The first cause, the differences of customs and traditions, will in time disappear, since the Japanese are rapidly adopting Western manners and modes of thought. The second must likewise vanish, and that in the near future, since the standard of living in Japan is rising so rapidly as to soon equal that of America. The third cause, the recent rapid increase in the number of immigrants, will be cut short by the higher living in Japan, since this will render it impossible for coolies to live out their lives at home on wages earned during a short period of labor in the West, as they have done in the

past. Only those of our people who desire to study abroad, and those other few who wish to live abroad permanently, will in the future leave Japan.

With the disappearance of the causes above stated, the anti-Japanese movement in America will die, so we may well look upon it as a temporary factor also. After all, it is absurd to make a gulf between the various nations, religions, thoughts and customs of the world's people. Open all the doors widely, and take what is best from all nations, all peoples, all countries. The thought that will divide the Orient and the Occident, the West and the East, is the real enemy of the world-civilization.

It would be infinitely better for the world if we had international weights, currency and language. Not good but real harm, comes from the adoption of various languages and customs. Let us look forward to the universalization of the world.—Hon. Yukio Ozaki, Mayor of Tokyo, in Independent.

### MAC DOWELL, AN AMERICAN GENIUS.

With the death of Edward Mac Dowell there passes a music-maker whom an apprehending critic called "the most poetic composer in America." The praise is just, so far as it goes. But Mac Dowell was more than that, he was one of the most spontaneously poetic composers with whose music the world is familiar, irrespective of geographical limitations.

"The fertilization of music by poetry," to employ a luminous phrase of Wagner's, would have meant for him no mere esthetic abstraction, but an intimate and ever-present reality. He was a musician, yet he looked out upon the visible world and inward upon the world of the emotions through the transforming eyes of the poet. The art of music differs from the art of painting, of sculpture, of poetry, in that it does not in itself suggest any correspondence with reality. A landscape, a piece of sculpture, bears a direct and obvious relationship to the external world,—it is, at bottom, a transcript of reality; so also do words, artfully disposed, evoke the thought of definite objects, experiences and events. Music, alone and of itself, has no such correspondence, no such relationship; it is not concerned with the events or the aspects of reality; it is, in the literal meaning of the term, the most supernatural of the arts. Yet it may, through an association with words, be made to suggest images and evoke definite moods with an eloquence that is beyond the power of paint or molded clay or cunningly ordered words.

To gain a true sense of his place in American music it is necessary to remember that twenty-three years ago, when Mac Dowell sent from Germany, as the fruit of his apprenticeship there, the earliest outgivings of his talent, our native musical art was still little more than a pallid reproduction of European models. Mac Dowell did not at that time, of course, give positive evidence of the vitality and the rarity of his gifts; yet there was, even in his early music,—undeniably immature, and modeled after easily recognized Teutonic masters,—a fresh and untrammelled impulse. A new note vibrated through it, a new and buoyant personality suffused it. Thenceforth music in America possessed an artistic figure of constantly increasing stature. Mac Dowell commanded, from the start, a wholly original idiom, a manner of speech which has been recognized even by his detractors as entirely his own.

His style is as pungent and unmistakable as Grieg's, and far less limited in its variety. Hearing certain

melodic turns, certain harmonic formations, you recognize them at once as belonging to Mac Dowell, and to none other. This marked individuality of speech, apparent from the first, became constantly more salient and more vivid, and in the music which he gave forth at the height of his creative activity,—in, say, the "Sea Pieces" and the last two sonatas,—it is unmistakable and beyond dispute. This emphatically personal accent it was which, a score of years ago, set Mac Dowell in a place apart among native American music-makers. No one else was saying such charming and memorable things in so fresh and individual a way. We had then, as we have had since, composers who were entitled to respect by reason of their expert and effective mastery of a familiar order of musical expression,—who spoke correctly a language learned in the conservatories of Munich, Leipzig, and Berlin. But they had nothing to say that was both important and new. They had grace, they had dexterity, they had, in a measure, scholarship; but their art was obviously derivative, without originality of substance or a telling quality of style. It will thus be seen why the potent and aromatic art of Mac Dowell impressed those who were able to feel its charm and estimate its value.

What, the casual reader may wonder, are the distinguishing traits of Mac Dowell's music? The answer is not easily given. His music is characterized by great buoyancy and freshness, by an abounding vitality, by a constantly juxtaposed tenderness and strength, by a pervading nobility of tone and feeling. It is charged with emotion, yet it is not brooding or hectic, and it is seldom intricate or recondite in its psychology. It is not German in its general aspect, or French, or Italian,—its spiritual antecedents are Northern, both Celtic and Scandinavian. Mac Dowell had not the cataclysmic imagination, the magniloquent passion, the strange sorcery of style, that are Strauss's; his art is far less elaborate and subtle than that of such typical moderns as Debussy and d'Indy. But it has an order of beauty that is not theirs, an order of eloquence that is not theirs, a kind of poetry whose secrets they do not know; and there speaks through it and out of it an individuality that is persuasive, lovable, unique. There is no need to attempt, at this juncture, to speculate concerning his place among the company of the great ones of music; it is enough to avow the conviction that he possessed genius of a rare order, that he wrought nobly and valuably for the art of the country which he loved.—Review of Reviews for March.

The possibilities that lie in our jury system were well illustrated in a New York court recently. The case was a suit against the New York Railway Co. for damages for killing a child and the jury rendered a verdict in favor of the railroad. It developed that a majority of the jurymen favored the plaintiff, but as they were hopelessly divided and one member had \$6,000 in his pocket to close a business deal it became the unanimous opinion of these conscientious jurymen that they could expedite matters by tossing up a coin for the plaintiff and defendant. In this way the decision was reached. When the judge of the court learned of this ingenious tergiversation, he promptly fined each juror \$50 and set the verdict aside. Thus a very high degree of citizenship and a deep regard for their oath and duty as jurymen are shown in the action of the jury, and of course everyone will feel a degree or two more of confidence in juries henceforth. Justice by the flip of a coin! Really this jury was getting on.—The Pathfinder.

## Echoes from Everywhere

The Italian Steamship Co. will begin in April running ships direct between Philadelphia and the Mediterranean ports, this being the first time the port on the Delaware ever had such a service.

Guayaquil, Ecuador, is suffering from an epidemic of bubonic plague. The scourge is increasing and the sanitary condition of that and other towns is causing great alarm.

March 17 the lower house of the Legislature of Oklahoma passed the Senate telephone regulation measure, with the addition of an amendment imposing a fine of from \$5 to \$50 for eavesdropping over a telephone.

Count Tolstoi is suffering from a severe illness brought on by exposure in endeavoring to rescue his horses which had fallen exhausted in a bank of snow. Owing to his advanced age, being nearly eighty, fears are entertained as to his recovery.

The Georgia railroad commission has issued an order that all common carriers which contemplate a cut in the wages of employees must notify the commission and give the figures and reasons for reduction. Furthermore, they must defer action until the commission notifies them.

At the May Day parade of children one hundred and fifty youngsters will march in the streets of South Brooklyn, carrying a red flag with the word "Socialists" emblazoned thereon, and will sing national anthems garbled so as to give socialistic meaning. The children range in age from four to thirteen.

The market in China for worn-out horseshoes seems to be almost without limit. Chinese iron dealers buy the horseshoes and sell them to knife and tool manufacturers all over the province. It is claimed by the Chinese that the temper of this class of iron makes it the best obtainable for knives and cutlery, and also good for other tools. The reason ascribed for this is that the constant beating the shoes have received under the feet of the horses has given them a peculiar temper absolutely unobtainable in any other way, and that tools made from them are superior to all others.

The government will withhold from the railroads one-seventh of the money for the transportation of United States mails until the actual cost of carrying them is ascertained, if the postoffice appropriation bill passes the House and Senate in its present form. An amendment has been inserted providing for a rigid inquiry into the subject and a separate bill will be introduced as a basis of all future contracts for carrying the United States mails. Arguments made against the present system were to the effect that some of the big companies are receiving enough money from mail contracts to pay the entire operating expenses of their respective roads.

The governor of Illinois has designated Friday, April 17 and Friday, October 16, as Arbor and Bird days. The alternate date of October 16 is given for schools which find fall planting more practical. The superintendent of public instruction has issued an Arbor Day booklet of more than usual interest.

The ship subsidy bill passed the Senate March 20. It provides for an increase of pay to vessels plying between our country and South America, the Philippines, Japan, China and Australia. For instance, vessels making sixteen knots will be paid \$4 per mile,—the amount heretofore paid to twenty knot vessels only.

Pauline Lucca died a few days ago in her native city of Vienna of cancer at the age of about 67. For about 20 years she was one of the most famous sopranos in the world. She was born in 1841, of Italian parentage, but with an ancestry of Jews, and evinced her natural gifts as a singer while yet a child.

A new use of electro-magnets may be made in the lifting and handling of large panes of glass. A piece of sheet-iron will be placed under the glass and one or more electro-magnets applied to the upper surface of the glass. The electro-magnets will attract the sheet-iron, and thereby hold the glass suspended while moving.

Both the bills legalizing lotteries and cock fighting, in Porto Rico, introduced by natives, were defeated by the Legislature, which adjourned March 18. Many important bills were introduced during the session, ninety-four of which became laws. The public utilities bill, drafted after that of New York, was passed. Big appropriations for education and good roads were made.

"What has happened in Georgia since Prohibition went into effect Jan. 1, 1908, is this," declares the Golden Age, Feb. 6, 1908: "The jug trade has taken the place of the barrel trade. The railroads have quit hauling barrels, and the express companies handle only jugs. The difference is about one to forty. The falling off in the dockets of criminal and police courts and corresponding increase of business in other lines are about the same ratio."

The Scientific American gives a list of prizes offered in the interests of air navigation. According to a cable dispatch, M. Michelin, the automobile-tire maker, has given a \$20,000 trophy for an annual international aeroplane race. Besides the trophy, a cash prize of \$3,000 goes to the winner. According to the same dispatch, M. Michelin has also offered a cash prize of \$20,000 to the first aviator to travel between Paris and Puy de Dome, some 250 miles distant, in an aeroplane before the year 1918. This prize is similar to that offered by the London Daily Mail, which is \$50,000 for a flight of 180 miles from London to Manchester, England.

John Haverskate of Whitehall, Mich., while searching through a lot of heirlooms in the attic left him by his grandfather, found a Bible printed in Dutch at Amsterdam, Holland, by Marcus Doorneck in 1690. The book, 10x14 inches, the covers of wood, and bound in brass, is in an excellent state of preservation. The Bible contains two maps showing the two hemispheres.

State Superintendent Cameron, in an address to the Oklahoma State Teachers' Association, said he will insist on the Indian Territory school fund being invested in schoolhouses in old Indian Territory. It is his plan to build schoolhouses in 3,000 districts the coming year. He favors three additional normal schools to be located in eastern Oklahoma. Tulsa is the strongest bidder for the northwestern normal school.

The Agrarian League of Cuba through its representative at Washington has made an appeal to congress for a reduction of the Cuban-American tariff. The League goes further and expresses the hope that Cuba will eventually be annexed to the United States. It declares that more troubles will result if the provisional government established by the United States is removed and the prediction is made that this country will have to intervene again.

Not America alone has been having trouble with her unemployed during the past winter. In Germany many people have been out of work and much suffering has resulted. In Plauen between 2000 and 3000 men and women were among the unemployed. The authorities were petitioned by the unemployed not to tax those out of work. It was asked further that the extension of old streets or the laying of new ones projected for a later time be begun at once.

Notices of a reduction of 10 per cent in wages, to take effect April 6, will be posted in practically every cotton mill in Rhode Island March 23. At a conference held here several of the large cotton manufacturers of the State signed an agreement to reduce wages, and nearly every large mill owner in the State has become a party to the agreement. It is expected that all the smaller mill owners will sign the agreement. Approximately 30,000 operatives will be affected by the proposed reductions.

Four-fifths of the Hebrew residents of Vladivostok have been expelled from the city, and all those remaining must leave before April 1. This wholesale expulsion is in violation of Russia's own regulations, which give governors of ports power to discriminate and allow Hebrews to remain on special permit from the ministry of the interior. By the middle of April all the Hebrews will be expelled also from Kronstadt and Sevastopol. Further vexatious measures are being considered against the Hebrews in Kiev.

Meter reading is "something new" which is being taught in the grammar schools of Newton, Mass. This modern "study" is proving very popular with students and has proved a revelation to the parents, to whom the average gas or electric meter is an insolvable riddle. The superintendent of the gas company was the originator of the plan, and his company furnished the materials required to give the practical instruction. They believe that a thorough knowledge of their system of reading the meters will tend to make their customers better satisfied with the service given them.

The battle for Local Prohibition at Elgin has developed many interesting incidents which show the strength of sentiment which has been aroused against the saloon. One of the most significant of these is the experience of a well-known milk dealer of this city. Having signed the local option petition, he was informed two days in succession by old patrons that they would discontinue their custom because of his sympathy with Prohibition, whereupon he immediately yielded to the intimidation and publicly announced the withdrawal of his name from the petition. The day following this announcement no less than thirty-seven of his regular customers, incensed, cancelled their contracts, telling him they had no use for a citizen who would be so easily influenced by the liquor element. If this is any evidence of the relative size of the Prohibition sentiment Elgin will vote overwhelmingly against the saloon on April 7 next.

#### NORTH DAKOTA.

Several years ago, when the Brethren began to homestead in North Dakota, it was thought that the western part of the State was unfit for cultivation. Even the Mouse River Valley was thought to be a doubtful proposition. Last year, the best crops in the State were produced in the western tier of counties. This year, a church will doubtless be organized in the southwestern part of the State near the old Roosevelt ranch, and another in eastern Montana.

Lignite coal has not been considered fit for extensive use in running large machinery. A new invention, however promises to make lignite valuable, and may make the lignite regions a vast industrial center. By this device, lignite coal is heated till the gas escapes, then the gas is exploded in a gas engine to produce power. The lignite deposits are enormous and their utilization is a matter of great importance.

The northwest is receiving much benefit from the hard times east. Last year it was almost impossible to get sufficient help to sow and harvest the crops at even the most extraordinary wages. This year, the farmers can get plenty of help, and many more helpers are coming this way. Last year there were not enough school-teachers for the local schools; this year outside applicants are appearing in gratifying numbers. The Dakota farmer is now hoping that the east will pick itself up in time to buy a good crop of wheat next fall at good prices. He thinks he'll have it to sell when the time comes.

A Farmer's Institute held in Cando, N. Dak., recently, promises to do much toward changing the methods of farming in this community. It was clearly shown that the present methods of farming were rapidly exhausting the fertility of the soil without leaving enough profit in the hands of the farmer to justify their practice. The growth of clover, alfalfa and field peas was shown to be practicable and profitable in connection with stock raising. Much experimenting has already been done along these lines near Cando, and will doubtless give way to extensive practice of the methods learned.

Conditions are excellent for a good spring wheat crop. The ground froze deep before snow came, insuring the gradual liberation of moisture as the plant roots need it. Enough snow has fallen to moisten the surface of the ground and to fill the sloughs and coulees and insure local showers.

The Duma has been asked for \$1,000,000 to enlarge Russian Prisons, which are overcrowded. The number of prisoners has increased 111 per cent since 1906. In January, 1908, the total number was 159,537, and in February 165,588, of whom 13,000 were political prisoners.

An Illinois Central claim agent, whose territory includes Champaign County, has written a letter in reply to an inquiry from a citizen of that county, in which he says that investigation shows that 77 per cent of those killed by his railway in that county in the past two years were under the influence of intoxicating liquor at the time of the accident. He also says that since the closing of the saloons in the city of Champaign not a single accident has been reported which was due to the use of intoxicating liquor.

China has released the Japanese steamship Tatsu Maru, seized on the charge of smuggling arms to Chinese rebels. The full terms of China's surrender are as follows:

China agrees to punish the officers who lowered the Japanese flag and to send a warship to the place where the vessel was seized to fire a salute as the ensign is re-hoisted. China will purchase the arms and ammunition seized. She will punish the officers who committed this breach against international usage and pay demurrage for detaining the vessel. Japan agrees to exercise extra vigilance against her subjects in the matter of smuggling arms into China.

The Birmingham (Ala.) News, Jan. 25, 1908, says: "For ten years Birmingham has not enjoyed so wonderful a period as it has since Jan. 1. So far Prohibition in this community has proved a powerful agency in the betterment of the public morals. It has reduced the criminal record of this community in a striking degree." The number of arrests for drunkenness in January, 1908, was scarcely one-sixth as large as the average when saloons were in operation. There were only thirty-seven arrests in January, 1908, as compared with 246 for December, 1907, (under license), and an average of 197 per month for the year 1907 (under license).

The government announces that it will place on the market on May 1 next 2,135 farms, and will allow their purchasers ten years within which to pay for them. The area of each will range from ten to 160 acres, and they are made available by the completion and development of irrigation projects in the West. In Nevada, in connection with the Truckee-Carson project, farms of eighty acres can be taken up with an entry fee of \$8, and \$3 per acre annually for ten years. There are 1,000 of these farms. In Oregon 200 farms will be available on the Umatilla project, of from ten to twenty acres. These lands will cost from \$600 to \$1,200. In South Dakota, on the Belle-Fourche project, 175 farms will be available in tracts of eighty acres; in Wyoming, 200 on the North platte projects, and 200 on the Shoshone project, costing from \$600 to \$1,200. Residence and cultivation of the farms will be required of purchasers, and every means will be taken to guard against speculators purchasing them. The farms are all close to railroad connections.

March 16.—Under suspension of the rules, the House of Representatives passed the bill providing for the restoration of the motto, "In God We Trust" on gold and silver coins of the United States recently removed by the President's order. The bill was passed by a vote of 255 to 5.

Pope Pius X., at his name day celebration March 17, entertained the Cardinals with the recital of how a certain gold coin had been given to him as a jubilee gift by the diocese of Acqui. This coin was discovered in 1898, while excavations were being made for the foundation of a new church at Acqui. Upon examination it was found to be the only coin in existence of the period of Innocent IX., a Pope who reigned for two months in 1591. This coin was the only one lacking to make complete the vatican collection of coins issued under all the Popes.

Kosciusko County, Indiana, with a population of 20,000, has no use for a jail. During the last six months the building has not had a single occupant. The temperance people of the county claim this condition of affairs is due to the fact that the remonstrance law has made it possible for them to drive five saloons from the county during the year. The last saloon in Warsaw will close its doors on July 3.

Government reports show the value of products of the farm in seventeen states west of the Mississippi in 1907 to have been \$1,091,000,000. Corn leads in production, being valued at nearly \$500,000,000. Winter wheat is next, valued at \$20,000,000, and domestic hay was valued at only \$2,000,000 less. Rye, oats, barley, and potatoes follow in order. The increase over last year in value of crops amounts to 15 per cent, and this gain is credited to irrigation. Iowa ranks first in corn, oats, and potatoes, Kansas first in wheat, and Nebraska first in rye.

Bishop Charles H. Fowler, of the Methodist Episcopal church, died at his home in New York March 20. At the time of Chicago's great fire he was a pastor in that city. In 1872 he became president of Northwestern University which position he held four years when he became editor of the Christian Advocate in New York. He was made general missionary secretary of the church in 1880 and four years later was elected bishop. As missionary secretary he organized Peking university in north China, Nankin university in central China, the first Methodist Episcopal church in St. Petersburg, established the McClay College of Theology in southern California, and consolidated the three colleges in Nebraska into the Nebraska Wesleyan university at Lincoln. He was trustee of Syracuse university, Drew Theological Seminary, Madison, N. J.; American university, member of the board of managers of the Methodist Missionary society, the Church Extension Society, Freedmen's Aid, and other Methodist societies.

## WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

---

WANTED.—Brethren having surplus money on hand to buy large tracts of land, in the Imperial Valley, to subdivide for the Brethren Colony. I will insure good income on money so invested. Address, W. F. Gillett, Holtville, California.

FOR SALE OR EXCHANGE—Share of Albaugh-Dover stock; White Holland turkey eggs, 9 for \$2.00, or 25 for \$5.00; Barred Plymouth Rock eggs, 20 for \$1.00, or \$4.00 per 100; Poland China pigs.—E. Biser, Westover Md.

## THE INGLENOOK

### ONLY 10 COPIES

We have just 10 copies of Peloubet's Select Notes on Sunday School Lessons for 1908 that we will close out prepaid.

### Only 95c Per Copy

This is perhaps the best Commentary published. It contains nearly 400 pages and would be a great help to any teacher. Order a copy now if you want a copy at this special price.

Regular price, .....\$1.25  
The first 10 orders only, ....95c each

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Ill.

### EVERYBODY LIKES IT

You can get the genuine old-fashioned, pure HOME-MADE

### APPLE BUTTER

We make it a specialty. We have hundreds of well-pleased customers. You run no risks. We guarantee satisfaction and safe delivery. Write NOW.

**C. J. MILLER & CO., Smithville, Ohio.**

### WHITE PLYMOUTH ROCK EGGS

13 for \$1.25; 26 for \$2.00, carefully packed. The White Rocks have no superior as a general purpose fowl, are excellent layers, mature young for market. My fowls are bred right for vitality, size, color, etc.

I AM A GRADUATE IN VETERINARY MEDICINE and make a specialty of poultry diseases, prescribing by mail for thousands of cases every year. Poultry diseases are very much neglected by the average veterinarian, therefore, such information from a specialist is a rare opportunity. For 20 cents (silver) with complete description of the symptoms of the poultry ailment, I will write a special letter, giving the most scientific way of treating the disease described.

**DR. H. H. LEHMAN, Ashland, Ohio.**

WHIP STEALING STOPPED with Farver's Locking Whip Socket. Size and appearance like an ordinary socket, yet will securely lock any ordinary sized whip, when desired, by simply pushing it down in the socket. Unlocked with a key (two of which go with each socket). Durable made; lasts for years; easily attached to dash; guaranteed in every respect.

Price, \$1.50, sent prepaid.

**Wm. Farver & Co., Ashland, O.**

### FREE SAMPLE

Send letter or postal for free SAMPLE

### HINDOO TOBACCO HABIT CURE

We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

### Thirteen Orders With Scarcely Any Effort

"I hereby enclose you an order for 13 of the new Revised Minutes. I have long wished that my members would get the book and become acquainted with what it requires of us. I believe it would be much easier to care for a church whose members are posted on Annual Meeting decisions, so I just took in hand and secured the order with scarcely any effort."—Eld. J. H. Baker, Astoria, Ill.

### EACH ELDER OR PASTOR

could help his congregation wonderfully along this line with just a little effort. Try it in your congregation as did the above Elder and the results may surprise you.

The new Revised Minutes contain all the revised minutes up to 1898 and the minutes since that date including the late meeting held at Los Angeles, Cal., last May.

The book is durably bound in cloth and contains over 300 pages.

Price prepaid, .....\$1.00  
Six copies to one address, prepaid, ..... 5.00

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Ill.

## RESULTS COUNT

That is why **ANGEMA** is becoming so popular.

Used as a Salve and as a Liniment.

**ANGEMA** keeps away croup.

**ANGEMA** prevents lung fever.

**ANGEMA** guards against COLD in the head or on the breast.

Have you tried it for your children?

Use **ANGEMA** and stop worrying. Your life will be prolonged, your children healthier and all happier.

It relieves RHEUMATISM, NEURALGIA and HEADACHE.

Be our representative in your community. **ANGEMA** is good. Our proposition to our agents is better. One lady sold 96 tubes in one small town in a month and without much effort at that. People want **ANGEMA** when they see it. Judge for yourself. Send 15 cents for a full-sized 25 cent tube.

Write for particulars FREE.

**THE ANGEMA LABORATORY**  
GARRETT, PA.

### CALIFORNIA

Do you intend always living in a climate that keeps you housed during the long, cold winter? Why not come to Los Molinos, an Old Spanish Land Grant, which is being subdivided, and sold under the gravity system of irrigation; where oranges, flowers, and vegetables, grow the year round; where the land is cheap and sold on easy terms. The cost of living the lowest in the United States. Rainfall, 25 inches per annum. Write for free descriptive booklet.

**LOS MOLINOS LAND COMPANY,**  
Los Molinos, Tehama Co., Cal.

### CRADLE ROLL SUPPLIES

There is a demand for Cradle Roll Supplies coming from some of our wide-awake Sunday schools, and we are now ready to meet the demand.

Every Superintendent and Teacher ought to be enough interested in this new department to ask for particulars. Drop us a postal asking for our illustrated descriptive circular of these supplies. **DO IT NOW.**

Elgin, Illinois.

# Facts Regarding Imperial Valley

Some people in trying to induce their friends to settle in the country where they themselves are located, frequently send them advertising matter that is gotten up by unscrupulous land agents that deviates from the truth. Their friends come and buy property and soon find out that the facts do not correspond with the advertisements sent them. The result is they soon become discouraged and sell out at a sacrifice, and go back where they came from, worsted financially and in some instances say worse things of the country than they should, and thus bring reproach on a good country (though not as good as the advertisement represented it to be). The undersigned has known this to happen more than once, and for this reason has decided to tell his brethren and friends about the Imperial Valley in his own words, so that he alone shall be responsible, and so that the wonderful Imperial Valley may never be made a reproach and a by-word.

Imperial Valley is situated in San Diego County, California, 183 miles east of Los Angeles on the Imperial branch of the Southern Pacific railroad. The soil is an alluvial deposit and all crops are grown by irrigation, with water from the Colorado River. The main irrigation canal is 80 feet wide on the bottom and 100 feet wide on the top, and 10 feet deep. The soil is adapted to the growth of wheat, barley, alfalfa and nearly all kinds of fruit. Alfalfa having plenty of water can be cut eight times per season, yielding as high as ten tons of nice hay per acre which sells at present from \$8.00 to \$11.00 per ton. Barley can be sown for winter pasture in alfalfa stubble after the last crop of hay is harvested. Alfalfa can be cut every three weeks if the hay is wanted for dairy cows, or every four or five weeks if wanted for horses. I have known of alfalfa yielding \$40.00 worth of seed per acre and my own yielded \$20.00 per acre with the first season's sowing. Dairying and hog raising are very profitable. Butter sells from 20 cents to 45 cents per pound; hogs, 7½ cents on foot; also beef, cattle and horses do excellently. One colt weighed 960 pounds at less than one year old. One acre of alfalfa will keep from 2 to 3 head of dairy cows or horses and from ten to fifteen head of hogs. Oranges, lemons, dates, figs, apricots, grapes and berries do well. A single grape vine has yielded 30 pounds of grapes 18 months from setting. Grapes, apricot and cantaloupe growing is very profitable as they will ripen here from three to four weeks earlier than other places, and be placed on the eastern market before they are ripe in other localities. One man at Coachella was offered \$600.00 cash for the grapes on a single acre of vines and refused the offer and sold at retail for \$1,400.00. Cantaloupes will net the growers from \$50.00 to \$300.00 per acre. I have lived in the valley as long as any one, being one of the first settlers, and my experience and observation has taught me that you can grow almost anything here you plant, including vegetables, if planted in the proper seasons and properly cared for. The selling price of land at present is from \$40.00 to \$100.00 per acre, owing to location. President Roosevelt says that when it is thoroughly developed it will be worth from \$500.00 to \$1500.00 per acre.

Reader, when you shiver around your fireside the coming winter, just think of the Imperial Valley where you can go in your shirt sleeves nearly every day in the year. And on the 10th day of this month (May, 1907), while there was a snow storm raging in many places in the eastern states, we were making hay and picking and eating fruit in the Imperial Valley.

## An Opportunity Rarely Offered

We have decided to sell "FOREST MEADOWS" (The Prather Ranch), Butte Valley, Siskyou County, Cal.—in SMALL TRACTS—"2700 Acres"—1000 Acres in Timber—1700 Acres open and in cultivation and natural meadows—under fence and cross fence—Thirty Thousand dollars in improvements—a free and perpetual water right—sufficient water to irrigate 5000 Acres—an Electric Light and Power Plant already installed and can be increased to 160 Horse Power at nominal cost—Three and one-half miles to railroad station—at \$36.00 per acre—one-half cash—balance on usual terms.

The timber cut into lumber will pay for the place and furnish lumber to build improvements for each small tract in addition. We want 50 men to take 40 acres of farming land and 14 acres of timber, or 25 men who will double that amount—they to subdivide and allot to suit themselves.

Think of this "Brethren" and write at once for particulars—to

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

## Mr. World and Miss Churchmember

By W. S. Harris.

till finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

Our Price, Prepaid .....\$ .75

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel.

A Book of Birthday Gems, Containing a Text, a Proverb, and Sentiment for every day in the year. Also spaces for signatures. By Thomas W. Handford. Bound in cloth. Stamped in gold and white. Gilt edges.

### TOURIST SLEEPING CARS.

A striking feature of the Union Pacific passenger trains is the tourist service. The tourist sleepers are identical with the standard sleepers, with the exception that their furnishings are not on so grand a scale, but the accommodations are equally good and are sold at HALF THE PRICE of the standard. The seats are upholstered, and at night the berths are hung with heavy curtains. Each car is accompanied by a uniformed porter whose duties are the same as those upon the Pullman Palace Sleepers.

### DINING CARS.

Union Pacific dining cars are operated on all through trains. These cars are all new in style and models of beauty and elegance.

### DINING ROOMS AND LUNCH COUNTERS.

Dining Rooms and Lunch Counters are located at convenient points along the line, and all through trains which do not carry dining cars are scheduled to stop at these points. Well prepared meals of the best quality are properly served at popular prices. Full time is allowed for meals.

What Else Would You Like to Know About

# BUTTE VALLEY, Cal.

Halfway between San Francisco and Portland, is located in Siskiyou County, near the Oregon Line.

The scenic beauty of the valley and the surrounding mountains is unsurpassed.

The altitude is four thousand two hundred feet.

The climate is that of Salt Lake City, Reno, etc.

It has about twenty inches of rainfall, besides sub-irrigation.

Sub-irrigation is furnished by Butte Creek and other mountain streams.

The water is pure, cold and plentiful.

The soil is volcanic sediment, from three to nine feet deep.

The valley is level, surrounded by mountains and foothills.

It is covered with a heavy growth of sage brush.

Mt. Shasta is forty miles to the Southwest.

Mt. Pitt, is sixty miles to the North.

The old Main Line of the Southern Pacific is twenty-eight miles to the West.

The new Main Line passes through the Valley from South to North,—

Will intersect the old line at Eugene, Oregon.

It extends from Weed to Klamath Falls.

Klamath Falls is forty miles to the Northeast.

The Rogue River Valley is forty miles to the Northwest.

The new town of Macdoel is building rapidly.

It is centrally located, and has a promising future.

Streets are graded and stores are doing business.

It will become a noted tourist resort.

A splendid church building has been erected in Macdoel.

A system of local and long distance telephones is in operation.

An efficient mail service is installed.

There are nearly a hundred children of school age in the Valley.

A very successful term of school is in progress.

Mud and dust are not found because of soil formation.

Succulent bunch grass is found in abundance, for grazing purposes.

Thousands of cattle are fattened in this Valley.

Tanneries ought to be located here for the output.

Stock raising is profitable in Butte Valley.

Pure water, rich grass, and eternal sunshine make it so.

It is a paradise for the dairyman.

Thousands of sheep are grazing upon the surrounding foothills.

Woolen mills should be established in the near future.

The mountains are covered with forests of pine, cedar and fir.

Fuel and building material are practically inexhaustible.

The opportunities for box factories are splendid.

The valley will be one of the greatest fruit countries in the world.

The surrounding valleys have proven this statement.

Fancy grades of apples only, will be planted in Butte Valley.

Newtown Pippins, Spitzenbergs, Winter Bananas, etc., are being planted.

Orchardists say that it will be a great peach country.

Small fruits do exceedingly well.

Colonists obtain wholesale rates on fruit trees.

Almonds and English Walnuts are said to do well here.

Wheat, oats and barley yield well wherever sown.

Timothy, clover, and alfalfa yield enormous crops.

The mountain streams are full of Rainbow trout.

Wild game is plentiful on mountains and lakes.

Vegetables are prolific and of the very best quality.

Canning factories can be made a paying business.

Every reasonable test has been made of the seeds and soil.

Government experts have examined the soil and pronounce it good.

Sugar beets have tested sixteen per cent saccharine.

Possibilities for electric power are illimitable.

Two years ago the central valley was uninhabited.

Now, more than one hundred buildings may be seen from one point.

The growth of this valley is without parallel in colonization.

Get a home there NOW, before the price of land advances.

San Francisco, Cal.

# The Better Way

Each year thousands of people are having their eyes opened to the baneful effects of drugging the system by means of nerve deadening narcotics and mineral poisons. The legislatures of several States have even gone so far as to pass laws, placing restrictions on the sale and use of such remedies, when not altogether prohibiting them. The more intelligent classes, people who think and reason, and who do not blindly swallow any medicine offered them are strongly in favor of the safe and practical system of herb treatment for the cure of disease.

Old Dr. Peter Fahrney, the originator of DR. PETER'S BLOOD VITALIZER was one of the early pioneers and exponents of the botanic system of medicine. His plain old herb remedy, known as DR. PETER'S BLOOD VITALIZER, which has now been in constant use for over a century with such unqualified success, has probably, more than any other medicine, demonstrated the advantages of the botanic system of treatment. Thousands of ailing men and women have found it a boon to health.

## **CALLS IT A BLESSING.**

Rodney, Mich., March 7, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Your Blood Vitalizer does grand work. Through the help of God it saved a neighbor's child and restored the health of my wife. We would not like to be without the Blood Vitalizer. It is a blessing, especially for poor people who cannot afford to pay big doctor bills. We think a good deal of you and your work and hope your usefulness may stretch over many years for the benefit of sick people. With kindest regards,

Yours very truly,

R. S. Smith.

## **CURED SICK HEADACHE.**

Chicago, Ill., June 1, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen:—I desire to send you my thanks for your good medicine, the Blood Vitalizer. I suffered nearly every day from sick headache, and at last I got so bad I had to take to my bed. But thanks to your Blood Vitalizer, it has cured me and I have had no further touch of it.

Yours truly,

Mrs. E. G. Dahlberg.

2362 Avondale Ave.

## **REGAINED HIS HEALTH.**

Athol Springs, N. Y., April 2, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—I desire to inform you that since using the Blood Vitalizer I have regained my health. It is now all I could wish for. I was a sufferer from indigestion and stomach troubles. Next to God, I thank your Blood Vitalizer for my recovery. Whenever I have an opportunity I recommend your medicine.

Respectfully yours,

Henry F. Rolf.

## **THE SWELLING DISAPPEARED.**

Greenwood, Mo., April 24, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen: The trial box of Blood Vitalizer arrived all O. K. I had a peculiar lump in my left side and a severe cough which bothered me a great deal before using the medicine. I had not taken more than one small bottle of the Blood Vitalizer when the lump in my side disappeared. I would not want to be without the Blood Vitalizer in the house. Your medicine has not been introduced here. I have given several bottles away. You may expect another order from me soon.

Yours truly,

R. R. No. 2.

Mrs. N. Dimmitt.

The sane, safe and practical way of treating disease by means of health-giving roots and herbs appeals to all thoughtful people. It accounts for the surprising popularity of DR. PETER'S BLOOD VITALIZER. The demand for this plain old herb remedy is today greater than at any time in its history. No one is so low with disease and no one is so well but what the BLOOD VITALIZER will do good.

Unlike other ready-prepared medicines, it is not to be had in drug stores. It is not an article of commercial traffic, but is supplied to the people direct through local agents—friends and neighbors whom you know and trust.

For further particulars address the sole proprietors,

**Dr. Peter Fahrney & Sons Co.**

112-118 South Hoyne Avenue

**Chicago, Ill.**

## Ropp's New Commercial Calculator and Short Cut Arithmetic The Standard for Store, Farm, Bank or Factory,

5 1/4 x 2 1/4 in.

Is from beginning to end a greatly improved, enlarged and thoroughly revised publication.

It contains an entirely new system of unique Tables, Short-Cuts and up-to-date Methods.

It is unquestionably the most complete, useful and comprehensive Calculator ever published.

It has more than twice the matter, scope and capacity of Ropp's former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

It is the most convenient and practical Labor-saving work ever used in the business world.

It will make every one independent, sure and self-reliant in all practical calculations.

It will prevent mistakes, relieve the mind, save time and labor, and often loss and trouble.

Its Tables are adapted to all the trades and occupations in the city and country, and

### Show the Answer as Quickly as a Watch Shows the Time.

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.

It will make the study and use of Figures easy and interesting for young and old.

It will enable every progressive mind to become an expert, sure and rapid calculator.

It will prove a boon to all whose education in arithmetic has been limited or neglected.

#### 48 Cuts Illustrate the Elements of Mechanics and Mensuration

It defines about 70 points in "Commercial Law" which every man and woman should know.

It is the result of devising, and improving system after system; of spending thousands of dollars in experimenting; of making millions of miscellaneous calculations, and of doing some vigorous thinking during 38 years, by an analytic, practical and persevering mind.

R. E. ARNOLD, Elgin, ILL.

## Olive Branch of Peace

### Valuable Contribution.

Dear Brother Hays: I have ordered a copy of your book, "The Olive Branch," and have read it with exceeding interest. It is a valuable piece of contribution, not only to the history of the Valley of Virginia, but also to the history of the Brethren Church and other peace loving societies of God's people. Especially is it valuable as a clear and full statement to the world of what the world is coming more and more to recognize as just, reasonable, and desirable—Peace, and the spirit of Christian peace. I pray and believe that by means of this book, "The fruit of righteousness is sown in peace of them that make peace."

Yours fraternally,

John W. Wayland.

University of Virginia, Charlottesville, Va., Oct. 29, 1907.

This book contains 232 pages, has a number of illustrations and is well bound in cloth.

Price prepaid, .....75 cents

### AGENTS WANTED.

We want an active agent in each congregation to push the sale of this valuable book. It should be in the hands of all of our people. If there is not an agent pushing the sale of this book in your congregation, and you could spare some time for this work, write us for terms. Do it now.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

# THE SPRING OF 1908

will witness a new influx of thousands of settlers in the fertile valleys of **SOUTHERN IDAHO**. A great many have gone and a large number are making arrangements to go soon.

## 125,000 Acres

on the Salmon River project will be opened up for settlement in the near future.  
**WATCH FOR DATE OF OPENING.**

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

Alfalfa, Sugar Beets, Fruits, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

## Come and See

### "WE MADE NO MISTAKE"

Twin Falls, Idaho.

Twin Falls Land and Water Company.

Gentlemen: On the 6th of April, 1906, I landed on the Twin Falls Tract to stay. I had been here twice during the winter "to see" and thought I had seen the opportunity of a lifetime for a man of small means to make a profitable investment and establish a comfortable home. Our experience has convinced us that we made no mistake.

Respectfully,  
John R. Newton.

Pullman, Washington.

C. O. Merrell, Twin Falls, Idaho:

Professor Fulmer, Chemist, of Washington State University, has made his seventh test of soil from lands under the Twin Falls Canal system. He finds a small trace of alkali and thirty per cent more plant-producing qualities than in the Yakima Valley, and there is only one place on the Pacific coast where is equaled, and that is in the Pajaro Valley in California.

A. T. Farris.

Mr. E. F. Hurst, Fruit Inspector of Dist. No. 5, of Idaho, states: "The Southern part of Idaho is second to no other part of the known world as a fruit producer, both in variety and quality."

## Greatest of America's Reclamation Projects

Guy E. Mitchell

ROBERT B. MARSHALL, of U. S. Geological Survey, who has just been appointed Chief Geographer for the United States, in charge of the Topographic Branch of the Survey, has, like a good many young men in that bureau, practically grown up under it. He received his first appointment in the Survey in 1890 and has now risen to the top notch in his chosen line of work. In 1903 he was given charge of the California topographic surveys of the Geological Survey, and in the reorganization of the topographic work of the United States last year, he was appointed geographer in charge of the Pacific Coast division, embracing California, Oregon, Idaho, Nevada, Utah, Washington and Arizona. Mr. Marshall is a member of the Society of American Civil Engineers.

It is in connection with his special survey, during the past five years, of the swamp and overflow areas of the great Sacramento Valley that Mr. Marshall's

Mr. Marshall's Surveyors Leveling in Tule Brush Along Sacramento River.

An Actual Elevation, Not a Pose

work is best known. Here is located the most stupendous drainage and irrigation project in the United States if not in the world. The Sacramento, during its flood periods, comes boiling down out of the Sierra Nevada, its flow augmented by many torrential tributaries and not only passes uselessly by lands rich in fertility, but often carries in its wake great destruction. While there are some three million acres in its valley susceptible of irrigation from its waters, the average flow of the river would still provide water enough for the reclamation of three or four times

that amount of land in addition. After the great problems of reclaiming these three million acres in the Sacramento Valley shall have been solved, the still vaster one of carrying this surplus water over into the San Joaquin Valley and irrigating several million acres of its arid fertility will present itself.

The survey of the Sacramento Valley is a coöperative undertaking between the

State of California and the U. S. Geological Survey, the State bearing one-half of the expenses and the Survey doing the work. The part of it attracting the greatest attention is the mapping of the million acres of overflowed lands on both sides of the river. Back of these and at a higher elevation is an irrigable

before them for working out all the broad features of their plans. This is exactly what has been done, in fact, at one point by the Reclamation Service. At Orland this bureau is spending \$650,000 in construction work, the engineers following closely behind Marshall's topographic surveyors and utilizing his maps. This is what is known as a unit project; that is, it constitutes a complete project, but at the same time it may be extended almost indefinitely and become an harmonious part of a vast system.

The Sacramento Valley problem is not that of a mere field survey. It involves not only land reclamation on a gigantic scale but the prevention

of great flood destruction. In one small section alone—the delta region between the Sacramento and the San Joaquin rivers—Mr. Marshall says that the loss resulting from last year's rampage of the Sacramento amounts to many million dollars.

Much of this surveying has been extremely difficult, owing to the shortness of the season between floods, while the maps' usefulness is indicated by the great demand for them. Californians are particularly enthusiastic over them, as they see pointed out by them the vast possibilities which lie before the State, the feasibility of controlling the giant river and of projects of reclamation of great areas so productive that five acres will constitute a farm that will bring

area of about two million acres additional, also included in the survey.

"These overflowed lands," remarked Mr. Marshall, who is now in Washington, "are fruitful beyond all comprehension. They represent the accumulated silt and river debris of untold ages and no one knows their depth. We speak of the exhaustless resources of the Valley of the Nile and of the Po and others; but nothing can compare, I believe, with the conditions in the Sacramento Valley. Yields are fabulous where drainage reclamation has been achieved and a statement of land productions and values would not be credited in the east. If one wishes to dream of the conquest of an inland empire beyond all conception of richness, he needs but to visit the Sacramento and San Joaquin Valleys and view the possibilities of swamp and desert reclamation."

Mr. Marshall has supervised the survey of a large portion of these three million acres, including a proportionate share of the million acres of overflowed lands, known as the tule swamps, producing large, special maps showing every detail of topography and upon which projects for drainage and irrigation can be confidently based. The survey is so detailed that it becomes almost a construction survey; that is to say, the construction engineers in planning either drainage or irrigation works in the Valley will have all the data

wealth to its owner. The great need of these detailed surveys is emphasized since practically nothing of an engineering nature can be intelligently prosecuted without them. For centuries these lands have lain dormant and the great river has carried its annual message of unused wealth to the sea; even of late

Harvesting Sugar Beets with Plows near Bethany, San Joaquin County, Cal.

The Largest Asparagus Farm in the World, San Joaquin County, Cal.

years but slight toll has been taken from its treasure. Now a great awakening is at hand and a development promised for this section of the Golden State which will rival if not surpass that of any other section of the continent.

Mr. Marshall's new duties, while they take him away personally from his California work which he has come to consider as his own, still leave him in general charge of this branch of the service; but his successor in charge of the Pacific Division, Thomas G. Gerdine, is another young man of energy and ability, who has made a most enviable record for the Geological Survey in Alaska. Mr. Gerdine has for several years had charge of the topographic work in that territory, has made reconnaissance and topographic maps of nearly one-third of it and has carried on explorations stated to be of large economic value. His has been a field where necessity compelled the development of original methods owing to the most unusual conditions and where there were no precedents to follow. But he has not been found wanting in this respect and has placed the maps of the Survey in the hands of the prospector and the miner to the great benefit of the mining industry of Alaska. While the Alaskan survey may be the loser, it is confidently predicted that Mr. Gerdine will "make good" in the prosecution of the great work to which he falls heir in California.

### IVANHOE.

EMMA HORNING.

IVANHOE is Scott's first attempt at English romance, his former being *Scotch*. It met with great success. It reveals his scope of ability in dealing with more than one line of romance. His portrayal of the contrasts of the three nationalities is very vivid. The customs and conditions of early English life is graphic and true to history. The plot is very tactful, the interest sustained, the mysterious always solved in a reasonable way. His broad, charitable mind is distinctly shown by the way in which he treats his characters. He always finds some good in his worst characters. His characters are always equally enough matched to call forth the sympathy of the reader on both sides. This romance is chiefly narrative, with touches of personal character, and woodland and architectural descriptions enough to make the narrative vivid. The movement of the narrative is very rapid which heightens the effect, the whole plot being worked out in less than two weeks with perhaps the exception of a part of the last chapter.

Taken all together *Ivanhoe* is considered Scott's masterpiece in romance.

*Time and Occasion:* Richard I of England went with the Crusaders to the Holy Land, leaving the kingdom in the hands of his unprincipled brother,

Prince John. Richard being made a prisoner in Austria on his way home, Prince John did all in his power to keep him there and in the meantime endeavored to win nobles and peasants to his favor by every means which his unscrupulous nature could invent.

At this time the Normans have complete control of Government affairs. The conquered Saxons are chiefly serfs engaged in agriculture. The antagonistic spirit is shown chiefly by Cedric and his servants who still cherish some hope of Saxon supremacy. (The commercial relations of the age are governed by the Jews. They have command of the wealth and are very necessary to the movement of the romance.) He desires to accomplish this by the marriage of a niece of his friend to Athelstan, both of royal Saxon blood. But his son loves Rowena, his niece, and also is a great friend of Richard I. This angers Cedric. He disowns his son who goes to the Holy Land.

*Plot:* A thunder storm and the sudden fall of night cause a cavalcade including the Templar, Prior and others with an unknown Palmer and a despised Jew to stop at the home of Cedric the Saxon. Here they make the acquaintance of Rowena and she inquires about *Ivanhoe* from the Palmer. The Jew being in danger, the Palmer helps him escape and is rewarded by the Jew securing him equipment for the coming tournament to which they are all making their way.

At the tournament the Palmer, or Disinherited Knight, is successful in the first day's conflict. He chooses Rowena as queen of the day. On the next day the Disinherited Knight is successful again but Prince John awards the prize to the Black Knight who disappears and the Disinherited Knight is crowned by Rowena who is nearly overcome on recognizing *Ivanhoe*. He is wounded and faints, but is taken care of by Rebecca, the daughter of the Jew, Isaac, of York. During the tourney John receives a note saying Richard is in England. It is soon brought to a close and some of his followers hasten to York to crown him king. But De Bracy and the Templar have been charmed by Rowena and Rebecca and plan to seize them on their way home.

The capture is successful and they are taken to a neighboring castle where each pleads for his choice lady but to no effect, when a shout is heard outside the castle, which proves to be their deliverers, being a band of yeomen headed by the Black Knight.

The castle is taken as a fire breaks out in it. All are saved but the owner and the "old woman." But the Templar escapes with Rebecca to the house of the Templars which is entirely against the rules of the Order. The Master of the Order happens to be there and hears of his breaking the rules. To free him from disgrace Rebecca is denounced as a sorceress

and is condemned to be burned at the stake. The Templar secretly has her call for a champion, he himself desiring to be the champion, but he could not make it work and was forced to be against her. At the last moment Ivanhoe arrived as her champion. The conflict took place. The Templar died in the conflict and Rebecca was saved. Their admiration for each other was very deep in their hearts but unexpressed. Finally Ivanhoe married Rowena. Rebecca went to the Holy Land as a sister of mercy to all oppressed or needing her aid. De Bracy escaped to France. Prince John's followers left him, so Richard the Black Knight reigned supreme.

*Characters:* The hero, Ivanhoe, is as perfect a character as the times would permit. He is the connecting link, the peacemaker, between the three hostile nationalities characterized by Cedric, Isaac, and Richard. The heroine, Rebecca, is a model of womanly strength, devotion, purity and tenderness scarcely equaled elsewhere in romance. Scott's characterization of the clergy in their formality, baseness and worldliness was but a characteristic of the age. He shows the opposite characteristics in Rebecca and in part of the speeches of the Master of the Order.

*Fruita, Colo.*

#### SIGNS OF DETERIORATION OF CHARACTER.

1. WHEN you are satisfied with mediocrity.
2. When commonness doesn't trouble you.
3. When you begin to think your father and your mother are old fogies.
4. When you can listen without protest to indecent stories.
5. When you are satisfied to do a thing "just for now," expecting to do it better later.
6. When you do not make confidants of your father and your mother, as you once did, or are ill at ease with them.
7. When you do not feel troubled by a poor day's work, or when a slighted job does not haunt you as it once did.
8. When you can work untroubled in the midst of confused, systemless surroundings which you might remedy.
9. When your ambition begins to cool, and you no longer demand of yourself the same standard of excellence that you once did.
10. When you begin to intimately associate with people whom you would not think of taking to your home, and whom you would not want the other members of your family to know that you know.—*Orison Swett Marden.*

## 'Tis Victory

Richard Seidel

For the bereaved friends of H. M. Barwick, late editor of the Inglenook.

The power that yields to death and to defeat,  
Yields but the conquest to the nobler strife;  
The force repellant, mightier forces meet,  
As fast recedes the ebbing tide of life.  
But, vainly cowering 'neath the sway of doubt,  
We mark as death the power that sets us free,  
'Tis but transition unto joys more real,  
The triumph of immortal life to see.

O life! thou hero, haloed but with bliss,  
And laureate with emblems of thy grace,  
Thou'st smitten but the transient unto death,  
Entombed, the perishing receives its place.  
While, 'mid the tranquil hush, the calm serene,  
The spark that knoweth not decaying blight  
Thy snow-plumed pinions bear from earth away,  
To dwell amid unchanging scenes of light.

Why tread this vale as one of doubts and tears?  
The meed is sure, the recompense is just.  
O life! thy power calms turbulence and fear,  
Divines the mission of exalted trust.  
Thy thrilling touch the latest germs revived,  
And hope's white blossoms swayed in balmy air;  
Thy voice, a minstrel inspiration woke,  
As floats its echoes down the aisles of prayer.

Clothed in the majesty of thine alone,  
In dimless glory shines thy crown of light.  
The chill damps of the misty tomb, O life,  
Ne'er touched thy gleaming robes of spotless white.  
No shadows linger e'er to veil or mar  
Thy radiant form, in symmetry complete,  
Love, from grief, tears the sable pall of fear,  
And at thy bidding, casts it at her feet.

We view thee as an angel form of light,  
Enrobed in vestments of immortal bliss,  
And through the cloud-wreaths, view thee gleaming bright  
Transfigured in thy perfect loveliness.  
Conferring but the boon, perpetual youth,  
That knows no blight, no withering or decay;  
As fresh, as bright, in emerald unfold  
The buds of springtide to the west wind's play.

The conflict ceased, the victory is won,  
The struggling force with force is done,—'tis o'er.  
The spirit greets the cheerful morning light,  
And of earth's gloom and sorrow, knows no more.  
For, mounting upward from earth's din and strife,  
Disrobed but of its brief mortality,  
Its gladsome song through arched-dome portals rung,  
'Tis spirit life and breath,—'tis victory!

## In the Custom House

Grant Mahan

I HAD traveled a good many thousand miles before I knew that there was such an institution as a custom house, for I had had no occasion to go outside of our own country and knew nothing of the method of collecting import duties. But since then we have crossed several borders and submitted to an examination of our belongings. There is all the difference in the world between the examiners. Some are very courteous and others are exactly the opposite; and of course some are much more thorough in their work than others are. We have found those at the ports of entry to our own country as thorough as those of any country we have been in.

middle of September, but it was the close of October before they were released. Our second shipment reached the same port five weeks ago and as yet we have no idea when they will be released. By staying with his goods and paying men to shove them along without thorough examination one might make better time, report says, but that I should not like to do. We have done without the things for so long that we do not miss them so much.

There has been improvement, however. Those who were here under Spanish rule, and have remained, say there is a great change for the better. Formerly if a foreigner wanted to get his goods through in any-

Custom House at Santiago de Cuba.

Some of them seem to enjoy bothering people as much as possible, and their experience has taught them what persons are most easily confused. We remember one old gentleman who was made to take everything out of his large valise. His own nervousness was the cause. None have ever appeared to us to be discourteous or inclined to make more trouble for us than was necessary.

But going through the custom house with trunks and valises is something quite different from taking freight through. The latter experience we never had until we came to Cuba; and if it is the same everywhere we do not care to take many goods to any other foreign land. Here it takes so long. Some say the time can be shortened considerably by giving liberal tips, but as to that I can say nothing from personal experience. A brief account of how things have gone with us may not be out of place. Our first shipment of goods reached Santiago de Cuba a little after the

thing like reasonable time he had to come down liberally with tips. One large importer had a regular scale of prices for those through whose hands his goods passed, and the higher the position of the official the more had to be paid to him. And woe to the importer who had missed one man, for that one would block the whole business. When money was being passed around, no one who had any claim at all to it wanted to be missed. The tipping system is generally corrupting. It leads men to do dishonest things in order that they may get more liberal tips; and the man who, under such conditions, gives the tip is really worse than the one who receives it.

And sometimes the custom house officials are exceedingly stupid. An American in business imported some rubber tires. The bill of lading came, stating that the goods were coming by a certain ship. But across the face of it was written that there was no room for them on the ship, and they would follow on

the next one, which they did. Then the importer took his bill of lading and went to the custom house. There the bill of lading for the ship on which the goods came, or the goods on the ship named in the bill of lading, was demanded. It was, of course, impossible to do what was asked; and the statement on the bill of lading had no effect. The matter was taken up with the American consul, but even he was unable to make the officials see the reasonableness of the man's request for his rubber tires. It was dragged along for three weeks. Finally the consul went to the chief at the custom house and told him the goods must be delivered at once or the matter would be taken up with the authorities at Havana. And this threat had the desired effect, the goods being delivered the next day. Liberal tipping might have prevented the delay. We may have our opinions, but we cannot know as to that, though we do know that tips are gladly received.

Other instances might be given, but these will show pretty well how things have been and are so far as the custom house is concerned. There is still room for improvement, and we hope it will be made in the near future. Honesty and efficiency should be required of every man in the service, and the man who receives a tip should be dismissed immediately. These men are paid by the government and should be punished for showing favors for money or withholding justice from the man who refuses to try to corrupt them. But there is sure to be some crookedness in any considerable body of men, and the only thing to do is to be on the watch for it and inflict penalties on the guilty. There should also be a way to punish those who attempt to smuggle. It is strange what the consciences of some people will allow them to do when they are traveling from one country. They think it no sin to steal from the government. They are morally deficient even though their names are on the church book and they are held up as examples.

It would be much pleasanter if we could travel from one country to another and not be under obligation to unpack our belongings; but so long as a large part of the revenue of many countries is derived from import duties we can hardly expect to travel without these interruptions. And, moreover, it is possibly a good thing that there are some unpleasant things about traveling, for if there were not we might have too many people traveling all the time. We have no quarrel with the custom house except when goods are held an unreasonable time. A way should be found to make the officials examine goods in the order they are received.

*Omaja, Cuba.*

. The man who never smiles is a walking protest against the goodness of God.

### THE VIOLET.

JOHN H. NOWLAN.

The April showers  
Awoke the flowers  
In nook and cranny sleeping,  
From many a plain  
In the fields of grain  
The flowers then were peeping.

The meadows were bright  
With the blossoms white  
Above the bright green showing.  
While the breezes fell  
On the little dell  
Where treasures rare were blowing

I found a flower  
In a little bower—  
In quiet nook so shady.  
The violet blue  
So modest and true,  
So like a little lady.

The blue from the sky  
In her gentle eye  
Among the green was hiding.  
With a gentle grace  
She sat in her place,  
So loving and confiding.

Then I left the spot,  
But never forgot  
That fondest, dearest treasure;  
But left her alone  
By a large red stone  
To give another pleasure.

### DRUNKENNESS COMPARED WITH OTHER EXPENSES.

THE following expense items give a fair idea of the necessary and unnecessary outlay of money per annum:

Births cost \$225,000,000.  
Marriages cost \$300,000,000.  
Burials cost \$600,000,000.  
Drunkenness costs \$1,744,447,000.

One and one-half times as much money is spent for rum as is spent for births, marriages and burials, all combined, and six times as much as is spent for our public schools and eight times as much as is spent for preaching the Gospel.

**A WISE MEMBER OF THE FAMILY.**

NICK, a thirty-year-old horse owned by Earl Thayer, of Billingham, Mass., performs his daily round of duties with an intelligence which indicates the possession of something very much like reasoning power, and more thoughtfulness than some boys, for he never forgets.

At six o'clock every week-day morning, Nick is harnessed to a buggy and, with the reins tied to the dash, he trots down the road without a driver, to a certain house where he stops, turns the wagon on the lock and waits. Presently, a young lady comes from the house, and as soon as she is seated Nick, without guidance, trots off to the railway station a half mile distant, where he brings the wagon to the platform, turns the wheel and stops. As soon as his passenger alights, Nick trots back to his own stable and waits for his master to free him from the wagon. When he needs new shoes he goes alone to the blacksmith for them. His fame has spread throughout the community.

**A STRANGE WILL.**

The following beautiful and pathetic lines, appearing in Lippincott's for March, were the only possessions of an insane lawyer who died some years ago in the ward for the insane at the Chicago poor-house, where, after his death, they were found in his ragged coat. Some members of the Chicago Bar Association came into possession of the paper, and the Association passed a resolution ordering the probate of the strange will, and it was probated in due form and spread upon the records of Cook County, Illinois. Mr. Jesse B. Roote, of the Butte, Montana, bar, while in Chicago, copied the record.

I, CHARLES LOUNSBERRY, being of sound and disposing mind and memory, do hereby make and publish this my last will and testament, in order, as justly as may be, to distribute my interest in the world among succeeding men.

That part of my interests which is known in law and recognized in the sheep-bound volumes as my property, being inconsiderable and of none account, I make no disposition of in this my will. My right to live, being but a life estate, is not at my disposal, but, these things excepted, all else in the world I now proceed to devise and bequeath.

Item: I give to good fathers and mothers, in trust for their children, all good little words of praise and encouragement and all quaint pet names and endearments, and I charge said parents to use them justly, but generously, as the needs of their children shall require.

Item: I leave to children inclusively, but only for the term of their childhood, all and every the flowers of the fields and the blossoms of the woods, with the right to play among them freely according to the customs of children, warning them at the same time against thistles and thorns. And I devise to children the banks of the brooks and the golden sands beneath the waters thereof, and the odors of the willows that

dip therein, and the white clouds that float high over the giant trees.

And I leave the children the long, long days to be merry in, in a thousand ways, and the night and the train of the Milky Way to wonder at, but subject, nevertheless, to the rights hereinafter given to lovers.

Item: I devise to boys, jointly, all the useful, idle fields and commons where ball may be played, all pleasant waters where one may swim, all snow-clad hills where one may coast, and all streams and ponds where one may fish, or where, when grim winter comes, one may skate, to hold the same for the period of their boyhood. And all meadows, with the clover blossoms and butterflies thereof; the woods with their appurtenances; the squirrels and the birds and echoes and strange noises, and all distant places which may be visited, together with the adventures there found. And I give to said boys each his own place at the fireside at night, with all pictures that may be seen in the burning wood, to enjoy without let or hindrance and without any incumbrance or care.

Item: To lovers I devise their imaginary world, with whatever they may need, as the stars of the sky, the red roses by the wall, the bloom of the hawthorn, the sweet strains of music, and aught else they may desire to figure to each other the lastingness and beauty of their love.

Item: To young men jointly, I devise and bequeath all boisterous, inspiring sports of rivalry, and I give to them the disdain of weakness, and undaunted confidence in their own strength. Though they are rude, I leave to them the power to make lasting friendships and of possessing companions, and to them exclusively, I give all merry songs and grave choruses to sing with lusty voices.

Item: And to those who are no longer children or youths or lovers, I leave memory; and bequeath to them the volumes of the poems of Burns and Shakespeare and of other poets, if there be others, to the end that they may live the old days over again, freely and fully without tithe or diminution.

Item: To our loved ones with snowy crowns, I bequeath the happiness of old age, the love and gratitude of their children until they fall asleep.

**THE FUGITING OF OLD TEMPUS.**

WE have reached another equinox, and from now for six months the day will have the long end of it. How fast speed the days, weeks, seasons, years—especially as we "grow older" and look back more and more, instead of ever to the future as the young are apt to do.

"Like a flash of the lightning, a break of the wave,  
Man passes from life to his rest in the grave."

Many people look upon this quick passage of time with dissatisfaction and regret, but in the well-ordered life no process of nature—not even death—need be

feared. If life seems to pass rapidly it is because we are busy, and let us be thankful that we are not of the unfortunate "leisure class," on whose hands time hangs so heavily that they have to invent the silliest and most inconsequential fads to occupy their poor little minds. If living is a burden and death a dread, be assured it is because the laws of life have been broken and Nature is taking her revenge.

If we fill our lives with the things that are worth while there will be no room for idle regrets or vain anticipations. There awaits our doing ten thousand times more than we could ever accomplish if we lived to the age of Methuselah. Our utmost is not much, but it is enough. And when the end comes and we are sent on we can rest easy in the consciousness that we did our part toward redeeming the world by honest work. If the years rush by so fast that we can scarcely keep account of them, so much the better, provided we are using those years to good purpose. But if we are working for the sake of money, or public notice, or to see how little we can give in return for what we receive, or are wasting our time on activities which do not minister to man's betterment, then woe to us indeed.

Life ought to be pleasant; if it is not pleasant the trouble is in ourselves and it is on us to readjust our manner of living without losing another hour. There is a right way for every one of us and we must find it. But as for clinging to life—that is morbid and wrong, and if we find ourselves running to seed along this line it is a sign that we need something more real to busy ourselves about. It is necessary to greatly overwork some people to keep them out of mischief.  
—*The Pathfinder.*

### THE COUNTRY SCHOOLHOUSE AND ITS ENVIRONS.

WHEN a new schoolhouse is to be built in a rural district, it is too often the case that it is located where the cheapest spot of ground can be had. A quarter of an acre of ground might raise four or five bushels of wheat a year, which might sell for three or four dollars. It appears to some a question whether such valuable property should be devoted to the use of the children. To such it seems much cheaper to plant the schoolhouse in a swamp, on a sandhill, or a treeless waste. But it should be remembered that an attractive schoolground will do much more than a wheat crop to keep the child on the farm. In many a country child there is born an antipathy to the farm life before he is old enough to reason the subject. The surroundings of the child are much more potent than is generally supposed in fixing his ideas of life.

Not only should the location of the schoolhouse be pleasant and inspiring, but the building itself should harmonize with the child's love of the beautiful. The

ordinary country schoolhouse in years gone by has been little more than a box.

Intelligent managers of the most progressive railway companies are more and more building truly beautiful stations and surrounding them with artistically laid out parks with flower beds, vines, shrubs, trees, etc., even though they may accommodate no more people than with ugly structures and unkept grounds. The great transportation companies would not make large expenditures for such purposes if they did not find it profitable to do so. Such being true, will it not pay the people of every school district to adopt a similar policy with reference to their school and its environs? Indeed, how much more should it be considered important to provide attractive conditions during that period in the lives of our children when they are the most impressible and responsive to the influence of environment.

When the sanitary, artistic, and moral possibilities of such an improvement can be once understood by the patrons of a school, the whole neighborhood can be enlisted to bring about the change.

The teacher must usually take the initiative in improving the surroundings of the school building. It may often be necessary to develop the sentiment of the community in favor of betterment before he can secure sufficient coöperation. But in every neighborhood there are a few persons whose influence may be effectively enlisted. When these few are sufficiently interested, a "bee" may be organized for improving the school grounds. One man will repair the fence, or remove it if not needed; another will plow the ground, if that is necessary; another will sow the seed for a new sod, and still others will bring trees and bushes for ornament and shade. The whole work may be done in a day, if properly planned. Most persons begin such work without a fundamental plan or picture of what is to be desired. They want to know about roses and lilacs, and how much space to leave between the shrubs and plots of flowers; and then put them in promiscuously or else with mathematical precision in any part of the school ground. The result of such aimless planting is stiff, artificial, and unpleasing.

First, then, have a definite plan. "Begin with the plan, not with the plants." And the plan should have reference to the proper uses of a school ground. The middle of the plot should be open, allowing room for the sports and exercises so necessary to good physical development in children. The side next to the highway should also be left open. The schoolhouse should be the center of a beautiful picture in landscape gardening.

Regard must be had not only to the picture which the house and grounds present to an observer from the outside, but also from the inside. "All schools should be located, as far as possible, where the eye will rest

upon the things of nature instead of clusters of houses." Leave openings in your foliage plan wherever distant views can be had of fine old trees, hills, a lake, or a handsome farm house. Such influences as these appeal not only to the child's sense of proportion and beauty but minister also to the right development of his moral character.

Blessed is the boy or girl who is born in the country, or at least has the opportunity of learning the lessons of youth in a pleasant country schoolhouse. Duty may call older persons to the city, and the trained, devoted mind may find God in the city, too; but the ideal place for children is in closest contact with Nature. Yet the average country boy or girl is not always inspired with the highest ideals; it requires refined tastes in parents and teacher and a love for the beautiful to make even natural advantages impressive and effective in character-making. These results do not come of themselves, but must be cultivated.

After the school ground has been properly platted and bordered with shade trees, attention should be given to ornamenting with shrubs and flowering plants; but nothing is more attractive than a strong-growing green sod on the areas not needed for playgrounds.

In the selection of shrubs and trees, only the most common should be planted, as they will be the most certain to live and thrive. The most ordinary shrubs and bushes when carefully placed in a school ground will give it a beauty that would delight the eye and heart of a city-bred boy or girl. Willows, witch-hazel, dogwood, sweetbriar, thorn-apple, elders, sumac, and many others may be found in almost any rural locality. Others can easily be added from the farmer's garden and orchard. Along the fences and the walls of outbuildings running vines may be used to excellent advantage.

The heart of child and man has been made responsive to the sweet influences of Nature and learns to look through Nature up to the great Author of all Nature. Surround our children with an environment that is beautifying and uplifting, and we have furnished them with the strongest support and incentive to the highest mental and moral development.—*Prof. Frank William Howe.*

#### THE NEW ARBITRATION TREATIES.

THE failure of The Hague Conference to agree upon a general treaty of obligatory arbitration has not seriously interfered with the steady progress of the movement for the general application, under treaty stipulation, of arbitration to the settlement of controversies between nations. Under the circumstances, of course, the movement is forced still to make its way in a fragmentary and irregular manner. But it goes forward, nevertheless, under the impulsion of its own previously acquired momentum, and there

is not the least reason to doubt that it will reach its consummation in due time. Indeed, it has already won its case, and any further question about it is one of detail only.

The new treaty with France, negotiated by Secretary Root, was ratified by the United States Senate, in secret session, on February 19. In an interview with the Senate Committee on Foreign Relations, Mr. Root stated that the government with whom Secretary Hay had signed treaties—the treaties which failed to go into effect because of disagreement between the President and the Senate—had consented to change them so as to meet the views of the Senate. All these modified treaties will, then, shortly be sent to the Senate for ratification, and it is understood that Secretary Root will negotiate similar treaties with the other nations. The President has, of course, waived objection to the Senate's point of view, as otherwise no treaties could be concluded.

The substance of the treaty with France is contained in the following articles:

"Differences which may arise of a legal nature or relating to the interpretation of treaties existing between the two contracting parties, and which it may not have been possible to settle by diplomacy, shall be referred to the Permanent Court of Arbitration established at The Hague by the Convention of July 29, 1899, provided nevertheless, that they do not affect the vital interest, the independence or the honor of the two contracting States and do not concern the interest of third parties.

"In each individual case the high contracting parties, before appealing to the Permanent Court of Arbitration, shall conclude a special agreement defining clearly the matter in dispute, the scope of the powers of the arbitrators and the periods to be fixed for the formation of the arbitral tribunal and the several stages of the procedure. It is understood that on the part of the United States such special agreements will be made by the President of the United States, by and with the advice and consent of the Senate, and on the part of France they will be subject to the procedure required by the constitutional laws of France."

At first thought it may appear that little is gained by such a treaty, which is only a general agreement to make a special agreement to submit to arbitration certain kinds of controversy that may arise. But in reality it has great moral force. It is a public pledge on the part of the whole nation, through the treaty-making power, to submit certain of its controversies with the other power to the International Court of Arbitration which it has assisted in creating. The fact that the submission will have to be passed upon by the Senate as well as the President is not likely to change the ultimate result, except in the remotest possible contingency.—*Advocate of Peace.*

## CURRENT COMMENTS

The three hundredth anniversary of the landing of Champlain at Quebec is to be celebrated by a week of pageantry and ceremony next July. The Prince of Wales is coming over with a fleet of sixteen warships. French and American vessels will be on hand, also, and representatives are expected from all the English colonies. Especial emphasis is to be laid on the idea of the empire; and not only the British government, but the colonies are asked to contribute to the \$2,000,000 expenses of the celebration.

The even hand of justice is scarcely apparent in the news from Toledo that three members of the Ice Trust convicted for their crime and sentenced to six months' imprisonment have been released after serving only thirty-seven days, because their business was suffering and their families needed their presence. Perhaps the release of the criminals was justifiable, but we do not remember hearing of burglars or pickpockets being released for such "sentimental" reasons. The men who raise the price of ice, thus depriving the poor of what is often a necessity, show very little consideration for the sufferings of the families of others.

In connection with the exhibition of the results of congestion in New York City, some very disagreeable stories of child labor have appeared in the papers. One settlement worker told of a child of four years, who had been required by her mother to sew buttons on trousers. She was hardly old enough to understand what was required of her before she was perched cross-legged on a chair to work. There she sat ten hours or more each day until she was eight years old. Then it was found that as a result of sitting so long in this cramped and unnatural position she could not walk, and an operation had to be performed before she could do so. A good many of our "bargin" stores make their profits out of such labor.

The idea of the old age pension is spreading from Europe to this country. At Albany the Ways and Means Committee are said to be favorable to reporting a bill which provides for a pension of \$144 a year for all persons over sixty years of age who are incapacitated and have no income. The conditions are that they have lived in the State twenty-five years, have not been convicted of a crime, have never deserted their wives and have supported their children up to the age of fourteen.

Reports continue to come in concerning the outrages of the "night riders" of Kentucky, who are fighting the "Tobacco" Trust and every tobacco raiser suspected of being willing to sell to it. The Society of Equity, which is suspected of complicity with the raiders, strenuously denies the charge and in some cases is offering rewards for the arrest and conviction of the night riders. Claude Williams, president of the Woodford County branch of the society, has offered rewards of \$250 for anyone burning tobacco barns, \$250 for anyone participating in night riding, \$125 for anyone scraping or salting tobacco beds, \$125 for anyone maiming or killing horses or cattle, and \$125 for posting or sending threatening letters.

Woodrow Wilson of Princeton, the other day was reported to have said that where women have the ballot very few of them vote. The College Equal Suffrage League of Massachusetts took up the matter and passed a resolution calling President Wilson's attention, "to the fact that the Colorado Secretary of State says eighty per cent of Colorado women register and about seventy-two per cent vote. The Wyoming Secretary of State says ninety per cent of the women in Wyoming vote, and the Chief Justice of Idaho and all the Justices of the State Supreme Court have signed a statement that "the large vote cast by the women establishes the fact that they take a lively interest." In Australia at the last Federal election 628,235 men voted and 431,033 women.

### Convictions in the Pennsylvania Capitol Case.

The whole country was glad to hear recently that four of the men accused of conspiracy to defraud the State in the Pennsylvania Capitol cases had been found guilty. That Pennsylvania had been to all practical intents robbed right and left in the furnishing of the Capitol there was, of course, no doubt. A contract which was to have cost the State \$800,000 cost \$5,487,899. John H. Sanderson, the contractor, is supposed to have cleared between four and five million dollars, though what became of all this sum is not known. The only question was whether the State could prove conspiracy. The particular case just concluded was connected with a bill of \$50,000 for tables, chairs, sofas, and clothes trees, on which fraud of \$19,000 was alleged. The men convicted were J. H. Sanderson, contractor; William P. Snyder, ex-Attorney General; W. L. Mathues, ex-State Treasurer, and James M. Shumaker, ex-Superintendent of Public Buildings and Grounds. The testimony produced during the trial was in good part technical, but was occasionally enlivened by accounts of the immense sums of money charged for chairs, tables, and so on. The fact that more than three million dollars was hurriedly paid to Sanderson before the installation of Berry, the reform treasurer, was again brought out. The way bills showed that furniture reached Harrisburg in some cases six months after it had been paid for as received. Former Governor Pennypacker testified for the defense. He is generally considered to be honest but deluded. The present is only the first of thirty-eight cases connected with the scandal. The next case is for alleged fraud on the part of Joseph M. Huston, the architect; Congressman H. Burd Cassel, of the Pennsylvania Construction Company; ex-Auditor General Snyder, ex-State Treasurer Mathues, ex-Superintendent Shumaker and Traveling Auditor Frank Irvine. The men just convicted have petitioned for a re-trial. The news from California that the Supreme Court of that State has affirmed the decision of the inferior court that the convictions of Ruef and Schmitz are not legal warns the country not to be too sure of the result of the appeal of the Pennsylvania grafters.

### The English Education Bill.

One of the principal elements in the great Liberal triumph in the English elections two years ago was the objection of the Nonconformists to the Education law passed by the Unionists in 1902, under which denominational schools giving denominational teaching were supported by the rates—that is, local taxation. That law was met by the passive resistance of many Nonconformists, Free churchmen, who suffered themselves to go to

jail and have their goods sold at auction rather than pay a tax contrary to their conscience. The first bill introduced by the present government to remedy the wrong in Mr. Balfour's school law was defeated in the House of Lords. Mr. McKenna who has succeeded Mr. Birrell as Minister of Education, last month introduced a new education bill. To explain the bill some history of English common school education is necessary. Elementary education has not been almost exclusively provided by the state in England as with us. A large proportion of the schools have been started by churches, a great many by the Anglicans, in smaller numbers by the Roman Catholics and the Wesleyans. Mr. Forster's education act of 1870 founded secular schools like those in our country, the so-called councils schools, but also gave grants to the so-called voluntary schools, which were generally denominational, and compelled parents, whatever their religious belief, to send their children to these schools in parishes where there was no other school. As we have said, Mr. Balfour's law of 1902 went much farther and compelled the tax-payers to support their denominational schools.

#### Mr. McKenna's Bill.

Mr. McKenna's new bill provides that only undenominational schools shall be supported by public taxation in single school parishes. The trustees of any school which is handed over to the local education authority may require that such religious instruction be given in the school as is provided for by the London County Council syllabus, and may have the use of the school free on Saturdays and Sundays. In the case of single school parishes they may have the use of the school for religious instructions before or after regular school hours. The bill abolishes religious tests in public schools. It provides that in parishes having more than one school parliamentary grants not to exceed forty-seven shillings per child may be given to denominational schools which have thirty or more pupils and come up to the standard required by the Board of Education. The parliamentary grant under the proposed law would be from four to six shillings greater per child than at present. The bill appears to be generally accepted by Nonconformists as fair. It will be opposed by Catholics and conservative Anglicans and is likely to run against a snag in the House of Lords.

#### Ashamed of His Record.

At least one Congressman on the Judiciary Committee of the House is now ashamed of the attitude that he took during the hearings on the proposed legislation relating to the interstate shipments of intoxicating liquors. The Congressman is DeAlva S. Alexander of New York. In his desire to have his attitude concealed he has even resorted to a mutilation of the record.

During one of the hearings on the proposed legislation, while Matthew E. O'Brien, of Bridgeport, Conn., Congressional representative of the National Prohibition committee, was making his argument, Mr. Alexander interrupted with a fusillade of questions which were promptly answered by Mr. O'Brien and in a way that did not suit the Congressman.

One of Mr. O'Brien's replies was, "I am sufficiently intelligent to know what is right." This nettled the Congressman and four whole pages of typewritten dialog ensued in which the Congressman who had started in with the determination of rattling the prohibition advocate came out second best. He finally gave up the at-

tempt to put the speaker in a false light and informed Mr. O'Brien that he could proceed with his argument.

After the stenographic notes had been transcribed Mr. Alexander went to the clerk of the committee and struck out the dialog from the record by crossing a pencil through it. Mr. O'Brien learned of this and entered a protest. He said he did not wish any one to write his argument or to edit it.

Chairman Jenkins of the committee ordered the matter stricken out by Congressman Alexander restored and this was supposed to end the incident, but Mr. Alexander and Mr. O'Brien met and the Congressman said that the questions he had asked were immaterial and he wished to withdraw them from the record. Mr. O'Brien replied that his answers were part of his argument and that he wished them printed in the record and would protest if they were not. Then Mr. Alexander said he would withdraw the questions and leave the answers.

At the next meeting of the full committee Mr. O'Brien appeared and said he wished to make a supplemental statement which he was allowed to do and he made it in this fashion. "The other day I appeared before the committee and during the argument made by me I was interrupted by Mr. Alexander of New York who asked numerous questions. He is now evidently ashamed of the questions that he asked and wants them withdrawn from the record, leaving my answers. This will make my statement read disconnectedly and I wish this statement to go into the record so that the reader will know why this disconnection occurred. Mr. Alexander now says that his questions were immaterial. If they were, why did he ask them? I think that the stenographic report should go in the record but if that is not to be I want something to go in to show why my remarks do not read smoothly."

Mr. Littlefield said, "Your statement now will make the matter clear in the record," and the incident was supposed by every one to be closed, but a week later Mr. O'Brien learned that the pages containing his dialog with Mr. Alexander had been torn from the record.

The prohibition advocate then made an appeal to his Connecticut Congressman to see that his remarks were printed as delivered and that the record give a verbatim report of the proceedings and not such report of them as the Congressman from New York desired. He secured from the stenographer a transcript of his remarks and supplied the missing pages and if they do not appear in the record several members will protest on the floor of the House.

#### A Murderous Weapon.

A new invention in the line of death-dealing instruments is to make its appearance soon at the Sandy Hook, N. J., proving grounds. The gun is mounted on an automobile having a speed of sixty miles per hour. It discharges two million bullets an hour. No powder nor other explosive nor compressed air is used. No shells are required. It makes no noise, no smoke, no flash, no report. There is no recoil. The gun never gets heated; it cannot explode. Two men can operate it. The velocity of projectiles is 3,000 feet per second. Ten guns firing 20,000,000 shots an hour would wipe out an army of 200,000 inside of sixty minutes, if one per cent of the missiles hit men. This may harmonize very well with twentieth century inventions, but how does it sound for twentieth century civilization? It is to be hoped that in the test the gun may fail to make good, for who could rejoice in the success of such an instrument of death?

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## IMPERFECT JUDGMENTS.

It seems to be common for the disqualified to want to judge and condemn their superiors. A man who labored all his life without accumulating any fortune, either money or intellect, was working for another man who had accumulated much and was continually increasing his wealth. The poor man was always criticising the rich man's poor judgment in making investments. It was common for him to tell the neighbors that the rich man had made another financial mistake altho year after year the rich man's calculations made a showing while the other man's judgment did not.

People with a smattering of medicine often condemn the treatment which some broad-minded doctor, ripened by experience, is giving some one. He has struck the substratum in his science, has correlated facts and knows the relations and interdependence of his drugs and the response which the human system will yield. One such case we saw. A doctor of this latter class said to a friend that in three weeks a certain one of his patients would die. On that very day she died. This doctor knew her system and the progress of the disease and acted accordingly altho some younger and less experienced doctors came in and laughed at the folly of the old man in giving up his patient. Their fun was great only while it lasted.

We used to notice some upstarts in language among teachers when we were teaching school. Some linguists among our institute lecturers made and unmade grammatical rules to fit the occasion. They knew that other men had first prescribed the present set of rules and that accepted usage was the only authority for continuing the use of certain rules of speech. They had mastered the grammar of several languages and knew the advantages and disadvantages of each language, and knew where our own could be benefited and strengthened. They composed sentences in such forms and with such words as expressed the concept

which the mind had at the time of utterance. To all of this the little fellow who had gone thru two or three English grammars turned up his nose in holy horror at the supposed blunders which the lecturer was making.

It is worth something to get over and forever past that dependent stage where you only know what some set of rules has decreed. Shakespeare made usage for the English world instead of accepting it. He gave little attention to rules. We have adopted his forms at present and most people think it a blunder to vary from such classical writers. Milton spelled words to please his own taste regardless of lexicographers. Poets have a license to omit letters and break the meter when they please. The phonetic spelling committee are being severely ridiculed by some editors for introducing phonetic spelling. These editors do not know that many of our silent letters are of recent birth and were mere affectations when introduced. It is another illustration of how narrow-minded people cry down and destroy if possible the work of their superiors.

The old saying,

"To be very wise and know it, is a pleasant thing no doubt,

But when young folks talk to old folks they should know what they're about,"

is true in morals as well as everywhere else. It was our privilege a few years back to trace back thru history the modern claims that the Christian world was all terrorized in the year 1,000 A. D., because they expected the world to come to an end at that date.

This has been taught prolifically for a few hundred years and we had a few combats with would-be scholars about the point named, but when the original source was found it warranted no such teaching. Indeed there is a painful absence of such teaching in the writings of scholars around the date 1,000 A. D. Later writers concocted the dramatic thot and others have swallowed it thotlessly and repeated it until modern literature is full of the error.

We want to urge the use of original sources as the basis for our belief and speech. Modern church conferences do not make the religion of Jesus Christ, and his religion will remain right when all the churches say it is wrong. We caution against quickly discounting another's ability and fitness or authority. Some people think Webster's dictionary is infallible, and, yet, when a man who knows the root and growth of English goes thru Webster, he finds errors and inconsistencies abounding, but Webster's dictionary is not invalid because of these errors. It only serves to show the variation among best authorities and the right which a scholar has to use some latitude in his choice of words.

To any one who has spent years in comparing Latin, Greek, German and French and knows the growth of

English forms, there are latitudes that the academic man knows nothing about, and cannot learn on the spur of the moment. The one thing he can do is to continue howling—but it is at his *own* weakness.

#### WORD FROM CARRIE A. NATION.

WE present our readers, this week, with a letter from Carrie Nation, accompanied with her photograph. She publishes a monthly paper at Washington, D. C., which is brimful of energy. It is called the *Hatchet*. Whatever people may say about her bold way of combating saloons, everybody admits her sincerity. When she began her notorious work of smashing saloons with a hatchet in Wichita, Kansas, a few years ago, many people abroad thot it was the result of a disordered mind, but such was not the case. The state laws of Kansas prohibited saloons, but no man, nor society, nor official would raise his finger to cleanse Wichita of her debauched saloon element and the social evil which was burning up the character and manhood of the rising generation. It was during such a moral fire as this, after others laughed and refused to act, that Carrie Nation went single-handed into the saloons of the city and smashed their belongings.

Such a course set people to thinking and they thot until the tide rose high enough that they cleansed Wichita by a vote of the people.

Passivity may be a virtue at times, but it is also a Christian duty to denounce wrong and evil. Carrie Nation is fearless in her denunciation of any wrong. Her list of evils which she combats includes the following: The license saloon, the social evil, divorce and remarriage, freemasonry and kindred lodges, tobacco and cigarets, heathenish dressing and infanticide by women.

She is a firm believer in the teachings of the Bible. She was recently arrested and imprisoned in the workhouse at Washington, D. C., for preaching on the steps of the postoffice in that city. The judge offered to recall his decision if she would promise to quit exposing the sins of the legislators at the national capital, but Mrs. Nation would give up her head quicker than give up the message which she claims the Bible has for this age. Friends soon contributed the money which bought her freedom and now she is traveling and writing continually in the interest of righteousness.

It is not often that such a woman comes before the public, and Carrie Nation will have more genuine friends after she is dead a few years than she has now. The history of old John Brown is likely to be repeated in her case.

Could everybody think and do right at all times—yes, if all the professing Christians would vote their convictions—then such upheavals and unpleasant

episodes as Carrie Nation's life represents would be unnecessary. Always stand for the right.

#### A CHANCE AT THE FOE.

SOME of our readers may wonder why we give so much space to temperance matter of various kinds since, perhaps without exception, those to whom the magazine goes are already fully converted to the cause. The reason is this: Since the passage of local option laws in a number of States the issue has been presented to the people freed from any of the features that heretofore may have made it objectionable. It is no longer a political question. Any one can throw himself into the thick of the fight without becoming besmirched in any way with the corruption of politics. The question stands alone. Will you have the saloon with all the evil which it brings to your neighbor and with which it threatens you and yours? For a long time you have been *thinking* on the right side of this question, now is the time to *act* on the right side. This is why we talk temperance to you, to get you to make use of the right vouchsafed to every citizen of this land of the free and home of the brave, that our freedom may no more be threatened by the rum curse, and that our bravery may no longer be in question.

#### ANSWERS TO THE QUESTIONS ARE WANTED FOR THE INGLENOOK.

A MODEL Farm Kitchen.

How to Keep the Young Folks on the Farm.

How to Grow Old in Good Health and Happiness.

How I solved the Hired Girl Problem.

A Woman's Pin-Money. (How to earn it.)

How to be Happy Though Unmarried.

How to be Popular.

Courtship.

#### HOW STRANGE.

ONE of our old and valuable contributors has asked us to publish an illustrated article on The Hague Tribunal as a counterpart to the article we published on the American Navy some time ago. We are glad to confess that quite a while before we published the article on the navy, we solicited parties who have outwardly professed to be adherents to peace principles for a few articles on peace. We received nothing from them and then solicited some peace adherents who attended The Hague Court, but up to date we have not received a line favoring peace.

We must confess our own disappointment in the matter, for we have longed for a brilliant write-up of this world-wide question. We hope this will answer all inquiries why we gave so much information about the navy and nothing in favor of peace. Perhaps the good news will be given yet. We, ourselves, are supplying a little matter in favor of peace as we go along.

## Reverence

Catharine Beery Van Dyke

Is corn to grow by method and character by caprice?—Henry Drummond.

WE have but to drop into church sometime, somewhere, take a back seat and use our observation to be convinced of the need of teaching to our children the virtue of reverence. It is the lamentable cry of so many congregations of religious worshipers that the young people lack reverence. The trouble with this matter, as with some others relating to the best interests of our children, is that we do not think much about it till we detect the lack of it. By that time the most propitious opportunities for teaching it have passed, for the virtues are not to be attached to us as ornaments but must be infused into our characters from very early life.

Froebel interprets religion to be the endeavor to get and ever hold fast *union with God*. Now it is a discoverable fact that when children are growing into a knowledge of their distinct selves and their surroundings this is the time—the easiest and best time—to put into their thoughts and actions the principles of righteous instruction. Improved, at this time, the weaknesses and backslidings which attend human experiences will be more readily overcome and it will be easier to “keep union.” Neglected at this point, it will be hard indeed to “get union with God.”

Froebel adds: “We do not even live up to our own professions. We profess to be the sons of God and are not yet true children of our own parents. God is said to be our Father and we are far from being true fathers to our own children. We aim to see the divine and we leave uncared for the human which leads to it.” I gather from this that in order to teach reverence for religion and religious things—reverence for God—we must also establish in our children, when they are very young, respect for human friends and for themselves. Two extremes are to be shunned here: The depreciation of human friendship; and the too confidential or sentimental or familiar relations with others. Children should not only be taught strict honesty and sincerity in their dealings with the “home folks,” but also to hold as sacred their engagements and dealings with their teachers, their school-

mates, their friends, and the parents of other children. Also they should be taught the *principle* of defending the aged, the very young, the poor and those afflicted in any visible way. They should be told in simple, sincere, earnest, everyday words the relation they bear to the church in all its departments of work.

Often children do *bad* things because they do not *know* any *good* things to do. If they are uninstructed by their parents, as so many children have been and are, they are left without rudder or guide except as their own undeveloped judgments guide or as their caprice governs them. These, in the very best-born children, are not adequate.

This state of moral disadvantage would be something like depriving each generation of all the discoveries, knowledge and improvements of past ages and requiring each generation or even individual to discover, learn and improve every thing and condition on his own responsibility. If he wanted salt, for instance, to season his food, let him discover the mine, dig it and use his own portion. If light or heat or electricity is needed, let him by personal experiments adapt these to his use according to the best methods he can work out. This seems ridiculous, but, soberly, is it not very like the hazardous condition we leave our children in when it regards their moral and spiritual education?

Oh, give the child a fair chance in these things, equal, at least, to the chance you are willing to give him in education, in social advancement or in a business career. Any parent that is worthy the name will see to it that the children learn to work; that they get an education; that they become fit to make a living in this world. Why not, with at least equal common sense, see to it that the children are prepared also in the higher branches, having acquired the equipment of a religious and spiritual life which not only illuminates the secular but is also a passport to the Life which evermore shall continue?

Many mothers are infatuated with motherhood, not because of the far-reaching and marvelous power that is given with it, but rather because of its being

the fruition of an instinct—the instinct that naturally accompanies every normal woman. A fruition that seems to call for some kind of expression or demonstration. So they *express* and *demonstrate* in ways, that to more thoughtful parents look quite foolish and silly.

To be clearer: I have heard some women say they would rather have girl babies than boys *because they can dress little girls so much nicer than boys and make them look so much prettier*. Some, looking a little deeper than the body, would make a preacher of this one, an artist of that, a musician of another and so on, while the greatest, grandest possibility of the state of motherhood is all uncomprehended. It is the possibility of motherhood, it is the power of motherhood, it is the responsibility of motherhood, in co-operation with fatherhood, to cultivate *souls* for the very highest that earth can give to them and, in return, receive from them, as *well* as to prepare them for heavenly citizenship!

With this momentous view of the case, what does it matter whether the baby wears a simple pink calico frock or a fine white silk mull with two or three edged ruffles and lace between? With this view of the case, should not all parents be aroused to a sense of dignity and concern, a sense of ambition and obligation sufficient to cause us to roll up our sleeves and go to work in real earnest on this problem of all problems, the proper rearing of our offspring?

Children are so constituted that they learn and form their habits more accurately from example than by precept. You do not need to say to the child: "I think more of your body than I do of your mind and soul," or "I think more of your body and mind than I do of your soul." You only need to act it out in neglecting the spiritual part and the child will know it,—know it better than if you told him so. On the other hand, if you sincerely strive for the highest spiritual development in your child, he will know that, too, and will in the depth of his heart feel little impulse to get away from the sweet power of such an atmosphere. The conclusion to be drawn from these statements is simply this: If our children show irreverence for sacred things the fault has been our own while the *loss* only is the children's. Do not think this statement harsh but *study* your own personal attitude toward your children. Is that attitude a communicative one? Are your relations mutually confidential and sympathetic? If you can answer these questions affirmatively your situation is not serious and you may with ease lead your child into a state of possessing at all times that sincere respect for all things respectable and that reverence for holy things that you desire him to have.

I cannot leave this subject without naming at least this one thing which I believe to be one of the strongest forces in generating or quickening this splendid

virtue if engaged in with special reference to this end. I also believe it to be incumbent upon every household, whether converted or unconverted. I refer to the duty of praying with and for our children and of teaching them the same exercise. Out of this the family altar is formed—a thing which every family has a right to have.

185 Hastings St., Chicago, Ill.

#### HOW AN ANGEL LOOKS.

Robin, holding his mother's hand,  
Says "Good night" to the big folks all,  
Throws some kisses from rosy lips,  
Laughs with glee through the lighted hall,  
Then in his own crib, warm and deep,  
Rob is tucked for a long night's sleep.

Gentle mother with fond caress  
Slips her hand through his soft, brown hair,  
Thinks of his fortune all unknown,  
Speaks aloud in an earnest prayer:  
"Holy angels, keep watch and ward,  
God's good angels, my baby guard!"

"Mamma, what is an angel like?"  
Asked the boy in a wondering tone;  
"How will they look if they come here,  
Watching me while I'm all alone?"  
Half with shrinking and fear spoke he;  
Answered the mother tenderly:

"Prettiest faces ever were known,  
Kindest voices and sweetest eyes;"  
Robin, waiting for nothing more,  
Cried with a look of pleased surprise,  
Love and trust in his eyes of blue.  
"I know, mamma they're just like you!"

—Household.

#### INVOLUTION AND EVOLUTION.

J. S. FLORY.

THE evolution of the "human form divine" from the earlier ages of the human race down to the present time is an interesting study. In the days of Samson and the days of the "giants" much attention was given to the animal and physical man. In the age of pyramid builders the brain casket was something like the pyramids in shape, strength below and less in build as we go up in our measurements. But now we have the heads of men and women more like the inverted pyramid, the largest part above—the upper story has widened out. Not so much now do we measure men from the pugilist's ring, as we do from the amount of intelligent grey matter in the head.

Yes, things have changed and from the "earthy" we have gotten up nearer the spiritual. We are glad to note this in the writers of the INGLENOOK and the kind of material our schools are turning out, showing the kind of work being done inside the walls of our institutions of learning. Before me lies a letter just received from one of the students of Mt. Morris Col-

lege. She says: "This is my fifth year and I enjoy my school work very much. It seems to me I am living in a different world since I have been in school. So many new things have opened up to me. Life means more to me than ever before. I don't get blue and discouraged so easily as I once did. The sun seems to shine brighter and the skies are clearer."

I knew her years ago when she did truly get the "blues." Why the change? Involution with her is all right and as a matter of fact evolution will be correct. There must be a high grade of involution before there can be an outward development along the higher ways of life. Intellect or knowledge is good, but the "principal thing" is wisdom, says Solomon. What a pity to posterity he did not sanctify that saying to his own personality. History repeats itself because mankind is human and the spiritual is not fully adhered to. "In the beginning God,"—yea, the infinite was first. Harmony prevailed and all was in accord with the universe. Happiness was the fruit of heaven and paradise bloomed in beauty.

"Eden's bliss when heaven was born  
The flaming sword where hell began."

We had a beginning. How was it? Did infinitude reign? Begotten of parents, were they begotten of God? Did they realize the sanctity of love, courtship, and marriage? Did they know what God's purpose was when he said, "The twain shall be one flesh"? Did they regard matrimony as a holy institution? Did they sanctify the home as a kingdom of heaven? A place to found a dominion and people it with the offspring of holy people to honor and glorify God? Did the involution of holy love become a factor in the prenatal existence of the begotten one? There are important questions to think about would we lay the foundation for an evolution of a great people, not great in stature, as great in perfection of health and high morality.

Can there be progress made where the involution is of a corrupt nature? Verily nay. Behold the great reservoirs of corrupt literature of the day, to say nothing of the contaminating nature of social intercourse. Environments of the rising generation are such that thinking people are often made to wonder "what shall the harvest be." Only quite recently I frequently passed an hour in one of those free library buildings built by that philanthropic millionaire, who is doing so much along these lines. At first glance it seems something magnanimous—and it may be—in many respects, but when I noticed as the schools were dismissed scores of students—mostly young girls—flocking in and carrying away—as a rule—trashy novels, I was made to wonder if there was not something to deplore in this line. The neglect of lessons and cultivation of a taste for questionable literature. I one time heard John B. Goff say in a lecture that when a certain pastor was called in to see a weeping mother

whose daughter had run away with a reprobate young man, in reply to her words, "I can't see why my daughter would do so. I was so careful in her bringing up," the pastor said as he glanced at the center table, "There, madam, is the answer to your remarks. It is true, there lies the Bible, but around it are enough novels to damn a thousand souls. She is simply carrying out what she learned from those books." Her life evolution was simply in harmony with what she had involved.

It is ever so. The Mormons know this, the Catholics know it. We should learn it anew if we want to keep our children in the line of true development. The time is about here when if our children of the Protestant faith are to be educated aright we must cut loose from the public school and have select schools or a different method of early education. The Bibles and all books having the name Christ in have been barred from the New York City schools and the same rule is obtaining favor in Chicago and all over the land:

Like begets like—as we sow we shall reap; therefore, the right thing must be involved into the heart of our children if we would have the right kind of an evolution in the life. To our brotherhood there comes a weighty responsibility in holding up for the higher life as taught by the great Master. The more of his spirit that pervades and works its way in, the higher our people will rise in the scale of moral and religious worth. Our worries, our "blue" days and our dark clouds will vanish just in proportion as we get to know that

"It matters not how straight the gate,  
How charged with punishments the scroll,  
We are the masters of our fate,  
And the Captain of our souls."

*Los Angeles, Cal.*

## THE MOTHER.

WALTER SWIHART.

Thy trembling feet, O little man, thy trembling little feet,  
Were guided in the way of light, when thou wast not thy own,

By one and only one;  
By one who never tired, my lad, by one, a watchful one,  
By one who never tired by day, who never slept at night,  
By one and only one.

That constant one, my little man, that constant careful one,

Is truly she that loves thee yet, has loved thee all the way,  
Loved more than others loved:

Oh, fondle close that careful look, that look subdued and kind,

That look that guided ever thee, that guides and shieldeth thee,

That guides till heaven calls.

Those peaceful eyes that brimmed with tears, that monitored thy path,

That looked with care upon thy course when tide ran high  
and tossed,

Are dimmed with constant care;

Then wayward child, whoe'er thou art, if yet thy mother  
live,

Go to her now while there is time and tell her all thy  
heart,

Ere angels whisper, "Peace."

How many times thy waywardness, thy careless, wilful  
heart

Has pierced that soul of purity, that soul which loved and  
loves,

That loved and loves thee yet!

Go quickly, go, while shadows fall across her wasted brow,  
And kiss her cheek, so thin and pale, with years of trial  
and care,

Go kiss her for her sake.

Oh, hear thy mother, thotless boy, thy mother, thotless  
child,

That asks her God, both day and night, in silent secret  
prayer

To save thee, truant boy;

So let not day set ere thou haste to make her prayer thy  
act,

For all her wishes, prayer on earth, she centers, boy, on  
thee,

That thou be saved of God.

Churubusco, Indiana.

#### PRUNE PUDDING.

WASH a half-pound of prunes and soak over night. Put over the fire in a double boiler, and cook very slowly until plump and tender. Add sugar to sweeten, then set aside until cold. Reserve half, selecting the best-looking prunes. Pit the remainder and cut or chop quite fine. Beat the whites of five eggs until frothy, then add a pinch of cream of tartar and whip until dry and stiff. Add a half-cupful of sifted powdered sugar and the chopped prunes. Mix lightly and turn into a buttered pudding-dish. Stand in a pan of hot water and bake twenty minutes in a hot oven, or steam for twenty-five minutes. Serve cold, heaping some whipt cream over the top and garnishing with the reserved prunes.

#### MY GARDEN.

MRS. D. C. MURPHY.

LAST year I had a bed in the garden ten feet wide by thirty long. On this I planted at the north end ten rows of onion sets eight inches apart and four inches apart in the row and sowed radish seed broadcast over the whole bed. Next I planted six rows of early peas twelve inches apart, then four rows of early beans, next two rows of early turnips, one of parsnips, two of sweet corn, two of onion seed for sets, one of carrots, then stuck beet seed all around the edge of bed except about four feet on one side where I planted shives for salads and sowed a strip two feet wide in lettuce.

Now my bed was about ten inches high and on this slanting edge I planted rose moss, also had some large

poppies here and there over the bed which looked very nice when in bloom as there were several colors.

In a tub with my lemon tree I raised some celery plants and as soon as the peas were gone I set celery there; the same with the beans and finally where the onions grew I had celery, and so on until I had over half of the bed in celery and it was fine, too. I put dirt in boxes and put it in the cellar to bleach and we are still having celery for the table (Feb. 11).

We had all the onions we needed, all the lettuce and radishes we wanted, yes, and I set some tomato plants along one side of the bed which had nice tomatoes on, and when the lettuce was gone I planted endive in that space, so I made all the ground bear two crops and everything did fine.

Montmorenci, Ind.

#### SPRAYING FRUIT TREES.

WM. MOHLER.

FOR more than a score of years spray pumps have been used in fighting the insects and the diseases that injure fruit and fruit trees. The greater attention has been given to the enemies of the apple, especially the codling moth, and the apple scab. The Chinese scale (San Jose scale) an introduction from China that was first noticed at San Jose, Cal., is a dangerous pest that is giving much trouble in places. It attacks all kinds of trees. This pest may be controlled by the use of the spray. What is known as the lime and sulphur mixture has given the best results so far in spraying for scale, but it is troublesome to make. From the first experiments until the past two or three years spraying was often followed by good results, but more often the results were not so good. That good results were sometimes obtained showed that they were on the right track, and that uniform success would be reached when they learned what brought the good results at the times they did succeed. One of the difficulties to overcome was to find a poison that would surely destroy the enemies and not injure the foliage of the trees. This has been accomplished in fighting the codling moth and the leaf-eating insects.

Much has been done in the way of getting something to prevent the apple scab, and to destroy the Chinese scale. Enough has been learned that if any one will follow the directions given below he can invariably have success with the codling moth, and fair success with the apple scab. I have not had any experience with the Chinese scale, so that if you are troubled with this insect I would refer you to your experiment station for information.

Arsenate of lead has been found to be the best substance for spraying for the codling moth. With the use of this material the Washington State Experiment Station has succeeded in getting nearly one hundred per cent (98.9) of apples free from worms. Arsenate of lead does not injure the foliage; it sticks well

to the leaves and the particles are so fine that it remains in suspension, requiring but little agitation, and it is very poisonous to the newly-hatched worms. The manufacturers of arsenate of lead recommend using three pounds to fifty gallons of water. One pound to fifty gallons of water if thoroughly applied, is strong enough, but I have been using two pounds to be sure that it is strong enough. Practically every codling moth worm enters the fruit at the blossom end. And to be sure of killing the worm the calyx cup must be coated with the poison before the cup closes. This closing usually occurs a week after the petals or flower leaves fall. It is not advisable to spray trees while in bloom, but I cannot emphasize too strongly that the spraying for codling must be done within a week after the petals fall, for it is almost useless to spray after the calyx closes. If the work is done thoroughly there will not be enough moths left to make a second brood large enough to do damage sufficient to justify a second spraying.

Two pounds of arsenate of lead thoroughly applied to the trees within a week after the petals fall will control the codling moth, by thorough work. I mean that every bloom cup should be coated with the spray mixture; to do this the spray should be applied with a pressure of not less than one hundred and twenty pounds to the square inch, even two hundred pounds of pressure is recommended. Fairly good results may be obtained by using the hand-pump sprayers, but with them the high pressure cannot be maintained.

Bordeaux mixture is the best substance to use for preventing apple scab. A stronger mixture than four pounds of sulphate of copper and four pounds of fresh lime to fifty gallons of water should not be used. This is known as the 4-4-50 strength. A 3-3-50 mixture is claimed to be strong enough to prevent the apple scab. A mixture even as weak as the latter will sometimes burn the foliage and russet the fruit, but the damage is not nearly so great as that which is done by the scab. Bordeaux should be applied just before the bloom opens to get the best results. Several applications during the season will have a tendency to keep the foliage free from diseases.

One application of strong soap suds will destroy nearly all kinds of plant life. The sap-sucking insects may be destroyed with coal oil emulsion. And the grape rot may be prevented with Bordeaux mixture for early spraying, the later with copper carbonate dissolved with ammonia and then diluted with water. Destructive insects are a blessing in disguise to the man that makes good use of the spray pump.

*Falls City, Nebr.*

#### SOME ANIMALS THAT WILL NOT WORK.

MALE ducks, and the sandpiper, leave their newly hatched young to the mother bird for protection from foes and for their food, while they, the males, sport

around at leisure. The mother birds of these species even have to build the nest alone while the gay mates have a good time all to themselves.

The male muskrat is another example of this shiftless kind of beings. They generally gather on the bank of the stream and frolic about while the female builds the home nearby.

Once in a while (yes, too often), another specie, called man, partakes of this unfairness and eats and sleeps in a home that is provided by a woman who lives over the washtub.

### For SUNDAY READING

#### FORGIVENESS.

MARTHA SHEPARD LIPPINCOTT.

If a fellow-mortal hurts you  
By a wound too deep to heal,  
And your soul in deepest anguish,  
Keen resentment, seems to feel  
While desire for vengeance fills you,  
So the soul can find no peace,  
Try the plan of sweet forgiveness,  
Then will happiness increase.

For the soul will find it sweeter,  
While dark clouds will pass away,  
If you will not let revengeance,  
In your heart forever stay;  
Sunshine follows sweet forgiveness,  
And the soul finds peaceful rest,  
When it learns to live the lesson  
That for happiness is best.

Moorestown, New Jersey.

#### THE BIBLE IN PUBLIC PLACES.

WEALTHY A. BURKHOLDER.

RECENTLY I heard a minister relate a story of how a woman was brought from darkness to light as far as she understood it, through the influence of only one verse from the sacred Word. She had always lived in London, and her life had been a continuation of self-indulgence in all kinds of worldly amusements, never giving a thought to anything more satisfying. One day she was on her way to a dance in the remote part of the city, and entering a waiting room, her attention was directed on this scripture, which was placed above the door: "For God so loved the world that he gave his only begotten Son that whosoever believeth on him should not perish, but have everlasting life." John 3: 16. She was interested and inquired of the agent where the words could be found. He said, "In the Bible." Then she asked where she could get a Bible, and was directed to a place across the street, where she went and bought one. After she entered the car she said to her companion, with whom she was living in sin: "Did you

know this?" pointing him to the verse. "Did you know that God so loved the world that he gave his beloved Son that whosoever believeth in him should not perish, but have everlasting life?"

"Yes," he replied, "I know about the Bible. I learned that when I was a child in Sunday school, but what of it?"

"She replied, "If this is true, then why are we living the life we are, so cold, so heartless and unsatisfying?" And right then she commenced to think upon her way and looked into the past in the light of the Bible and discovered she was groping in the dark, and longings for something higher and nobler came into her mind. Step by step she was led into the light and she yielded to the rich influence which those words had awakened and the result was, a Christian home was built up, and lives which had been given over to sin and worldly pleasure only were now to be used for the good of others and much good was the result.—Only one verse.

The Gospel is the power of God unto salvation, and when it comes in contact with humble and sincere hearts its influence must be rich with fruitage. Then why not use the beautiful texts and place them where the traveler may see them? I remember during the year of 1881, in Northern Illinois, I found the Bible in the waiting room at Mt. Carroll, and a few other places on that road, but I never have seen a copy on any other road than the Chicago, Milwaukee and St. Paul, but at the time I was impressed with the importance of having a copy at all stations where people must spend time.

If God so loved the world—loved it to such an extent, that he could give his only and beloved Son as a ransom for a world lost in sin, what effort should we make that the good news may reach the unsaved? For even here in a Christian land there are many who are in darkness and need the influence of the Gospel to awaken them to a realization of their lost condition. Let us not forget that the "Word of God is quick and powerful and sharper than any two-edged sword, piercing even to the dividing asunder of soul and spirit and of the joints and marrow, and is a discerner of the thoughts and intents of the heart."

Newburg, Pa.

#### WORD FROM PRISONERS.

##### Appreciated Friendship.

FROM Dannemora Prison, N. Y.

"It is with great pleasure that I avail myself of this opportunity to thank you for your kindness and the interest you have manifested in my spiritual well-being. I may sincerely say the reading of your bright little paper and the knowledge that at least one good man honors me with his friendship has been of great moral value to me, ever urging me on toward a higher and purer life. I feel confident that with the Lord's

help I shall finally see the ever nearing brightness of the shining light of salvation."

##### Christian Work In Prisons.

Written by inmate of Michigan Reformatory to Mrs. Fred Nelson:

"As I am the vice-president and chairman of the Lookout Committee I felt that it was my duty to my Master as well as my duty to the Christian Endeavor Society to write you this letter to express our Christian thanks to you for the interest that you take in us poor sinful men who have broken the law of God as well as that of man.

"There are forty-six of us who claim to be followers of Jesus, and we send our Christian love and prayers. The society as a body, who are working for Jesus in here, offered up a special prayer last Sunday for you; and oh, you don't know how happy your letter made us all. We ask God's blessings on you for it.

"I have good people—mother, brother and sisters, but they don't know that I am here. I am praying that God will be with me always and that when I am released I can write to my dear mother. I hope to hear from you again and also ask you for your daily prayers for myself and all the members of the society."

##### Needs a Bible.

A prisoner writes from the penitentiary in Frankfort, Ky.:

"I appeal to you for help. I am in prison without friends. Christ is all the comforter I have. I haven't anyone to correspond with; would like some Christian friend to write to. I am twenty-six years of age, without any relations—unfortunate, got into trouble. I have only been in prison four months and have ten years to serve. I am in need of a Bible."

##### Who Will Send a Bible?

A prisoner in the Indiana State Prison makes the following request:

"I need a Bible and dictionary; I have a Bible but it does not belong to me. But don't you worry yourself about that for you have been too kind to me already. I wish the little *Life Boat* came out every week for it is a blessing to our hearts; it cheers me up when I get it. I always fall on my knees and thank God for it.

"Your letters encourage me; I read them over and over and they give joy to my heart. I wish I could receive one every day; but of course I could not answer it. I am very thankful for what I get, and may God in heaven bless you all. I would like to do some kind of work for Jesus; if I can't do it with my mouth I can do something for him with my hands. I can do a little and every little helps."—*Life Boat*.

EVERY prayer waits for the endorsement of daily practice.

## CREAM OF MAGAZINES

### THE NEW MISSISSIPPI.

Twenty years ago the most important thing about the Rivers and Harbors Bill was the number of Congressional districts into which it divided the spoils. Ten years ago the members of Congress had begun to question this way of doing business. Today there is a tendency to concentrate the whole bill, or the major part of it, upon one desirable project each year and to carry that project through.

Since the close of the Civil War this evolution has been going on. At the end of the struggle, our army engineers were sent out into the field to survey the rivers of the western country and to find means of improving them for the purpose of navigation. Out of the millions piled up by the war tariffs, a generous part was set aside each year to be used in prosecuting some task recommended by these experts. As the Rivers and Harbors Bill was made up by districts, so was the river work. There was not then any man to consider the whole western river system and to plan for its use. Instead, each Congressman in whose district an obstruction occurred sought to get an appropriation to have it removed. Consequently, there was no systematic work. Dams were built and locks created, but on no river were all the locks of the same size—and it is the smallest dimension of the smallest lock that determines what sized boat shall use the channel. Some stretches of a river were deepened to ten feet, some to two, and in between others were left unimproved, which effectually blocked navigation.

Yet, in all this work engineers were learning how to do things that no engineers had ever attempted before. One of these was to control the Mississippi, the largest river that has ever been taken in hand by man. It was a long struggle. The Mississippi River Commission, which has charge of the stream below Cairo, tried many expedients, some of them of its design, some of them copied and enlarged from foreign works. Out of them all has been developed a special type of revetment, or bank protection, consisting of mattresses of willow brush, woven with galvanized wire cables, and sunk against the bank, where the current strikes it, by a facing of rubble-stone. By this means the engineers are able to hold the Mississippi rigidly in its channel, for the current is thus prevented from eroding the bank, which is the first step in shifting. And, by holding the current in a fixed channel, the same revetment, aided by narrowing dikes from the opposite shore, makes the river scour the channel deep and clear in its fixed position. No simpler and yet no more entirely successful apparatus has ever been devised. On the lower river these mats are of great size, 300 feet wide and often 1,000 feet long. When the river is completely revetted, they will cover every bend into which the current sets—600 miles in all—between Cairo and New Orleans. And not only will they themselves be covered with rock, but the bank above them, sloping back 120 feet, will also be rock-faced. And all this will represent an investment of about \$75,000,000 for the Mississippi below Cairo. But

when it is done, it will provide not only a clear, fourteen foot channel from Cairo down, but in addition a safe bank for the farmers back of the river, safe foundation for the levees—of which we lose annually a million dollars' worth—and it will make valley land that is now worth \$20 an acre worth \$150 or more. Further, it will recover hundreds of miles of land from the stream bed.—Everybody's for April.

### WHAT HAS BECOME OF SOME WELL-KNOWN BIRDS.

The great power which may be exerted by man in altering the balance of animal life finds an apt illustration in the fluctuations of some kinds of bird life. Fitted as they are for a fight against nature, most animals possess some vulnerable spot, and if man happens to attack them in that spot the result may be fatal. People who are not yet old can remember flocks of passenger pigeons, which swarmed over oak trees in such numbers that the boughs of the trees sometimes gave way under their weight. And today a single specimen is of the rarest occurrence. Time and altered conditions may change this balance of things. In England, a thickly populated country about the size of New York State, the wild pigeons are in some districts a pest to the farmers. If the few surviving passenger pigeons learn in their present seclusion to roam in pairs instead of in compact flocks, and develop a liking for grain—and birds sometimes transfer their preferences in food stuffs—they may again be common throughout the country. The passenger pigeon has so far avoided extinction, and there is hope for it.

Some birds, such as the eagle and the California vulture, decrease in numbers because they breed slowly—laying but one or two eggs at a time—and have the hand of the sportsman against them. Others may be introduced or exterminated locally by farming conditions. The irrigation of a tract of arid land drowns out the desert birds and introduces water birds; the reclaiming of a marsh wipes out the long-billed, long-legged birds of our swamps.

It has often been commented that bird life is more in evidence in England than in America, a thing which seems paradoxical, considering the respective sizes and population of the countries. There are two main causes for this. In England birds are effectively protected during the breeding season; and over there barbed wire is little used. This last fact may need a little explaining; the fields are divided by hedges of thickly-grown bushes, and these form an effective shelter for innumerable small birds.

One of the most fatal habits of birds is community breeding. Flamingoes—shyest of birds—breed largely on some secluded mud flats in the Bahamas. A party of egg hunters, or even a slighter disturbance, will drive the birds to abandon their nests and eggs. When this affects a whole colony, it is a considerable limitation of the season's supply of young birds. Fortunately, the British governor of the Bahamas, acting on the suggestion of Prof. Chap-

man, secured the passing of a law protecting these birds during the nesting season.

Among the most graceful of birds are the terns or sea swallows. Light and swift on the wing, they are not the easiest of marks for a gunner, and yet some species have been exterminated, it is believed. Commerce has had a hand in this; the graceful birds have been considered a fitting adornment for ladies' hats, and so the terns have been slaughtered. They breed on well-known spots on sandy shores, and here the hunters search them out at a time when their eggs or young should bring them immunity.

The heavy-flying sub-arctic birds, such as murrens and razor-bills, have suffered severely, and very wantonly. They perch on cliff ledges in compact masses and show little fear of man; consequently, they have proved an attraction to that class of hunters with no ambition beyond record slaughter. The graceful kittiwakes, that breed on the same rocks, fall victims to the fashion that has proved so fatal to the terns.

In some ways the birds of the desert, where man cannot hunt except with personal discomfort, have the advantage over their cousins of the shore.

It is fortunate that interest in things natural has been developed before it is too late. Some redwoods survive in California, immune from the axes of the lumbermen. The bison is not absolutely extinct, and will be kept alive. Even in Central Africa the British government has stepped in, and the large game there will be saved from actual extermination. Where buffaloes and giraffe survive, it seems to be assured that our bird life will continue with us.—Scientific American Supplement.

### THE UNEMPLOYED.

In the plight of the unemployed there are several considerations besides the mere fact of idleness. There is, for instance, a sharp distinction between the unemployed and the unemployable; some men won't work. There is always comparative lack of work in mid-winter, due to bad weather and the slack season in certain industries, and there are many workmen caught in the cogs of new machinery and new methods of production whose hard-bought trades are a drug in a market no longer bidding for handicraft where machinecraft is quicker and cheaper—men who must suffer as they adjust themselves to a new order. These things are not peculiar to this winter, but they add to its total of unemployment.

The number now out of employment is variously estimated. It has not been counted nor can it be compared exactly with the number of other years, for America has no substitute for the police registration of European cities. A committee in charge of the relief situation of Chicago gives 75,000 as a conservative guess for that city of many seasonal occupations. In New York estimates made by Frank Julian Warne from a few authoritative figures on typical trades indicate 90,000 idle members of trades unions in addition to non-union workers, and a minimum of 35,000 homeless men besides. The number of homeless men is based on the total number of beds in free and cheap lodging-houses, and as all of these are crowded, it is probably near right. The Commissioner of Public Charities has stated that there are normally 30,000 homeless men in New York at this time of year. Of other figures one may take his choice. Numbers count for little, for, as has recently been pointed out, it is not the number who are idle, but the ability of the idle to meet the situation, that counts.

One hundred thousand men temporarily idle but able to care for themselves and their families make a problem slight in comparison with a possible situation involving one-tenth as many both idle and dependent.

The demands on municipal lodging-houses, charitable societies, churches, and employment bureaus, the long bread-lines, the men walking the Bowery at night, the scramble for the snow-shovels in the street cleaning gangs, the falling off in deposits at the savings banks,—a score of bad-times barometers give evidence of unemployment greater than has been known since the winter of 1893-94.—From "The Man Out of Work To-day," by Arthur P. Kellogg, in the American Review of Reviews for March.

### FROM CARRIE NATION.

Sanford, Fla., Feb. 19.

Dear Editor Inglenook:

If people don't believe there is a God who works in the hearts of the people, let them try to explain the present temperance revolution. Truly, "the wind bloweth where it listeth and thou hearest the sound thereof, but cannot tell whence it cometh or whither it goeth." So is the power of the Holy Ghost that is here convincing men of sin, of righteousness and of judgment. The devil's forces are crying war and building their ships and gathering their forces, but "Peace on earth, good will to men," is brooding over the horizon of human hearts and hopes. I do not speak in a doubtful or hopeless strain. "I know

whom I have believed and am persuaded that he is able to keep that which I have committed unto his care against that day." Those who are not ready for the Lord to descend, as he promised, with victory and vengeance, had better begin now. The only healthy condition for an individual or church is to be ready. Be ye always ready. I am publishing my *Hatchet* in Washington, D. C. Send for a sample. Am in the round-up now, but keep smashing at the top. We must cut off the head of this viper at Washington. On to Washington! Write your servants you send from your localities—representatives—that you demand of them to cancel the license in Washington this winter. This is the earliest, most reasonable and quickest way to do this.

Your loving Home Defender and servant  
For Jesus' sake,

Carrie A. Nation,

Editor of *The Hatchet*,

Washington, D. C.

# Look at Both Sides of the Ledger

## The Only Fair Way

### The Saloon People Contend:

1.—The saloons pay a part of our taxes.

2.—If the saloons were suppressed, an enormous number of people (now engaged in the manufacture and sale of intoxicants) would be thrown out of employment.

3.—The liquor traffic consumes large quantities of corn, etc. If the saloons were put out of business, the farmers' market for grain would be severely injured.

4.—Districts which have gone for local option are suffering from financial depression.

### The Anti-Saloon People Answer:

1.—Wherever a saloon pays one dollar of our taxes, it produces the necessity for the levying of a considerably larger amount. What causes the astounding expense of the most of our criminal trials? What is at the bottom of the majority of divorce suits? What produces physical and mental deterioration as nothing else does, filling poorhouses, reform schools, and insane asylums? The saloon. Do not these things cost money? Do they not increase our taxes much more than the revenue from saloons can possibly diminish them?

2.—The people who would be thrown out of employment as a result of the suppression of saloons, would soon be engaged in making and selling the furniture, the carpets, the clothing, the boots and shoes, the groceries of all sorts, the barns and the houses, and the thousand and one other useful and beneficial things that the families of drunkards (as well as some "moderate" drinkers) would then have the money to buy. Does anyone for a moment imagine that the millions of dollars spent annually for drink, would not be spent for something else if the saloons were put out of business? Would the owners of all this money destroy it just because they could no longer spend it in saloons? On the contrary, such a stimulation of trade in other lines would follow as one can scarcely conceive of; for a hundred dollars spent for drink gives far less employment to labor than does an equal sum when spent for furniture, clothing, groceries, etc.

Of \$100 spent for hardware, \$24.17 goes to labor.

Of \$100 spent for furniture, \$23.77 goes to labor.

Of \$100 spent for clothing, \$17.42 goes to labor.

Of \$100 spent for liquor, \$ 1.23 goes to labor.

3.—Only one bushel of corn in exactly 143 is used in the manufacture of spirits, anyway. If saloons were put down, much of this "liquor-corn" would still be used in making liquor for use in the manufactures and arts and for export purposes. The rest could easily be used up in the shape of more pork, more corn-bread, more beef, etc., by the families of drunkards, who would then have more money to buy pork, corn-bread, beef, etc., with. Similarly with other grains.

4.—There is now on hand in all parts of this country, and of other countries, one of those waves of financial depression which have struck the world periodically ever since money was made. This present wave began in New York City, and is still felt most severely there. Surely no one would say New York is without saloons, or ever has been. The truth is, local option districts are, as a rule, withstanding the depression better than the saloon districts.

The above arguments are made on a business basis purely. Should we consider the want and the woe, the suffering and the crime, the disgrace, the humiliation, the idleness, the inefficiency, the shame, the mental and physical deterioration and wreckage caused by intoxicants and of which each one of us has seen many instances, so much the stronger beyond the possibility of language to express it, would be the argument against saloons.

# Echoes from Everywhere

The President's special message which has been talked of and looked for for some time appeared in Congress March 25. A glance at the message shows the following as its important points:

Child labor should be prohibited throughout the nation.

Recommendation for employers' liability law is renewed.

Urges law to prohibit injunctions without first giving defendants due notice.

Renews recommendation for amendment of interstate commerce law so as to legalize traffic agreements between railroads.

Urges amendment to anti-trust law so as to legalize combinations of union labor and farmers when for self-protection and not in restraint of trade.

Urges financial legislation and the establishment of postal savings banks.

Urges the appointment of House committee to prepare plans for revision of tariff by next Congress.

Urges immediate change in tariff so as to admit wood pulp free of duty as a measure of protection to American forests.

Urges permanent water ways commission and suggests reasonable charges for power privileges.

March 27 the second chamber of the Netherlands Parliament approved a convention with the United States under which American meats are to enter Holland at a reduction of the present import duties.

The Legislature of Kentucky, before adjourning, passed a bill a good deal like the Percy-Gray law, which New York is now trying to get rid of. It forbids gambling in a poolroom, but allows it on a racetrack.

The arbitration treaties are making progress in the Senate. That body has recently ratified the one with Switzerland, and one with Mexico has been drawn up and will be signed in a week or so. These treaties are like the arbitration treaty with France.

A bill compelling municipalities to provide employment at union wages to every applicant professing himself unable to earn a living otherwise, was recently introduced in the House of Commons and voted down. It is said that a similar scheme of public workshops was adopted by France during the revolution.

The brownish spots which appear in old books are really due to bacteria. The tiny destroyer is especially fond of starchy material and its propagation is promoted by damp, says **Popular Mechanics**. It has been well understood that damp produces discoloration and decay, but the share of the microbe in the operation has not hitherto been suspected. Tiny fungus or mold is responsible for gray and black marks upon old papers. In spotting the surface the fungus helps to break down the fabric and hasten the process of its destruction.

Miss Julia St. Cyr, said to be the only Indian woman lawyer in the country, is a full blooded Winnebago. She recently defended herself before the Federal court in Omaha, Neb., on a charge of having accepted too large a fee as pension attorney for an Indian woman. So well did Miss St. Cyr conduct her defense that the jury acquitted her on the first ballot.

For Tolstoy's eightieth birthday, which occurs in September, it is said that Mr. Carnegie is to give a half million dollars for the buying of the copyright to all of Tolstoy's writings, so that the world may profit freely by them. Whether the report is true or not, a committee by one of Tolstoy's Russian friends, has already collected a million rubles for the establishment of permanent charitable foundations.

Many cities and towns in Mexico were visited by earthquake shocks March 26. The shocks seemed to be most severe at Chilapa, in the state of Guerrero, the town being almost totally destroyed. Many one story adobe houses, built to resist such disturbances were destroyed. The town had a population of 15,000. There was much loss of life and property in other places, the total of which has not yet been learned.

Some basis for the belief that the Congo Independent State will be actually annexed to Belgium this time was found in the acceptance by the Chamber of Deputies commission of seventeen sections of the annexation scheme, including the colonial charter, which provides for a government of the natives under Belgian rule. The debate in the chamber will begin early in April. Supporters of the treaty claim to have a majority of 35.

The University of Paris has superseded the University of Berlin as the biggest university of the world so far as members go. In last summer's semester there was a student body of 16,609 at Paris with 285 professors and instructors. The faculty of law had 7,182 students, medicine had 3,330, letters 2,649, science 2,147, and pharmacy 1,000. The growing popularity of Paris with the foreign student may be judged by the fact that 3,021 students, or nearly twenty per cent, were from abroad. The greater part of the foreigners, as in Switzerland and Germany, came from Russia.

Since last June the U. S. senate has lost seven of its members. Mr. Morgan of Ala., died June 11, 1907, aged 83; Mr. Pettus of the same state, died July 7, aged 86; Mr. Mallory of Fla., died Dec. 23, aged 60; Mr. Latimer of S. C., died Feb. 20, 1908, aged 56; Mr. Proctor of Vt., died March 4, aged 76; Mr. Whyte of Md., the oldest member at the time, died March 17, aged 83, and March 22, Mr. Bryan, the youngest senator, died, aged 31. Mr. Bryan had been a member of the senate but 73 days, 33 of which were spent in fighting typhoid fever which caused his death in Washington.

Secretary Cortelyou has issued a general circular announcing that the amount appropriated by Congress for the transportation of silver coin for the year 1908 having become exhausted, "no more standard silver dollars will be sent to applicants free of charge from the offices of the Treasurer or the several Assistant Treasurers of the United States." The policy of shipping to banks silver coin free of express charges was adopted about twenty-five years ago, when it was deemed desirable to stimulate the general circulation of silver.

A strange well exists at Riverside Park, Logansport, Ind. An eight inch pipe was first sunk about eighty feet and inside it a five inch pipe was carried down farther. Fresh water from a limestone stratum comes up between the two pipes, while water which tastes and smells strongly of hydrogen sulphide comes up through the five inch pipe. The sulphur water flows at the rate of a gallon a minute from the drinking fountain over the well, while the fresh water flows with a somewhat smaller volume from a pipe about twenty feet distant.

The Society for the Prevention of Cruelty to Animals in its desire to see animals killed in as painless a manner as possible has offered a reward of \$500 for an apparatus, not now in use, which will best accomplish this end. The date by which all designs must be submitted is June 6, 1908. The requirements are that the apparatus shall accomplish the purpose with the least suffering to the animal; that it shall not cause any deterioration of its flesh, and that it shall not be so expensive as to preclude its general adoption. The headquarters of the society are in New York City.

Statements made by officers of the army are to the effect that it will cost much more to defend Manila, which is to be the naval base in the Philippines, instead of Subig Bay, than any place in the United States, for the reason that materials are more expensive, the channel to the bay is very wide; there are two channels, and the batteries will have to be built six hundred feet above the water surface. Colonel Abbott, assistant to the chief of engineers, has just returned from a trip of inspection to the Philippines and found that the difficulties attending the construction of the fortifications are increased by the fact that material will have to be brought long distances and that labor, especially white, is hard to control.

Eighteen hundred cities and villages of Illinois are voting prohibition today, April 7. It is the most widespread public movement in the State since the days of Abraham Lincoln. During the last few weeks many national leaders, including Seaborn Wright of Georgia, John H. Hector of Pennsylvania, Attorney General Trickett of Kansas, Governor Hoch of Kansas and Governor Hanly of Indiana have addressed enthusiastic rallies of the Prohibition forces in all parts of the State. State Chairman Wilson estimates that from three to five-thousand saloons will be voted out of existence, while the aggregate majority for Prohibition in the ninety counties where a poll is being taken may reach 150,000.

Following the hearing held March 25, the second class mailing privilege of *La Questione Sociale*, a socialist publication issued at Paterson, N. J., was annulled by the postoffice department March 26. Ludovico Caminita, editor of the paper, appeared before Third Assistant Postmaster General Lawshe at the hearing and admitted

his responsibility for the articles which caused Postmaster General Meyer to declare the publication unmailable.

Translations made by the postoffice department show that nearly every issue of the paper contained obscene and indecent matter and was almost entirely devoted to defending violence, riot, arson, murder, and assassination. Czolgosz, the assassin of President McKinley, is styled "the hero of Buffalo."

The postoffice officials held that some of the matter printed in the Paterson publication is too vile for reproduction in English. Ministers, senators, congressmen and others are attacked.

North Atlantic ports especially are interested in the launching of the new derelict destroyer Seneca at Newport News, since the vessel will fill an important function in the protection of shipping. "It will be the duty of this vessel," says the Boston *Transcript*, "to patrol the coast to rid it of the floating dangers and to be in readiness at any moment to cruise wherever a derelict may be reported, either by vessels entering port, or by wireless messages. Each season there is a list of ships missing for unknown causes, and, as it is probable that these dangerous hulks have much to do with sending sound ships to the bottom, the activity of the Seneca may be expected to reduce this list. There will be other uses for the derelict destroyer, such as supplying sails and provisions for vessels in distress, or taking off crews from unseaworthy or sinking vessels, but its real value will be in ridding the sea of one of its greatest dangers."

The old wooden sloop-of-war Monongahela, which fought under Rear Admiral Schley and Admiral Dewey in the Civil War, and once served as Farragut's flagship, was totally destroyed by fire recently at Guantanamo, Cuba. Two years after the Civil War, on November 18, 1867, the Monongahela was struck by a great tidal wave at Saint Croix in the Danish West Indies and carried more than a mile inland. Naval Constructor Thomas Davidson, of the United States Navy, had charge of the task of getting her back to the water again. Ways were built from the ship to the shore and in a little more than three months the stranded hulk was moved sidewise to the water's edge and then over 2,500 feet of coral into deep water. Two years ago when the Monongahela was at Guantanamo she had another experience in some respects notable. She caught fire and to save her from total destruction she was scuttled and sunk. Then she was raised and fixed up for quarters for enlisted men at the training station, and she was serving in that capacity when the end came.

## An Opportunity Rarely Offered

We have decided to sell "FOREST MEADOWS" (The Prather Ranch), Butte Valley, Siskyou County, Cal.—in SMALL TRACTS—"2700 Acres"—1000 Acres in Timber—1700 Acres open and in cultivation and natural meadows—under fence and cross fence—Thirty Thousand dollars in improvements—a free and perpetual water right—sufficient water to irrigate 5000 Acres—an Electric Light and Power Plant already installed and can be increased to 160 Horse Power at nominal cost—Three and one-half miles to railroad station—at \$36.00 per acre—one-half cash—balance on usual terms.

The timber cut into lumber will pay for the place and furnish lumber to build improvements for each small tract in addition. We want 50 men to take 40 acres of farming land and 14 acres of timber, or 25 men who will double that amount—they to subdivide and allot to suit themselves.

Think of this and write at once for particulars—to

San Francisco,

California

# Facts Regarding Imperial Valley

Some people in trying to induce their friends to settle in the country where they themselves are located, frequently send them advertising matter that is gotten up by unscrupulous land agents that deviates from the truth. Their friends come and buy property and soon find out that the facts do not correspond with the advertisements sent them. The result is they soon become discouraged and sell out at a sacrifice, and go back where they came from, worsted financially and in some instances say worse things of the country than they should, and thus bring reproach on a good country (though not as good as the advertisement represented it to be). The undersigned has known this to happen more than once, and for this reason has decided to tell his friends about the Imperial Valley in his own words, so that he alone shall be responsible, and so that the wonderful Imperial Valley may never be made a reproach and a by-word.

Imperial Valley is situated in San Diego County, California, 183 miles east of Los Angeles on the Imperial branch of the Southern Pacific railroad. The soil is an alluvial deposit and all crops are grown by irrigation, with water from the Colorado River. The main irrigation canal is 80 feet wide on the bottom and 100 feet wide on the top, and 10 feet deep. The soil is adapted to the growth of wheat, barley, alfalfa and nearly all kinds of fruit. Alfalfa having plenty of water can be cut eight times per season, yielding as high as ten tons of nice hay per acre which sells at present from \$8.00 to \$11.00 per ton. Barley can be sown for winter pasture in alfalfa stubble after the last crop of hay is harvested. Alfalfa can be cut every three weeks if the hay is wanted for dairy cows, or every four or five weeks if wanted for horses. I have known of alfalfa yielding \$40.00 worth of seed per acre and my own yielded \$20.00 per acre with the first season's sowing. Dairying and hog raising are very profitable. Butter sells from 20 cents to 45 cents per pound; hogs, 7½ cents on foot; also beef, cattle and horses do excellently. One colt weighed 960 pounds at less than one year old. One acre of alfalfa will keep from 2 to 3 head of dairy cows or horses and from ten to fifteen head of hogs. Oranges, lemons, dates, figs, apricots, grapes and berries do well. A single grape vine has yielded 30 pounds of grapes 18 months from setting. Grapes, apricot and cantaloupe growing is very profitable as they will ripen here from three to four weeks earlier than other places, and be placed on the eastern market before they are ripe in other localities. One man at Coachella was offered \$600.00 cash for the grapes on a single acre of vines and refused the offer and sold at retail for \$1,400.00. Cantaloupes will net the growers from \$50.00 to \$300.00 per acre. I have lived in the valley as long as any one, being one of the first settlers, and my experience and observation has taught me that you can grow almost anything here you plant, including vegetables, if planted in the proper seasons and properly cared for. The selling price of land at present is from \$40.00 to \$100.00 per acre, owing to location. President Roosevelt says that when it is thoroughly developed it will be worth from \$500.00 to \$1500.00 per acre.

Reader, when you shiver around your fireside the coming winter, just think of the Imperial Valley where you can go in your shirt sleeves nearly every day in the year. And on the 10th day of this month (May, 1907), while there was a snow storm raging in many places in the eastern states, we were making hay and picking and eating fruit in the Imperial Valley.

# JERRY McMAULEY An Apostle to the Lost

Edited by R. M. Offord

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser of human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them is to find the clew to his power. Here is one of them. "I have nothing to be proud of; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

## Kindle the Flame in Other Hearts

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

## Every Church Worker

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

# ALBERTA

## ¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

Will send, express prepaid, for 75 cents extra.

## Mr. World and Miss Churchmember

By W. S. Harris.

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel,

till finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

Our Price, Prepaid .....\$ .75

## Ropp's New Commercial Calculator and Short Cut Arithmetic

The Standard for Store, Farm, Bank or Factory,

5 1/4 x 2 3/4 in.

Is from beginning to end a greatly improved, enlarged and thoroughly revised publication.

It contains an entirely new system of unique Tables, Short-Cuts and up-to-date Methods.

It is unquestionably the most complete, useful and comprehensive Calculator ever published.

It has more than twice the matter, scope and capacity of Ropp's former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

It is the most convenient and practical Labor-saving work ever used in the business world.

It will make every one independent, sure and self-reliant in all practical calculations.

It will prevent mistakes, relieve the mind, save time and labor, and often loss and trouble.

Its Tables are adapted to all the trades and occupations in the city and country, and

**Show the Answer as Quickly as a Watch  
Shows the Time.**

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.

It will make the study and use of Figures easy and interesting for young and old.

It will enable every progressive mind to become an expert, sure and rapid calculator.

It will prove a boon to all whose education in arithmetic has been limited or neglected.

**48 Cuts Illustrate the Elements of Mechanics and Mensuration**

It defines about 70 points in "Commercial Law" which every man and woman should know.

It is the result of devising, and improving system after system; of spending thousands of dollars in experimenting; of making millions of miscellaneous calculations, and of doing some vigorous thinking during 38 years, by an analytic, practical and persevering mind.

## Olive Branch of Peace

Valuable Contribution.

Dear Brother Hays: I have ordered a copy of your book, "The Olive Branch," and have read it with exceeding interest. It is a valuable piece of contribution, not only to the history of the Valley of Virginia, but also to the history of the Brethren Church and other peace loving societies of God's people. Especially is it valuable as a clear and full statement to the world of what the world is coming more and more to recognize as just, reasonable, and desirable—Peace, and the spirit of Christian peace. I pray and believe that by means of this book, "The fruit of righteousness is sown in peace of them that make peace."

Yours fraternally,

John W. Wayland.

University of Virginia, Charlottesville, Va., Oct. 29, 1907.

This book contains 232 pages, has a number of illustrations and is well bound in cloth.

**BRETHREN PUB. HOUSE,**  
Elgin, Illinois.

many witnesses; and his spirit continues with us, blessing all who follow his glorious example and beautiful life acts.

And you and I—and all God's children—will also (after a little) leave these dull earthly habiliments of care and trouble for death's sleep of peace and rest, quickly to come forth from the slough of sorrow and gloom, to a glorious resurrection of the spirit, to dwell in the mansions of bliss and never-ending progress, as a reward for our life and deeds.

"Life is a journey! On we go  
Thro' many a scene of joy and woe;  
But, 'Dust thou art, to dust returneth,  
Was not spoken of the soul.'"

### EASTER.

ROSA MILLER.

"O Easter skies, be bright and fair!  
Lilies, your perfumed incense bear!  
Swing bells, and chimes exultant ring!  
Ye choirs, your glorious anthems sing!"

We all know that Easter is a festival, commemorating Christ's resurrection. Easter is the most ancient of Christian festivals, dating back, even before the celebration of Christmas. Yes, and we can go back even farther than that. *Easter is older than Christianity.*

The goddess Ostara or Eastre seems to have been the personification of the morning or East, and also of the opening year or spring. The Anglo-Saxon name of April is Estormonath, and is still known in Germany as Ostermonat, meaning Easter month. The worship of this goddess Ostara, struck deep root in Germany, and was brought to England by the Saxons. With the lighting of bonfires and numerous other rites it was celebrated in Germany till the beginning of the eighteenth century. Like the May observances of England it was specially a festival of joy. Many of the Easter customs are of pagan origin.

The reformers of the sixteenth century loudly and successfully raised their voices against the indecency of the popular sports, dances and farcical exhibitions in which even the clergy joined.

It was the usual policy of the ancient church, seeking to convert surrounding pagans, to endeavor to give a Christian significance to such of the rites as could not be rooted out; and in this case the conversion was very easy. Joy at the rising of the natural sun, and at the awakening of nature from the death of winter, became joy at the rising of the Sun of Righteousness, at the resurrection of Christ from the grave.

Easter was a favorite time for the rite of baptism, for the giving of alms and for the freeing of slaves. On Easter day the people saluted each other with the Easter kiss. Easter marks the transition from the austerities of Lent to more congenial, worldly vani-

ties, from sorrow and doubt to the assured hope of ever-lasting love.

Fairest of all flowers to lend its sweetness and purity to this festal occasion is the lily. To the Egyptians the lily was emblematic of joy immortal; to ancients it meant power and strength; and to us it is the emblem of purity. The lily is one of the oldest known flowers. It was in the gardens of Babylon 1200 B. C. The lily figures in the pictures of saints, who were famed for the purity of their lives.

The Candidum Lily is always spoken of as "the flower of the Virgin." Appropriate above all other lilies, are the Bermuda and Longiflorum, whose waxen trumpets have gained for them the name of Annunciation Lilies. The lily always has been a saint among flowers and around it innumerable legends have clustered, the most beautiful being that after the Savior rose from the tomb, his footprints, as he walked were marked by snow-white lilies which everywhere sprang up and blossomed where he stepped. This is given as the origin of their name "Easter Lily," and their use as a symbol of the resurrection.

The growth of the lily from the tiny germ entirely hidden by the brown bulb, to its final perfect beauty and loveliness, points out the story of the death of the body and the redemption of the soul, much more beautifully than tongue can express.

"Sweet Lilies, lift your heads  
From out your lowly beds;  
Arise from mold which long hath been your prison.  
Your blooms, like censers rare,  
Shed perfumes on the air,  
And tell again to earth  
'The Lord is risen.'"

### ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

#### XI. Dr. E. K. Kane.

DR. ELISHA KENT KANE was born in Philadelphia, February 3, 1820, and was the son of Hon. John K. Kane. He entered the University of Virginia in 1836, and afterward studied medicine in the medical department of the University of Pennsylvania. He was appointed surgeon in the United States Navy, and visited China, India, the East Indies, Arabia, Egypt, Greece, and Western Europe. On returning home he was ordered to the west coast of Africa in May, 1846, but on account of an attack of fever returned the next year, and was sent to Mexico for the war.

In 1850, as senior medical officer, he accompanied the first Grinnell expedition in search of Sir John Franklin, and published an account of the expedition in 1853. The same year he sailed as commander of the second Grinnell expedition. He published the account of this expedition in two large octavo volumes in 1856, the next year after his return. Honors were heaped upon him for his arduous work as physician,

naturalist and historian. He received gold medals from Queen Victoria, the Royal Geographical Society of London, the American Congress, and the New York Legislature.

His health had been failing since 1844, and the exposure and fatigue of the two expeditions told heavily upon him, and after a trip to London he sailed to Havana, Cuba, where he died February 16, 1857. His writings are not only brilliant specimens of English composition, but they are valuable contributions to science, and his accounts of the Grinnell expeditions are given with a simplicity and vividness that place them in the foremost rank of descriptive writings.

Worthy of mention: John P. Kennedy, novels; Francis S. Key, poetry; D. P. Kidder, theology; Coates Kinney, poetry; Mrs. E. C. Kinney, prose and verse; Mrs. Sue P. King, novels; Rev. Elijah Kellogg,

children's stories; John F. Kirk, history; Rudyard Kipling, poems and stories.

*Bryan, Ohio.*

✻ ✻ ✻

Tread not in paths worn smooth by other men;  
He is a slave who keeps the beaten groove—  
A slave to custom and his own weak self.

Strike out! Aim high!

And make your purpose felt from earth to sky.  
No vassal, you, to cringe and crawl for pelf,  
Creation's king with noble stride should move,  
Alone, but not apart; too small our ken.

We learn by touch

From all men something, and from some men much.  
Work for some good, be it ever so slowly;  
Cherish some flower, be it ever so lowly;  
Labor! all labor is noble and holy;  
Let thy great deeds be thy prayer to thy God.

—Exchange.

## A Rain Song

It isn't raining rain to me,  
It's raining daffodils!  
In ev'ry dimpling drop I see  
Wild flowers on the hills!  
A cloud of gray engulfs the day  
And overwhelms the town—  
It isn't raining rain to me—  
It's raining roses down!

It isn't raining rain to me,  
But fields of clover bloom,  
Where any buccaneering bee  
May find a bed and room.  
A health, then, to the happy.  
A fig to him who frets!  
It isn't raining rain to me—  
It's raining violets!

—Author Unknown.

# "THE VISION OF SIR LAUNFAL."

WILLIAM L. JUDY.

THE great honor of being the "high-water mark of American poetry" is usually given to James Russell Lowell's poem, "The Vision of Sir Launfal." Justly may that prominence be ascribed to it, for its art, its sentiment, its descriptions, its lofty conceptions, its great moral lesson cannot be surpast. Without doubt, this is Lowell's masterpiece, fulfilling in every respect his own famous definition of a classic in literature: "Common without being vulgar; elevated without being distant: neither ancient nor modern: always new, and incapable of growing old."

The poem opens with a description of an ideal June day. Then comes the story. A young knight, Sir Launfal by name, prayed, as was the custom of knights before setting out on some mission, for a vision to guide him in his search for the Holy Grail. We are carried back to medieval times and traditions. Thus the zeal of a religious vow in the Middle Ages gives life and reality to the slight plot of the poem.

The Holy Grail was the cup from which the Savior drank on the occasion of the Last Supper. It was brought into England, so the tradition goes, by Joseph of Arimathea. Here his descendants kept it for many years as an object of pilgrimage and worship. Every lineal descendant had to be chaste in thought, word and deed. But one of the keepers having broken this condition, the Holy Grail disappeared. Many attempts to recover it were made but in vain. It was the burning desire of every ambitious knight to find the cup. In this poem we read of Sir Launfal about to set out on such an errand. Bear in mind that the poem describes the "vision" and not the real actions of Sir Launfal.

"Not only around our infancy'  
Doth heaven with all its splendors lie;  
Daily with souls that cringe and plot,  
We Sinais climb and know it not."

These lines well express the central theme of the poem. We grumble because our short-sightedness cannot recognize opportunities until they have past beyond recall. Tho we hear the voices of nature, we give no response. DAILY EACH ONE MIGHT CLIMB SINAI, THERE TO MEET GOD FACE TO FACE AS DID MOSES OF OLD. "Each day" gives us opportunities to do some act of kindness, to make some one's life just a little happier.

"Earth gets its price for what Earth gives us." By the sweat of the brow alone can anything be obtained. All are doomed to partake of Adam's hard lot. Professing to strive towards an ideal, nevertheless, we spend our lives for mere pleasure.

"For a cap and bells our lives we pay;  
Bubbles we buy with a whole soul's tasking.  
'Tis heaven alone that is given away,

'Tis only God may be had for the asking;  
No price is set on the lavish summer;  
June may be had by the poorest comer."

Everybody can enjoy June, lovely June. God gives it to king and beggar alike. Then, hopes revive; Nature encourages us, presenting her blossoming life as an emblem of promise. The old man lives again the days of youth; youth yearns to wear manhood's armor; manhood sets up higher ideals.

"And what is so rare as a day in June?  
Then, if ever come perfect days . . .  
'Tis as easy now for the heart to be true  
As for the grass to be green, or skies to be blue."

What wonder then that Sir Launfal now thought of his solemn vow, whose purpose if attained would give him perpetual fame!

Sir Launfal was a young knight and lord of an earldom. On this June day, being adorned with his richest mail, he fell asleep, expecting a vision to guide him in his quest for the Holy Grail. "And into his soul the vision flew." He was earl of the proudest hall in the North Countree. The castle appeared gray and cold. Without Nature was decked in beautiful robes of green. The sun smiled; all was life. Sir Launfal, fully armed "to seek in all climes for the Holy Grail," now rode from the castle.

The young knight was enjoying the bright morn. He had not gone far from the castle when a leper accosted him for alms.

"And seemed the one blot on the summer's morn  
So he tossed him a piece of gold in scorn."

Let all mark well the words of the leper in reply.

"The leper raised not the gold from the dust;  
'Better to me the poor man's crust,  
Better the blessings of the poor,  
Tho I turn me empty from his door;  
That is no true alms which the hand can hold;  
He gives nothing but worthless gold  
Who gives from a sense of duty."

The scene has changed. For the time the story of the knight is dropped and the chill winds of winter greet the reader. All is cheerless and silent without.

"Within the hall are song and laughter,  
The cheeks of Christmas glow red and jolly."

Such was the Yule-tide scene within the "proudest hall in the North Countree."

"But the wind without was eager and sharp,  
Of Sir Launfal's 'gray hair' it makes a harp."

Could this have been the "young knight" who in manhood's morn left his proud castle on a bright June day to seek for the Holy Grail? Is this "old man" the young Sir Launfal who scornfully tost a coin to the leper? Could he have been the once proud and wealthy young knight but now a friendless man feeble and forsaken in his old age? This was the same Sir Launfal. In many a clime he had sought in vain

for the lost cup. Now he was a poor man. He came home with no glittering armor but instead, with "raiment thin and spare." Not even was admittance given him to his own castle.

"Sir Launfal turned from his own hard gate,  
For another heir in his earldom sate."

No longer was he proud Sir Launfal. HE HAD LEARNED THROUGH BITTER EXPERIENCE THAT ONLY SORROW COULD TEACH THE VALUE OF TRUE SYMPATHY. Now his attitude was changed. As he went away from the castle, bitter pangs of the past came into his soul. Whom should he meet but the same leper as long ago. Immediately Sir Launfal gladly recognized him. He had no gold coin, only a little bread and water. Willingly he gave it all to the leper. But then, the leper, no longer crouching by his side, stood before him glorified. Verily, t'was the Master himself.

"Lo, it is I, be not afraid!  
In many climes, without avail,  
Thou hast spent thy life for the Holy Grail;  
Behold, it is here,—this cup which thou  
Didst fill at the streamlet for me but now . . .  
Not what we give, but what we share,—  
For the gift without the giver is bare;  
Who gives himself with his alms feeds three,—  
Himself, his hungering neighbor, and me."

At last, poor, despised, and aged, he had unexpectedly found the Holy Grail. The one great dream of his youth was realized. His vow was fulfilled. The Master had been found not as a king in a palace but as a leper without raiment or food.

At this stage of the history we are content to leave the hero with his glory.

"But Sir Launfal awoke, as from a swoond.  
The Grail in my castle here is found . . ."

The real Sir Launfal, as young as ever, had seen all this in a vision. This is an almost dissatisfying reality. When he awoke, he stored away his needless armor. The Grail—to find which was the great object of his life—had been found in his castle. HE WAS CLIMBING A SINAI AND KNEW IT NOT. Opportunities were within his own walls. He did not need to seek for them in distant climes. The one great lesson of his life was learned.

"The castle-gate stands open now,  
And the wanderer is welcome to the hall, . . .  
The meanest serf on Sir Launfal's land  
Has hall and tower at his command;  
And there's no poor man in the North Countree  
But is lord of the earldom as much as he."

"HAPPY is he who knows something, but happier still he who knows what to do with what he knows."

## GIVING HALF THE ROAD.

MARY E. CANODE.

CUSTOMS are unwritten laws that call for as strict obedience as the most rigidly enforced laws of the statutes. Their violations are generally looked upon as an outrage upon humanity, and properly so, because customs are the natural outgrowths of conditions and events of everyday life, hence violation of customs must necessarily throw society into confusion.

Giving half the road is a custom which in our own land means turning to the right and equally sharing the public highway with the other man who chances to be traveling in the opposite direction. This is done not only because each man recognizes the rights of the other, but also because both know that upon the observance of this custom depends their mutual safety. How strange then that a practice which every civilized being recognized as necessary and right on the public highway is so utterly ignored by thousands of those same human beings when it comes to the figurative application of this same expression to wayfarers on the public "Highway of Life."

Figuratively applied, what does it mean? It means permitting each and every human being the unqualified privilege of pursuing his own chosen way in life so long as that way is a right way.

A few years back we heard orators, lecturers and all kinds of speechmakers talk a great deal about "The Brotherhood of Man." Somehow we seldom hear those words repeated nowadays. Recent years have consummated the making of so many monsters of greed and selfishness who not only want and take all the road but also try to appropriate every thing that chances to be upon it, leaving the grand conception of the "Brotherhood of Man" to languish by the wayside together with the brothers whom they have robbed and trampled under foot. And the orator who would now impress the idea upon the younger generation is appalled at the enormity of his task.

In both the literal and figurative meaning of the expression it is always safest and best to give half the road, that the wheels of traffic and progress may not become entangled and that society's evolution from lower to higher conditions may not be retarded because its members stubbornly refuse to make room each for the other and thus bring confusion and disaster upon the whole body politic. Such are the results when Wall Street gamblers and their kind try to appropriate all the road to fortune or when gluttonous trusts precipitate strikes by refusing their workmen the privilege of pursuing even the by-path to a decent livelihood.

It seems that these violators believe that there will always be for them an escape from punishment. But the violation of any law, eventually brings punishment to its violator in one way or another. There is no such thing as immunity from any just law and he who

allows himself to fall into the dangerous habit of transgressing will in the end suffer the penalty, whether his dues be meted out to him in the form of a penitentiary cell, in losses, poverty and want in return for ill-gotten gain, hatred and scorn of men, or the retributive justice of God.

There is also the highway custom of the loaded wagon being given the entire good track that its load may not be made to draw heavier by moving to the rougher side track. This too is figuratively illustrated when one traveler with little or no load meets a heavily loaded one on the road of life and not only gives up his own share of the best road for the safer passage of the other but pauses in his course to help his brother traveler out of the rut into which he has chanced to slip. If this were always the case when man meets man on the rutty highway of life those rough side tracks would soon become worn down to like smoothness, thus forming one good broad road over which all could pass with safety. And the heavy burdens that are carried by the few would be lightened by the mutual sharing of the many. But too often we find that those who have no weighty cares of life to cumber their way and whose positions are such that it would require no great sacrifice on their part to ease up some of those burdens, not only ignore the idea of helping another but even throw their rightful share of life's responsibilities upon the already overburdened ones. To this kind of impostors the Divine Master said, "For ye lade men with burdens grievous to be borne, and ye yourselves touch not the burdens with one of your fingers." To this belong the worthless parasites of wealth and fashion whose useless lives and extravagant demands prove them to be miserable failures as profitable members of society, a greater menace and disgrace to the land than the worthless tramp whose parasitical propensities lead him no farther in his impositions than to that of begging or stealing a mere sustenance of life.

"Man's inhumanity to man  
Makes countless thousands mourn."

is a sad fact that was recognized several ages back in the history of our boasted Anglo-Saxon civilization. How much more does it now stand forth as a startling truth in this age of Christian influences when man's better nature should be so far in advance of what it was in that age that the above couplet should long since have become obsolete in meaning.

The same inhumane conditions in as bad or worse form existed as far back as human history can be traced and in comparison the present age is far in advance of the age in which it was written but man's progress from brute to human or perhaps we had better say to Christlike nature has not been as rapid as it should and could have been. Love of gain and self instead of love for God and man is the weight that retards humanity's progress toward a higher nature. Man's unworthy

occupation too long has been that of studying how he can most effectively shove his brother off the road to success instead of how best to help him along the way to success, honor and righteousness.

Will it ever be thus? Possibly not. Promising signs of better things have already put in their appearance. In our own country, at least, the National conscience is at last arousing from its lethargic state. Those who have been giving half the road have learned that it takes more than precept and example to teach impostors that it is necessary for them to do the same. Men of broader influence backed by men and societies in the humbler walks of life are persuading, urging and compelling violators to stop infringing upon the rights of others.—to give half the road!

But that which is applied in general may as well be applied to the individual. It is not alone in the broader paths of life that violations of this rule are found. Individual cases of refusing to grant half the road are everyday events in our lives. How about political ideas? The nation is now on the verge of another great political campaign. Already may be heard the noise of clashing opinions. Are we going to give each other half the road? How about our differences in religious matters? Do we always accord our fellow Christian half the road? In all things of greater or minor importance, do we grant the other person half the road? There are diversities of opinions as there are divers minds to hold them. Each one has his own philosophy of life to follow and need find no hindrances to its following if each and every individual grants to every one else the rightful privilege of using half the road so long as he turns to the right.

#### SOME HEALTHFUL PURSUITS.

OIL workers are never bald. Visit oil regions such as those of Russia; examine the workmen's hair; it is soft and thick and glossy. For petroleum cures incipient baldness, and if your hair is thinning, rub some in. Shepherds enjoy remarkable health. The odd odor of a sheep seems to drive away disease. Sheep are especially good for whooping cough. In the sheep country, when a child takes whooping cough, it is the custom for the mother to put it to play among the sheep, and the next day it is well. The men and women who work among lavender, gathering or distilling it, never have neuralgia or nervous headache. Lavender, moreover, is as good as a sea voyage for giving tone to the system. Run-down persons often work for nothing among lavender plants in order to build themselves up. Salt miners can wear summer clothes in blizzard weather without fear of catching cold, for colds are unknown among salt workers. Breweries and tanneries and printing-ink factories bar out consumption. Turpentine works and rope works bar out rheumatism. Copper mines bar out typhoid.

## Fauna and Flora in Winter

IN countries where the winters are accompanied by snow and frost, the inhabitants see sudden transformations in nature's form and color, such as is not granted to the people of warmer or more equable climates. To awake some morning and find the whole world out of doors, from tree or mountain top to the lowest dip of the valley, clad in one stretch of white, is to see a beauty which dwellers in the tropics cannot realize. There are many phases of snow landscape. The snow may look a dull flat gray under a leaden sky, or it may sparkle frostily under a clear sun. The trees

may stand up, gaunt and bleak, from ground deeply buried in snow, or the merest film of hoar frost may coat every tiniest twig and every blade of grass. Every bough may droop under a thick load of clinging white, or may be sheathed in a wrapper of clear transparent ice. Best of all the landscape looks when it may be traversed in a smoothly-gliding sleigh, with no sound in the frosty air except the tinkling of the horses' bells.

What mighty changes winter brings in the plant

The Beauty of the Early Sunlight.

Wind, Snow, Frost and Thaw Alternating Weave Some Weird Shapes.

and animal world! How entirely different are the demands the winter makes on them as compared with the remaining seasons, during which the sun not only shines, but diffuses energizing heat! In the plants these changes appeal directly to the eye. All have apparently suspended their vitality; of the trees, only the pines and a few shrubs have retained their green dress; in the case of the others, the leaves have all disappeared. The buds, to be seen everywhere on the branches, are carefully enveloped in tight coverings, which in spite of their slight thickness allow no

frost to touch the tender fabric they protect; all movement of the sap in trunk and twig is stopped, the tree is in a complete state of rest, in which the rigors of winter cannot affect it. The great array of annual plants has disappeared, withered and dried up; but under the soft snow lie the seeds, which owing to the fat they contain and their solid shells, are proof

against the cold; or, the entire life of the plant has withdrawn into the root corpuscles, which, buried deep in the earth, survive the hardest winter.

How is it, however, with the animal world? How do all its creatures with their thousandfold different vital requirements get through the severe winter? The numerous and varied army of the insect world, that in summer so often announces its presence to the human beings in the most emphatic manner, has disappeared from the face of the earth. If, however, we go into the forest and lift here and there the thick carpet of leaves lying under the snow, we shall be astonished to find all sorts of beetles, wasps, flies, and spiders, that have retired to this sheltered spot to winter. At the advent of cold weather they gradu-

ally become rigid, and remain in this condition until spring. The majority of the ephemeral insects, however, pass the winter in the larval or chrysalis state, in protected places, as in the earth, the wood of trees, etc.

Some common butterflies, for instance, always winter in the chrysalis form; numerous grasshoppers and many butterflies live through the winter in the egg state; other insects which require several years for their development—cicadas, stag beetles, etc.—are, of course, in the larval state.

Creeping things, of low organization for the most part, bury themselves in mud or earth, or seek sheltered caves and holes in which they pass the winter. Lizards creep into holes under stones and bushes and

lapse, soon after the advent of frost, into a condition of rigidity. Snakes do the same, often knotted together in a ball, lying motionless until the spring. That all these animals, the blood heat of which depends on the temperature of the surrounding air, should, when the latter falls below the freezing point, lapse into rigidity, and in this condition of apparent death pass the entire winter without any nourishment, is not surprising if we remember that when in a wakeful, perfectly lively condition, they can abstain from food for months without injury. It is peculiar and in every respect remarkable that this condition of rigidity, for

the purpose of winter protection, occurs also in the case of the warm-blooded animals, in other words, animals that lead a much more active life, animals whose consumption of oxygen is very much greater than that of the before-mentioned cold-blooded reptiles.

The faculty of thus protecting themselves is possessed by but a limited number of mammals; the best known among them include the bear, badger, woodchuck, hedgehog, and dormouse. All these animals betake themselves, with the commencement of winter, to more or less sheltered places. Bats assemble in caves, clefts in the rocks, in old deserted mines and tunnels; dormice and hedgehogs make nests in hollow trees, cracks, or in the thick layer of leaves under a brush; while the badger and the groundhog construct elaborate burrows, which they carefully close, from the inside, against the cold. No matter what the hiding place; in all of them, soon after the beginning of frost, the same conditions may be seen. The animals that have retreated, well nourished and quite fat, into their winter quarters, lie rolled up, with closed eyes, in a sound sleep. Gradually the activity of the lungs decreases, the breathing becomes slower and slower. The number of respirations falls off to 15 or 20 in a whole hour; in consequence, the blood heat of the body sensibly declines usually to about the temperature of the surrounding air, which as a rule is about 50 deg.

F. The stomach and intestines are empty and shrunk together, all organs cease to exercise their functions. The animal is consequently in a condition hardly to be distinguished from death. The reduction of the vital activity almost to zero alone makes it possible for warm-blooded animals to exist so long without nourishment.

In addition to these genuine hibernating animals there are a few that enjoy an interrupted winter sleep.

The squirrel sleeps for weeks in his nest but comes out on fine, clear days to look for food. It is the same with some kinds of bear, in whose case it must be noted that the female bear usually brings forth her cubs in the month of January, and after their birth remains with her helpless offspring in her "arms,"

Snow and Hoar Frost in Grotesque Combination.

ally become rigid, and remain in this condition until spring. The majority of the ephemeral insects, however, pass the winter in the larval or chrysalis state, in protected places, as in the earth, the wood of trees, etc.

Some common butterflies, for instance, always winter in the chrysalis form; numerous grasshoppers and many butterflies live through the winter in the egg state; other insects which require several years for their development—cicadas, stag beetles, etc.—are, of course, in the larval state.

Creeping things, of low organization for the most part, bury themselves in mud or earth, or seek sheltered caves and holes in which they pass the winter. Lizards creep into holes under stones and bushes and

uninterruptedly asleep, without taking any nourishment. By far the larger number of animals, however, do not possess the faculty of being able to pass the winter without nourishment; on the contrary, the cold weather materially stimulates their appetites, and only with the aid of substantial food are they able to withstand the winter, protected from the cold by the heavy winter coat provided for them. The putting on of a thick, warm coat is the ordinary protection, and is so recognized in the case of all land animals. We speak of a summer coat and a winter coat in connection with almost all mammals.

The summer coat consists for the most part of bristle hair. The winter coat is of dense wool, that toward the winter season begins to grow under the bristle hair, and speedily, with its thick substance, overlays the summer coat. With most animals, also, the hair changes color. It becomes much lighter, even quite white, and being of the same color as the snow, it insures its wearer the greatest protection against pursuit. I need only call attention to the ermine and the snow hare.

Protection against winter by change of coat, so universal among the animals, is less common among the birds. The birds that remain over winter acquire, it is true, a thicker covering; the soft, woolly down is more abundantly developed, the entire plumage becomes thicker and warmer.

By far the greater number of our domestic birds protect themselves against the inclemency of the winter by migrating to warmer countries. In autumn the migratory birds assemble and at a certain well-defined period they leave us and make their way south. Most of the wanderers travel only at night, though some, especially the large birds, fly by day, and we may occasionally see them, in regular order, moving southward at a considerable altitude. In consequence of this migration, northern bird life in winter is but poor compared with the numbers of the bird population in the summer time. —*Scientific American Supplement.*

#### NEW SIMPLIFIED WORDS.

SOME time ago we named a half dozen words that could have a phonetic spelling to advantage—tho, thru, and thoro were some of them. We are not insisting that anybody shall adopt the simplified form of spelling, but we do say that senseless usage and affectation in the past has encumbered the English language with diphthongs, triphthongs and silent letters to an alarming degree.

Many of these usages crept in stealthily and slowly. Some silent letters were introduced by leading writers to distinguish them from the common herd of imitators. For example:

Ghost received its h from Caxton, who late in the

fifteenth century followed a Dutch fashion later abandoned and printed the Old English gost with the h inserted. This action paved the way for the insertion of the h in agast and gastly. Many later writers hesitated to adopt the innovation, and we find that Spenser, Milton, and Butler spelled aghast without the h.

Dr. Scott says, many people will probably balk at the substitution of f for ph in such words as alphabet, biography, pamphlet, paragraph, telegraph, photo-

An Ice-fringed Stream.

graph, and the like, but, according to the Spelling Board, the change ought ultimately to be made in all words containing ph in that value, altho at present changes are recommended only in a few of the familiar words. It is pointed out that all such words are spelled with an f in Spanish, Italian, Danish, Swedish, Polish, Bohemian, Hungarian, etc., and that the same spelling was common in such of them as existed in Late or Middle Latin. Such words passed into Anglo-Saxon and Middle English with the f, but in most the classical Latin ph was restored. Other words in exactly the same class, such as fancy, frantic, frenzy, frieze, coffin, and coffer, did not return to the ph spelling, altho there is apparently no good reason why they should not also have reverted to the classical form. . . .

Autumn, solemn, and column the Board would de-

prive of their n's because, altho in the Latin originals the letter was pronounced, it is silent in the modern English and therefore is considered superfluous; bedstead is to lose its a for the same reason that led to the adoption of the spelling stedfast which was recommended in the Board's first list of three hundred words. The latter has the sanction not only of Spenser, Milton, Bunyan, and the Bible, but is accepted as an alternative spelling by the Webster and Century dictionaries. . . .

It is recommended that the g be dropt from campaign, foreign, sovereign, and diaphragm, as it is needless. Campaign is said to be a modern spelling. Diaphragm merely follows the recommendation made in the first list as to apothegm. The earlier spellings of foreign and soverign were forein or forain, and soverein or soverain.

Here are seventy-five words which the Board of Simplified Spelling recently recommended for adoption by writers and publishers:

|             |            |            |           |
|-------------|------------|------------|-----------|
| ake         | condit     | harang     | redouted  |
| aile        | counterfit | higt       | sent      |
| agast       | curteous   | indetted   | sion      |
| alfabet     | curtesy    | iland      | sissors   |
| autograf    | crum       | ile        | sithe     |
| autum       | det        | lam        | siv       |
| bedsted     | dettor     | leag       | slight    |
| bibliografy | diafram    | lim        | solem     |
| biografy    | dout       | num        | soveren   |
| boro        | dum        | pamflet    | succede   |
| bild        | eg         | paragraf   | surfit    |
| bilding     | excede     | fonetic    | telegraf  |
| campain     | foren      | fonograf   | telephone |
| camfor      | forfit     | fotograf   | thum      |
| quire       | furlo      | tisic      | tung      |
| cifer       | gastly     | tisis      | wier      |
| coco        | gost       | procede    | wierd     |
| colleag     | gard       | redout     | yoman     |
| colum       | gardian    | dedoutable |           |

It will be remembered that Andrew Carnegie has endowed this Reform Spelling Board so it can prosecute its work. We hope to see it improve our faulty English.

## CURRENT COMMENTS

### Christianity and Sanitation.

The spritual salvation of the masses is, I venture to urge, as closely connected with their social salvation as the mental health of the children receiving compulsory education is connected with their bodily well-being. It is therefore a good and wise thing that the churches seeking to establish the spritual well-being of the masses should recognize the importance of dealing with the social problems which affect the physical well-being of the masses. In this direction I believe the churches can go very far indeed. They can preach the great sanitary doctrines of the clean and wholesome life, and by their influence do

far more than the municipalities to safeguard the health of the people and raise the standard of home life and family life. The health of the people should be a solid plank in the platform of the churches. If the Christian faith is to endure, the Christian people must endure. The preservation of the race as a vigorous race is essential to preservation of its faith as a vigorous faith.

### The Pricks in the Big Navy Argument.

Our national vigilance is needed a thousand times as much against internal enemies of graft, homicide, and criminal recklessness as against external foes. Twice as many are annually murdered in our country as fell on the American side in three years of the Philippine war, though the Filipinos' loss was immense; eighty thousand more persons have been recently killed by accident in four years than were killed on both sides in the four years of the Civil War. The enemies we most need to fight are not to be conquered by bullets, but by ballots, education, and law. We have still six million illiterates, and are paying the average teacher less than a garbage collector, while a hysterical fear lest we have not enough costly steel constructions to annihilate an unknown, supposititious foe is making us blind to the dangers that are weakening and dishonoring the Republic, and are humbugging us into spending money precisely where it is least needed. President Prichett said, in his recent argument for a big navy: "Our international human nature is not likely to be made over again in a century." Justice between nations no more depends on a change of human nature than does justice between States. It is proper organization, not saintliness, that prevents New York and Pennsylvania, or Pisa and Florence, from fighting each other, as the latter used to. A navy's size bears no relation to its "dignity" any more than the number of fire-engines or jails is proportioned to the dignity of a city, or his pistols and burglar alarms to the dignity of a man. The sole just criterion for the size of a navy is the degree of national danger. Last April President Roosevelt wrote to the National Peace Congress: "We are no longer enlarging our navy. We are simply keeping up its strength. The addition of one battleship a year hardly enables us to make good the units which become obsolete." In November he asks for four new battleships. Will some one please explain why? No nation was safer and less frightened than we thirty years ago when our navy was small. Today we have no enemy in the world; we have had only two and one-half years of foreign war since 1812; we were not then invaded and the two wars were of our own making. No nation could so safely as we lead the world in a gradual reduction of armaments.

### An Englishman's Interpretation of the Cruise.

A condition of things under which America's heaviest liabilities were being incurred in one ocean while her fleet was stationed in another could not be permanent; and the sound view of the present distribution of American sea power is, in my judgment, that it is a somewhat tardy linking of policy with strategy, of responsibility with force, and of diplomacy with the material means that can alone make diplomacy effective. In restoring in this dramatic and convincing fashion the union between the instruments of American power and the course of American policy, the United States is not only absolutely within her rights, but is taking a step that the compulsion of circumstances had rendered, if anything overdue. The battleships do not precede a national change of front; they fol-

low and register it. They foreshadow, no doubt, the systematic assertion of American power in the Pacific, but American interests in that ocean, commercial, political, and territorial, have already been neglected too long; and the very fact that the transfer of the fleet from one American port to another should have started opinion both at home and abroad, should have piqued curiosity and aroused apprehensions, is in itself the strongest proof that it was imperatively needed. No nation could permanently allow itself to be hampered by the tradition that of its two coast lines one might be trusted to take care of itself while the other was to enjoy a virtual monopoly of the national means of defense. The dispatch of the American fleet is essentially the rectification of a lop-sided growth and of distorted focus. It is an adjustment of America's sea-power to the plain facts of her geographical position. The magnitude of the undertaking, its expense, the enormous distances to be covered and the riotous commentaries of the American press have somewhat blinded the world to its fundamental simplicity and its indefeasible propriety.

#### American Telegraph and Telephone Company.

The annual report of the American Telegraph and Telephone Company for the year 1907 includes a good deal of interesting information. It shows that every man, woman and child on the average talked through the telephone seventy-five times last year, at least six times more than he did the year before—facts which seem to indicate not only that we are great talkers, but that the habit is growing on us. The company uses more than eight and a half million miles of wire, enough to cover thirty-five times the distance of the moon. Last year alone it added 1,141,687 miles to its wire in use. The company has more than twenty-three thousand stockholders, whose average holding is sixty-five shares, and paid out nineteen million dollars odd in dividends. Thus the average stockholder received about \$817, which is a greater sum than the average earnings of a laboring man. The report gives full publicity to all matters, the sort of report that every great corporation should give out. It endorses Governor Hughes's policy of public control for telephone companies, believing that such control is better than competition, which it finds wasteful, and believes that physical valuation is a useful aid to the fixing of just rates. The company expresses its opinion on this matter of rates thus: "Fair rates, therefore, should be authorized or acquiesced in, for it is only by fair rates that good service to the public and permanent, healthy conditions can be created or maintained."

#### The Local Option Campaign in New Jersey.

In only five of the forty-six States in the Union, Wyoming, Idaho, Utah, Nevada and New Jersey, have the people no direct power of protest against the issuing of licenses to sell liquor in their particular community. That a State should have no such power speaks ill for the Christian citizenship in it. The licensing power in New Jersey resides in some places in a city council, in some places in an excise board, and in some cases in a county judge. What this means, so far as the power of a community to decide for itself in regard to the presence of a saloon, may be judged by two or three instances. In Greenwich, Cumberland County, a license was granted against the protests of all but three men living within the community. At Cranberry Station all the voters within a radius of a mile of the place signed a petition protesting against a saloon, but there was very great dubiety

whether the judge would refuse to renew the license. At Montclair, a place of eighteen thousand people, 1,250 citizens petitioned the Council against granting an additional license and renewing two old licenses for places where the law had been violated. The liquor dealers presented a counter petition signed by one hundred names. The Council granted the new license and renewed the other two. Under the guidance of the Anti-Saloon League the Christian citizens of New Jersey have been conducting a vigorous campaign for the passage of a local option bill. Governor Fort was elected last fall on his promise to enforce the Bishops law, which required Sunday closing and the removal of screens to enable bars to be visible from the street on that day, but he refused to favor local option, although great pressure was exerted on him. The Governor is a Methodist, and promised the Methodists that if he were let alone he would drive every saloon out of the State, but the Methodists and other anti-saloon voters want practical action, not indefinite promises. The local option bill was defeated, and the churches and the Anti-Saloon League hold the Governor responsible. The episode will tend to put a quietus to talk of Mr. Fort as Vice-Presidential candidate on the Republican ticket. The anti-saloon vote is so strong this year that the Republicans are not likely to antagonize it unnecessarily, as would be the case if Mr. Fort were a candidate.

#### New York Tenement House Troubles.

The strike of the tenants against the landlords in the tenement house district of New York City may possibly assume alarming proportions. It would seem that the protest of these people was not without reason, as they are being driven to desperation by the exorbitant demands of the landlords. In some of the lower East Side tenement districts the population is in many instances over one thousand people to the acre. Packed in miserable dark rooms like sardines in a box, these poor wretches are now forced to pay as much as \$6.50 each for rooms which several years ago rented for but \$4.00. This, together with the fact that many are now out of employment, has forced many of them to the limit of endurance. The main cause of this tremendous increase in rentals is the growing speculative tendency of New York landlords. The owner of a building leases it to another who in turn sublets it, each new lessee of the building figuring on making a profit on his lease by increased rentals. Thus a building is never sold for its actual value, but upon the basis of what it will rent for. For example: a six story house on Norfolk Street sold six years ago for \$28,000, while today \$43,000 is asked for the same building. This increase is not because of any improvements, but merely for the reason that the tenants are being gouged proportionately by increased rentals. Thousands of these tenants have organized under the auspices of a socialist committee, landlords have been interviewed, and in many cases the rents have already been reduced.

#### Nerve Stimulants.

Taking up the old question of the effects of nerve stimulants upon the capacity for work, Armand Gautier has shown that when kola is given to a horse fatigue seems to be lessened, and half a mile or more is added to the distance the animals can travel per hour. It was further proven, however, that the horse loses more weight than the one that has received no stimulant. This drug, like alcohol, can whip up the tissues, but the artificially produced energy is at the expense of the living machine.

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## THE STONE ROLLED AWAY.

AGAIN the season bids us refresh our minds on an event so important in the history of the world that by far the greater per cent of our present progress and activities may be traced directly to it. An event the significance of which appears to broaden and deepen with time, so that its several features not only retain their first striking clearness, but they have the added weight of authority which time and trial alone can give. The resurrection of our Lord is an assured fact and in its turn it assures us that the impulses of our being that reach out beyond all earth-bound limits shall find their completeness when we have shaken loose the fetters of this house of clay.

Unless in hopeless despair we have buried deep the dearest treasure of our heart we cannot understand the feelings of the disciples when they had laid away the Master. And unless we have received again that which we had despairingly surrendered, pulsating with new life and hope, we cannot fathom the joy that filled their hearts when they beheld the risen Lord. Nevertheless, our joy may be full, even with an increasing power to enjoy, if we will accept the sacrifice made for us which ended so gloriously in the resurrection. In reality the stone rolled away offers to us as much comfort and inspiration as it did to the disciples. The real value of its power to give comfort and hope is not affected by the passing of ages; it has no limits except such as our finite beings give it.

But the stone rolled away holds not only the fact of our Lord's resurrection. It is significant of God's part in all our work. The women were perplexed because the stone was in their way, but they went on preparing their spices and started for the tomb. They did all they could do and, lo, there was no cause for worry, God did the rest. The experience of these women may be our experience today, for the same condition prevails. If there is a task that needs to be done, however impossible it may appear, we have only to do what

we can and the rest will be done for us. Our strength need not be taken into consideration only as we connect it with a willingness to do our best. Then the difficulties will disappear, the stones will be rolled away.

## A GLIMPSE OF AN HONEST MAN.

SOME of us have grown sick and tired of the many exposures of corruption and of its unprincipled agents and authors. It is true that much good has resulted from these exposures and we are glad for the promise of better things which such a course brings. Nevertheless, the large number of these evidences of dishonesty makes us tired and the fact of their existence makes us sick at heart. For this reason, when a man is found apparently with a natural disposition to do the right and to stand by it at all costs, we are moved to accord him special reward for such strength of character, altho the possession of these qualities is no more than the world has a right to demand of every man and woman. The instance that has inspired us with renewed faith in mankind, because of a man's fight for the right, is that of Governor Hughes's crusade against gambling in his State. We give a brief account of it as it appeared in the *Independent*, with some of the magazine's comments.

In the days when Phillips Brooks was preaching in Boston it used to be said, and perhaps it is still said, that the local Unitarians found no difficulty in transferring their ecclesiastical allegiance to Trinity church, where they had to repeat the Apostles' Creed every Sunday and join vocally in worship of the Father, the Son, and the Holy Ghost. One thinks of this easy alliance when one reads how Bishop Potter and Dr. Slicer united their influence in the chorus which, before the Albany Legislature, defended the present permissive gambling law of that State.

It was plainly against them and their allies of the Hockey Club that Governor Hughes directed his telling speech recently in New York City. His argument was sharp and decisive. The State Constitution says:

"Nor shall any lottery, nor the sale of lottery tickets, poolselling, bookmaking, or any other kind of gambling hereafter be authorized or allowed within the State, and the Legislature shall pass appropriate laws to prevent offenses against any of the provisions of this section."

That covers gambling at the races, as well as in hidden poolrooms. But the present law allows and, with a license fee, protects the former while forbidding and punishing the latter. Its purpose seems to be to bring the gamblers all to the races, that all the gamblers' profits may be gathered there. Of course the racing associations wish to shut up the poolrooms that they may hold its whole wicked monopoly.

Members of the Legislature have sworn that they will obey the Constitution. Governor Hughes holds

them up to their oath. To fail is perjury. There is no escape, for in this matter there is no higher law. Gambling is by common consent immoral, vicious and mischievous. There is no proper excuse for breaking their oath and annulling the Constitution.

Governor Hughes risked the opposition of the bishop and the clergymen to his candidacy to the Presidential chair when he said:

"Our clergy pray in their churches that law and order may be upheld, and that among our people there may be genuine devotion to our institutions and sincere desire for the maintenance of just authority. Would any churchman, breathing that prayer, dare to give his counsel and support to open defiance of the Constitution of the State, a defiance, which in its cynical disregard of the expressed will of the people, breeds contempt for our laws?"

We are especially pleased with the lively way in which Governor Hughes hits back at ex-Governor Black, who had presented an argument for the racing associations to the effect that men will gamble, and they might as well be allowed to do so under due limits—that is, at the grand stand, but not in poolrooms. For, said he, women will wager gloves, and men will bet a cigar, and boys will play for marbles, and it can't be helped. What the Governor says is so fine, so strong, that we must quote it at length:

"But it is said that the Constitution prohibits all kinds of gambling, and that it is a humbug to deal with racetrack gambling and not to deal with betting of boxes of candy and the petty wagers of common experience.

"Is this sensible? Is any thoughtful man really impressed by such an argument? Suppose it be impossible to deal with petty private wagers, is that any reason why the constitutional provision should not be enforced where it can be enforced? If you cannot reach every bet of a cigar or every chance or grab-bag, is that a reason why we should repeal the law relating to lotteries and revert to the scandals of earlier days? Because every bet of a box of gloves cannot be reached would you repeal the laws as to gambling dens and poolrooms? But why should we make a favored class of poolsellers and bookmakers at race-tracks? Shall we erect a Monte Carlo and legalize gilded gambling saloons where the inherent failings of human nature may have free exhibition and not indulge in the humbug of attempting to prohibit them, because, forsooth, we cannot reach the wager of a box of candy? Talk about humbug? There is humbug for you, of the finest, rarest quality; but fortunately it deceives no one."

That is what it is, humbug, nothing less. But it is more than that; it is lawlessness, nullification. And it is even more than that; it is greed, and Governor Hughes says so:

"It happens because money wants the privilege. It is simply, so far, the victory of unscrupulous money power over the people of the State."

#### INGLENOOK WEEK.

IN order that our readers may have a special inducement to offer their friends who should belong to our INGLENOOK family, we are setting aside one week, May 4 to 9 inclusive, in which we are bringing together all the exceptional offers that we are able to make. Aside from those that will be mentioned in the advertising pages, there will be special features in the way of reading matter. A traveler who is able to describe his experiences in a spicy and versatile manner will contribute a series of articles under the heading, "Around the World without a Cent." These articles will be illustrated and we are sure they will be eagerly read by thousands of our readers. This series will begin with the first issue in May.

In the same number will begin the lessons in Esperanto, as promised by the late editor. As with other languages this language is much more easily acquired when taken in class. Any one wishing to follow these lessons as they appear in the INGLENOOK should endeavor to get a number of his friends to subscribe for the magazine so that they may form a class and take the lessons together.

#### WHY DO WOMEN DEPLORE THEIR SEX?

WOMAN discounts herself and all the world accepts her verdict. In heathen lands the girl baby is not wanted, and woman lives in an immortal state only thru and by connection with her earthly husband. Even in Christian lands women lament their inability to cope with their brothers.

All of this is a false calculation, for every normal man looks up to woman as his complement. He reverences her. He will follow her whom he loves to heaven or to hell. The social world is not complete without woman. Her work is more delicate and her influence oozes from a deeper soul depth than does that of man. Or if it does not come from deeper depths it strikes deeper in the recipient.

It is time for woman to see herself in the divine light, her real light, and appreciate her powers. Instead of self-pity and contempt for a weaker physical organism, for childbirth and for a few social and political distinctions, occupy the realm belonging to you. Woman leads man and to her belongs our future national ideas. A man admires a courageous woman and not a down-in-the-mouth companion. He does not like a spitfire, but he does gracefully succumb to the woman who battles for her right if she is consistent and considerate. Neither sex can claim advantage over the other for both are dependent. While the woman was made "for the man," she was made because he needed her to save him. Hence she is superior in some sense.

## Food and Dieting in their Relation to Health

O. G. Brubaker, M. D.

THE question of food and dieting is a very complex and important, as well as interesting one. Not only the health and strength of our bodies, but our moral and intellectual characters, are dependent upon the nature and quantity of the food supply. And as is readily admitted by all, improper food materials, as well as excessive and deficient amounts of food, have a vital influence upon the condition of our health.

A great many definitions of food have been given by as many authors, but the one given by Dr. Atwater especially appeals to me. "Food is that which, when taken into the body, builds up its tissues and keeps them in repair, or which is consumed in the body to yield energy in the form of heat to keep it warm and create strength for its work." A careful study of this definition will prove to us without the shadow of a doubt that most of us eat entirely too much. For how much of all the potatoes, bread, meat, cabbage, etc., that we eat goes to build tissue or yield energy in the form of heat? It has been said that if we knew how to solve the food question to the minutest detail each of us could carry enough food material for a day's rations in our vest pocket. While I doubt the exactness of the above statement, yet I am fully convinced that all of us, with here and there an exception, eat entirely too freely to enjoy the best of good health and happiness.

How to avoid eating too much is the question that naturally arises in many of your minds. And by the way, in many places, in the country as well as in the towns and cities, this is no little question. For in the first place God has given us appetites for food and to sit down to a table loaded with three or four kinds of meat, five or six kinds of vegetables, two or three styles of salads, from one to a half dozen desserts, not to mention the chocolate cake, the lemon cake, the layer cake, etc., angel's food cake, and one denominated his Santanic majesty,—and all of these seasoned and flavored just to suit the taste,—and not eat till one's stomach aches and groans with its load is more than you can expect of the average American citizen. So my appeal must be to the mothers, wives and sisters to serve not to

exceed one kind of meat, one or two vegetables, very little salad,—and honestly I am sure the pie and cake would be better in the garbage can. This is a little to the extreme on both sides of the question, but for the sake of our health and that of our posterity let's get back to the more simple diet of our forefathers. "Pork and beans," or better still, "beef and potatoes," is a simple diet, but oh, how good,—and what sturdy men have lived for eighty and ninety years upon it. God alone knows, mother, how many mental, moral and physical wrecks you are making out of your sons and daughters by feeding them from that table so heavily loaded with so many highly-seasoned and flavored, as well as lavishly furnished foods. It is my opinion that overeating has as much to do with the cause of nervous and mental diseases, of which there are so many today, as anything else.

Our bodies demand and need a variety of good substantial food material. We can not dispense with any of the three classes of foods,—proteids, carbohydrates and fats. A diet composed entirely of any one or any two of these to the exclusion of the other will soon manifest itself by ill health of some kind. Hence a strictly vegetable diet, or the diet of the strict "vegetarian," is not compatible with good strong health. This kind of diet is not only insufficient for the requirements of the body but it very often leads to grave digestive disturbances.

The amount and kind of food to be eaten depends very largely upon the age, the occupation, the climate and the season. The best food for the infant is its mother's milk, that for the adult a mixed diet of meats and vegetables and fruit, that of the old man should be largely milk, buttermilk, grains and fruit. The diet of the farmer and blacksmith should be richer than that of the office worker or schoolteacher. The natural diet of the African is vastly different from that of the Laplander. In the winter we need more fat and a heavier diet than we do in the hot days of July and August. Hence our custom of eating fresh meats in the winter and salt pork and fruit in the summer is strictly in accordance with the laws of health and hygiene.

I would like to speak at some length on the sub-

ject of the relation of food and water supply to the cause of health but space and time allow for only a brief mention of some diseases which are in a great many cases traceable to infected food or contaminated water. Among the diseases of cattle which render their flesh unfit for food are, Texas cattle fever, foot-and-mouth disease, anthrax, actinomycosis (lumpy-jaw) and tuberculosis. Among the diseases of the pig may be mentioned,—hog cholera, tuberculosis, anthrax and trichina spiralis. Of the diseases conveyed by milk, in addition to those derived from the cows themselves, may be mentioned,—typhoid fever, cholera, diphtheria and scarlet fever. These diseases are not produced by the cows being infected but by contamination of the milk with polluted water, or by means of flies, and by means of infected hands and clothing of the milkers or those employed in handling the milk. Butter and cheese, and most any kind of food, may give rise to disease in a similar way.

Allow me to conclude this article then by saying that a moderate diet selected from a variety of *clean* unadulterated and well preserved foods will go a long way in preserving the health of the inmates of any home.

*Mt. Morris Ill.*

#### CONCERNING CERTAIN DOMESTIC AFFAIRS.

IF you think that you have a thousand and one things to do, drop the thousand and attend strictly to the one; then, at least one thing will be done in time and be done thoroughly, and all the others are likely to be, in turn.

There may be a few farmers' daughters who have had lodged in their brains the notion that doing housework is not ladylike. For their benefit let us quote the words of a Philadelphia woman, a leader of society: "I have trained my daughters as I was trained, to the performance of every detail of housework, not only that they may know how intelligently to direct servants, but also that they may be able to meet every domestic exigency that may arise." There's not a word in that about cooking or dish-washing or bed-making being degrading.

Good listeners are almost as rare as good talkers. Some people listen with an abstracted air which shows that their thoughts are elsewhere; or, they seem to listen, but their wide answers and irrelevant questions show that they have been occupied with their own thoughts, which they found more interesting than what you were saying. Some interrupt and will not hear you to the end; others, meaning to be polite, listen with such determined, lively, violent attention that it makes you uncomfortable and the charm of the conversation is at an end.

MEN often mistake their inclination for their convictions.

#### COWARDICE AND WASTEFULNESS.

A FEAR of seeming stingy keeps many persons from saving. Many a housewife is really afraid to say anything about economizing lest her servants characterize her as "close," small—in short, stingy, when they talk over their employer's shortcomings with their neighbors. Many a woman falls into extravagances because she feels that the eyes of her neighbors are upon her; she dreads criticism if she tries to do with little. Every housewife should be a law unto herself, and being sure she is doing for the best, worry not at all as to what others will say. She knows, or ought to know, better than anyone else what can be afforded, and economy should be practiced for economy's sake. This moral cowardice often leads one to buy needless things simply to satisfy the eyes of people who care not a rap of the finger what she does, or does not. Down deep in our heart we know we have enough, and what is good enough for all needs, but we do not dare say so. Moral cowardice impels waste in every department of the household. We indulge in extravagances merely because we wish to either equal or out-do our neighbors, and we do not stop to realize that such extravagance is sinful waste, with absolutely no satisfactory returns.—*Housewife.*

#### TED'S ARCHITECT.

HATTIE PRESTON RIDER.

"HERE's my design for manual training today, Grandpa," said Ted, holding up a small square of white tissue paper. "It's for a hall archway. Isn't it pretty?"

"Very pretty," his grandfather declared. "So that's the work they set you at! Are you going to be an architect?"

"I guess so," Ted laughed: "That is, if I get time after baseball hours."

He ran down the walk, whistling, and Grandpa went into the other room to look at the morning paper. He had not been in his seat by the window more than ten minutes, when Ted came tearing back, breathless and worried.

"I've lost my design! You didn't see it anywhere, did you, mother? I know I had it when I started, for I was showing it to Grandpa! I'll be late, sure!"

"Perhaps you dropped it on the lawn," she said, hurrying down the steps. "Did you look all the way?"

"Yes," Ted panted.

Grandpa had followed them, his *Daily* under his arm.

"You'll never find it by looking on the ground, Ted," he said, mischievously. "I saw a little white paper lying on the walk, after you went out, but before I realized what it was, an architect came along

and picked it up and carried it away. I dare say he is using it this very minute."

"An architect!" Ted gasped, his eyes wide with astonishment. "Who was he? What did he want of it?"

Grandpa laughed outright. "To use, of course. He did not introduce himself, but he wore a blue coat and a high peaked hat. He was very handsome, and I judged he was bright-witted enough to improve all the chances that came his way. If you want the design back, perhaps you can get it of him by calling at his office up in the branches of that elm just east of the drive."

A peal of laughter broke from Ted's lips, and a sparkle drove the anxious look out of his eyes.

"A blue-jay!" he shouted. "He wanted it for his nest, the little thief! Let him have it. Fellows in the same business ought to be obliging to each other. I can make another." He turned and ran off quickly, waving his cap. "Won't teacher laugh when I tell her! He had the nerve, hadn't he, though!"

#### AN EASY NAME PUZZLE.

A NUMBER of little girls in the fifth grade decided to give their teacher a patchwork quilt made by their own hands. They designed it so as to consist of sixteen blocks. On each block there was a letter and they so arranged the blocks that the teacher could find the

names of all the givers by starting with the proper letters and taking the letters next to them in any direction. For instance, "Mary" is indicated by the dotted line. See how many girls' names you can find in the same way, starting with any letter you please. Uncle Josh has found twenty—and maybe someone who is smart could find still more. Try this on your schoolmates.—*The Pathfinder*.

REMEMBER INGLENOOK week,—May 4 to 9 inclusive.

#### FRUIT AND FLOWERS IN THE GARDEN.

D. Z. ANGLE.

A FEW choice fruits may be grown to advantage, if not placed in the way of vegetable rows, or in a position so that the reflection of sunshine from trees on small plants does not prevent or dwarf the latter's growth. This may be prevented by having small fruits such as strawberries, raspberries and blackberries, grown between trees and vegetables, as berries do reasonably well there and taper off the effects of the sunshine and shade on smaller plants. Then it is a good thing to have some berries growing handy to the house in the garden which should be safely fenced against the intrusion of poultry and farm animals. It is also a suitable place to raise a few grapes, currants, and rhubarb. Some of these may be set around the edges along fences, but rhubarb should be set along north side of fence or where the sun does not have chance to burn plants, although rhubarb will probably do well enough out in the open, where the sunlight is not reflected, and air has equal access to plants.

If a garden is extra long and narrow, most of the fruit and trees may be planted at one end, but if about square in shape the fruit could be set at one side, which will leave room for vegetables to be set in long rows. The berries should also be set in rows five or six feet apart and cultivated a few times each season or mulched to keep down the weeds. The garden should be near the house. Then the vegetables can be cultivated quickly or at odd times, and the vegetables and fruits are close at hand for table use or canning.

Flowers and shrubs or nonedible plants, while not essential to highest usefulness of the home garden, are of decorative value, and as such are desirable to a limited extent and degree. Unless one desires to raise flowers for the market, too many of them in a garden would not prove profitable or even necessary as a beautifier, for many of the common fruits and plants furnish blossoms in rotation and later their ripe fruit, which is all very pleasing to our eyes, as well as to our appetites later. A few rose bushes, Easter lilies, hollyhocks, honeysuckles, etc., may be grown just inside the entrance along paths, or in other out of the way, but easily observable spots. For medical purposes a small section should be devoted to growing sage, hoarhound, etc., where such plants do not grow wild and have to be bought if needed from the tradesman.

*Mt. Vernon, Ill.*

Blow softly, winds, o'er garden beds,  
Where flowers are waking from their sleep,  
While drowsily they lift their heads,  
The skies of April laugh and weep;  
Blow softly while the wild birds sing,  
And rills exultant break their chains;  
Blow softly, heralds of the Spring,—  
Upon her throne fair April reigns.

—Ruth Raymond.

**THE TRUCK PATCH.**

Don't let the tomato plants crowd in the seed-bed. Take them up and reset them in rows 2 x 3 inches. Some kind of marker should be used to space the plants. A good one can be made out of a piece of 2 x 2 inch stuff as long as the bed is wide. Bore half-inch holes, and put in pegs as far apart as the plants are to be set. By using the marker the plants can be set in straight rows, and this will facilitate cultivation. Before the plants are reset, the bed should be worked over and raked down.

As soon as large enough, cabbage, cauliflower, lettuce, pepper, celery and the like should be transferred to the cold frame and gradually hardened off for the field. Get the frames ready for them at once.

Radishes and early turnips should be sown, and the first crop of early peas planted, just as soon as the ground can be worked. In some sections the extra early White Milan turnip is a profitable crop. It is usually sown broadcast, and the crop can be harvested in time for the land to be used for something else.

The first planting of early potatoes should be made as early as possible this month. If the potatoes are covered with the plow, and the harrow run over the field at intervals of ten days or so, the ridges will be worked down, and a good part of the cultivation will thus be done by the time the potatoes are well up. To catch the mother beetles and keep off the blight, spraying should begin as soon as the plants are through the ground.

If the soil for bedding melons and cucumbers was not hauled up last fall, the sooner it is done now the better. Lima beans can be started in dirt bands in the hotbed like melons, and several weeks gained in the time of ripening.

Manure that is to be used in the hill for melons, cucumbers and the like should be forked over, fined and ricked up so as to turn water. Unless this is done it may be too wet when the time comes to use it. Finish hauling and spreading manure that is to be worked in broadcast. It would be interesting to know how many truckers are using manure spreaders.

Keep the plow going whenever the soil is dry enough to work well. April may be too wet to admit of much plowing.

Cucumbers paid handsomely last year. A short crop kept prices up and enabled those who had them to ship the entire crop. A big crop will be planted this spring, and only the very early ones are likely to be profitable. However, with the right kind of soil and proper cultivation, cucumbers can be made to pay every year. A neighbor of the writer has a piece of creek bottom land containing less than three acres, on which cucumbers have been grown for the last five years, and the net returns have been \$1,000 a year. The land is in a se-

cluded valley well protected on the north and west by woods. By manuring heavily, and starting the plants in hotbeds, he gets early cucumbers and they bring top prices.

Don't forget to give the rhubarb and asparagus a thorough cultivation as soon as the soil is dry enough.

If March is warm, winter onions will be ready to ship by the end of the month. Get everything ready for them.

All planting that can be done now will help to relieve the pressure in April and May. For this and other reasons rhubarb and asparagus should be planted in March, if the weather will permit.

Success with asparagus and rhubarb will depend in a large measure upon the kind of plants set. With most other crops weak plants may be made to produce good crops by thorough tillage and fertilization; but this is not true of asparagus and rhubarb.—*Farm Journal*.

**TWO FLOWER BEDS.**

I WISHED for a flower bed on the lawn, and one by my dining room door, both of which should be in good form, all or nearly all summer, and not need a great deal of care. This is how I reached the desired result. The one on the east side of the house, circular and four feet in diameter, was sown to star petunias in the spring. In August, three *Lilium Candidum* were planted in the center, and in October thirty-six pink hyacinth bulbs were planted about them. That was four years ago and the only care since is to keep out weeds, and thin petunias. In full sunshine the other, a diamond shape, six feet on each side, was planted in October. One hundred and forty-four single scarlet tulips were planted five inches deep and two hundred scillas—between the rows—two inches deep. These were mulched about two inches with dry leaves, held in place by evergreen branches. Early in March, the leaves were worked into the ground and pinks, poppies, and scarlet verbenas were sown. This also is a success. The bed is scarlet with verbenas blossoms. This bed requires a little more attention than the other as the poppies must not be allowed to smother the small verbenas plants and must also be removed as soon as they are through blooming. I take the tulips up every second year.—*Floral Life*.

**BLACK LOCUST GROVES.**

THE question of future supply of fence posts is one which concerns every Western farmer. We already see the trend of lumber prices, and fence-post timber is sure to go the same way. Of course, much timber can be used for posts which is not suitable to be worked up any other way, but at the present annual rate of consumption it will be only a few years until oak, cedar, locust and catalpa posts will be selling at

50 cents each, and, unless new groves are started now, there is bound to be a great scarcity.

On most farms there are corners, or perhaps patches of several acres, growing nothing but weeds. These places should be put into black locust or catalpa plantations, so that some post material will be coming on in a few years. Plow up this ground and put it in crop condition, and tend and cultivate the young timber as you would a corn field. These timber plantations must have good care for the first five years, after which they will do nicely. Don't try to grow timber and pasture together, and don't let the stock in to eat off the tender sprouts or break down the young trees.

The division lines between fields or between farms could be planted to post timber to very good advantage. There is usually a strip of ten or twelve feet left between these fields, upon which nothing is grown. Plant them to timber, and I believe the best investment that any Western farmer can make would be to put five acres of his best land in black locust and catalpa.  
—Selected.

#### SPRING.

There's a song of birds on the morning air,  
There's a glint of green at your feet,  
There's violets blossoming everywhere,  
With perfume dainty and sweet.  
There's a brush of brooms at the back doorway,  
And the housecleaning path we clear,—  
And the ragman called again today,  
Sure, we know that spring is here.

—Nellie Fiske Hackett.

### For SUNDAY READING

#### THE WALK TO EMMAUS.

D. D. THOMAS.

The brightness of the vernal days  
Was sombered o'er with strangest things,  
As bound unto some cruel ways  
Right in the blossoming of Spring.

The earth seemed as a raging sea,  
Tumultuous rent the hill and dale,  
The rocks from off the mountain flee,  
The sun is hid beneath a veil.

No picture shows the gloom of it,  
No words describe the terror felt,  
Yet, here the robe of glory knit  
When God's own Son in darkness dwelt.

So o'er the land a gloom was cast  
With suddenness of summer cloud,  
When Jesus thro' the shadow passed  
To robing of the whited shroud.

And when the grave that early morn  
Lay tenantless, they sought him there,  
And Mary felt herself forlorn,  
The living Jesus heard her prayer.

So when the two that afternoon,  
To Emmaus were on the way,  
These tidings had not raised their gloom  
Their faces and their walk betray.

As gropingly each step they take,  
It seems they scarce can trust the ground,—  
How cautiously each news they break,  
And seem affrighted at the sound.

The rising hill they peer across  
And half expectant, half afraid,  
Imagine him a monster ghost  
In frightful equipage arrayed.

And thus there come before their eyes  
To further take their peace away.  
The wily tempter wrought his lies  
And let delusions fevered play.

Their Lord had taught in sorrow's hour  
That they should lift their hearts in prayer;  
'Twould bar away the tempter's power;  
'Twould welcome faith and angels there.

Alas, how great the task he bore,  
So faithless are the hearts of men,  
So sightless, shall we say, and more,  
So deadened in the ways of sin.

Tho' tempest cease at his command,  
For Lazarus ope the bars of death,  
Tho' all were great, the Master's hand  
Had none so great as quickening faith.

The day was bright, a cloudless sky,  
Or, slightly streaked with blush of white,  
Just as some uneventful day,  
The moments drove away the light.

They met no stranger in the way,  
Had left their friends, they walked alone,  
The stillest hour of the day,  
And light as any since the morn.

But somehow stepped another form  
Right out of somewhere near their side,  
As of a mystic mother born  
And meant to always there abide.

It seemed 'twas no surprise to them,  
They only did not see him come.  
And greeted as a common man,  
Continued calmly nearing home.

His question caused them no surprise,  
His second, seemed he did not know.  
They saw him by "withholden" eyes,  
And yet they felt the spirit's flow.

The glowing of a genial soul  
Has often kindled friendly fire,  
And made our yearnings fully whole,  
And fed the heart with its desire.

So this had nothing strange to them,  
They had before the angel kiss,  
Tho' with the Master they had been  
They did not see this hour of bliss.

And as they walked and talked with him,  
With fervency their hearts enthuse,  
One could but think their eyes were dim  
Or else they willed him to refuse.

The door was reached, he moved to go,  
But they constrained him to abide,  
And Mary welcomed, she whose flow  
Had touched the crimson where he died.

She smiled upon the sad-eyed face,  
And bade him sit at meat prepared,  
Her household duties were a grace,  
And ever with a stranger shared.

And with their guest at meal recline  
With eyes aloft, the morsels take,  
And broken by a hand divine,  
The curtain lifts, and they awake.  
Herring, Ohio.

### EASTER THOUGHTS.

AGNES NEFF.

WITH the Eastertide comes new hope, new joy. All over Christendom the children are singing and the burden of their song is joy and victory over death.

The wonders of spring are again repeated before our eyes and verify the message of Easter. The fields that were but a few weeks ago sleeping beneath the snow, nature now hastens to clothe with grass, and the trees with bud and bloom. The birds are flying back in countless numbers. The little wild flowers smile up at us from the cold ground, the streamlets, now free from ice and snow, go singing on their way. Thus the message of Easter comes to each of us bidding us take new courage, new heart and go on.

To the great household of the sorrowing it comes with its deepest meaning. To the bereaved and drooping soul pressed down by the heavy hand of sorrow, it comes with consolation. Life will perhaps never be the same again, but new joy shall spring up, where there is only darkness now, new hope where there is only bitterness and despair.

Thus the glorious Easter message brings joy to all the world. "Beyond the smiling and the weeping, there shall be for you and me love, rest, and home."

### NEARING LIFE'S SPRING.

RICHARD SEIDEL.

As the winter days hasten on, we are nearing the spring. How a sunshiny day in the cold season speaks of the springtime and summer beauty; how the blue sky reminds us that nature has better things in store for us.

The fringe of evergreens on our native hills, towering upward to the firmament, is a whole volume of unwritten poems on hope, as in the chilliest weather we dream of the time when the other trees will wear their green once more.

What do we care for dead leaves or snowflakes; there is the promise of spring in every green needle of the waving pine that silhouettes in blackness on winter's gray skies! Why should we mind withered daisies and thistles, when every now and then the

grass peeps up in greenness 'neath the snow? In the coldest day that comes we are nearing the spring.

Every gray hour, like the cloud with a silver lining, has a lining of sunbeams and flowers and gentle breezes. Turn winter's gray hour around, any hour of the season, even the stormiest, on the other side is first a springtime, sixty minutes' breathing of daffodil and crocus, of Mayflower and lilac. All is not as it seems, The desolation of winter means rest, and a preparation for the flowers and fruits of other seasons. Is it not so with life's winter? A seeming desolation has a heart of greenness, and the future bloom of heaven's summer. Much is in preparation in spite of grayness and bareness of ways. The little rifts of blue mean the unfading blue of eternity, when skies never change. We are really nearing life's spring and summer, though friends may look with commiseration on us. It is not all of life to live when bound to this earth. The stars shine so brightly for a world beyond; the sun's shining is a type of the indescribable radiance of the Sun of Righteousness. If every flower is a thought of God in its beauty and fineness of make, how beautiful must be the heavenly world that he has prepared for us. If each season has a loveliness of its own, when all seasons are resolved into one, the earthly seasons of this globe, and life's spring, summer, autumn and winter are transfigured by a heavenly touch above, what joy and gladness in his presence. O the flowers and fruits, the verdure; in short, the great happiness in heaven, the blessings that await us there! Nearing the spring of perfect love and faith, nearing the summer of hope fulfilled!

Every Bible promise will leaf out for us, will blossom out, in the world to come with a spring and summer glory. We are truly nearing the spring and summer of eternal life, and all the green ways that we know here in season and out of season, every flower that we pluck is a reminder of paradise regained.

### AN EASTER THOUGHT.

RICHARD BRAUNSTEIN.

A faint glow touched the darkened spot  
Where all the night my troubled thought  
Had centered, crying to Thee  
Deliverance from Gethsemane.

The radiance spread, and all the sky  
Gleamed o'er the earth to glorify.  
Ravished, my spirit, upward drawn,  
Beheld the majesty of Dawn.

Spring's wondrous miracle was wrought:  
A sweet white blossom sprang my thought,  
An Easter flower, uplift to Thee—  
Dear Lord, Thou shinest upon me.

It's all right to hope for the best, but it's better to work for it.

## CREAM OF MAGAZINES

### OUR MISSION OF PEACE IN CUBA.

Our mission in Cuba ten years ago was one of peace. Revolutionary trouble had been chronic there for three-quarters of a century, and a devastating war had been in progress for three years. Spain had nearly 200,000 men in Cuba, and could neither conquer the insurgents nor withdraw from the islands without creating revolution at home. The Cubans could not drive the Spaniards from Havana or their other strongholds, yet could keep up their own kind of harassing warfare for an indefinite period. It was a deadlocked situation. The intervention of the United States was justified in principle, and doubly justified by its merciful results. It relieved Spain of an intolerable burden, and it gave Cuba the basis for a normal and hopeful future. Already the change in Cuba is wonderful. The recent difficulty that resulted in our sending Governor Magoon to act temporarily as chief magistrate has only served to illustrate the statesmanlike wisdom of the plan upon which the Cuban Government was established. There is no longer any oppression of the individual in Cuba. Everybody is secure in the personal and social rights that the Cubans have always wanted but never before possessed. So long as they can carry on the higher affairs of state in an orderly way their independence is absolute. But as against revolution and disorder, the United States, with its great navy and its adequate army, will intervene so promptly as to guarantee all legitimate interests as against loss or danger, just as it would in any part of this country. Such an arrangement is of incalculable value to a young republic like Cuba, with the long tradition of turbulence and insurrection. To have brought about such a situation as now exists in Cuba within a decade after the retirement of Spain is a brilliant triumph.—From "The Progress of the World" in the American Review of Reviews for March.

### HINDERING THE CHILDREN.

Do we educate or merely train our children? A monkey may be trained into a chimpanzee clown that knows how to take off its hat and beg, but is that educating the monkey? And we all know what pitiful wonders of the mind the obedient public school child is made to perform. That person is considered the best teacher who can make one of them learn how much four times nine is whether he can learn it or not, just as he is considered a good animal trainer who can make beasts do the things that are not natural for them to do, like jumping thru hoops of fire. And it is only a question of time when the public school child will be so highly trained mentally that he will be capable of inventing a flying machine or an aerial map of the universe. But is this education, or only the mechanical and simpler part of education? There is much knowledge that it is best not to know, in spite of those insolent ignoramuses of their own human nature who think they can afford to know everything. We talk grandly of making the world better, but we talk too late, after we have betrayed all its crimes and weaknesses to the children who shall come after us.

Education is not the knowing of things, but it is the fine moral selection of knowing the right things, particularly whatsoever things are of good report. If the grown people of this generation would form a trust not to betray so many of their own faults or the faults of the past to their children, either at home, or at school, or upon the stage, or even from the pulpit, until they are old enough and mature enough to endure the moral embarrassment of such revelations, we should begin to see more clearly what real education is. A child can be taught the dangers of alcoholism without having his father dramatize drunkenness. And it is positively malicious for his teachers to destroy at this early time his ideal of the father of his country by telling him that Washington was a land-grabber, given to profanity, and that Alexander Hamilton wrote his farewell speech for him. Children require heroes and convictions about guardian angels in order to develop the proper qualities of spirit and character. And the mind should not be trained at the expense of either. Also, young people are much more apt to remain pure, to marry, and to remain married who do not see the vulgarizing of sex and the degradation of love upon the modern stage, and who do not read about it in the best examples of modern fiction.

As a matter of fact, we outrage the divinity of childhood by destroying its illusions. The writer knows of poor little intellectual waifs, neither one of whom ever plays, because the boy cannot ever imagine he is Jack the Giant Killer, and the little girl known she is not and never can be the mother of her doll. We are conscientious about taking away their own peculiar happiness by teaching them what we know to the contrary, as if half of what we know is not a misfortune, and the other half merely colorless and scientific. It is what we do not know and what children believe which makes them such as are of the Kingdom of Heaven.

Now all this is what we call "training the child"; so it is, but it is not the proper way to educate one. It is the kindergarten method of rearing him for this world, and for this world as if it were a dollar-marked dirt ball, instead of one of Heaven's stars. And this is a convenient method if the child is merely a kind of human insect that matures, breeds and dies. But he is not.

By this protest it is not the writer's purpose to inveigh against the teaching of scientific truth to children in so far as they are able to comprehend it. The very great hope of the future is in the awful, invincible spirit of veracity in true science. But it is the way things are taught that matters; the partial, unbelieving, skeptical manner, whereas we know that great scientists are the greatest of all believers. They have imaginations that take in the coal mines on the planet Mars, and they are not averse to immortality. Probably no other class of men stand with fewer deceits of traditions and creeds between them and God. But the average child, youth, college man, university graduate, is taught science in such a way as to make him a materialist rather than to

imbue him with an indefatigable hope for the ultimate, divine solution of things.

The one important fact which neither teachers nor writers take into consideration is that children have delicate sensibilities mixed up with their truly barbaric faculties. In their best moods they are shy of the obvious, because they do not yet belong to our world of dull realities. And they are attracted by the incredible and illusive for the same reason. A training, whether of books or text-books, which destroys this eternal quality of childhood without replacing it with a high poetic ideality is not suitable to the exquisite nature of these little heaven-strangers.—The Independent.

#### WHY WE LIKE WHAT WE LIKE.

The "personal note" which has made journalism into the thing of abhorrence or of envy according to the taste and temperament of the judge, has also come to dominate our standards of criticism. It shows itself as a "spirit of rebellion against authority," we are told by Mr. R. A. Scott-James, in a recent English work called "Modernism and Romance." Modernism, it must be explained, is not to be taken here in the special theological meaning which it has lately acquired. It stands for the spirit that pervades the literature of the present day, and one of the strident notes of this spirit is the personal tone. So "exaggerated and fanatical" has the personal note shown itself in its rebellion against authority, the writer points out, that "critics of the old school declare that the British public has lost its capacity of appreciation, its standards, its sensitiveness to form." The modern critic, we are told, generally reminds himself that everything has been said about a given subject that can be said; that, if it be a man of letters, his life has been written and his books all edited, that "the principles of his art, his influence upon his contemporaries, to say nothing of his final place in literature, have all been determined with unerring precision." In fact, this supposed critic goes on to reflect, "there is nothing about him which remains unknown, excepting one thing—how he happens to affect me. But as that is something quite different from anything that any one has ever mentioned and to me it seems the one thing about him which matters, I propose to write a book about him." Mr. Scott-James speaks about this self-centering habit thus:

"The introspective habit of modern writers, the tendency to look upon their own emotions and to reveal them, has led to an intensely personal quality in criticism as well as in art, and sometimes to a contemptuous deviation from fixed artistic standards. There is no dogma about art from which some reputable critic does not dissent; there is probably no masterpiece in literature which does not bore and even irritate some person usually sensitive to literary charm. The author, the critic, and the general reader, confronted with an ever growing range of interests and accessible books, are thrown back upon themselves and the tastes which individual circumstances, and not general principles, have created in them. Literary values have altered. There was a time when a book would be weighed and precisely assessed in the formal, quasi-technical language of elegant literary circles—the only circles in which books were read. Fanny Burney would quote the formal approval or disapproval of Dr. Johnson; Mrs. Vesey would quote Mrs. Montague; all would quote some traditional phrases of Pope or Addison; and when once the little world of readers was supposed to have made up its mind, it was heresy or ignorance to disagree. At the present day, on the con-

trary, there is a flood of conflicting opinions, not as of old upon theology, but upon literature and all the arts. Quot homines tot sententiæ. The more unorthodox the opinion, the more 'original' and 'clever' it is held to be. There is no aspect of truth too one-sided, no paradox too startling, to win the applause of a proudly divided multitude. And the reason of this change is that literature has been democratized; it has been disseminated among widely differing classes of the community, the majority of which care for books just so far as they prove agreeable to the individual tastes of themselves, the readers. And this tendency, starting among uneducated, informal readers, has spread upward to the educated and even the learned. The literary values have altered, so that most people no longer ask whether this or that work conforms to the standards set up by the classics of the language, but whether it stimulates them as individuals, whether it finds a response in their own possibly misshapen emotional fabric—whether, in fact, it matters to them."

The writer appears to think that "we are passing through a period of transition which seems to promise compensations." He points out that probably "the Americans" were the first "to emphasize the importance of this personal, subjective quality in literature." Emerson and Walt Whitman are mentioned as the forerunners, while John Burroughs is quoted as saying that "the crying want always is for new, fresh power to break up the old verdicts and opinions, and set all afloat again."—Literary Digest.

#### ON OVER-EATING.

The insistent desire to have a certain degree and character of appetite not infrequently leads to consulting a physician. Still more common is the obsession that the appetite must be gratified, the supposition being that the desire for food is, in the growing child or in the adult, an infallible guide to the amount needed, though it is a matter of common knowledge that this is not true of infants or of domestic animals. If one leaves the table hungry, he soon forgets it, unless inordinately self-centred, and he has no more desire to return than to go back to bed and finish the nap so reluctantly discontinued in the morning.

I have heard the theory advanced by an anxious fore-caster of future ills that all unnecessary food, if packed away as adipose tissue, serves to nourish the body in periods of starvation. Assuming that the average individual need consider the stress of circumstance, I am strongly of the impression that the best preparation for enforced abstinence will prove, not a layer of fat, but the habit of abstinence.

The quantity of food proved by experiment to suffice for the best work, physical and mental, is surprisingly small. A feeling of emptiness, even, is better preparation for active exercise than one of satiety.

It is a national obsession with us that no meal is complete without meat. Order fruit, a cereal, rolls, and coffee at the hotel some morning, and the chances are ten to one that the waiter will ask you what you are going to have for breakfast, though you have already ordered more than is absolutely necessary for that meal, as demonstrated by the custom upon the Continent, where the sense of fitness is as much violated by the consumption of an enormous breakfast as it is with us by the omission of a single detail.—George Lincoln Walton, M. D., in April Lippincott's.

## Echoes from Everywhere

The city of New York is short by near four hundred public school teachers.

In eighty per cent of the public schools of Minnesota, text-books are free.

Iowa teachers' salaries for 1907 were \$400,000 larger than for 1906.

The government is calling for three hundred more school teachers for the Philippines.

For the first two months of 1908 as compared with the first two months of 1907 the Internal Revenue Department reports a total decrease in collections from spirituous and fermented liquors of \$1,824,272.11.

The sentence of Lieut. Gen. Stoessel, who was condemned to death for cowardice and treason in surrendering Port Arthur to the Japanese, has been lightened to ten years' imprisonment. He began serving his term March 20.

That the present copyright law does not protect the composer of music against its use by mechanical devices is the decision of the U. S. supreme court in two test cases brought by the White-Smith Music Publishing Co. of New York, to restrain the Apollo Co. from adapting two copyrighted pieces to use in mechanical pianos.

A bill is being prepared by the Department of Commerce and Labor which will require all sea-going American vessels to be equipped with a self-anchoring line carrying projectile and the means for projecting it. Equipped with such a device, similar to the breeches buoy of the life-saving stations, a stranded vessel can land its crew and passengers in safety.

In spite of much persecution the Standard Oil Company seems to be thriving nicely, thank you. A quarterly dividend of \$15 per share has just been declared and John D. Rockefeller has stowed away "rocks" to the amount of \$3,852,810 as his share of the plunder. It really is shameful, the way these poor corporations are persecuted.

While a man in Philadelphia has been trying to invent a varnish that will make a new cheap violin sound like a Stradivarius, a well-known violinist and maker of the instruments has been working along a different line to secure the same effect. He says that age has nothing to do directly with the tone of a violin; that the amount of "bowing" it receives is what makes the tone superior. He makes use of an electrical machine which sends vibrations through the instrument, and he claims that in 30 days as much "bowing" can be given the violin by this means as it would get in 50 years in the ordinary way.

So far as Manitoba is concerned government ownership of telephones is not much of a success. Before the telephones were taken over it was promised that telephone charges would be cut in two and eventually still further reduced. Just recently, however, instead of a reduction, an advance in rates has been ordered in certain classes.

According to statistics compiled by E. D. Cowles, the annual lumber cut in Michigan has dwindled to considerably less than half of what it was in 1888, which was the banner year. The total production in 1907 was 1,743,583,000 feet, a reduction of 10 per cent from the output of 1906. Unless reforestation is extensively adopted, it is said, Michigan lumber will be practically exhausted in thirty years.

The Illinois Republican platform adopted at Springfield the last week in March contains the following: "WE FAVOR THE ENACTMENT OF ALL LAWS WHICH GIVE TO EVERY CITIZEN THE GREATEST MEASURE OF PERSONAL LIBERTY." This was dictated by the liquor leaders and is taken directly from the platform of the "United Societies" of Chicago, the notorious defiers of the Sunday law in that city.

The "Vitascope" of English instrument makers is a novel telescope, about a foot long when closed, with lenses arranged to magnify twelve diameters at a distance of twenty inches and sixty diameters at five inches. It is designed for watching insects in flowers and other small living objects, at suitable distance, and adds greatly to the nature student's power to observe the minute life about us.

In a sensational speech, recently, Gov. Burke of N. Dak. said that the Attorney-General of the State had failed to prosecute liquor dealers in the State, whose prosecution he had directed. Gov. Burke expressed his desire to dismiss the officer, were it possible for him to do so. The governor was elected on a law-enforcement platform, and has made good as far as lay in his power. He will seek reflection on the same platform. He will have the liquor interests, as well as the railroads against him.

Minneapolis has been treated to a rare sight lately. The State law requiring saloons to close at 11 P. M. has been enforced against the licensed saloons for some time. It is asserted, however, that there are 4,000 "blind pigs" in the city, which have not been closing at the required time. The regular saloon men have undertaken to have the law enforced against the blind pigs and cafés. Delegations of men representing the Retail Liquor Dealers' Association have been patrolling the streets of the city for the purpose of securing evidence against the law-breakers. They realize that in the strict enforcement of the law against all alike lies their only hope.

New York brewers, frightened beyond all their previous experience at the onward march of Prohibition, have announced that they will combine to abolish the "low dives" in the metropolis and help make New York a "clean city" by May 1st! The rest of the country meanwhile will hold its breath and see what happens. In return for this, it is stated in the dispatches "the brewers want the legislature to stop several bills providing for further restrictions of the liquor business."

There will be more spring wheat sown this year than ever, according to present indications. Not only will there be a great deal of new land sown, but large tracts of land in the Red River Valley that have lain idle for several years will be sown to wheat. This land was bought up by large companies for speculation. For several years it has been hard to secure farmers for this land on account of the cheaper land further west. This year, however, new settlers are being placed on these farms.

It has been estimated that about one boy out of fifteen is left-handed when he reaches the age of ten. This is his mother's fault in not making him use his right hand more during his babyhood. In Germany there are schools where the boy is taught to be right-handed. Nearly all tools are made for right-handed men, and the boy who grows up left-handed will be awkward. If one can use both hands alike he has an advantage in some things; but it seems as if nature intended the right arm to do most of the work.

Without being materially amended, the fortifications appropriation bill was passed by the House of Representatives March 21. In the debate the War Department was criticised by several members regarding the money spent on fortifications at Subig Bay, which, it was charged, was wasted, in view of a later recommendation that the defenses of Cavité be strengthened. Criticism likewise was offered to the estimates of the department which recommended an appropriation of over \$30,000,000. This amount, it was stated, could not have been expended within ten years.

The first annual report it has ever made public was recently promulgated by the American Sugar Refining Co. It shows the earnings for 1907 to be more than \$8,700,000; a surplus for the year is something over \$2,400,000, after payment of 7 per cent dividends. The cash on hand was more than \$5,000,000 and the bonds and stocks held for use as a reserve were nearly \$7,000,000. In the company's assets there was included over \$17,000,000 of loans. So far as concerns a further statement of details of the company's affairs, the report says only information for which all stockholders at large may ask will be given. If, however, the agitation with regard to publicity should result in a law specifying what information shall be given to stockholders the directors declare they will comply with it promptly.

The Democrats of North Dakota are facing a very peculiar situation. The primary law of the State requires that to get its nominees on the official ballot of the State, a party must cast a vote at the primaries, equal to thirty per cent of the vote of that party at the last election. At the last State election, at least half of the Democratic vote was cast by men who are ordinarily Republicans but who united with the Democrats to elect Gov. Burke. To get upon the official ballot this year, the Democrats must

cast 8,000 ballots at the primary. Democrats are so few that it will be hard to get out so large a vote. In case they fail, the party will be practically destroyed.

Postal experts object to the statement that the expense incident to rural delivery has been the cause of the deficit in the postal revenues of recent years. The assertion is not confirmed by the records of the Postoffice Department. In 1897, when the expenditure on account of rural delivery was only \$14,840, the postal deficit was \$11,411,779, while in 1907 the expenditure for rural delivery had increased to \$26,755,524, and the deficit had decreased to \$6,653,282. These figures are cited to demonstrate that the increased expenditure on account of rural delivery service bears no ratio to the annual deficit. On the other hand, it is certain that the operation of the rural delivery service is responsible for a large percentage of the increase in the postal receipts.

An expert of the agriculture department who has been investigating the boll-weevil in the Southern states says that he found 54 varieties of birds which are now devouring the insect. This is an announcement that will be welcomed, as the varieties of birds that fed on the weevil when it first made its appearance in this country were very few, and even they did not seek it with any great avidity. It would seem that the birds have acquired the boll-weevil habit, as the government man says they devour them with great eagerness. According to other men who have made a study of the situation, not more than five per cent of the weevils survive the winters. The birds attack this surviving five per cent even more industriously in the winter than in the summer time, for their food is scarcer then. The weevils hibernate in the stalks of the plant, in cracks of the earth, in crevices of tree trunks, anywhere in fact, where they can slip out of sight. Many varieties of birds are now becoming expert at hunting the weevils.

It will be remembered that Attorney-General Young of Minnesota was fined for contempt of the federal court under very peculiar circumstances, last summer. Minnesota's last legislature passed a commodity rate law and a two-cent passenger rate law. Stockholders of the railroads interested secured a temporary injunction from the federal court, restraining the attorney-general from proceeding against the railroads interested until the courts should have passed on the lawfulness of the rates established. Mr. Young thought that as an officer of the State in the discharge of his duty, he could not be enjoined; and, in order to make a test case of it, disregarded the injunction and proceeded against the roads. Upon his conviction and sentence for contempt of court, he appealed to the Supreme Court. On account of the legal point involved—the ability of a federal court to enjoin a state officer to prevent him from enforcing a state law—this case has had a national interest. In its decision, recently handed down, the court holds, first that the Minnesota laws were unconstitutional on account of the excessive penalties attached. In regard to Young, it holds that in endeavoring to enforce an unconstitutional law, he was acting illegally, and was therefore liable to punishment. The right of a federal court to enjoin a state officer from enforcing a law whose constitutionality has not been established, is fully maintained.

Representatives of the city administration of Cleveland, Ohio, announced April 6 that in all probability the local street railway controversy would be settled the next day, and that the rate of fare would be three cents flat, with an extra cent for a transfer. The fight for a lower rate of fare than five cents has been waged by the city for seven years.

Satisfactory progress is being made by Secretary Root and Ambassador Bryce to settle by treaty all disputes between this country and Canada. There is reason to believe that several treaties will be transmitted to the Senate for its approval at the present session of Congress. The favorite method of adjustment in these cases is to provide by treaty for the appointment of joint commissions on each of the questions, the final recommendations of these commissions to form the basis of ultimate permanent regulations.

The statistical bureau of the Union Pacific has just issued a statement compiled from government reports, showing the value of products of the farm in seventeen states west of the Mississippi in 1907 to have been \$1,091,000,000. The report, compared with 1906, indicates an increase of 15 per cent in value of crops, which is credited to irrigation. Nearly 85,000,000 acres were under cultivation and the average value of crops per acre is given at \$12.86. Iowa ranks first in corn, oats, and potatoes; Kansas first in wheat, and Nebraska first in rye. The report also shows an increase in live stock of 250 per cent since 1870.

The Chicago Great Western road has been in court for some time on account of a change in its rates on live stock products. The road reduced the freight rate on meat products, but not on live stock. The effect was to favor St. Paul and Missouri River points at the expense of Chicago. The Inter-state Commerce Commission held that the change of rate on one article without a corresponding change on the other was unlawful, but the Supreme Court has decided that it is lawful. If the present rates continue, it will be cheaper to pack meats in the western cities than to ship live stock from the west to Chicago for packing.

In the opinion of President Finley, of the Southern Railway, who has just completed a tour of inquiry as to commercial and industrial conditions in the South, that section is ripe for an invasion of northern capital. "Throughout the South the banking institutions are in sound condition and, although their managers are generally pursuing careful and conservative policies, sound business enterprises are generally able to obtain all of the credit needed. From most localities come reports that Southern farmers are in a prosperous condition and have substantial bank accounts. The question of how soon a revival may be expected to begin is one which no man can answer with certainty, for the reason that some of the reasons for the continuance of the business depression are psychological. This being true, one of the most important results to be brought about is the creation of a constructive sentiment based on faith in ourselves and in the future."

**How To Do It.**—"Tell me," said the young woman with literary aspirations, "how you contrived to get your first story accepted by a magazine?"

The eminent author smiled. "I owned the magazine," he replied.—Cleveland Plain Dealer.

## BETWEEN WHILES.

The only happiness a brave man ever troubled himself with asking much about was happiness enough to get his work done.—Carlyle.

Two Irishmen, meeting one day, were discussing local news.

"Do you know Jim Skelly?" asked Pat.

"Faith," said Mike, "an' I do."

"Well," said Pat, "he has had his appendix taken away from him."

"Ye don't say so?" said Mike. "Well, it serves him right. He should have had it in his wife's name."—Everybody's Magazine.

Hyker: "Browning's wife must be an intellectual woman."

Pyker: "Why do you think so?"

Hyker: "I notice he seldom has any buttons on his clothes."

**A Puzzle.**—"Hello," cried young Mr. Newliwed, entering the kitchen, "making some bread, eh? Or is it cake?"

"I don't know," replied the dear little bride, with a despairing frown, "I haven't finished yet."—Philadelphia Press.

The statement of a French scientist, that the shock of immediate rising in the morning when one first awakes may produce insanity, sounds as if the scientist himself had been jumping right out of bed.—Pathfinder.

**Badly Needed.**—The professor had been quizzing his psychology class, and was evidently somewhat disappointed with the result.

"Gentlemen," said he, as the bell rang for dismissal, "it has been said that fish is good for brain food. If that statement is true, I advise some of the men in this class to try a whale."—The Herald and Presbyter.

Nature has given to me one tongue, but two ears, that we may hear from others twice as much as we speak.—Epictetus.

If any little word of mine  
Can make one life the brighter;  
If any little song of mine  
Can make one heart the lighter;  
God help me speak that little word,  
And take my bit of singing,  
And drop it in some lonely vale,  
To set the echoes ringing.

## WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

**WANTED.**—To impress upon more of our farmers, fruit growers and gardeners that the compressed air sprayer I sell for \$7.50 is the easiest to operate and BEST for results. A woman can do the spraying. Let me tell you about it. W. G. Nyce, St. Peters, Pa.

## The Spirit's Sword

For all Ministers and Personal Workers.

By Evangelist J. R. Beveridge.

Vest-pocket Size, 2 3/4 x 5 1/2 inches. 1/4 inch thick. 128 pages, 1,200 Scripture references. 133 Subjects. Special Notes.

The  
Greatest Book  
out for  
Christian Workers

## Thirteen Orders With Scarcely Any Effort

"I hereby enclose you an order for 13 of the new Revised Minutes. I have long wished that my members would get the book and become acquainted with what it requires of us. I believe it would be much easier to care for a church whose members are posted on Annual Meeting decisions, so I just took in hand and secured the order with scarcely any effort."—Eld. J. H. Baker, Astoria, Ill.

### EACH ELDER OR PASTOR

could help his congregation wonderfully along this line with just a little effort. Try it in your congregation as did the above Elder and the results may surprise you.

The new Revised Minutes contain all the revised minutes up to 1898 and the minutes since that date including the late meeting held at Los Angeles, Cal., last May.

The book is durably bound in cloth and contains over 300 pages.

Price prepaid, .....\$1.00

Captivity. Containing full Scripture references and subject indexes to the whole series.

Regular Price, per set, .....\$7.00  
Our Price, per set of 7 volumes, f. o. b., Elgin,.... 3.50

Will send, express prepaid, for 75 cents extra.

## Mr. World and Miss Churchmember

By W. S. Harris.

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel,

till finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

Our Price, Prepaid .....\$ .75

## Sands of Time

A Book of Birthday Gems, Containing a Text, a Proverb, and Sentiment for every day in the year. Also spaces for signatures. By Thomas W. Handford. Bound in cloth. Stamped in gold and white. Gilt edges.

# ALBERTA

---

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

# OVER TWENTY MILLION CATARRH SUFFERERS

In the United States of America

If you have CATARRH let me send you my

**NEW OX-O-NA-TER FREE**

I can only produce a limited number of these wonderful combination treatments this year, but shall try to reach as many sufferers as possible. I will be able to furnish treatments to all readers of the **INGLENOOK** who order now. The **OX-O-NA-TER** produces a soothing sensation to man, woman and child. The **OX-O-OIL** is made expressly for my use and can be obtained from no other source. If you have not used the **OX-O-NA-TER**, send today for a treatment

Sent Anywhere  
on  
**TEN DAYS'  
TRIAL**

## On Ten Days' Trial Free

Then if you are fully satisfied with the benefit received from it—if you would not be without it for many times its low price, you can send me my special introductory price of Two Dollars. Otherwise return it, (postage 5 cents, which I will gladly refund).

Catarrh begins in the nose, but progresses rapidly to the throat, then the larynx, stomach, kidneys, leading to the dread tuberculosis. **CHECK IT NOW.** My Oxonater works on entirely new principles, delivering absolutely dry healing vapor directly to the inflamed surfaces. It is curing thousands of the worst cases. It costs nothing to find out if it will cure you. Valuable Catarrh Book free.

Send no money, just your address, and you'll get this handsomely plated \$2.00 Ox-o-na-ter by return mail on free trial.

Write today.

**Address, E. J. Worst, 216 Main St., Ashland, Ohio**

## MAILED ON TRIAL FREE

We want you to try Pure Herb Tablets

### TEN DAYS FREE

and prepare your system for the changeable weather of your climate.

## Pure Herb Tablets

Quickly relieve Constipation, Stomach and Kidney Trouble and Rheumatism.

No Alcohol, no Opiates, no Narcotics.

### 3 MONTHS' TREATMENT \$1.00.

If you have a stubborn case of Constipation, Rheumatism, Kidney or Stomach Trouble, or if you feel bad in any way, try Pure Herb Tablets. They are a wonderful treatment for the digestive system. They strike at the root and cause of the disease.

In most people Uric Acid is present in the blood, gradually accumulating as they grow older, and by lodging in various organs of the body, it causes disease. The blood grows old and impure, thus undermining the strongest constitution.

## SEE HOW EASY.

Just send us a mere postal card, mentioning the **Inglennook** and we will mail three months' treatment of our Pure Herb Tablet treatment. Use them ten days, if perfectly satisfactory send us \$1.00, if not, simply return the balance and you still have your money. We claim this treatment has no equal for above diseases, and take this honorable way to prove it to our patrons. Don't hesitate.

Speed the day by sending now to

#### TOURIST SLEEPING CARS.

A striking feature of the Union Pacific passenger trains is the tourist service. The tourist sleepers are identical with the standard sleepers, with the exception that their furnishings are not on so grand a scale, but the accommodations are equally good and are sold at HALF THE PRICE of the standard. The seats are upholstered, and at night the berths are hung with heavy curtains. Each car is accompanied by a uniformed porter whose duties are the same as those upon the Pullman Palace Sleepers.

#### DINING CARS.

Union Pacific dining cars are operated on all through trains. These cars are all new in style and models of beauty and elegance.

#### DINING ROOMS AND LUNCH COUNTERS.

Dining Rooms and Lunch Counters are located at convenient points along the line, and all through trains which do not carry dining cars are scheduled to stop at these points. Well prepared meals of the best quality are properly served at popular prices. Full time is allowed for meals.

ROOM 14, CENTRAL ARCADE  
FLOOD BUILDING

W. H. McDoel, President  
H. R. Gallagher, Asst. Manager  
M. D. Early, Secretary

Macdoel, Cal., April 3, 1908.

D. C. Campbell, Esq.,  
Chicago, Illinois.

Dear Charlie:--The railroad track has been laid into Macdoel. Montezuma Ave. was crossed at 11 A. M. today. The long-looked-for has at last come. The railroad people are sinking a well where the depot will stand. The inhabitants of Macdoel were out on dress parade today and it was a real gala day for the town. We took up a collection and bought four boxes of apples for the railroad men when they crossed Montezuma Avenue, which they seemed to appreciate very much. They came through Mt. Hebron without even laying a side track and will move their cooking establishment and sleeping cars down here at once or at least as soon as side track is ready to accommodate them. They would not make their headquarters at Mt. Hebron for it is a saloon town and if they stopped there, some of their men would be drunk most of the time. Macdoel will be the stopping place for some time and they will go back and put the road in good shape. I understand there will be an agent stationed at Macdoel by the first of May and steady trains will be running to this station soon. The stage barn will also be removed to this place. I have also learned that the mail will be carried through by Bray in a short time. You will please give this matter to all concerned as I do not have time to write to many.

Today was election day for school trustees. I have been appointed registrar by the county officials at Yreka; received the books yesterday and conducted the election today. Prospects are very bright for our school privileges in the future.

Please keep me posted from time to time as to the numbers arriving on different excursions.

We are very busy in the Valley and especially the farmers who are putting out their spring crops.

Fraternally yours,

M. D. Early

# THE SPRING OF 1908

will witness a new influx of thousands of settlers in the fertile valleys of **SOUTHERN IDAHO**. A great many have gone and a large number are making arrangements to go soon.

## **80,000 ACRES Open For Settlement**

**Last Week in May at Twin Falls, Idaho**

Under the Cary Act, filings on 40 to 160 acres may be made by power of attorney. Price \$40.50 per acre, payable \$3.25 down, balance in nine annual payments. Easy way to get a valuable farm.

### **EXCURSION FOR THIS OPENING**

**Tuesday, May 19, 1908**

**ROUND TRIP** rates from Chicago to Twin Falls, Idaho, \$50.80. Corresponding rates from Peoria, Kansas City, Omaha and all principal points.

## **Wonderful Possibilities**

for homeseekers and investors. Climate Mild. Soil Very Productive.

Alfalfa, Sugar Beets, Fruits, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

### **An Opportunity of Your Life**

This is an opportunity of your life. Grasp it before it passes. Be sure to make arrangements now to go on this excursion with scores of others that are now planning for the trip.

**WRITE AT ONCE FOR BULLETIN**, giving particulars concerning this wonderful opening, to

## The East Wind

Adaline Hohf Beery

A Titan gem, to infinite brilliance cut,  
A spangle on Aurora's turquoise gown,  
Flashing across a drowsy hemisphere,  
Which, dreamily caressed by velvet light,  
With vigorous limb springs into wide-eyed day;  
The green leaves softly sifting brightness down,  
Filling each buttercup's expectant brim,  
And spilling sparkles thro' the cool, wet grass;  
At early matins in the cherry-bloom  
A crimson-vested choir in perfect voice,  
Their notes picked up by an obliging breeze  
And out and far away go billowing on;  
A bold hill-front, in dapper waistcoat green,  
Embroidered in the same old-fashioned print  
Of cowslips, golden-rod and violets;  
A bonny brook, which, always bickering by,  
Yet always stays, and always with the spell  
Of its own soft, inimitable song  
Bewitches men to Nature worshipers;  
The temper of the air a perfect balm,  
With odors from all flower-bowls distilled;  
The aspect of the earth, and sky, and sea,  
A mother smiling on her dimpled child.

Lo, what a change! with sudden frown the East  
Looms up out of the wet, and from her breath  
The cold drops drizzle; up the swart air blows  
Her streaming hair, like witch's locks unkempt;  
Her knit brows darken every laughing lake;  
With ashen brush she paints the sweet blue out,  
Mumbling the while, or screaming at her task,  
As if she hated such a landscape fair,  
Hiding it with her miserable daub;  
She blots the very voices from the score  
Of summer's symphony, and bobolink  
And bee put up their reeds in mood forlorn;  
The cricket stops his strident violin;  
A dismal croak comes from the rushy pond;  
The frightened harebells swing their delicate chimes,  
All muffled by the gaunt, distempered blast;  
The damp creeps to the forest's oaken heart,  
And, save the brooklet's sweet, persistent song,  
Nature, discrowned and broken-spirited,  
Puts on the sack cloth, and gives up to grief.

A fine, frank face that looks you in the eye,  
The bloom of health upon the rounded cheek,  
With springing foot and quick, athletic arm,

A carriage of mixed dignity and grace,  
A temper like a sunbeam, warm and bright,  
A mouth whose words are with young courage spelled,  
And hands full of enthusiastic help;  
A mind with bookish discipline prepared,  
Manners to finer social fitness rubbed,  
And habits governed to most temperate notch;  
With healthy spur of brisk, admiring friends,  
He mingles in the swarm of human life  
And pushes on, with uplift eye and prayer,  
To make his end, the crown of work, success.  
Speed the true soul! and may his wholesome toil  
Find recognition in his heaven's blue smile.

Lo, as he runs the gauntlet of the years,  
They mock and jostle him; the fine, rich bloom  
Of high-born spirit fades out from his cheek;  
His sturdy hopes and plans and prayers and deeds  
Are waylaid, wounded, crushed, and left for dead.  
The book he meant to write has not been born;  
The song with which to move the multitude  
To wonder and adore, refuses him;  
The height where leaders overlook the clans,  
And see a victory, to him is shut;  
The privilege to practice soulful arts—  
The palette of a summer eve transfer,  
The passion of "Messiah's" score unchain,—  
In blank unreason is denied; the keen,  
High-stepping roadster keeps unwilling stall;  
Which way he turns, or service undertakes,  
Sincerest effort is checkmated still,  
Until, aweary of life's badinage,  
He drops, a limp resemblance of despair.

But stay! One word yet; 'tis not truest life  
To sail in soft gondolas down the bay,  
Or pluck from eagle's crag the edelweiss;  
Sometimes 'tis rummaging in cobwebbed nooks,  
Sometimes a turn with grimy threshing hands,  
Or setting some refractory stitch in line,  
Or sweeping streets where rude plebeians walk,  
Or months upon a bed of restless pain;  
For life is durance, patient, cheerful, long,  
In that small corner of the Maker's plan  
Which He alone knows how to call success.  
Turn then where lie thy buried dreams, and rise  
New clothed with peace, and Easter life begin.

Huntingdon, Pa.

ment the results would be the same, only Russia would unite with the others in extricating the conquering power from Constantinople.

But why should the European Powers be so jealous of the power which shall take Constantinople? Let us see: If Russia should win the prize, she would soon transfer her power from St. Petersburg to Constantinople. Austria-Hungary and even Germany would be doomed. Despotism and autocracy would unite and these dark powers would control and censor the entire world. Thus we see that the other nations are jealously guarding the Bosphorus that Russia shall not have it.

If England should obtain the prize it would convert

its present administration, has no thoughts or intentions of being swept off the map. The German kaiser has worked up an apparently strong friendship between himself and the old sultan of Turkey. Many people are not sure of the sincerity of this friendship, for they intimate that selfish motives lie behind it all, yet nevertheless, it exists. And its existence enables the kaiser to use his diplomacy, which he is doing even though the old sultan is himself a shrewd diplomat. And so Germany, through this friendliness is extending her railroads and franchises and enterprises into Turkey, and Turkey is happy to get them.

And the kaiser probably reasons that—as the sultan is now old, and he is yet young, and the tottering con-

Mosque of St. Sophia, Constantinople.

her, by a single stroke, into the greatest power that the world has yet known. Constantine's dream would be realized in its fulness, and the Bosphorus would enlighten the world. But Russia and its church and state policy with its autocracy would be doomed to smoulder and to die away. Its great dragonish power would no longer keep people as subjects submissive to its awful power. Thus Russia aims, above all others, to keep England back.

If France should take possession of the Bosphorus, her old glory would return and her foreign possessions would multiply with utmost fleetness. Her majestic power would become supreme.

But Germany, most of all other powers, besides Russia, perhaps, is most tactfully watching the Bosphorus and keeping tab on Turkish events. Germany, under

dition of the Turkish empire can probably exist only a few years after the sultan dies—Germany will be in a splendid condition to send great detachments of her magnificent soldiery down into Turkey to protect her interests and franchises in the disintegrating country. This would admit Germany to Constantinople and once there,—thus reasons the kaiser,—Germany is in a fairly good shape to remain. Then German autocracy would be built up, Austria-Hungary would be swallowed up, and Germany's ambition to be the modern Constantine of the world would be realized.

In America we can hardly imagine the jealousies of the rival European powers. With the expansion of our nation from ocean to ocean even in its building, we have seen the need of forts decay and we deal with our neighbors on the north and on the south as we

deal with brothers. The Monroe Doctrine has kept our eyes off of European affairs so long that it is only since the years that have followed the War with Spain that we, as a nation, are permitted to look into European affairs, conditions and controversies.

As to internal conditions the nation consists of a downtrodden people. The power of the sultan is absolute, and his word to other nations is unreliable—made so by his unreliable government. He can put people to death at will, and by means of secret telephones and the telegraph can keep in minutest communication with his entire domain. We marvel that a nation would stand gasping and be thus led and battered by one man. But we need not marvel. In government alone, through its influences, this could not

work before they begin to pour on bucket after bucket of water. They usually get the pay before the fire fighting begins and consequently the fire usually burns itself away. The only scavengers in the city consist of its associate population, *i. e.*, the dogs. Constantinople is a city of dogs. Dogs everywhere. They belong to nobody, but live on the castaway food in the streets. They are seldom molested. If one is sleeping with his head across the street-car rail, the motorman or driver will stop his car, leisurely alight to the street, and drive the canine away. The bridge across the Golden Horn is an old trap, ready to fall to pieces, but the sultan will not permit the building of a new one for fear that some explosive would be hidden in the structure which might be used to separate his

Roberts College, Constantinople.—Rear View.

be done. But in Turkey there is complete unity in church and state and the sultan is the head of the state religion,—Mohammedanism,—and through the religion of his subjects he secures their submissiveness and their loyalty. Free speech is prohibited, and a word said against the sultan would mean death to the unfortunate one who gave expression to it. The press has no influence, for it is censored. Education is almost unknown, and enterprise is a matter entirely out of the question.

An American sociologist visiting in Constantinople found the people to be lazy and indolent. As giving alms is one of the cardinal principles of their religion, he found begging to be a reputable occupation. The city has no sewage to speak of and it is filthy beyond description. The fire department consists of a band of leisurely fellows who bargain for the price of their

shrunk soul from his majestic body. And such is the life in the sultan's capital city. Such as this the sultan sees as the result of his policy, and yet he goes on in his career, being, in the words of Gladstone, the "Great Assassin."

But, even in such censorship, and such despotic autocracy, some agencies within Turkey are working. These agencies at work are the smouldering fires that give the German Kaiser grounds for hopes in his ultimate success in reaching Constantinople. Following are some of the conditions:

The party known as the "Young Turkish Party," consisting of younger and educated Turks are struggling for a constitutional government;

The people of Albania are sincerely and earnestly striving for independence:

The Macedonian misery as a result of the sultan's disregard for the Treaty of Berlin in 1878:

The Armenian massacres of 1894-96, and the present outrages and massacres in Armenia. Also the cruelty of "The Great Assassin" in these massacres has been revealed to the world as they never have been before, and the world stands appalled, gasping for breath.

And growing out of these difficulties the Turks are appealing to Europe and to the world for intervention. They realize that from within they are powerless to strike effectually, for they are battling against a power, to them, irresistible; but they hope to keep the fires kindled until intervention by a foreign power may bring light.

Another influence for good, and which incidentally adds to the disturbing elements, which are continuously and constantly knocking away at this backward government is the American-English educational movement. Mr. Roberts, a philanthropic American of wealth, became interested in education in Turkey and succeeded in establishing a college, which is located in the eastern suburbs of Constantinople overlooking the Bosphorus, and is a great beacon light for humanity there. The American College for Girls is another great factor for good and its influence is already being felt.

These institutions, however, do not succeed, as yet, in attracting many Mohammedans, but are largely filled by Christians from England, France, Germany and America, as enough people from these countries always reside in Turkey to insure a student population in these school towns.

A few years ago Jerome Hall Raymond of Chicago was invited by the president of the American College for Girls to deliver an address to its first class of graduates. Before Dr. Raymond was permitted to take the platform, however, the president instructed him not to mention America, or allude in any way to the Turkish ruler, government, or any other ruler or government. He was also instructed not to use the words despot, or despotism, in his address, "As," explained the president who is an American, "the sultan strictly forbids such utterances from our platform." So Dr. Raymond proceeded along scientific lines and labored through a long address without permitting the eagle to scream a single time.

But for all this, the sultan cannot prohibit thought. And when thoughts are not uttered they become deep and long. They are collected in the reservoir of reserve, which some day will become filled and the banks will overflow. Thus the disturbances in Turkey are growing little by little as the years roll on. The other European powers are becoming more and more anxious to pick up this bone of contention, and each jealously desires its entire possession. Time is going on and the fuse of unrest is burning slowly down to the

bombshell of disintegration. Going on with this is Turkish cruelty unchecked and heedless of every sign. A cruelty in misrule, in robbery, in corruption and in assassination so great that—

"The panther of the desert, matched with these,  
Is pitiful; beside their lust and hate,  
Fire and plague-wind are compassionate."

#### COMMENT: CRITICAL AND OTHERWISE.

RICHARD BRAUNSTEIN.

WE occasionally hear a man say that he "has very strong dislikes." His smug complacency suggests that he regards this characteristic of his make-up as something at least innocent, if not positively virtuous. But how unfortunate in reality is the condition which makes such a remark possible. A man whose mental structure is so sadly warped deserves our sincerest pity and our hearty sympathy.

"Dislike" is not a pleasant word. It falls harshly on the ear. But the worst word in any language is *hate*. It is a word for demons, not for clear-eyed, wholesome men and women. God forbid that we should ever hate anyone. For our own sake as much as for the sake of others, we cannot afford to harbor a thought of hatred. We should not do ourselves such an injustice, such an injury, for the wound of hate heals slowly, and the scar lasts long.

Let us try to think of the better qualities of the people we know, for everyone has in him something worthy of our admiration and our respect. Let us think kindly of those around us, or not at all. If we cannot have love for all, *we can have charity*, which is giving to every man and woman the benefit of the doubt. Charity builds up; hate tears down. Charity protects; hate destroys. Charity leads and soothes; hate poisons and torments. One thing only may we hate and that is the *wrong*, the *untrue*, the *unclean*. Hate evil then, but hate no man, not even the doer of it.

Through the gateway of the ideal we find our escape from all that is sordid and unlovely in our life upon the earth. It is that which comes to us in moments of utter bewilderment and discouragement and makes our existence once more an intelligent, desirable thing. It is that which transmutes our human values into terms of eternity, and glorifies our everyday cares and occupations with a light that never was on land or sea. If we have our ideal of perfection constantly before us, and can see that slowly but surely we are making our lives conform to it, the ordinary misfortunes and rebuffs which fall to our lot count for little or nothing. In our strong tower we find a refuge from every wind that blows and every storm that breaks upon our heads.

Your ideal and mine may not be the same; they do not need to be. You may call yours truth or beauty,

health, wisdom, virtue, kindness or something else—it matters little. These are but facets of one flawless gem. You see one and I, another, but we are looking at the same gem. We are both seeing life—perfection, and all of these ideals point the way to it, although from different directions. Follow the one which seems to attract you most strongly and commandingly. I will try to do the same, and if together we do our best to get our fellow-traveler to take up the quest, ultimately we shall find ourselves where the ways come happily together.

Just another seed-thought: In your efforts to bring about some worthy and unselfish end, have you ever been overcome by a poignant sense of loneliness? Have you ever, failing to receive the coöperation of even your best friends, been tempted to ask, "What is the good of all this endeavor? What is one among so many?" Have you ever felt like giving up the struggle, and resigning your life to the *carpediem* program which so many of your neighbors seem to be following?

If such thoughts as these come to you, comfort and cheer yourself with the memory of what has been accomplished for humanity by isolated,\* lonely, friendless men. Since the days of John the Baptist, many a voice has cried in the wilderness. Luther and Savonarola felt the bitterness of standing alone; Lincoln carried upon his unsupported shoulders the terrible burden of the Union's threatened disruption. And Christ, himself, was alone in Gethsemane, although his hearers at one sermon—where food was provided—numbered four thousand.

There is a Persian couplet which runs:

"A single human sigh may burn  
Till it the world shall overturn."

The solitary voice of a reformer may be heard only indistinctly by the men of his own generation. It may take years, or centuries, for its leaven to work. But *work* it will, for all the power of God's universe is back of the word of truth and of love, no matter how unassuming be the speaker of it.

Cairo, N. Y.

#### TUNNELING UNDER A RIVER WHILE FLOATING ON ITS WATERS.

THE natural way to tunnel beneath a river would seem to be to get beneath its bed and work. Indeed this has been the rule followed heretofore, but all things change a little and civil engineering changes a little more. In building a railroad from Detroit, Mich., to Windsor, Canada, under the Detroit River, all rules have been abandoned and the entire work is done from a barge idly floating on the bosom of the river as is shown in the illustration on the first cover page.

The method used has been to dig a great trench out

of the bottom of the river, in which are being sunk successive tubes of steel, 23 feet in diameter and 260 feet long, secured together by transverse stiffening diaphragms of steel at every eleven feet of their length. These tubes form the waterproofing of the tunnel proper, which consists of a solid ring of concrete, two feet in thickness, formed within the tubes. The width of the river between dock lines is about half a mile, and the subaqueous section of the tunnel, or part entirely under the river, will consist of ten of these twin tubes with a total length of 2,622 feet. Along the bottom of the trench, rows of piles have been driven and capped, to form a bearing for the tubes.

The tubes are built at the shipyard of the Great Lakes Engineering Company at St. Clair, forty-eight miles away. The ends of the tubes are "plugged" with stout wood bulkheads, to render them watertight. Then they are launched into the river sideways, very much as lake ships are launched. Floating lightly on the water, and drawing no more than six feet, the tubes are towed by a tug down the river to the place where they are to be sunk. On top of the tubes and near each end are two air cylinders, ten feet in diameter and sixty feet long, strapped securely to the tube diaphragms, and these serve to regulate the settling of the tubes, as they slowly fill with water, which is admitted at the will of the engineers through gate valves in the bulkheads.

After the tubes are sunk in the trench between the rows of piling the water which was used to settle them is pumped out. The concrete gang now begins operation within the tubes which are used only as a protection to the cement filling inside upon which the train service is built. The inner cement wall is from two to five feet thick and solid enough to withstand the severe strain of the heaviest trains. The cement tube is eighteen feet high in the clear which allows for the passage of the highest cars.

Cement is again used on the outside of the steel tubes in order to protect the metal from the water. The entire thickness of all three walls is about five feet on the sides and over six on top.

Out in the stream are the cement scows, fitted out with the latest concrete mixers and with huge cranes and other devices for the rapid handling of the material from the lighters alongside. The scows are anchored as immobile as is possible in the swift current of the river, which is constantly churned into choppy waves by hundreds of passing freighters and excursion and ferryboats plying the busy stream. By means of hoppers placed at the top of long vertical delivery pipes, the concrete as it is prepared, is deposited in the trench exactly where it is needed, and comes in contact with the water only when it is spread over the surface of the gravel bed which was prepared for it. As the work goes on, the concrete is held in

proper form about the tubes by three-inch oak plank-ing, firmly braced and backed up with clay and river slime from the dredges, working in the trench farther out in the river. Concrete is also chuted down between the tubes and continued up over them for five feet, thus encompassing them in a solid mass. The trench is then filled around the tunnel, and the top is covered with riprap.

Heretofore the through trains have crossed this river on ferryboats of immense size. This was a slow process and rather dangerous when the heavy ice floes filled the river. The five trunk lines—the Michigan Central, the Grand Trunk System, the Wabash, the Péré Marquette, and the Canadian Pacific—operate no less than ten of these car floats.

Instead of thirty minutes spent in crossing by the old way only seven minutes will be required to cross thru the tunnel. The saving in time and expense of operation in moving the heavy traffic across the river thru a double-tracked tunnel, over the slow and uncertain ferry system, is deemed by the Michigan Central officials, in view of the ever-increasing tonnage of the road, of sufficient moment for the expenditure of \$10,000,000 in the construction of the international tunnelway.

### PROHIBITION IN KANSAS.

W. O. BECKNER.

JUST at the present time, the subject of Prohibition it attracting as much, if not more attention than almost any subject that is in the public mind. So much of the territory of the United States is under some form of prohibitory law that, though the old-time politicians and many of the larger metropolitan dailies ignore the whole subject, it is impossible to keep it from the people as a very live issue. Many parts of the country have Local Option, that is, the law allows that a municipality or a city or a county, may vote "no whiskey in this territory" and that is law for that part. Texas has Local Option, for example, and whole counties are "dry." Nebraska has the Slocum law, which is in effect the same thing as Local Option.

Kansas has state-wide Prohibition. About twenty-seven years ago, as the result of a campaign waged by the W. C. T. U. of the State, there was placed an amendment to the State constitution, forever prohibiting the sale or transfer of alcoholic liquors for any but medical or scientific purposes. There was also put upon the law books of the State a provision that every teacher in the public schools of the State, must pass an examination in Physiology and Hygiene including the bodily effects of alcohol and tobacco. Furthermore, the text-books in Physiology must contain instruction along that line. By these various means, there is anything but the densest of ignorance among the school children of Kansas about the evil effects of alcohol and tobacco.

At a time when there is so much agitation of the subject in other parts it is but natural that Kansas should be looked to as a fair example of what state-wide Prohibition does. Editors of Kansas newspapers, leading business men in nearly every city, preachers whose names have gone beyond the borders of the State and many of other professions are receiving almost daily, inquiries as to the working of the law. "Does it really work? Does it really prohibit?" And some there are who inquire as to how a city gets along without the revenue coming from license fees. From Illinois, this is especially true just now, due to the fight being waged there. But be it said to the credit of Kansas, that today, the editors of Kansas papers are ready almost to a man to champion a cause that twenty years ago would have sent them begging for bread, so far as their subscription lists were concerned.

To the present Attorney-General of Kansas, Hon. Fred S. Jackson, more than to any other man now active in Kansas, is due the credit for our present hopeful condition. As Assistant Attorney for the State under the previous official, he instituted a system of procedure that set city officials and county attorneys to listening. In many cities the officers of the law collected the fines imposed, regularly, which in effect was only a monthly license. These fines were turned into the city treasury and were a considerable source of revenue. Such practice was admitted by all concerned to be unlawful but it was claimed that to enforce the law as it stood on the books was an impossible task, because it would lack support from public opinion. But Mr. Jackson went to work. He held the theory that any law was to be enforced and obeyed so long as it was on the books. He knew no difference whether it was a law against selling liquor or against horse stealing or against safe blowing or against murder. It must be obeyed. He claims it to be his duty as a public officer to know no difference. His first move was to notify the mayors of certain cities where violation was so very open that they must cease to collect such fines or show reason why they should not be ousted from office. They laughed. He brought one to trial before the Supreme Court of the State, and that court sustained Mr. Jackson's point. The mayor went home and attempted to make a joke of the whole matter. He soon got word that he was wanted before the court again, and that august body assessed a fine against him in the neat sum of one thousand dollars, along with a disqualification to hold office for a certain length of time. The fine was paid. Other mayors took notice. They sat up, as politicians say. They began to get busy. The police force was called in and instructed that "something must be did." Joint raids became common and many has been the case of liquid fire that has found its way down the gutter since.

Political parties move slowly. Old institutions

know no speed. Like the horse of long years' service on the dray wagon, they take time and never get excited. But in January of the present year Mr. Jackson made a speech in a banquet of his political party, defending his policy of law enforcement, with emphasis on the prohibitory law, and he was loudly applauded. They see "the handwriting on the wall." They must support a policy that is so certain to be popular. 'Tis true, many may consider it only a seeming support, which really amounts to opposition in disguise, but Mr. Jackson takes them seriously. He is making it a principle of his party's platform.

Mr. Jackson is a Kansas product. He grew up in Kansas. He was educated in the public schools of Kansas where his text-books contained the information named above. He came to manhood in Kansas where he learned what it is to know no open saloons, where he caught the idea of the moral law being superior to every other. It is not a question with him whether we can enforce the law, but rather should we enforce the law. And Kansas is pleased with the answer he has sent ringing through the State. He goes backward not a step. Tomorrow's sunset must record greater achievements for right than it was possible for the sun of today to know. Onward ever is his watchword.

There have been those who clamored for a re-submission of the whole matter to a popular vote again, claiming that the law was a failure, and that the people of Kansas did not want it else it would not be so hard to enforce. In a number of the sessions of the State legislature the subject has been sprung, but it always lacked some one to back up the contention. Too many of the politicians of the State were of the opinion that it was better to keep hands off a thing that was so much agitated and so uncertain. They did not dare put themselves on record against it and did not care to get into the private light as favoring it. So it was let alone. But this clamor for re-submission has subsided wonderfully since the campaign of enforcement has been inaugurated. We do not hear of it any more. If there be any who still favor it, they are afraid to cheep; they hide their heads like ostriches, in the sand. Re-submission is as far away in Kansas today as the east is from the west. No call for it at all. It is all swallowed up in the larger notion of enforcement. More than that, if the question were to be submitted to the voters again, there is no question but that it would be affirmed by an overwhelming vote. While some people want their beer, and whiskey, they would not be willing for a saloon to be established next door to them. They think too much of their property value and too much of their neighborhood in general. Any man who thinks, knows that property values in the vicinity of the saloon are not so good as in a clean, saloonless neighborhood. The difference is too great to compensate for all the desire

that alcohol be easy of access. Kansas people are settled on the question of re-submission.

One of the things that makes the enforcement of the law in this State more difficult, is the fact that no State can, under the laws of the United States, prohibit the shipping into that State from another any article or product. It is by the provisions of the Inter-state commerce law that such is true. I may send to a man in Missouri or Illinois any article I wish to, and the officials of that State cannot interfere with the transaction so long as it is a transaction between us two of different States. That may seem to be a queer arrangement, but it is in accordance with the principle that the United States is *one* country and not *many*. It is all right in principle. The larger principle that will take in the situation for whiskey shipment is that the United States has no more right to allow the sale or transfer of alcohol from one individual than she has to allow some men to steal. Think of the Government licensing an official thief. No other man allowed to steal but him whom the authorities name. Such is against moral principles and therefore not done. The whiskey situation has just not yet come to that full realization in the public mind; that is all the difference. No man has a moral right to transfer to another that which will make the other less a man than he is. No man has a moral right to transfer whiskey just because the other fellow wants it any more than a father is bound to pass out his firearms and his razor on the demand of his two-year-old son. On the other hand, the moral law would bind him to keep them from him. Every man is bound morally to render all the help possible to his neighbor, that is to have concern for his character growth. Some have gone so far as to predict that the final solution of the whiskey problem will be in the form of a decision from our Nation's Supreme Court, embodying this moral principle.

Another thing that makes it hard to enforce the prohibitory law is that unscrupulous men will take advantage of the provision for "medical" purposes. Drug stores may secure from the County Court a permit to sell alcohol for purposes within the law. But men who will lie will generally swear to it. The permit books of these druggists are filled up with oaths that the applicant needs this half-pint of whiskey for a cold. No certificate from a physician is required. It should be. A better way possible would be to publish regularly the names and causes of those who have been sold to. That would work marvels in some people's excuses. Druggists are continually hounded with a lot of cheap hangers-on who come regularly for their pint. These permit books are the property of the public and must be kept in the store where the public can inspect them, but it is only once in a great while that any citizen comes around to look over them. They

lie there on the desk in full view, as safe as though behind a lock.

But after all, does it work any good? Ask the many young men in our proud prairie State, who have never been inside a saloon; who have never had a chance to sit down to the card table with a lot of ruffians and learn the tricks of the gambler from professionals; who have escaped the terrible seduction of having their minds filled up with a lot of rotten stories from the mouths of those whose tongues were set on fire by the flames of hell. Ask those whose faces radiate a something of positive goodness of character, who have few wild oats to reap because they have sowed sparsely, but whose mothers take infinite pride in the fact that their sons are strong, manly men, with a heart as pure as a lily and a purpose as strong as the forces that hold earth to the solar system. Ask the mothers whether it pays to live and raise up a family in a prohibition State. Ask the legitimate business man who has in his employ a number of fellows that were accustomed to report for work on Monday in an unfit condition, due to their "boozing" over Sunday. Ask him whether he would as soon run a business with men in his employ who "boozle" little or much. Ask the police judge who was accustomed to have a number of cases to hear on Monday morning, cases with men who should at the time have been at work, but who imbibed a little too much on Saturday night. Ask him whether it is any different under a *regime* of law enforcement. Ask the school-teachers who have in charge children from homes where alcohol was used, whether they notice any difference in the attendance of those children, and whether the children seem any better fed, better able to do their work. Ask them whether their daily records are so badly crossed up with absent marks, and whether the children are suffering less from colds, due to better clothing, now that the father maintains a higher standard of conduct. Ask the mothers of such children whether their husbands are any more companionable and whether they spend more time at home with the family than before the whiskey law was enforced. Ask whether food stuffs are more plentiful and fuel less hard to keep in stock. Then ask the men themselves who were in the habit of frequenting the joint, whether they honestly enjoy life better; whether they get as much from sober association with their families as they did from the old clan of the boys. You will be surprised at the answers you get if you press the question far enough and seriously enough.

Not all men are teetotalers now in Kansas. No, but not all men refrain from stealing nor from murder and we have strenuous laws against both. Those who point to the prohibitory law and claim it to be a failure, forget that neither does the law against these other offenses entirely prohibit them. Taking it on a whole, the prohibitory law is as well enforced

and prohibits as much crime as any law. We have a law that all children shall attend school; yet it is a fact that many do not secure a complete education; many are unlearned in the higher and broader things of life. No one would be ready to champion a proposition to abolish the public school because all do not get from it all that is possible for them to get. Kansas people are in the main satisfied with the present law against the transfer of alcoholic liquors and expect to keep it on the law books. It does prohibit a great deal of crime. It keeps the liquor away from the boys, out where they will not be tempted with it, and they grow up to the age where they have better sense of their own about its use.

It is true that the struggle is not done; the millennium is not come yet. But with every conflict there comes a weakening of the enemy's lines and a strengthening of the cause of Prohibition. Manhood is being priced and will win out in the end.

## CURRENT COMMENTS

Hon. E. F. Acheson, of Pennsylvania, (republican) is making a splendid record for prohibition. Within the last ninety days he has introduced five bills into the House favoring that movement; to wit, to prevent the shipment of liquors into prohibition states and communities; to forbid the transmission of all printed matter through the mails containing liquor advertisements; to forbid the sale of liquor in the Panama Canal Zone, also proposing a constitutional amendment prohibiting the manufacture and sale of liquors in the United States; and a bill providing that total abstainers should be given the preference in the military service. This shows that the will of the people of the United States will not be passed by for the want of an interpreter. Wise is that statesman who can read the signs of the times and act accordingly.

### The Haytian Volcano.

Not long ago eleven Haytian revolutionists were summarily executed and President Nord Alexis demanded that the consulates surrender to him the revolutionists who had fled to them for refuge. This demand was particularly directed at the French Consulate, where General Firmin, the leader of the revolutionists, had taken refuge. There was apprehension of a general attack on the white residents of the island, and French, German, British and American warships in the West Indies were ordered to Port au Prince and Gonaives. The shots to announce her arrival, fired by the British cruiser "Indefatigable" as she anchored in Port au Prince harbor, Tuesday evening, provoked the greatest terror in the town. The presence of the foreign ships had the desired effect. The Haytian government changed its mind over night, President Alexis gave up his ambition to play a second Castro, and it was announced that the revolutionist refugees would be allowed to depart unscathed. So long as the ships are in Hayti harbors all will be quiet there. Native

Haytians in New York, who are opposed to the present administration, believe that trouble will break out again after the ships depart. The Haytian army is described as a joke by recent visitors there. Its uniform consists of a red hat. The soldiers wear, or neglect to wear, other garments to suit themselves. Fully one-third of the "army" were unprovided with guns, they say, and few had shoes. The present revolution will probably be like many others on the island—some bloodshed, lots of talk, and then a period of rest.

#### The Demands of Labor.

A convention representing 117 labor associations, including the American Society of Equity and other farmers' organizations, met last month in Washington and after conference presented a protest to Congress against "the indifference, if not actual hostility, which Congress has shown toward the reasonable and righteous measures proposed by the workers for the safeguarding of their rights and interests," and demanded the passage of these measures: A law restricting jurisdiction of the courts of equity so as to prevent the holding that property or property rights exist in the labor or labor power of any person or persons; a bill to regulate and limit the issuance of injunctions; employer's liability bill; a bill to extend the application of the eight hour law to all Government employees, and those employed upon work for the Government, whether by contractors or sub-contractors. The protest suggested, also, two amendments to the Sherman anti-trust law. The first is intended to remove the labor union and its members from the jurisdiction of the law, while the second provides that the law shall not apply in cases of combinations among agriculturalists or horticulturalists who combine with a view to enhancing the prices of their products. The protest is particularly bitter in its references to the judiciary, whose power, it says, is so extending that it is "invading the field of government by law and endangering individual liberty." The document continues: "We favor enactment of laws which shall restrict the jurisdiction of courts of equity to property and property rights, and shall so define property and property rights that neither directly nor indirectly shall there be held to be any property or property rights in the labor or labor power of any person or persons." Speaker Cannon, when the labor leaders presented the report to him, indicated that he expected the employer's liability law to be passed on favorably by Congress, but made it clear that in this he merely expressed his private opinion.

#### A Bomb in Union Square.

It is estimated that there are two hundred thousand unemployed in New York City. To bring the condition of these people before the public, the Conference of the Unemployed, a delegate body in which the Socialist party is represented along with many other labor organizations, called a mass meeting to be held in Union Square on Saturday afternoon, March 28. In response to this call some twenty-five thousand people gathered at the Square early in the afternoon. But the Police and Park Departments refused to allow the meeting to be held, cleared the Square twice and then dispersed the crowds in the side streets, pulling down men who attempted to speak from steps or vans, and brutally riding down upon the crowds on the streets and the sidewalks. After Union Square had been cleared for the second time, while part of the police reserves were waiting to be ordered back to

their station, a bomb exploded in a small group of men who stood in the square near the squad of police. The man who was about to throw the bomb was terribly injured and a bystander, who was apparently attempting to dissuade him from the deed, was killed. No one else was seriously hurt. Investigation showed that the young bomb-thrower was a Jew who had been in this country nine years. He had of late been reading anarchist literature, but so far it has not been discovered that he was connected with any anarchist group. His mad deed, with the crime in Colorado on the same day, and the other recent anarchist deeds, rouse the abhorrence of all America. Nevertheless, the New York police on Saturday seem to have exerted authority with unnecessary roughness. One spectator described their action thus:

"The sight was one which I think could not be duplicated outside of Russia. Not all of the police could be blamed. They were acting under orders, and some of them were as kind as possible under the circumstances. A few of them seemed as fanatical and fiendish as Cossacks. I do not know if any of the spectators were seriously injured, but it is a miracle if some were not." It may be that the police had information that the Paterson anarchists planned a demonstration during the afternoon. If so, it was eminently right to disperse the crowd. But the right of free speech is one that we must guard carefully for all men who do not advocate treason or crime.

#### A Longer Day.

An attempt to make the English day longer is being much discussed in England, where an inventive gentleman suggested some time ago that all the clocks in the United Kingdom should be simultaneously put forward one hour and twenty minutes. In this way a man who rises at nine would, unbeknownst to himself, as the Irishman said, be getting up at 7:40, and would lengthen his daylight almost an hour and a half. Later it was announced that a member of Parliament had drawn a bill to induce a less but still a great saving of time by advancing all the clocks eighty minutes during the summer months. Two hundred and ten additional hours of daylight would be secured for business and for pleasure during those months; and as the impression prevails that the early morning hours are most auspicious for creative work, it is to be hoped that the intellectual standard of the Empire may be perceptibly elevated. Some practical difficulties have, with vulgar persistence, obtruded themselves. The person who now dines at 7:30, for instance—which is perhaps the average dining hour of the Londoner—will then be dining at 6:10, which is preposterously early, and will be altogether unfashionable. Moreover there is one aspect of the change which would fill London with horror. If, for instance, a man were going to a seven o'clock dinner, under the new arrangement of daylight he would appear on the streets of London in evening dress at 5:40, which would shake the British Empire to its foundation. Sir William Henry Mahoney, the Astronomer Royal, has had the effrontery to declare that the scheme is futile; that it is simply special legislation for the benefit of late risers; and he goes so far as to declare that no act of Parliament will ever make people leave their beds earlier. This shows a skepticism with regard to the efficiency of legislation which is disheartening. The scheme is enticing, but it is to be feared that it belongs to the era of the millennium. Oliver Herford suggests the difficulty in one of his wisest and most popular aphorisms—"For many are called, but few get up!"

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## THE CONSERVATION OF ENERGY.

ONE cannot think of the amount of energy wasted annually in our country without a deep feeling of regret. We are a strong people. We enjoy good health and this develops strength and energy. We have the weak among us but these give place to the strong and active. Among some savage tribes the weak are left to die by the way or the end is hastened by cruel murder. Under Christian civilization the strong must and do bear with the infirmities of the weak both spiritually and physically. The weak are often the objects of our tenderest care and this is as it should be.

To conserve our energy for noble doing should be the purpose of all. It should never be wasted in useless endeavor. God-given strength used for the greatest good of all is not an ideal too high for attainment. No man has earned the right to waste his energy in idling it away or in spending it uselessly. Were the Bible injunction, those who do not work shall not eat, strictly enforced there would be a multitude of hungry, starving men and women in the land in the next ten days who might have work if they would. In the strenuous days when England was at its merriest the man who was found idling away his time without visible means of support was given the alternative of getting busy at once or having his ears slit. If that rule were enforced here who could count the divided ears?

Energy, however, is not only wasted in idleness but in misdirected effort as well. No one who has the good of his fellows at heart can contemplate, but with sadness, the misdirected, and worse than wasted strength and energy that is now taking place all over our fair land. Baseball, football, the so-called outdoor sports, racing and other forms of wasting strength are responsible for an immense amount of wasted energy, and what is really worse than all, the gambling spirit is being inculcated so that we are in danger of becoming a race of gamblers.

Says a noted writer in one of the leading periodicals referring to the opening of the baseball season, "Strong men and robust youths are gathering day by day to expend their energies, not in fruitful toil, but in the mere wantonness of tossing a leathern sphere and striking at it with a bat. Their number mounts actually into the thousands, yet is as nothing compared with the myriads who will desert bench, and desk next summer to watch them manipulate the ball, the while uttering barren cries and beating the air with unproductive arms.

"The labor power fritted away in baseball parks would dig the Panama Canal, grade a railroad, or break every strike in the country; and it is a portentous sign of our fall from the revered polity of our fathers that practically nobody objects to it."

At the close of the baseball season last year three games were played at which the gate receipts alone aggregated about a hundred thousand dollars. And thousands of those who paid from fifty cents to a dollar to see the games were young men who needed every penny of their salary to meet their necessary expenses for living, and not one of them was the better man for it. Indeed, if the gambling spirit that is always present at these games is taken into account, they were immeasurably the worse for it.

We are run mad on athletics and recreation. We are placing things in a wrong position. We are making athletics and recreation the first thing, forgetting the Divine Word which teaches that "Bodily exercise profiteth little: but godliness is profitable unto all things, having the promise of the life that now is, and of that which is to come."

## MAY 4 TO 9 INCLUSIVE.

ON another page of this issue we are making an exceptional offer in order to get our magazine into a number of homes where it is not now found. In order to reach those outside we must work through those already acquainted with us, and we therefore ask our present readers to call the attention of their neighbors and friends to this offer and to the matter that is to be found in the INGLENOOK pages. Beginning with the first issue in May the first lesson in Esperanto will appear. These lessons are to continue for a number of weeks. In the same issue will appear the first of the interesting articles, "Around the World without a Cent."

## SOLVING THE PROBLEM.

(Concluded from opposite page.)

itch for the other fellow's job and the other fellow's money. But we must expect this, for like the poor they seem to have an endless lease on this earth. Notwithstanding all this, the plan is a safe and sound one and seems to look millennial way.

## SOLVING THE PROBLEM.

THE conditions in the social world are coming to have more and more the appearance of a problem that must sooner or later have a solution. To be sure, many solutions have already been offered and some of them have been put to a test on a small scale, but even those offered by the loudest murmurers,—the ones most insistent on a radical readjustment—have not proved to be the panacea their authors are seeking.

In the first place this spirit of discontent is often born of desires that cannot in any light be considered right or lawful. It is a spirit of covetousness. If the readjustment were to be made in accordance with this spirit there would simply be a change of possessions; there would be no reform, no fundamental change of conditions, no solution of the problem. In every human being there is in some degree a spirit of selfishness. Any real solution of the social problem must steer clear of this element. To pander to it in any particular is bound to call forth the cry of injustice and inequality. The solution of the problem must, therefore, be of the nature to take a man out of himself. It must provide for him an occupation and interests so absorbing and so elevating in their nature that he will have no desire to compare himself with any of his fellow-men, seeing only the advantages on the opposite side.

There is a movement being agitated now in the land which would solve the social problem along this line. It is called the home-crofter movement. The idea is that every man shall own and cultivate the piece of land, large or small, on which he lives. If he desires to

give most of his time to some other pursuit then he would need only enough to afford him the recreation he should have. Whether the family's entire living is to come from the ground or not, there should be only as much of it as could be well cared for after the best methods of intense cultivation.

From my limited sphere of observation and experience I believe the plan is a better one than any yet offered. A hearty application of one's energies to the

cultivation of soil products is not surpassed by any other industrial pursuit in its power to produce contentment and real happiness. It presents the broadest field for the employment of the various tastes, and the greatest possibilities for progress in the sciences it embraces. The influence, on the nation, of a life lived after this plan is expressed in these words of Henry W. Grady: "The citizen standing in the doorway of his home contented on his threshold—his family gathered about his hearthstone—while the evening of a well-spent day closes in scenes and sounds that are dearest—he shall save the Republic when the drum tap is futile and the barracks are exhausted."

To be sure, this plan, even when carried out according to the highest ideals of its promoters, will not altogether solve the social problem. There are people who are so wedded to the artificial life that they would reject any plan that meant something different. There are even people who get their living from the soil today—not the best living, of course, and such as it is not by the best methods of cultivation—who have a very plainly developed case of

(Concluded on preceding page.)

## The Order of Peace and Good Will

We agree to deny ourselves, so far as possible, every expression of complaint, fault-finding, resentment, or bitterness. If we are fractious we will not show it. We will not complain at our circumstances, however meager, uncomfortable, or lonely they may be. We will not complain at the weather, or the state of our health. We will not answer back with anger, as much as by a look, even if we think ourselves treated with disrespect or injustice. We will bear it if we receive less of love, honor, or attention than we deserve. We will not stretch out our hands to demand more than we get.

We will deny ourselves the privilege to punish or censure others, though they deserve punishment. We will not denounce any one. We will give up the use of blame, even against the blameworthy. We will not combat other people's opinions or try to argue them down. If we can say nothing good of a neighbor, we will say nothing at all. We will make no one unhappy if we can help it. We will not try to detect evil, or to attack it, or to utter it. We will have the least possible to do with it. We will henceforth turn our forces in the direction of good. We will discover all the good there is in our conditions and our circumstances. We will count up the full value of the assets that belong to us, every item of good health that remains, all beautiful scenery, all memories of sunny days, all our comforts, every loyal friend.

We will find out and appreciate whatever good there is in our friends, our neighbors, and our attendants. We will try to understand their opinions, their politics, and their religion. We will say kind words to them whenever we can. We will tell them, if they care to hear, what our best thought is. We will be good-natured if they do not agree with us.

We must sometimes, doubtless, speak out and say what we think! We cannot let evil be confounded with good. We cannot stand by and see injustice done. We will speak then, if we must, to some purpose and do good when we speak. We will speak for the sake of others, and never because we are hurt. We will never say disagreeable things for the satisfaction of saying them.

We will assure ourselves that our temper is good, before we say what will pain our neighbor to hear; otherwise we will not dare to speak. We will use the voice and tone of sympathy, or if our voice is harsh, we will wait till we can recover its tone. We will approach our neighbor with good will, or we will let him alone. We will repeat to ourselves certain good words, "Thy kingdom come: Thy will (that is, the good will) be done;" and, if we cannot say these words in good faith, we will not dare to condemn any one else.

This is the Order of Peace and Good-Will. We aim to make the least possible trouble; we aim to give no one needless pain; we aim to stop strife; we aim to overcome evil with good. We see no other way to kill evil. We are here to make the world happy.—Selected.

## Why I Loved My Stepmother

Elizabeth B. Grannis

President National Christian League.

CHILDREN, do you know what a stepmother is? One little boy says she is a mother-in-law. You need not laugh at this little fellow's definition, for it is not so far from correct as you may imagine. A stepmother is a wife made a mother by law, and is not a mother by blood.

Own mothers are generally considered better mothers for children than stepmothers, and I think the Creator designed and fitted the relation of mother to the child to be the nearest and dearest relation save one. I was eight years old when my mother died, but I had a grandma and two aunts (my mother's sisters). I loved them dearly because they loved me, and were so thoroughly confident that my little brother and I were of the best blood in the land. I was not a wise little girl; I knew just enough to think I did not want a new mother, because I had been taught so.

When our new mother came to our home, my little brother was only three years old. Oh, how well I remember just how she looked, how she was dressed, and how kindly she treated me. Yet I thought I could see by her manner even then, that she loved little brother best, and I don't see how she could have helped it, for he loved her at first sight; he put out his little fat hands to be taken, when she kissed him the first time; he hugged her with his first good-night kiss, just as he did grandma. And don't I remember how I tried to be very old, and pretend to grandma I was ashamed of little brother's love for our new mother? Grandma put me to bed that night, and stayed with me longer than usual. She talked to me of my lovely own dear mother, who died when little brother was a baby. I could know her only through the stories of grandma's and Aunt Kate's and Emma's descriptions of my mamma's beauty and charming accomplishments. I believed that night, more than ever before, that my real, true mamma was nicer than any mamma ever had been, for grandma really cried right before me. I had seen the tears come before, or grandma go out of the room or to the window sometimes when my dead mamma was the subject of con-

versation; but I had never really seen her cry like me till this night, as she said it seemed as though her heart would break to see this strange woman in her dear Alice's place at the table, and worse than all, to see poor little brother go to her as a little dog would follow a new master.

I am going to tell you how my new mother and I grew toward each other. Of course, I never meant to love her, because I had been taught that no new mother was needed in our family—grandma was good enough for me. When I tried to be naughty or disrespectful, my new mother would fail to hear or notice me, or divert my attention by immediately becoming intensely interested in something that was especially attractive to me. She never punished me except by simply ignoring and not appearing to remember I was in existence, and as I was very fond of being noticed and constantly cared for, I soon decided that I must be loved by this new mother if I had to pay for it with my love for her. She was irresistible to me; my father loved her, and I loved my father dearly. She stimulated my childish ambition; she taught me that which pleased my father; I learned to wait in anticipation to see my father's sweetest smile and to receive his fondest caress, when I should tell him after supper what I had learned new that day, or present him with some little sketch of my handiwork, as I answered his question, "Who taught you that, Dolly?" "My new mamma." And I shall never forget the twinkle in his eye one night at the table when I placed under his plate a little picture I had sketched for him. When I replied as usual to the oft repeated question, "Who taught you, darling?" "My new mamma," that night the twinkle in papa's eyes caught all the eyes at table—even dear grandma's—when papa said, "Little daughter, is not mamma old enough yet to leave off that prefix, new?" I looked at grandma and my two aunts, and my new mamma, and just decided then and there, that I would say I love mamma dearly, just as well as I could love my own mamma, and I said it.

Since that night I have seen many a day and night, after the death of my dear father (many years in the past) that I have longed to sit in my dear old step-mother's lap, and receive her comfort and encouragement for the daily responsibilities of life: I can truly say that I owe more to her wise counsel and sympathy in after life than to all my earthly relations, except my father.

### AN EVENING REVERIE.

MARY C. STONER.

I sat and mused amid the gloaming,  
As shadows softly fell,  
And saw the tinted rays of splendor,  
Beyond the peaceful dell,  
Stretch forth their golden waves of glory,  
Unfold, and fade away  
Until the world in somber stillness,  
In peace and silence lay.

I heard the breezes softly murmur  
Their lullaby so blest,  
Till rocked in nature's calmest bosom  
The day had gone to rest.  
The day with all its song and shadow,  
The day of work and play,  
Came back upon the memory's vision  
As bright as flowers in May.

And sweet, sweet thots of blessed service  
Of those we aid in love,  
Upon the heart in sweetest music  
Were whispered from above.  
But sadness, for the deeds of kindness  
The night had found undone,  
Came stealing thru the gath'ring shadows  
And marred the joys begun.

Oh! could these lines but catch the meaning  
Of nature's finished work,  
And breathe within the soul its message  
And know its greatest worth!  
Could we but see the mighty planets  
Fulfil their destined way,  
Behold the little shining dewdrops  
Their mission small obey.

And know that into all their courses  
No soul from God was given,  
We'd make our lives, the sacred chalice  
Which holds our gift from Heav'n,  
Conform unto the precious likeness,  
And leave no task undone,  
Should bear within the faithful bosom  
God's likeness of his Son.

No cloud should mar life's brilliant sunset,  
No pain for all life's ills,  
No murmur on the gentle breezes,  
For all the Father wills.  
But as the ling'ring glories vanish  
Behind the somber gray,  
So ends the life in ripened fullness,  
So ends life's little day.

### HOW I PRESERVED MY EYESIGHT.

S. Z. SHARP.

I HAVE passed the limit of three score and ten years, yet I never saw the day that I could not write my letters and read the INGLENOK, or MESSENGER through without the aid of spectacles. When I see the great disadvantage under which so many labor, who must resort to the use of eye-glasses, before the age of fifty years, and the still greater helplessness of those who have lost their eyesight entirely, I am led to state how my eyesight was preserved.

At the age of twelve years I began to prepare myself for the profession of teaching. In winter, I began to study early in the morning and late at night by candle light, literally. This was more than fifty years ago. Later came the lard lamp, then the kerosene lamp, all of them injurious to eyesight. Soon after starting out on a special course of study, a good friend in an impressive manner advised me never to study with the light shining directly upon the eyes, but to shade the lamp or sit so as to let the light shine over the left shoulder. I have followed this advice until this day and have never regretted the result. When the light shines directly upon the eyes, it will strain both the pupils and the retina and weaken them or cause some other disorder which young people should never allow to happen, by not allowing the light to shine directly upon the eyes while at study or at work. A shade or visor, worn over the eyes, will not fully answer the purpose, since the wearer will frequently look up and the sudden contraction and dilation of the pupils will be injurious.

The eyes of some young people are not always of equal strength or they do not focus properly. This is often the cause of headache and they should have glasses made by a regular graduate oculist, and not wear a cheap article which does not fit, bought on the market. The eyesight is too precious to have any one tamper with it or to neglect it in youth. At the age of fifty-one years, while teaching elocution and I had to read fine print, sometimes, at sight, I found the use of glasses of an advantage and have since worn them more or less, but I had my eyes tested a short time ago by a specialist and according to what they registered, he pronounced my age fifty-four years which is nearly twenty years from the mark. When he was told his mistake, he replied, "Well, I have for once found a young old man."

Fruita, Colo.

### A HANDY ARTICLE.

ETHEL L. BUSSEL.

An inexpensive piece of furniture for the kitchen, and one that lightens labor, is made as follows: As a lamp-filling device it is a treasure, but the filling of lamps is only a small part of its usefulness. Take a

box three feet tall and eighteen inches wide and make two compartments in it by having a shelf half way. In front of the upper compartment, fit a door hinged at the bottom. On the inside of the door fasten an oblong tin in which to set the lamps while filling. A five gallon tank placed on top brings the faucet in a correct position for use. In the lower open compartment lamps can be kept ready for use and the upper or closed compartment can be utilized as a receptacle for the various "impedimenta," such as chimneys, burners, wicks, with trimmers, chimney cleaners and clean cloths. Never leave oily rags about the case, but burn them up as soon as used.

*Buford, N. Dak.*

#### GARDEN VIOLETS.

THE violet is a blossom for all the year around, and there is not a month when one need be without fresh blooms of it from cold-frame, garden or window-boxes. Planted in a shady corner of the garden, where yet they have an airy, well-drained nook, violets will take care of themselves, with the kindness of a covering of dead leaves in the fall. But they last so long and give such richness that the borders are worth preparing well. What the garden violet dislikes most of all is standing with its feet in the wet; unlike the fragrant white wild violet, which we find in meadows and bogs.

My violet bordered is planned to give a succession of bloom the year round, the earth from the three-foot bed being dug out two feet deep, and the sides stoned up with rubble laid in mortar with which coal ashes have much to do. This keeps the violets roots from gadding, and from freezing. Nine inches of stone are filled in for drainage, with turf and some old pounded mortar above to keep the earth from washing down, and the other foot is violet soil—good strong loam for the basis, with liberal mixture of old, rich barn-yard stuff, and the top leaf-mold, garden earth and sand with plenty of bone-dust, which violets love. The border lies under the lee of a little wood which skirts the grounds, facing full south, but screened by tall plants on the other side of the walk. Here the roots will spread into great crowns nearly two feet across within the year. In this favored spot one may feel sure of finding violets in any month of the year.

In Autumn, a wooden frame or sash goes right over the border; plants that have been growing in the shady corners of the garden are brought under cover, the old ones well-encircled and half smothered in dead leaves which are heaped around the frames, and the violet season goes merrily into Christmas-tide. New plants are coming into bloom while the old ones are resting. They get their bone dust, their weak tea of old leaves, old wood and very old manure steeped in rain water when the soil is very dry, and they do nothing but grow and blossom. Only one thing they ask

—not to get too wet. You can hardly give violets little enough water in cold weather. Only till the earth is dry several inches deep need you water them, which will be once in two or three weeks. They will bear the sashes lifted on sunny noons, and warm winter rains for perhaps half a hour; but avoid letting them get drenched, or having any drip from the sashes. That brings yellow leaf and decay among the crowns.

Very few people know the varieties, even of sweet violets which enrich the border. The English, the Neapolitan, and the new Russian varieties are barely known by name; but you will hardly find one well-educated person, not a gardener by calling, who can tell the difference. As the sweet violet, *viola odorata*, is native in England, Russia, Italy and throughout Europe and part of Asia, we may look for differences of interest in all.

Neapolitan Violets are pale, long stemmed, and so fragrant that you think of Violet Attar in the room with a cluster of them.

Marie Louise is deeper purple and a rich bloomer, which with care, in the open garden, starting early in a sunny sheltered place, will give flowers in Spring and Autumn.

The English violet is deeper purple still, and the standard variety for ease of cultivation and sweetness. Roots of this should be planted in every sheltered spot, under shrubbery, on light wooded banks, the north side of houses and arbors, wherever one wants the winds to be laden with sweetness.

The true Russian violet is small; the Czar, large, deep purple, almost black by the side of others, and very sweet.

The Victoria Regina, a large, deep-hued, scented violet is not to be confounded with the Queen of Violets, which is white, double and large, vying with the Belle de Chatenay, inimitable for its tinged pale petals, which suit the snow-wreath heliotrope.

The winter cultivation of violets is easy and they are the most charming of house plants, bearing dry air, and neglect with more equanimity than many favorites, only dying of gas and overheating.—*Vick's Magazine*.

#### THE HERB BED.

It is a great pity that herbs are now seldom raised in the home garden. The use of them in medicine is perhaps not so great in these days when a doctor can be readily called, but in the old times no housewife was without a goodly show of them in the yard, and she dried them carefully for winter use. Nor are herbs used nowadays so much for flavoring in cooking; and, when they are desired, the pressed leaves are bought at the druggist's. The home-grown article is far better than money can buy. A home with even a small strip of land can find place for some of these plants which are so valuable.

Of the distinctly medicinal herbs there are some which are still prescribed and, if to be had fresh, they may well be used in the family; such are boneset, peppermint, pennyroyal, catnip, camomile, saffron and horehound.

The only herb now much used for cooking is sage; and a plant of the large-leaved variety should certainly find a place in some corner of the garden. But there are several other savory herbs which are worth attention. Good cooking does not rely on one flavor; in the mingling of savors, none distinct and strong, is often the secret of producing the best seasoning of all. Summer savory, sweet marjoram and thyme ought to be more used than they are. "The housekeeper who tries them once will find a place for them in her garden. Then caraway to furnish the seed-cakes beloved of the children, and dill for the pickles, may be raised.

Also, there are the sweet herbs, among which lavender is preëminent. But lavender is not entirely hardy, and is not readily grown in some parts of the country. There are other sweet herbs which respond better to ordinary culture. Sweet fennel is very fragrant, comes up year after year from the first sowing, and furnishes a foliage very beautiful for using in bouquets. Sweet basil also has an odor generally liked; while the lemon balm is almost as fragrant as the old-fashioned tender lemon verbena. Coriander and anise would also be valued if raised, both for their seeds and for their fragrance.—*Farm Journal*.

#### HOW TO HAVE HEALTHY FOWLS.

LIVING in town, I have been compelled to keep my fowls confined to a lot of about a quarter of an acre; yet they have been remarkably free from disease, and give us eggs the whole year around.

Fowls, even the tallest, live and breathe very near the surface of the ground; and when the earth becomes foul from having had poultry running on it for some time, they cannot help inhaling the malaria engendered by it. Fowls on filthy runs will sicken and die without any apparent cause; so if we wish to have healthy fowls we must take sanitary measures.

Many people clean their yards by paring them annually, then some fill them up with chalk and gravel. This is all very well; but I think I have a better method than this, one which gives me a double profit on the lot, and answers the purpose as well. Every year in the spring I plow the lot for potatoes, except that portion directly around the poultry house. After plowing, I let it stand for a day or two so that the chickens may scratch for worms to their satisfaction, then they will not bother it so much afterward. Plant the potatoes rather deep and there will be no danger of their being scratched out. The fowls have never bothered the growth of the plants any as I could see, and they will keep the worms off the plants. The guano-like

manure on the lot is a valuable fertilizer, and we usually get a fine potato crop off the lot, and the ground is completely purified by the turning up of the soil. Around the house where one can not plow easily, I empty my ashes all through the winter, and since I have been doing this, I have not had to feed my fowls shells and lime as I did previously. They seem to get enough out of the ashes to provide the eggs with good hard shells.

Overcrowded and ill-ventilated houses are another source of disease. If you cannot increase the size of the poultry-house, then decrease the number of fowls. Every six or eight fowls should have at least six or eight square feet of room, and more would be better. I keep my poultry-house well ventilated, but am careful to see that no drafts blow on the fowls, or cold and rheumatism is the result. If one gives the fowls clean runs and houses, plenty of feed in variety, but not an over abundance, and gives them plenty of good clean water, he will not be bothered with sickly fowls.

Be careful that the eggs intended for hatching do not get chilled during the cold days. They should be gathered frequently, and turned occasionally.

Don't, under any considerations, breed from immature, undersized, unhealthy, unthrifty birds. Be sure that every bird is in the pink of condition. And remember that the male is half the flock.

The extremely high prices of grain necessitate a study of cheaper feeds. Buckwheat middlings are excellent to add to the mash. They are high in protein, and usually not so high in price. A small portion of linseed-meal is excellent. The waste from the manufacture of shredded wheat is valuable balanced with corn and oats.—*M. M. Wright*.

#### BEES MAKING FRUIT GROW.

HONEY producing is only one of the missions of the bee. Indeed, for actual profit, the honey is but a minor item.

Some years ago I moved to a small place up the Hudson River. I wanted a bee farm and selected for that purpose a spot among apple, cherry, and plum trees, some of which had never borne fruit, others, none for years. My landlord told me I might cut down certain trees, as they were worthless and he intended putting out some fine nursery stock.

Being busy, I did not cut the trees down. They blossomed freely, and of course we paid no further heed to them than to break blooms by the armful when we wanted floral decorations.

The cherry trees were, much to the owner's astonishment, loaded with very large, perfect fruit. He could not understand it; such a thing had not happened for years.

Early in the autumn, while waiting for a swarm of bees to settle I noticed a number of fine apples upon

one of the smaller condemned trees. When the landlord's attention was called to them he was completely mystified and called in his neighbors to see the wonder. Later we gathered from this tree nearly a barrel of the finest Fall Pippins ever seen in that vicinity.

No argument would convince the man that "them pesky bees" had anything to do with the yield of fruit on the place. He insisted that some sort of fertilizer must have been used.

Since that time I have demonstrated by scores of experiments that trees which had for many seasons borne little good fruit, or possibly none at all, have been brought up to a high standard of productiveness by the presence of bees. They carried the pollen, fertilized the blossoms and a bountiful harvest was the result.

Regardless of the honey crop, every fruit grower should have a few colonies of bees.

If, when the bloom season is past, there is so little nectar in the midseason flowers that the bees must be fed, it is a decided economy to feed them, as in cases where a strict account has been kept, the cash value of orchard products alone has been doubled by their assistance.—*Suburban Life*.

#### SECRETARY WILSON ON FOREST RESERVES.

UPON his return to Washington from a seven weeks' trip to the Northwest, during which he made a special investigation of the federal government's forest reservations, Secretary Wilson made public a few observations on this important subject. He says:

"It has been two years since the forest reservations came under the department of Agriculture, and I have been anxious all that time to look them over myself, but the meat inspection and pure-food problems have kept me away until recently.

"The government has, roughly, about 150,000,000 acres of forest reserve. With regard to them I found two chief problems: First, to insure protection from fire, and, second, to reforest the land where continual fires have destroyed the young trees. There are millions of acres growing nothing except a little grass. The question of reforestation is pressing.

"The price of lumber indicates that we are up against a wood famine. Lumber is being shipped from the Northwest all over the world. A great deal of it is even coming here to the East. Common lumber costs thirty dollars a thousand when it gets to the Mississippi Valley.

"In the forest regions the homesteader, or the man who gets patent under the timber and stone act, often sells to private corporations, some of which have as many as 30,000,000 acres, and are still buying. Considerable pressure comes from persons who want to get title money to sell to such companies and put the money in their pockets."

#### NOTICE.

SOME time ago some one inquired about a vine suitable for the north side of the house. If the inquirer will write to Libbie Hollopeter, Pentz, Pa., inclosing stamps, she will send cuttings of such a vine.

### FOR SUNDAY READING

#### THE BOOK PRE-EMINENT.

JOHN S. FERNALD.

With Shakespeare to lead them in Drama's great field,  
And Literature's choicest of treasures to yield,  
With myriads of writers, some great and some small,  
You'll find that the Bible's ahead of them all.

In History's realm, reviewing the past—  
Herodotus first, even down to the last,  
Of whatever nation the story you've read,  
The Jews of the Bible you'll find at the head

In sentiments lofty, or solemn, or sweet,  
All ages of poets may vainly compete  
With those of the Bible who God's praises sing  
And have for their leader the Psalmist and King.

The buildings of Egypt, of Greece and of Rome,  
And modern St. Paul's, or new structures at home,  
We see the fair lines and proportions most grand  
Excelled by the Temple by Solomon planned.

Law-givers, and all who man's justice invoke,  
Regard as authorities Blackstone and Coke,  
With Webster and Marshall, wise jurists, there's none  
But builds upon Sinai's tablets of stone.

Hail woman! E'er faithful in present and past,  
The first at the grave, at the cross was the last—  
Stowe, Willard and Howe, faithful leaders for truth,  
Find patterns in Martha, the Marys and Ruth.

To say man's best efforts the Bible excels,  
Is stating it mildly; whoe'er the Word reads  
Finds all these great features excelled by this one,  
God's message of Life through Christ Jesus, his Son.

#### PEACE AND WAR.

RICHARD SEIDEL.

If all Christians clearly saw the lovely beauty of peace and the criminal horror of war, as they really are, they would all believe fully that peace is the blessing and the glory, and war the curse and the disgrace of nations and mankind. They would see that peace is always right, and war always wrong; they would see that any peace to avoid any war is always infinitely better and more glorious than any war can be, they would see that to stand up meekly and firmly for peace to loss of property, and even unto martyrdom, in the spirit that Jesus manifested all the way from Gethsemane to Calvary, is always a holy offering to God; and to die voluntarily in war, for any cause, is to die entirely outside of the requirements and spirit of Christianity.

It is vain to look for the day of millennial peace and love until the church, as one grand body, shall see that peace is always right and war is always wrong, and that it is the duty of the church, as a body and as individuals, to "follow peace with all men," be the temporal consequences what they may, ever keeping in mind that even defeat and suffering in peace is immeasurably better and more glorious than the grandest triumph in war. The Christian has nothing to do with murderous weapons in maintaining or defending, or overturning human governments. For such things let the unregenerate children of Adam fight and die, if they will. The Christian's mission on earth is like as was our Divine Master's: Peace and good will to all mankind. Blessed be God for the gift of a Savior so ineffably peaceful and lovely. Not a thread of military glory, so magnificent in the eyes of many who call themselves his followers, was woven into his seamless garment.

The more the Christian studies meekly the character of Christ, the more he will see the beauty of his sublime title: "The Prince of Peace." Christians, do you wish, in your endeavor to make war truly agreeable to the life and teachings of Christ, your Savior—do you wish that he would henceforth take the title: "The Prince of War"? No, you shudder at the thought. If such should be his character for the eternal future forever, vain would be all your hopes of Peace for time, of peace for immortality. Let all our bosoms bound with holy and eternal joy that Jesus is, and forever will be, "The Prince of Peace;" and let us all labor that he may be the Peace of all nations as well as individual souls. Let us move forward with the beautiful branch of Arbitration in the blessed name of philanthropy, praying that its precious "olive leaf" may be accepted gladly by all individuals, classes, and nations, as the healing for all the disagreements, contentions, and wars of fallen men, and to the "very God of Peace" be all the glory forever and ever. And when the banner of Arbitration shall wave in peaceful triumph over the world, then it may in truth be said the sun of millennial day is at its dawning.

#### SOMETHING TO LIVE UP TO.

ONE who repeated to a friend a word of praise that had been overheard—a high encomium of his work and character, was somewhat surprised by the sudden light that flashed into the strong face.

"Thank you." was the earnest reply. "I'm glad you told me that. It is something to live up to."

There was no vain acceptance of the commendation as fully merited; it was only like a bugle call to higher service. That is what such words must always prove to any true and earnest spirit. They flash a sharp contrast between the self that appears to others, and what the soul knows of its failures and shortcomings,

and humble as no blame could do; but also they inspire to fresh courage and effort; they are "something to live up to."

"A true friend will tell one his faults," is a saying we often hear, but a true friend, if he is wise in the knowledge of human nature, will tell us our virtues. The fact is that in this busy world of ours, with its keen struggle and sharp competition, we are apt to be told our faults by those who are not friends, and to be brought face to face with our mistakes and failures so often that we sometimes lose hope and courage. Whoever has a word of honest praise for another should feel that he holds something which is that other's due, and hasten to pay it. The word of blame may be a goad, but the word of hearty commendation will be "something to live up to" through many a trying hour."—*The Parish Visitor*.

#### WEAR YOUR TROUBLES INSIDE.

MANY a man gets into the habit of carrying his troubles in his face. The eyes tell it, the droop of the lip speaks it, the bowed head declares it, the very grip of the hand reveals it, and the foot-fall is full of it. He has run up the flag at half-mast, and he carries it everywhere, so that his whole little world is compelled to know his sorrow. Is this natural? Possibly. Is it wise? Probably not. Is it fair? Surely not. Is it a sign of weakness? Undoubtedly it is. Is there a better way? Surely there is. First, a man must make up his mind to expect his share of trouble, and perhaps a little more. Then he should make up his mind to bear his trouble manfully, that is, with patience, with courage, and with hope. The world has enough trouble of its own, let us not add to its burden. It should be the aim of every Christian man and woman to become strong, and when strength is won to use that strength in bearing the burdens of others. Every sorrow mastered, every burden borne inside instead of outside, makes us stronger, and leaves the world brighter. Learn to smile, get the habit of it; learn to sing, make it also a habit; and you will be surprised how much brighter it makes the world not only to others, but to yourself! The smile and the song lessen the burden and light up the way.

—*Christian Guardian*.

LET your life be a lighthouse for every man who comes your way. Do all your work so well that he will feel the thrill of aspiration to do better, just by passing your way. Keep a brave heart and know that by so doing you will light up the life of some brother.

—*Farm Journal*.

"AROUND the World without a Cent" recounts the real experiences of the writer of the articles who knows how to tell things.

## CREAM OF MAGAZINES

### GOD'S CHILDREN, GIVE THEM A CHANCE.

A score of years ago the world was shocked by the declaration of an Italian, Lombroso, and his school of scientists, that criminals were born so; that their heredity was insurmountable; that they were helpless in the face of inexorable destiny. They brought their proofs: the brow, the brain, the ear—plain to see that the man was destined to be a thief. The years passed and a great congress of criminal anthropologists met in a European city. Before it the Italians owned that their inexorable fate was a bugbear, a scientist ghost which man had the power to lay. Given, that nothing stayed a man with the signs of a criminal in his career toward violence, when to the lack of training, of home, were added want and drink. Yes, he would become one without doubt. But with the social environment changed, with hope, with home, with education, physical, mental and moral, brought to bear, disposition might be modified—the “born” criminal turned into a useful citizen. Instead of a summons to stack arms, to give up the fight, the new science became a bugle-call for society to bring all its resources to bear on the work of rescue, even of the prisoner who had traveled a long stretch on his evil road.

If this be true of the man, what then of the child yet mentally and physically unformed? These things were done in the body which is liable to the laws of the physical world, of the world we touch. What then of the actual child whose house the body is, speaking literally? Shall it be downed by a heredity which, once launched, is irresistible, incurable? Which is stronger in the world—love or hate, good or evil, God or the devil? I was walking with the chaplain of the Massachusetts Reformatory, at Concord Junction, after a visit there, discussing the hope we both saw for his charges, and trying to frame in words what was on my mind, when he did it for me.

“The truth is,” he said, “we are children of God. That is our heredity. Backed by that, what is there of his work in his world that we can not do?”

Ever since, the vexed question that so perplexes many minds has had to me but one answer. Heredity is a factor, but not an invincible one. We can do with the soul what we did with the body. It is just a question of effort, and of the right remedy. The effort is worth making; for the civic death-rate, looking at it from that point of view, is even worse than the baby mortality. Every time a boy goes to jail a citizen dies. The remedy we know: it is the home where the law of love rules. Of all the forces in God's world it is the strongest, for it is his own law, his very being. Evil is conquered with good.

These are my personal beliefs and convictions in this matter of heredity, sometimes preached as a doctrine of despair. I cannot see where the despair comes in. For twenty-five years, as a police reporter in New York, I saw all the wickedness of depraved human nature. But behind it all I made out also what it was that had depraved this poor human nature, and that the responsibility lay with us who let it be, whose neglect of the neighbor that

had fallen among thieves was to blame for it all. The world is no worse than we make it. We also can make it good. For we must grow together, the whole human race, and every child whom we neglect is a drawback. I should not be afraid of taking a little child into my home, whatever its ancestry, if I felt able and ready to take the responsibility for bringing it up, and I should not be in doubt about the result if I did; for I should know that I was doing God's work with his child, and he would attend to the outcome.—The Delineator for May.

### JOURNALISM AND POLITICAL AMBITION.

Can an editor under any circumstances accept public office? Such is the question put by Col. George Harvey in his Bromley lecture at Yale University March 11. His answer is in the negative. If the editor does not free his mind from any thought or hope of such preferment, the speaker goes on to say, “his avowed purpose is not his true one, his policy is one of deceit in pursuance of an unannounced end; his guidance is untrustworthy, his calling that of a teacher false to his disciples for personal advantage, his conduct a gross betrayal not only of public confidence, but also of the faith of every true journalist jealous of a profession which should be of the noblest and farthest removed from base uses in the interest of selfish men.” The speaker adduces the following as the “one conceivable conclusion in logic or morals.”

“That true journalism and the politics that seeks personal advancement are not and cannot be made coöperative; from the radical difference in their very natures and the impossibility of reconciling what should be the idealism of the one with the practicalism of the other, they must be essentially antagonistic. That in fact they are is evident. The chief, if not indeed the sole, aim of the politician is to win the favor of the majority.

“To achieve this purpose he does not scruple; in the language of his craft, he ‘keeps his ear to the ground,’ and the magnitude of his success is measured by the shrewdness with which he divines popular tendencies sufficiently in advance of their general manifestation to appear to be the leader of a movement to establish newly discovered principles rather than as a skilful conjecturer of evanescent popular whims. It follows necessarily that the journal animated by any other than a like motive, that is, the desire to profit from pandering to mobilize selfishness, is so hateful to the aspiring politician that in his view it must be discredited. Hence the frequency and virulence of assaults upon newspapers which for one reason or another dissent from views exprest by politicians, sometime no doubt in sincerity, but always in hope of currying public favor. The reasoning of such a journal is seldom combated; a mere questioning of its motives is deemed and generally is found to be vastly more efficacious. So it often happens in even these enlightened days that a newspaper undergoing no change in control may today be pronounced patriotic and devoted to the cause of the people and tomorrow be denounced as a servant of

special interests and an enemy of the country, in precise accord with its defense or criticism of political measures and men.

"One of our most conspicuous statesmen—if the term, despite its apparent obsolescence, may still be applied to the holder of a high public office—recently declared that the sole mission of journalism is to detect and encourage popular tendencies. In truth, such a conception is the basest imaginable, but it is the politician's and probably always will be. Nor can we honestly deny that it is the easier and likely to prove more profitable and more comfortable."—Literary Digest.

#### NEW TYPE OF LIFEBELTS.

The ordinary type of lifebelt possesses the disadvantage that unless correctly donned, the wearer's equilibrium is in serious danger of being upset when in the water. Recently a series of demonstrations have been carried out in Europe with the lifebelt invented by Mr. Jack Focketyn of that city, which while of simple design is so arranged that the wearer's head must always be kept above the water. The device comprises two buoyant cushions, one resting on the chest, and the other across the upper part of the back, connected together by straps passing over either shoulder and a strap around the waist. The belt can be put on or taken off in three seconds. Its total weight is between 6½ and 7 pounds.

In connection with the lifebelt proper the inventor has devised a special helmet resembling a Russian cap, fixed to the head by a strap passing under the chin, and provided with a flap at the back to drop over the neck as a protection from the heat of the sun, etc. In the front of this cap is carried a small electric lamp fitted with a powerful reflector, charged from a small battery of from three to four hours' capacity. The light thus projected can be seen at sea for a distance of some 400 or 500 yards, and is of great utility in assisting the rescue of persons at night. Moreover, owing to the position of the lifebelt, both the arms and legs are left entirely free and unencumbered, so that the wearer can either keep himself afloat or assist himself by swimming if desired.

An interesting demonstration was recently carried out with the apparatus in the basin of the French Transatlantic Steam Navigation Company at Havre before numerous interested government and other officials, including representatives of the British Admiralty and Commander Gibbons, the United States naval attaché at Portsmouth. On this occasion the inventor demonstrated the ease and rapidity with which the belt can be assumed, and the impossibility of the wearer's vertical position in the water being in any way disturbed or threatened. Owing to the position of the belt across the chest and back, the wearer's head was kept several inches above the water. Even if one should become unconscious through exhaustion, it would be almost impossible to be drowned, for when floating on the back or face, either of the two cushions will keep the head well above the water.

The second belt is the invention of Mr. Schwab, of London, and is called by him the "Balloon waistcoat." In appearance the garment is an ordinary waistcoat, but it is lined with a bag of waterproof material, which surrounds the body and is inflated by blowing through a rubber tube. The bag can be inflated in about three minutes. Like the Focketyn belt, the balloon waistcoat has the great advantage, over the ordinary cork jacket, of lifting the upper part of the body out of water, so that the arms have perfect freedom of motion. Consequently,

the wearer can readily seize floating wreckage or a buoy or line that is thrown to him or swim toward safety.

Mr. Schwab has been successful in solving one great problem which confronts inventors—the attracting of publicity. He recently flung himself into the lake of a London park. When a rescue reached the supposed suicide, they found him reading and smoking a cigar.—Scientific American.

#### CAUSES OF THE ANTI-SALOON MOVEMENT.

The present temperance upheaval is the revolt of the American conscience against what it considers to be wrong. The American saloon can blame itself largely for the present opposition to it; it is essentially bad. Aside from the inherent danger of the business under the wisest possible restraints, the liquor-dealers of the nation have set themselves to do their very worst to provoke alarm. The saloons are the breeding-place of all kinds of vice and crime. In them the thieves, the murderers, ballot-box stuffers, grafters, purchasers of law, and the debauched find their education and protection; and from them the lawless hordes go forth to prey upon society. The only wonder is that the people have stood this menace to our civilization as long as they have.

While it is not universally so, it is too often the case that the saloon fosters and promotes the social evil. The public sentiment is greatly outraged at the intimate relationship between the saloon and the disorderly house. The public is very angry because so many drinking-places are gambling hells.

Another thing that has stirred the public against the liquor traffic has been the relationship between the politician and the saloon. No feature of American public life is so abominable and discouraging as this open and notorious copartnership of the liquor traffic with politicians of all parties in the business of crime. It is an astounding fact that most of the great cities of the country are ruled by rum, and have been for a generation or more. Every privilege for every kind of crime is bought and sold for money. Fabulous corruption-funds and thousands of the criminal classes are organized to hold up the public and compel it to deliver. Three saloon-keepers of Chicago have absolute authority in Wards One and Eighteen, where the traffic in vice is maintained; and men of their stripe rule in some other wards; so that the political complexion of Chicago is determined by the saloon influence. In New York City a large proportion of the Tammany leaders who determine the policy of their party in the city and State are or have been saloon-keepers. In Philadelphia and in some other cities the connection between the saloons and the political leaders of the opposite party is just as marked as it is in Chicago or New York.—American Review of Reviews for April.

"THE proper place in which to measure a man is in his home. If he is a small man there, he is bound to be a small man everywhere, no matter how big he may appear to the world."

AN act of goodness is in itself an act of happiness. It is the flower of a loving inner life of joy and contentment; it tells of peaceful hours, and days on the summit heights of the soul.

REMEMBER INGLENOOK week!

# Echoes from Everywhere

The great Knickerbocker Trust Company of New York, the run on which was one of the first symptoms of the panic last fall, reopened for business the latter part of last month.

The largest steam locomotive in the world is about to be turned out at Schenectady for the Erie railroad. It will weigh 413,000 pounds and haul a loaded train a mile and a half long. That means power.

Express companies operating in Oklahoma will be less likely in the future to pay two hundred per cent stock dividends. The Oklahoma Corporation Commission has ordered a forty per cent reduction in all express rates.

A forward step toward merging the Indians into American citizens has recently been inaugurated by the appointment of Dr. Charles A. Eastman, a graduate of Boston University and a full-blooded Sioux Indian, empowering him to give a new name to each of the Indians of the Sioux nation. He has already named 15,000.

Gov. Folk declares the liquor question a dominant issue in America at present. Said he, "The question in the minds of the people of the United States today is the liquor business. Wherever you go throughout the whole country you will find the people talking not of the tariff, insurance or corporation matters, but of the liquor business."

Vessel owners will adhere to the "open shop" policy in the operation of boats upon the great lakes this season. A stand of this character in dealing with organized labor was unanimously agreed to at the annual meeting of the Lake Carriers' association at Cleveland, Ohio, April 9. The rule will be put into operation at once and will affect nearly 40,000 men.

Some small frogs of the species known as *Rhinoderma Darwini* have reached London from Chili, and have received much attention from naturalists. The tadpoles are developed in a very curious manner. The female lays about a dozen eggs and these are immediately swallowed by the male and deposited in a pouch in his throat, where they remain until hatched and sufficiently developed to emerge into the outer world. The lack of external gills is a remarkable characteristic of the tadpole.

Near Beloit, Wis., there is a roaring well which has again "made good." This well roared for several weeks before the great earthquake at San Francisco, and the curious sound of rumbling, together with wind from the mouth of the well ceased at the precise hour when the shock struck the California city. On the day recently that the well resumed its clamor, residents of Rock County predicted a calamity. It came in Chilapa, Mexico, where a disastrous earthquake occurred.

A vegetable caterpillar from the planting of a true caterpillar is among the marvels of the Pink Terrace region of New Zealand. Eating some tempting fungus spores on its way to its final burrow, the creature becomes transformed into a wood-like mass of fungus, with form and structure preserved. The caterpillar is now a veritable root, from which a stem shoots up eight or ten inches, dropping other fungus spores.

The heavy losses which the railroads of the country have sustained because of the falling off of traffic and the detention of cars by non-owning roads is forcibly illustrated by the great increase of empty cars on the Rock Island system, which may be regarded as representative of others. During February this system had an increase of 94 per cent over the same period in 1907, which increased operating expenses \$171,107.

Passenger officials have been notified of a decision of the interstate commerce commission regulating the checking of excess baggage. It appears that certain commercial travelers have been in the habit of borrowing tickets from fellow passengers and with them checking baggage on which otherwise excess charges would be levied. The commission holds this to be illegal, as it creates a preference in favor of the passenger who is thus able to borrow as compared with the one who cannot do so. The commission lays down the rule that borrowed tickets may not be used in any case to check baggage.

April 1 Lieut.-Gov. Eben S. Draper, the acting governor of Massachusetts, sent to the house of representatives his first veto message in returning without his signature a bill which authorized Essex County to pay \$1,350 to James M. Tremble, guardian for Edgar W. Meikle, the Lynn boy, who was **tried and acquitted** last year of the charge of murdering his father, Charles Meikle. In giving his reasons for refusing his signature to the bill the lieutenant-governor says that it is unconstitutional, special legislation, and would establish a dangerous precedent. This is the first suit in New England where remuneration has been asked for a person accused, tried and acquitted.

Of all the different electrical devices for the electrical transmission of sound, not the least wonderful and useful is that which greatly intensifies sound. We hear about the Acousticon transmitter and its wonderful results. A most important detail in the working of this is the Microphone, which seems to be the newest of the new inventions, and has the effect of greatly magnifying sound. An item in one of our late magazines says of this development in telephonic industry: "It is not beyond the bounds of possibility that Dr. Parkhurst, speaking in his new and magnificent church, which has an Acousticon equipment, may preach to an audience of one hundred thousand people scattered from Maine to California."

A new wire of special advantage in electrical industries is obtained by a Parisian metallurgist through a perfected process of welding copper to steel wire. Great conductivity is combined with the tensile strength and elasticity, giving a wire stronger than copper and smaller and less exposed to wind and action than iron or steel of the same capacity.

The unemployed in Philadelphia at a meeting April 5 decided to ask the city to appropriate \$50,000 for the immediate relief of the thousands out of work and those dependent on them. The Mayor has called for a meeting of the Citizens' Permanent Relief Committee to consider the problem of relieving distress, but the leaders of the unemployed fear that the committee will not appropriate a large enough sum.

After reposing for 136 years in London, the vaults of the Swedish church, Prince's Square, St. George's in the East, the remains of Emanuel Swedenborg, the famous mystic and writer, will soon be on their way to Sweden for burial in their native soil. The Swedish government formally requested the exhumation and surrender of the body, and a Swedish frigate has been especially ordered to bring the body to Sweden.

Within twenty miles of New York's city hall there is a population of 1,000,000 Jews, more than in all America besides. It is the greatest aggregation of Jews in any one spot on earth, one-eleventh of the entire Jewish population of the globe. Here are one-fifth as many Jews as in Russia, one-half as many as in Austria-Hungary, four times as many as are in the British Isles, ten times as many as in the Holy Land, and twenty times as many as dwell in Jerusalem.

In Chicago the care of the unemployed during the winter, according to a Health Board bulletin, resulted in providing food, beds, warmth, bathing and medical supervision at a cost of nine cents a day for each man. The public was protected from contagion, the homeless were kept free from suffering and clean and healthy, some unworthy, idle and drifting criminals were forced out of the city, and some innately honest but weak men were shielded from crime.

The growth of cigaret smoking in the British army is beginning to disquiet the higher officers, whose reports indicate that the health of the men is being seriously impaired. Lieut.-Gen. Grenfell, commander-in-chief of the forces in Ireland, is the first to take action. He has just issued an order to his troops, calling attention to the evils which must inevitably follow such excess and appealing for "earnest and early action to combat the habit, which is gradually but greatly affecting the efficiency of the men."

Late experiments have proven that heat is transmitted downward into the earth very slowly, and that a thin covering of soil is sufficient to protect even explosives and inflammable liquids from the highest temperatures of burning buildings. A heat of 2,500 degrees, maintained for several days, will scarcely be observed through a layer of earth three feet in thickness. It is estimated that the walls of the Safe Deposit Company in New York City, three feet in thickness, are sufficient to protect valuables from the heat, even if the entire city should go up in flames.

Queen Maria Pia, the poor grandmother of King Manuel, of Portugal, and mother of the late King Carlos, has broken down physically and mentally as a result of the tragedy of February.

The women's clubs of Bangor, Maine, are starting a crusade for medical inspection in the schools and also for the establishment of a fund for optical treatment of the children of the poor who attend school. At a recent club meeting the principal of one of the largest grammar schools made the alarming statement that he had reason to believe that there were several pupils in his school who were affected with tubercular diseases, but he had no authority to bar them out. It is understood that the matter will be taken up by the proper authorities.

Legislation in advance of anything existing in North America was undertaken by Nova Scotia, when Premier Murray introduced a bill in the house of assembly recently to provide pensions for aged colliery workers in accordance with the old age pension commission's report, previously presented to the house. The bill is entitled "An Act to Incorporate the Nova Scotia Colliery Workers Provident Society, and to Create an Old Age Pension Board." It also provides for an emergency fund in the case of grave mining disasters in the province.

The electric rat-killer of A. F. Riederheim, claimed to have been doing effective work in a factory at Trieste, is designed for lowering into drains or other infested places, and consists of a shallow tray with a bottom lined with closely-spaced metal points alternately connected to the positive and negative terminals of a high-tension electric circuit. The animals are promptly electrocuted as they step on the points in attempting to reach the bait. The apparatus destroys only rats and similar vermin, and it is affirmed that there is no risk to cats and other large domestic animals.

Fireless or self-cooking stoves, which have been so popular in Germany for a number of years, have been recently much improved. The early types were simply boxes made with double walls so as to retain the heat, and food to be boiled or stewed was first thoroughly heated and then enclosed in the box for a sufficient time to cook by the retained heat. The latest apparatus is stated by Deputy Consul General J. W. Dye, of Berlin, to be heated by a stone. This is made sufficiently hot in an oven or over any fire, then placed in the cooker with the steak or roast, and the box is sealed up and left for an hour or so until the food is thoroughly cooked and hot. With double boxes, boiling, frying, and roasting may all proceed at once without care.

Metchnikoff, one of the professors in the Pasteur Institute in Paris, is the greatest exponent in the world of the theories of Darwin. It is his business to hunt up diseases and their remedies. In a new book Metchnikoff points out that the reason men do not live to a great age is because under modern conditions the arteries harden with advancing age, due to deposits of calcareous substances. He says he has discovered that the antidote for this condition is sour milk. The sheaths of the arteries are softened by the milk. The principle, he says, is as sound as the virus theory in hydrophobia, and anti-toxin and vaccination for other ailments. Metchnikoff declares that sour milk or pure buttermilk should be drunk twice or three times a day. He declares that fifty years would be added to the lives of aged persons if they would do so.

China must be changing indeed. We read that the police department of Canton, China, has issued a proclamation forbidding the sale of the flesh of dogs and cats as food.

The suit of Japanese residents against the city and city council of San Francisco to recover damages for mob violence on May 20, 1907, has been compromised on the basis of a judgment against the city and council for \$450. Thus one small grain of sand in the international bearings is removed.

Royalty is an expensive luxury—at least German royalty is. Emperor William gets \$3,930,000 for his civil list as King of Prussia. As Emperor of Germany he serves for nothing. But the \$3,930,000 is not enough for the needs of his court. Living expenses have risen and the Prussian Diet is to be asked to increase the Emperor's pay.

When the country so generally feels that the way to stop conspiracies in restraint of trade is to send the men guilty of them to jail, that Judge Kumler, of the Common Pleas Court of Toledo, should merely fine the twenty wealthy lumbermen who had been found guilty of the crime instead of sending them to jail makes it possible for crime to become profitable.

Prof. Flinders Petrie, head of the British School of Archaeology in Egypt, is about to start in earnest the work of excavating the ancient city of Memphis on the Nile. He expects that the task will occupy him for the rest of his life. Memphis is buried now beneath ground which is cultivated by the villagers of Mitrachin which will have to be removed before the work can go far.

The hackmatack (also called "juniper" or "tamarack") sawfly has reappeared in Maine after more than thirty years' absence. Specimens have recently been received from several Washington County towns for identification by the entomologists in the state department of agriculture. Prof. Elmer F. Hitchings of the bureau of entomology states that there is no question about the insects being the destructive sawfly which killed nearly every hackmatack tree in Maine in the 70's. No means are known of suppressing the insect.

The steam consumption meter patented in Germany by P. Weller is a small electric alternator, with a magnet wheel built into the steam-pipe, and rotated by turbine blades fitted to its periphery. The current generated in the armature shows on a voltmeter the pounds of steam consumed per hour, or a train of wheels can be arranged to give a continuous record. Connection to the pressure gauge gives variations in the resistance of the voltmeter circuit, and thus automatically corrects for variations in steam pressure.

The Roumanian government is making use of the recent disturbances as a pretext to banish Jews from the rural districts. The new law requires that two-thirds of the artisans engaged in any one place shall be native Roumanians, and the Jews being regarded as "strangers" are often excluded by this enactment. The law gives an opening for the police to interfere with the make-up of the pay roll for any particular establishment, and employers for this reason refuse to employ Jewish labor. The economic condition of the Jews in Roumania which has been steadily growing worse, will necessarily deteriorate further under the new conditions.

## BETWEEN WHILES.

Boarder—This soup seems to be rather weak, what kind is it anyway?

Landlady—Chicken soup. I told the cook how to prepare it but she evidently failed to catch my idea.

Boarder—Yes, or else she failed to catch the chicken.

Mrs. Hicks (relating her burglar scare)—"Yes, I heard a noise and got up, and there under the bed I saw a man's legs."

Mrs. Wicks—"Mercy! The burglar's?"

Mrs. Hicks—"No, my husband's—he had heard the noise too."

Wink at a wrong today, and you'll be taking its wages tomorrow.—Home Herald.

"My son," said his father solemnly, "when you see a boy always loafing about the street corners, what place in life do you suppose he is fitting himself for?"

"To be a policeman."

Muggins— I'm surprised that you believe the story Brown just told us. Why, I wouldn't believe it if I told it myself.

Huggins—Oh, well, in that case neither would I.

A health journal is telling people how to lie when asleep. If it could persuade them to tell the truth when awake it would be doing a real service.

A street car in charge of a newly appointed Irish conductor, had just left the car barn for the downtown run, says Harper's Weekly. Before it had proceeded many blocks it was boarded by an inspector. This official, after a glance at the register and the occupants of the car, asked, in surprise:

"Why, O'Flaherty, how's this? You have seven passengers and the register shows but six fares rung up."

"Begorra, is that so?" puzzled the green conductor. Then instantly a happy solution of the difficulty struck him. "Git out o' here, one o' yez!" he shouted. "There's wan too many o' yez on this car."

## A LESSER HALF.

"I want a man to do odd jobs about the house, run on errands, one that never answers back and is always ready to do my bidding."

"You're looking for a husband, ma'am, not a man."—The Jewish Ledger.

## WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED—To impress upon more of our farmers, fruit growers and gardeners that the compressed air sprayer I sell for \$7.50 is the easiest to operate and BEST for results. A woman can do the spraying. Let me tell you about it. W. G. Nyce, St. Peters, Pa.

# Of Course You Know of the **MIAMI RANCH**

**Miami -- Via Springer, New Mexico**

**You Owe It to Yourself to Come and See Before Purchasing Elsewhere Because**

1. Our climate is healthful.
2. Our soil is unsurpassed.
3. **Miami Ranch** is soul-inspiring in natural beauty.
4. Our water supply is abundant and chemically pure.
5. Our gigantic irrigation plant is practically completed and is built to stand for ages.
6. We are already storing a supply of pure mountain water in our mammoth reservoir for this season's irrigation.
7. Thirty families of permanent settlers imbued with purpose and with ability to accomplish are already located upon their farms.
8. A postoffice and general store are in full operation in our new town—**MIAMI**.
9. Church and school privileges are already provided for.
10. Sale of intoxicating liquor is forever prohibited upon the ranch.
11. **Miami Ranch** is peculiarly adapted to fruit culture and will produce abundantly all crops adapted to the temperate zone.
12. Our lands, which are now selling at from 35 to 70 dollars per acre, will double in value within one year.

**Cheap excursions the first and third Tuesdays of each month to Miami Ranch.**

**Only \$30.00 for the round trip from Chicago.**

# Facts Regarding Imperial Valley

Some people in trying to induce their friends to settle in the country where they themselves are located, frequently send them advertising matter that is gotten up by unscrupulous land agents that deviates from the truth. Their friends come and buy property and soon find out that the facts do not correspond with the advertisements sent them. The result is they soon become discouraged and sell out at a sacrifice, and go back where they came from, worsted financially and in some instances say worse things of the country than they should, and thus bring reproach on a good country (though not as good as the advertisement represented it to be). The undersigned has known this to happen more than once, and for this reason has decided to tell his friends about the Imperial Valley in his own words, so that he alone shall be responsible, and so that the wonderful Imperial Valley may never be made a reproach and a by-word.

Imperial Valley is situated in San Diego County, California, 183 miles east of Los Angeles on the Imperial branch of the Southern Pacific railroad. The soil is an alluvial deposit and all crops are grown by irrigation, with water from the Colorado River. The main irrigation canal is 80 feet wide on the bottom and 100 feet wide on the top, and 10 feet deep. The soil is adapted to the growth of wheat, barley, alfalfa and nearly all kinds of fruit. Alfalfa having plenty of water can be cut eight times per season, yielding as high as ten tons of nice hay per acre which sells at present from \$8.00 to \$11.00 per ton. Barley can be sown for winter pasture in alfalfa stubble after the last crop of hay is harvested. Alfalfa can be cut every three weeks if the hay is wanted for dairy cows, or every four or five weeks if wanted for horses. I have known of alfalfa yielding \$40.00 worth of seed per acre and my own yielded \$20.00 per acre with the first season's sowing. Dairying and hog raising are very profitable. Butter sells from 20 cents to 45 cents per pound; hogs, 7½ cents on foot; also beef, cattle and horses do excellently. One colt weighed 960 pounds at less than one year old. One acre of alfalfa will keep from 2 to 3 head of dairy cows or horses and from ten to fifteen head of hogs. Oranges, lemons, dates, figs, apricots, grapes and berries do well. A single grape vine has yielded 30 pounds of grapes 18 months from setting. Grapes, apricot and cantaloupe growing is very profitable as they will ripen here from three to four weeks earlier than other places, and be placed on the eastern market before they are ripe in other localities. One man at Coachella was offered \$600.00 cash for the grapes on a single acre of vines and refused the offer and sold at retail for \$1,400.00. Cantaloupes will net the growers from \$50.00 to \$300.00 per acre. I have lived in the valley as long as any one, being one of the first settlers, and my experience and observation has taught me that you can grow almost anything here you plant, including vegetables, if planted in the proper seasons and properly cared for. The selling price of land at present is from \$40.00 to \$100.00 per acre, owing to location. President Roosevelt says that when it is thoroughly developed it will be worth from \$500.00 to \$1500.00 per acre.

Reader, when you shiver around your fireside the coming winter, just think of the Imperial Valley where you can go in your shirt sleeves nearly every day in the year. And on the 10th day of this month (May, 1907), while there was a snow storm raging in many places in the eastern states, we were making hay and picking and eating fruit in the Imperial Valley.

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

Will send, express prepaid, for 75 cents extra.

## Mr. World and Miss Churchmember

By W. S. Harris.

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel,

till finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

Our Price, I prepaid .....\$ .75

## The Philosophy of Life

Since it is given to no one whatsoever to escape the dream, let us accept it. Only let us try to have the right one. Men hate, are brutes, fight, lie; leave their dream unto the shadows. But share you your bread with little children, see that no one goes about you with naked feet, look kindly upon mothers nursing their children on the doorsteps of humble cottages, walk through the world without malevolence, do not knowingly crush the humblest flower, respect the needs of birds, bow to the purple from afar and to the poor at close range. Rise to labor, go to rest with prayer, go to sleep in the unknown, having for your pillow the infinite; love, believe, hope, live; be like him who has a watering-pot in his hand, only let your watering-pot be filled with good deeds and good works; never be discouraged, be magi and be father, and if you have lands cultivate them, and if you have sons rear them, and if enemies bless them—and with that sweet and unobtrusive authority that comes to the soul in patient expectation of the eternal dawn.

—Victor Hugo.

### TOURIST SLEEPING CARS.

A striking feature of the Union Pacific passenger trains is the tourist service. The tourist sleepers are identical with the standard sleepers, with the exception that their furnishings are not on so grand a scale, but the accommodations are equally good and are sold at **HALF THE PRICE** of the standard. The seats are upholstered, and at night the berths are hung with heavy curtains. Each car is accompanied by a uniformed porter whose duties are the same as those upon the Pullman Palace Sleepers.

### DINING CARS.

Union Pacific dining cars are operated on all through trains. These cars are all new in style and models of beauty and elegance.

### DINING ROOMS AND LUNCH COUNTERS.

Dining Rooms and Lunch Counters are located at convenient points along the line, and all through trains which do not carry dining cars are scheduled to stop at these points. Well prepared meals of the best quality are properly served at popular prices. Full time is allowed for meals.

# DO YOU THINK THE TESTIMONY OF A GOVERNMENT EXPERT IS WORTH ANYTHING?

- ¶ Men who have been there may give their opinions.
- ¶ Men who have lived there may give their honest opinions.
- ¶ Men who have NEVER been there may have their opinions.
- ¶ Land agents and railroad men may also have their say.
- ¶ Pessimistic knockers may say what they please.
- ¶ But the testimony of Scientific Men who are in the employ of the Department of Agriculture of the Government ought to be worth something to the man who is looking for a good place to invest his money in a fruit country.
- ¶ Here are a few paragraphs from a letter which might help you.

## UNITED STATES DEPARTMENT OF AGRICULTURE

Bureau of Soils, Washington D. C., March 30, 1908.

Utilization of Soil Resources.

Mr. J. H. Harris,

703 Palladio Building, Duluth, Minn.

Dear Sir: In reply to yours of March 17, in regard to fruit raising, in Butte Valley California, Siskiyou County, I send you the following memorandum digested from a recent report on the soils and fruit possibilities of that valley.

With the exception of a few small orchards but little attempt has been made to grow fruit in the valley. Where grown, apples have yielded abundantly, and the fruit has been of choice quality, being of bright appearance, brilliantly colored, and free from fungus or insect pests, and the outlook for the development of this industry is promising.

The varieties likely to succeed best are the Spitzenbergs, Newtown Pippins, Northern Spy, Jonathan, and the Rome Beauty. Pears, Plums, Quinces, and Berries would also do well in all locations favorable to apple culture.

Very sincerely,

J. A. Bonsteel,

In Charge.

¶ These are only clippings from the report as has been said. If you desire reliable information concerning grain, hay, vegetables, stock, or anything else, we will be glad to give you such as may be depended upon.

¶ There is a special excursion to the coast on the 25th and the 26th inst, \$72.50, Chicago to San Francisco and return, good for thirty days. Why not go and see for yourself?

The Standard for Store, Farm, Bank or Factory,

5 1/4 x 2 3/4 in.

Is from beginning to end a greatly improved, enlarged and thoroughly revised publication.

It contains an entirely new system of unique Tables, Short-Cuts and up-to-date Methods.

It is unquestionably the most complete, useful and comprehensive Calculator ever published.

It has more than twice the matter, scope and capacity of Ropp's former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

It is the most convenient and practical Labor-saving work ever used in the business world.

It will make every one independent, sure and self-reliant in all practical calculations.

It will prevent mistakes, relieve the mind, save time and labor, and often loss and trouble.

Its Tables are adapted to all the trades and occupations in the city and country, and

### Show the Answer as Quickly as a Watch Shows the Time.

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.

It will make the study and use of Figures easy and interesting for young and old.

It will enable every progressive mind to become an expert, sure and rapid calculator.

It will prove a boon to all whose education in arithmetic has been limited or neglected.

**48 Cuts Illustrate the Elements of Mechanics and Mensuration**

It defines about 70 points in "Commercial Law" which every man and woman should know.

It is the result of devising, and improving system after system; of spending thousands of dollars in experimenting; of making millions of miscellaneous calculations, and of doing some vigorous thinking during 38 years, by an analytic, practical and persevering mind.

### It is Especially Designed for

Farmers, Mechanics, Business and Professional men,

## Olive Branch of Peace

Valuable Contribution.

Dear Brother Hays: I have ordered a copy of your book, "The Olive Branch," and have read it with exceeding interest. It is a valuable piece of contribution, not only to the history of the Valley of Virginia, but also to the history of the Brethren Church and other peace loving societies of God's people. Especially is it valuable as a clear and full statement to the world of what the world is coming more and more to recognize as just, reasonable, and desirable—Peace, and the spirit of Christian peace. I pray and believe that by means of this book, "The fruit of righteousness is sown in peace of them that make peace."

Yours fraternally,

John W. Wayland.

University of Virginia, Charlottesville, Va., Oct. 29, 1907.

This book contains 232 pages, has a number of illustrations and is well bound in cloth.

Price prepaid, .....75 cents

### AGENTS WANTED.

We want an active agent in each congregation to push the sale of this valuable book. It should be in the hands of all of our people. If there is not an agent pushing the sale of this book in your congregation, and you could spare some time for this work, write us for terms. Do it now.

Elgin, Illinois.

## INDIA: A PROBLEM

By W. B. Stover

This book contains 344 pages, cram full of plain facts and illustrations concerning India, by a man who has spent years in the field and knows what he is talking about.

### NOT DULL

I have been reading your books, so feel that you are near us. That book is all right. Some of these books are so dry that there is danger of spontaneous combustion. They have to be kept in a damp place, and "away from the boilers." You have gotten up a book full of information and not dull.

Yours sincerely,

W. H. Stephens,

Poona, India.

Sept. 20, 1907.

## EASTER CARDS

We have a very choice assortment of Easter Cards this year and are sure they will be especially pleasing to the children.

7575. A special assortment of cards with pretty children, rabbits, floral designs, eggs, etc., printed thereon in colors. Suitable Easter Greeting on each card. Six designs. Embossed.  
Price per pack of six cards .....10 cents

7576. Same as above with the exception that they may be used as Post Cards if so desired. Sure to please.  
Price per pack of five cards .....10 cents

7577. Pretty chicks and ducks printed in many colors on a silver card. On each card is a wreath either of Forget-me-nots, Violets, Daisies, or Four-leaf-clovers, in the shape of an egg. Heavily embossed. Each card has an appropriate Easter Greeting. Four designs. Size,  $3\frac{1}{2} \times 5\frac{1}{2}$  inches.  
Price per pack of ten cards, .....20 cents

For Sunday Schools  
Special quantity price.

100. Assorted designs beautiful Easter cards in colors with appropriate Easter Greetings. Size,  $3\frac{1}{2} \times 5\frac{1}{2}$  inches. May be used for post cards if desired.  
Price per pack of 50 cards .....\$0.75  
Price per pack of 100 cards ..... 1.35

### Easter Post Cards

11. An exceptional card for little folks. Chicks, ducks, children, rabbits, flowers, eggs, etc. Sure to please. Heavily embossed. 25 different designs. Appropriate Easter Greeting on each card.  
Price per pack of four cards, .....10 cents  
Price per pack of 25 different designs, 25 cards, 45 cents

15. Special series of handsome crosses, angels, floral designs, etc. A splendid card for both young and old. Forty different designs. Suitable Easter Greeting printed on each card.  
Price per pack of four cards .....10 cents  
Price per pack of 25 different designs, 25 cards, 45 cents

# THE SPRING OF 1908

will witness a new influx of thousands of settlers in the fertile valleys of SOUTHERN IDAHO. A great many have gone and a large number are making arrangements to go soon.

## 80,000 ACRES Open For Settlement

**Last Week in May at Twin Falls, Idaho**

Under the Cary Act, filings on 40 to 160 acres may be made by power of attorney. Price \$40.50 per acre, payable \$3.25 down, balance in nine annual payments. Easy way to get a valuable farm.

### EXCURSION FOR THIS OPENING

**Tuesday, May 19, 1908**

ROUND TRIP rates from Chicago to Twin Falls, Idaho, \$50.80. Corresponding rates from Peoria, Kansas City, Omaha and all principal points.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

Alfalfa, Sugar Beets, Fruits, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

### An Opportunity of Your Life

This is an opportunity of your life. Grasp it before it passes. Be sure to make arrangements now to go on this excursion with scores of others that are now planning for the trip.

WRITE AT ONCE FOR BULLETIN, giving particulars concerning this wonderful opening, to

## Socialism: What It Is

W. F. Gillett

MANY honest people think that socialism and anarchism are the same. This is a mistake. Webster's unabridged dictionary defines socialism as a theory of society which advocates a more precise, orderly and harmonious arrangement of the social relations of mankind than that which has hitherto prevailed. Communism. And anarchism as, want of government; the state of society where there is no law or supreme power or where the laws are not efficient, and individuals do what they please with impunity. Political confusion. The anarchists are opposed to all law, or at least they believe the less law the better, while the socialist believes in the highest form of government possible.

The socialist does not propose to divide up the wealth of the land as many think, but proposes to concentrate in the hands of society the instruments of production that are now scattered in the hands of many owners, and instead of the individual dividing up his earnings, he will retain them for his own use. Every one of us is now dividing up with the Standard Oil Trust, the beef trust, the steel trust, and many other trusts, and the socialist proposes to stop it.

The socialists have been accused of wanting to confiscate the property of the capitalist class. This is a mistake. They only wish to recover the property that has been confiscated from them, by the capitalist class. They believe that labor produces all things, and that labor is entitled to what it creates. They believe that inasmuch as production is carried on coöperatively, the distribution of the products should be after the same manner.

The socialists do not wish to destroy the trust, for they recognize it as essentially a tool of production, in that it eliminates expense in production and adds inches to man's stature by increasing the productivity of his labor. But what they wish to do is to make the trust public property, as also all of the means of production and distribution. This can be done by laws, the same as they escaped out of our hands by laws. To illustrate, the land was at one time public property,

but through an act of Congress it became private property. Also through another act of Congress it could become public property, and the same with everything else. The socialist proposes to distribute the products of labor according to every one's needs. Therefore, if there should be any that would not work (unless they were physically unable to work), they would starve to death.

The doctrine of socialism had its origin in the following conditions: Up until one hundred years ago, the tools of production were simple and every man could own his own tools with which to work, but later, when inventions began to be made, and the tools of production became more complex, they gradually passed out of the worker's hands, into the hands of the capitalist, and because the man with the inferior tools of production could not compete with the man owning the improved tools of production, he had to stop producing for himself and work for the man with the improved tools, which has virtually placed him in wage slavery. How? or why? Because in this capitalistic system of production no employer of labor intends to pay in wages, as much as his workmen earn. According to the statistics of 1890, if I mistake not, the wage workers of the United States got in wages only one-fourth of the value of the products of their labor, and they get considerably less than one-fourth now. This is how it comes that such enormous fortunes have been acquired. This is what has given rise to the doctrine of modern socialism. The ladder upon which mankind has been climbing toward civilization, the ever more powerful tool of production, is the storm center around which the social storm rages. The capitalist seeks to keep it for his own use, the socialist seeks to preserve it and improve it and make it the property of all of the people.

In order to give us some idea of the inequality of the distribution of wealth, the reader is requested to note the following: Senator Jeff Davis, of Arkansas, in a speech in the United States Senate Dec. 11, 1907, declared that fifty-one men in the United States own

the enormous sum of \$3,295,000,000. He named the men, and John D. Rockefeller heads the list, with \$600,000,000. He took the list from statistics, so it must be somewhat correct.

This is only one side of the picture. Let us look at the other side. I read from the INGLENOOK, of Dec. 24, 1907, that 125,000 people in New York were out of employment. I ask, Why are they out of employment? The answer is simple. It is this. Because the wage-worker receives in wages only one-fourth of the value of the product of his labor, and with this one-fourth he cannot possibly buy from his employer any more than one-fourth of the product of his labor. So in case of a panic, the goods pile up in the factory faster than they can be sold, and the factory has to shut down. In other words, the working class has produced so much that they have to go destitute. Is it any wonder that people fall into the belief of the doctrine of socialism? I don't think it is!

With the seizure of the means of production and distribution by society, the production for sale and profit would cease, and anarchy would be supplanted by peaceful and deliberate organization. The struggle for individual existence would be at an end, and thereby man would in a certain sense step out of the animal kingdom, out of the brute creation of existence, into that which is truly human.

Socialism is inevitable. Every system of society that we know of so far, has contained within itself the seeds of its own destruction, and we believe that the capitalist system contains within itself the seeds of its own destruction. To illustrate. First, we have individual ownership, next a partnership, next a corporation, next the trust which is a combination of companies. Combination is the direct outgrowth of competition, and combination means final control, for one combination or trust has to compete with other combinations or trusts and the weaker will go to the wall. And this process is going on all of the time, and it will continue to go on until we will have only a very few trusts, and there will be only one thing for the working class to do (whether they like or not) and that is to take possession of the trusts, and make it the property of all of the people, or starve.

Another thing that leads me to believe that the capitalist system will fall of its own weight is this. Capitalists, in order to sell the vast amount of goods the working class produces for them and keep their factories running as much of the time as they do, seek for foreign markets, and much of their surplus products are gotten rid of this way. But nearly all of the other countries are developing into industrial states that sooner or later will supply their own wants. In short, the time is drawing near when the market can no longer be extended in other countries, and will begin to contract. The moment this effect begins to be felt, it will be the signal for the wholesale bankruptcy

of capitalist society; there will be no market for their goods, and all of the factories will have to close their shops, and the whole working class will either have to take possession of the means of production and operate them in the interest of society, or starve to death.

This is not altogether a dream of our own, for the capitalists see it that way themselves. Secretary Taft in his Boston speech Dec. 30, 1907, said: "If the abuse of monopoly and discrimination cannot be restrained, if the concentration of power made possible by such abuses continues and increases, and it is made manifest that under the system of individualism and private property, the tyranny and oppression of an oligarchy of wealth cannot be avoided, then socialism will triumph and the institution of private property will perish." The working class and the capitalist class have nothing in common, there can be no peace, so long as hunger and want is found among millions of working men, and the few who make up the employing class have all the good things of life.

*Holtville, Cal.*

#### THE EARTH'S MAGNETISM.

JOHN H. NOWLAN.

THE study of the earth's magnetism is an interesting study and our present knowledge of it is due to centuries of research. Many centuries before Christ writers referred to a stone having the power to "draw to it the all-conquering iron." Its earliest names were Hercules stone, magnet stone, Lydian stone, siderit (iron stone), and also simply "stone." Later they all gave way to the term "magnet."

The derivation of this now common term is hard to determine. Lucretius (99-55 B. C.) says it was so-called because it was found "in the native hills of the Magnesians." Pliny (23-79 A. D.) quotes from the poet Nicander who flourished in the second century B. C. that the shepherd, Magnes, while guarding his flocks on the slopes of Mt. Ida, suddenly found the iron ferrule of his staff and the nails of his shoes clinging to the rocks, which after him became known as the Magnus stone or magnet.

That the fundamental principle of the magnet of attracting iron was early known by the Greeks is proven by its being mentioned by Thales who lived between 640-546 B. C. It was known by various terms in the European languages during the middle ages, each suggestive of its attractive powers as "sailing stone," "loving stone" and "which attracts iron." Nearly all the European terms are said to have their significance repeated in the Asiatic tongues.

While its attractive powers were so well known, its popularity was not known to Europeans till about the twelfth century.

The Chinese with their usual aptitude for claiming everything in sight have a tradition that it was known

to them at least 2634 years before the Christian era. In that year the Emperor Ho-ang-ti attacked the rebel Kiang, on the plains of Tchou-lou. Kiang getting the worst of the battle raised a great fog to protect himself, but the Emperor made a chariot *which indicated the south* and was thus able to pursue and capture the enemy. This, however, savors too much of mythology to be of any force in this day.

The Japanese in the second half of the seventh century had south-pointing carts. A picture in the large Japanese encyclopedia shows one of these carts on the front of which is a figure on a pivot with right arm extended to indicate the south.

In the eighth century the Chinese learned that the compass did not point exactly north and south; and also anticipated the Europeans by several centuries in the most delicate method of suspension—by means of a fiber. However, they have no record of its use in navigation till near the close of the thirteenth century, at which time it had been in use in Europe for a century or more.

The evidence goes to prove that its properties were discouraged by Europeans and Asiatics independent of each other, with the weight of the evidence giving the Chinese the priority.

Many myths are associated with the magnet. Many no doubt have heard of the great lodestone island whose attractive power was so great that ships sailing too near were drawn to its shores and the nails pulled from the vessel. Sailors were not allowed to eat garlic or onions lest the odor deprive the stone of its virtue.

Until about the year 1600 it was thought that the polarity of the needle was due to the influence of the north star.

The first treatise on the compass was written by Petrus Peregrinus, a follower of Charles of Anjou. At the second siege of Lucera in Italy by his sovereign Peregrinus wrote his "epistola" beneath the walls of that town. His chief achievement was in the improvement of the compass. That used prior to his time was a magnetic needle supported in a vessel of water by reed or cork, and without an index or compass card. He first floated his compass but later introduced the double-pivoted compass. Some of the principles of his compass, as the azimuth bar, remained in use for a long time. Means of communication then were very poor and the few copies of his letter were hidden in the monasteries till the sixteenth century.

About 1302 A. D. Flavio Gioja invented the compass or at least made decided improvements on those in use. Some time prior to 1380 the compass card was divided into 32 points instead of 24.

The early charts of the Mediterranean were oriented by the compass, all bearings from port to port being

compass directions, hence these charts are known as "compass charts." At that time, as for a long time after, it was thought that the needle pointed true to the pole, the deviation noticeable being believed to be due to imperfections in the construction.

It remained for the sailors of Columbus to discover another fact—that the *amount* of deviation varied in different parts of the world. Not many days out from Gomera the pilot found that the compass varied to the northwest one point ( $11\frac{1}{4}$  deg.) Previous to this the observed variation had been to the northeast.

Later Cabot noticed the same variation. When at a point west of the Azores he found the needle to point to the true north, and to the west it was west of north.

Navigators thought that a very important discovery had been made—that a line, given by nature herself, had been found from which all longitudes could be reckoned. Later it was found not to be a true meridian and that it was not a right line.

Since then it has been learned that even its position is subject to change.

*Mulberry Grove, Ill.*

#### SPRING POEMS.

MARTHA SHEPARD LIPPINCOTT.

I always want to write spring poems  
When springtime comes around,  
When everywhere upon the earth  
Such beauty will be found;  
But of the birds and flowers, too,  
I've written oft before,  
Of frogs, green grass and apple blooms,  
And dozens of things more.

No theme it seems has been untouched  
By my e'er busy pen;  
But still each year the longing comes  
To write of spring again.  
I've told how love will creep in hearts,  
When springtime comes around.  
It seems to tell of all its joys,  
No new way can be found.

And editors will joke about  
The poems coming in,  
As if they thought it really was  
An oft-repeated sin;  
But why not have them every year,  
For all rejoice to sing  
Of sweet delights the heart will find  
With coming of the spring.

Moorestown, N. J.

OH, do not let us wait to be just, or pitiful, or demonstrative toward those we love until they or we are struck down by illness or threatened with death! Life is short, and we have never too much time for gladdening the hearts of those who are traveling the dark journey with us. Oh, be swift to love; make haste to be kind!—*Amiel*.

# Alphabet of American Authors

G. Fegley

## XII. H. W. Longfellow.

HENRY WADSWORTH LONGFELLOW was born at Portland, Maine, February 27, 1807. He was the son of Stephen Longfellow, son of Stephen Longfellow, son of Stephen Longfellow, son of William Longfellow of Horsforth, Yorkshire, England, who came to America about 1676, and married Anne, daughter of Samuel Sewall, first chief justice of Massachusetts. The father of the poet was a distinguished lawyer and politician. Through his mother, Zilpah, daughter of General Peleg Wadsworth, he traced his ancestry to John Alden and Priscilla Mullens, of *Mayflower* fame in the time of the mighty Miles Standish.

At three years of age he started to school to a hole called "Ma'am Fellows," wrote his first letter at six, and at seven was half way through his latin grammar. At nine years of age he wrote his first composition and poem, "Mr. Finney's Turnip." The first book to make any distinct impression on him, and which he read and re-read was Washington Irving's "Sketch-Book." His poem, "The Battle of Lovell's Pond," written when he was thirteen, was printed in the *Portland Gazette*. At fourteen he entered Bowdoin College at Brunswick, and during his four years there published three prose sketches and twenty-four poems, and with part of the money bought a "Life of Chatterton," the English boy-poet who committed suicide at seventeen. Chatterton evidently made considerable impression upon him, as he wanted to use him as subject for his graduation essay, but was persuaded by his father to take another, which was "Our Native Writers." It was not many years till he was one of them.

At his graduation he was offered the chair of Modern Languages in the college, and in 1826 went to

Europe where he staid three years, traveling and studying in France, Spain, Italy and Germany, fitting himself for the place. At a salary of \$800 per year he worked nearly six years, in which time he prepared a Spanish grammar, as the one in use did not suit him. He resigned to accept a similar chair in Harvard College, and in 1835, accompanied by his wife, Mary Storer Potter, whom he married in 1831, went to Europe. His wife died in Holland in the autumn. He visited Sweden, Denmark, Holland, Germany and Switzerland, and returned in December, 1836, to Cambridge, where in 1855 he resigned his chair to James Russell Lowell, and spent the rest of his life in literary work, making two other trips to Europe. He was married a second time in 1843 to a daughter of Nathan Appleton. She was burned to death in July, 1861, by her clothing catching fire in sealing a letter with wax, while using a lighted taper. "The Cross of Snow" pathetically tells the force of this blow. He died March 24, 1882.

His first published book was in 1833, "Coplas de Manrique," a translation from the Spanish, with an essay on Spanish poetry. In 1835 he printed "Outre Mer" (Beyond the Sea), a poetical prose work, not unlike Irving's "Sketch-Book." In 1839 came "Hyperion," a poetical romance, and the same year "Voices of the Night," which included "A Psalm of Life," "The Reaper and the Flowers," "The Beleagured City," and numerous translations from the Spanish, French, German, Italian, Danish and Anglo-Saxon, and a number of his earlier poems. Then came "Ballads and Other Poems," which included "The Skeleton in Armor," "Excelsior," "Blind Bartimeus," "To the River Charles." Then came "Poems on Slavery," and "The Spanish Student," a play.

Next he published a large octavo volume, "The Poets and Poetry of Europe." In 1846 appeared "The Belfry of Bruges and Other Poems," including "The Old Clock on the Stairs" and "The Arsenal at Springfield."

His first long poem, "Evangeline," a tale of Acadia in 1755 at the English occupation, was written in hexameter verse, and published in 1847. In 1849 was issued "Kavanagh," a New England prose tale, and "Seaside and Fireside," short poems, including "The Building of the Ship," "Resignation," and "The Sand of the Desert in an Hour-Glass."

"The Golden Legend," his longest single poem, remarkable for its variety of style and versification, dealing with life in the Middle Ages, came next. Then came "The Song of Hiawatha," who is as grand as any of Cooper's Indians; the meter is odd, there is no rhyme, yet it is an Indian epic, moulded after "Kalevala," of Finland. Then came "The Courtship of Miles Standish," in hexameter verse, which concerned his ancestors, John and Priscilla Alden. A collection of poems, "Tales of a Wayside Inn," after the fashion of Chaucer's "Canterbury Tales," was published in 1863. "Paul Revere's Ride" is one of these. A continuation of these, "The Second Day," appeared in 1872. Another collection of poems was published, called "Birds of Passage" which included "The Children's Hour," and "Weariness." Then came "Flower-de-Luce and Other Poems." Next he published his translation of Dante's "Divine Comedy." "The New England Tragedies" published next completed the "trilogy," the others being "The Divine Comedy" and "The Golden Legend." Four or five other books came next, and two books were published after his death.

The style of Longfellow's poetry was very simple, expressing universal sentiment in the simplest and most melodious manner. People like to read his writings because he thought and felt as they thought and felt; it is not that he said anything so unusual, but it was the pleasant, graceful way he said it. Many of his poems are based on actual facts, circumstances and incidents coming under his observation. For instance, when "the spreading chestnut tree," that stood over the old blacksmith-shop of Mr. Pratt, was cut down in 1879, an arm-chair was made of it, and the school children made him a present of it. A workman, on the streets of London, stopped him and begged to be allowed to "shake hands with the man who wrote the 'Psalm of Life.'" Even in the interior of Asia it is said the poem is found in the language of those peoples.

In 1869, on his last trip to Europe, the University of Oxford conferred upon him the degree of D. C. L., a noble honor, better understood because no other scholar or writer has done so much to give us the culture of Europe by putting into our language choice

selections from the foreign poets, which otherwise we might never have known, as well as valuable information about the poets themselves. He is in great contrast to Tennyson, in that his verse is always tender and delicate, and unobtrusively wins its way into the heart, and speaks for "the weary heart and aching brain of all humanity." In his memory his daughters have recently given \$10,000 to endow a fellowship in literature in Bowdoin College.

Worthy of mention: James R. Lowell, poetry, essays, criticism; Sidney Lanier, poems and novels; B. J. Lossing, history and biography; Lucy Larcom, poetry; Emma Lazarus, poetry; Charles G. Leland, the gypsies; A. B. Longstreet, "Georgia Scenes"; Eliza Leslie, stories and novels; Olive Logan, stories; Mary A. Livermore, lectures and autobiography.

*Bryan, Ohio.*

### HOW ABOUT THE BAIT?

JOHN H. NOLAN.

"There's just as good fish as ever was caught"

I heard a dreamer say,

Who had failed to gain the prize he sought

Because of his delay.

I pondered that idle dreamer's thought

Who yields himself to fate.

There's just as good fish as ever was caught,

But how about the bait?

O dreamer arise, you cannot obtain

The prize, unless you pay.

The day that is past you cannot regain—

That chance is gone for aye.

You dream of the future, yet strive for naught,

But idly, supinely wait.

The fish may be good as ever was caught,

But how about the bait?

*Mulberry Grove, Illinois.*

### THE CHEERY FAMILIAR ROBIN.

MRS. M. E. S. CHARLES.

"Out in the cheery breath of morn,

Up from the meadow winging,

Before the day is fairly born,

I hear my robin singing."

THE American robin belongs to the family of birds which consists of the bluebirds, thrushes, etc. This family includes most of our finest singers. Nearly all of them are birds of medium size. The robin is used by many ornithologists as the standard of measurement. It is one of our most common birds, and every one is supposed to be familiar with its size; it measures ten inches in length and is well proportioned. The head of the male is black, the breast is a bright reddish brown; the upper parts of the body, including the wings and tail, are slaty brown; the tail when widely spread shows a tip of white on each feather. The female is smaller than the male, and her plumage is much lighter in color. The young are inter-

mediate between the two, and conspicuously spotted and streaked with black and gray, which reveals their relationship to the thrushes.

The robin ranges from the highlands of Mexico to the Arctic regions. They winter largely in the forests of the lowlands of all the Gulf States, and especially in Florida. During the winter they live on the berries of different kinds of hollies, those of the Mexican mulberry, and particularly the mealy, nutri-

A Robin's Nest.

tious berries of the sparkleberry (*Vaccinium arboreum*). Besides, they eat all the insects they are able to find. While wintering in the south the robin is a very wild and timid bird, rarely leaving the forests.

In the region where the robin nests, it has become quite confiding and fearless and seems to enjoy the companionship of man. You can find it everywhere in field and forest, in meadow and marsh, on hills and in villages, and in parks and gardens. Its favorite haunts, however, are locations where woods, fields and orchards alternate. In the cultivated treeless western prairies the robin has become abundant since orchards were planted.

In the northern States nest building frequently begins as early as the middle of April. The nest may be found anywhere from two to thirty feet from the ground, in the most varied positions and situations; on trees, on the tops of high stumps, among the roots, matted together with soil, in the corners of rail fences, in old abandoned houses, in sheds and barns, on the window-caps of occupied houses and in all kinds of ornamental and fruit trees. The nest is built of weeds and grass, bits of paper or rags and rootlets; then a layer of mud is added which is moulded into a smooth cup-shaped cavity which is lined with dry grasses. The eggs, generally five in number, are of

a uniform rich greenish-blue color. After the young birds are hatched both parents share in the feeding and care of the nestlings until they are old enough to care for themselves.

The song of the robin, though simple and modest, is not without effect, and its manner of singing is significant. While many of our birds select a secluded spot while singing, the robin chooses an exposed position, usually the top of a tree, and pours forth its song for hours at a time from this lofty perch. It sings most persistently early in the morning, as soon as dawn begins to show in the far east, and in the evening, often long after the fading of the bright sunset. What makes the song of the robin especially valuable is the fact that it is uttered in the immediate neighborhood of our homes, where every lover of nature can delight in it during the pleasant season of the year. The loud, flute-like song involuntarily reminds one of the clear flowing notes of a sacred song. Whenever the bird sits high aloft and sends its voice to the distance, all the other male robins of the neighborhood feel duty bound to enter into competition. Soon three, four, and even more may be heard in loud chorus. This is usually the case during the evening twilight when each bird seems to be striving to outsing every other one, while they make the surroundings echo with the vibration of their jubilant, exultant melody.

Although the robin is a great eater of berries and soft fruits, such as strawberries, mulberries, cherries, etc., the damage done in this way is inconsiderable in comparison to the great benefit these birds render the farmer, gardener or horticulturist. Upon the arrival of the robins early in the spring, long before any fruit is ripe, they scatter over the newly-ploughed fields, meadows, lawns and parks, in eager search for the grubs and worms that, later in the season, would prove destructive to these same fruits were not their ravages stayed by the friendly army of robins.

### SPRING.

CARL NELSON.

Tell me, friend, whose heart is full of longing  
For the joy of springtime's balmy day,  
Have you not, when radiant days were dawning,  
Listened to a songbird's joyous lay?  
Came there not from palmy strand a swallow,  
With a message from its amber sky,  
Bidding us awake from winter's fallow,  
While it softly chirruped, "By and by"?

Aye, there echoes while the storm-winds tarry,  
In my heart a springtime melody,  
And I hear across the wind-swept prairie,  
Soul-enchancing songs of jubilee.  
Still the snows in Spring's lap fondly linger,  
Yet my dreams a flowery vision bring,  
And my Spirit, free and without hinder,  
Lights within my soul the fire of Spring.  
Cando, N. Dak.

# Elements of Success

D. Z. Angle

## Industry.

SIR WALTER SCOTT, in writing to a youth who had obtained a situation and asked him for advice, said, "Beware of stumbling over a propensity which easily besets you from not being fully employed,—I mean what the women call 'dawdling.' Do instantly whatever is to be done, and take the hours of recreation after business, never before it." Probably no true success in life can be had without industry. First one should find work adapted to one's talents, abilities, and environments. It need not take an educated man to tell you or me what we should first do; simply do whatever honorable work we find to do, remembering that "time is money," as the business man says, and any time we lose is gone forever, and likewise its equivalent in wages unearned. A due appreciation of the value of time is necessary before one can see the need of being industrious. "A philosopher has said that time was his estate, an estate which constantly required cultivation to give its fruit in fullest measure. Allowed to lie waste the product will be noxious weeds and vicious growth of all kinds. One of the minor uses of steady employment is that it keeps one out of mischief, for truly an idle brain is the devil's workshop, and a lazy man the devil's bolster." It is observed at sea that men are never so much disposed to grumble as when least employed. Hence, an old captain, when there was nothing else to do, would issue the order to anchor. The path of success in business is usually the path of common sense, says Sam Smiles in his excellent book on "Self Help." He continues thus: "Patient labor and application are as necessary here as in the acquisition of knowledge, or the pursuit of science. The old Greeks said, to become an able man in any profession three things are necessary,—nature, study, practice."

Study along lines that nature's hand directs us, and practice of the useful things learned, is what tendeth to bring perfection and success to us. "Practical industry, wisely and vigorously applied, always produces its due effects. It carries a man onward, brings out his individual character and stimulates the actions of others. All men may, not rise equally, yet each on the whole very much according to his deserts. It is not good that human nature should have the road of life made too easy. Better to be under the necessity of working hard and faring meanly, than have everything done ready to our hand and a pillow of down to repose upon." A small start in life with only small means, seems necessary as a stimulus to work, and a condition essential to success. An eminent judge when asked what contributed to success at the

bar replied: "Some win success by great talents, some by high connections, some by a miracle, but the majority by commencing without a shilling." It seems that necessity has always been, is, and always will be the greatest incentive to work. After laboring steadily for years, work becomes habitual, a habit that, with many, increases in intensity with passing years, and the first element to a successful career is firmly established in our character. It is said that the Emperor Napoleon was continuously busy, and worked so hard that sometimes he would exhaust four secretaries at one time. His successful adversary at Waterloo, the Duke of Wellington, was also a great worker, and upon the persistent energy and industry of these great men is to be based much of their great success.

## Honesty.

But no true commendable success can be had without honesty of character. Though the dishonest or wicked may flourish for a season, "like the green bay tree," shame and sorrow usually follow them so quickly and surely, that the treasures gained are but an elusive phantom, which really unpossessed, vanishes quickly from view, leaving disappointment more bitter than though nothing had been won. The man whose honesty is proven will be trusted, while the one who cheats or steals a little here and there, will soon be discovered, possibly by his own guilty conscience shown in his countenance. "Be sure a man's sin will find him out," is a saying which proves true with multitudes in daily life. The boy or girl may think it isn't stealing to take a dime or a dollar out of father's purse without his knowledge or permission, or the man or woman may think it not much harm to withhold or appropriate a few dollars from public or church funds, because, they reason, it will not be missed, or we're one family or people, and besides they'd do the same thing if they had my place or position! Such little thefts lay the foundation for much ill success, private and public dishonesty, and an ignoble home in a prison cell.

Many are probably familiar with a little incident illustrating Lincoln's honesty, who, when a young man keeping store, overcharged a customer six and one-fourth cents, and discovering the mistake walked two miles after closing shop that day, and repaid the small sum. That was a small incident, but it shows clearly the sterling honesty and great character of the true man and the absolute trustworthiness and promptitude of the noble Lincoln traits, which he carried with him throughout his career, and which doubtless won him the presidency of the United States. The people

felt they could trust him and so will they trust you, dear reader, with their treasures if you give equal evidence of your desire to live up to the Golden Rule.

#### Economy.

Unless one practices economy, it is difficult to be financially successful in life, difficult even to be honest unless one learns to save or live within his income. What matter if a man makes \$10 per day, if he or his family spend it all as fast as made in foolish extravagance? He cannot accumulate, and if thrown out of employment or old age approaches, he has no reserve to live upon, and must become in straits of want, suffering, temptation and crime, or suffer the humiliation of dependence upon public charity, or private benevolence. The writer once knew a wealthy farmer, who said that when a young man he worked for twenty-five cents per day. He gradually worked up to good wages, a portion of which was saved and invested in land or loaned to others at interest. He farmed part of his land and became wealthy, dying recently, worth about \$50,000. Industry, honesty and economy were the keys to his success. He commenced life without a dollar, worked hard, but if he had spent all he made, he never could have bought land when it was cheap, which later became the source of much of his income. Land is still low-priced in some localities, but of what inducement is that to the man who has no means? It takes some money to buy land, some work is required to make money, and some degree of wisdom and prudence to spend it judiciously.

As an excuse for not laying up for a rainy day many men say it takes all their wages or income to pay the cost of living, for though wages are high, living expenses are high in like proportion. However, we believe a saving account could be started by many of these, who spend sums for a quantity of unnecessary high-priced clothing, possibly a sum each year for useless whiskey or tobacco, for life insurance and the various lodges. Great quantities of hard-earned dollars are, we consider, thus practically thrown away yearly. The fine clothes are seldom worn or soon thrown away because "out of date." The tobacco is consumed without profit, probably much loss. The stimulant takes some of his money and usually unfits him for caring for what he has left. The insurance and lodge schemes are an uncertain means of making or saving him money, but are a certain means for getting rid of some of his cash, often with no value ever received therefor. If all these expenditures were saved and properly invested by himself in reliable property, they would finally give him much greater return (on the average) than all the momentary pleasures, endowments and payments for losses which he is likely ever to receive.

#### Punctuality.

Nelson, the hero of Trafalgar, once said, "I owe

all of my success in life to having been always a quarter of an hour before my time." Another wise man said: "A proper consideration of the value of time will always inspire habits of punctuality." "Punctuality," said Louis XIV, "is the politeness of kings. It is also the duty of gentlemen, and the necessity of men of business. Nothing begets confidence in a man sooner than the practice of this virtue. And nothing shakes confidence sooner than the want of it." We show our respect to others and due regard for the value of their time by not keeping them waiting. When Washington's secretary excused himself for his lateness of attendance at a meeting by laying the blame upon his watch, Washington replied, "You must get a new watch, or I a new secretary." Can the doctor expect success in his calling if he has a habit of delaying for a day or two in answering urgent calls from his patients? Will the grocer increase his trade or income by opening his store one hour later each day than his competitors, or could the farmer delay planting his corn six weeks after the proper time, and secure equal rich return for his labor? "Strike while the iron is hot" applies to various tasks and callings beside blacksmithing, and the habit of being prompt and on time is one great essential to highest success in life.

#### Method and Accuracy.

Man's success depends much upon his method of doing things and then exactness of execution. "Knowledge is power," "labor is worship." We should learn to do correctly what we do, which will take no more labor often, than to do it incorrectly. By constant repetition of the same task, our work becomes to an extent mechanical or involuntary, and it is accomplished thoroughly and well, with the least possible expenditure of vital energy. In study, in work, and in play, plan to do each and all with the least cost of time and effort, consistent with first-class achievement. Let us learn the Golden Rule along with the multiplication table, and if I buy two dozen of eggs, at 19 cents per dozen, reason if I were the seller, whether I would be willing to take less than 38 cents for them before I require them for less. Or if I sell you 20 pounds of bacon for \$1 and 100 pounds of bran for \$1, and afterwards you weigh your purchases and find you received only 19 pounds of bacon and 95 pounds of bran, will you then believe me honest or accurate and a safe person to deal with? All are prone to mistakes, therefore accuracy needs constant cultivation; also will care and attention to details prove a safeguard to integrity of character. In conclusion we affirm that if we faithfully perform our duties, and live as becometh our station in life, abundant and lasting reward will be ours, and we will receive the active coöperation, respect and esteem of just men and women.

*Mt. Vernon, Ill.*

## STORY OF A FOX.

S. N. M'CANN.

I REMEMBER well of hearing an old hunter in West Virginia tell the following story. (He was regarded as a very truthful man and I believe the story).

While out hunting one day he saw a red fox gathering wool off from the briers that the sheep had lost in being caught in the thorns. He decided to watch the fox and see what it would do with the wool. It gathered bunch after bunch until it had a good mouthful. It then ran down to a nearby stream of water, waded in where the water was still, and slowly dropped its tail into the water.

It then waded very slowly backward into deeper water, finally sitting down very slowly and sinking the hinder part of the body very slowly until only the head was above the water, still holding the big bunch of wool in its mouth. It then sank the head until only the black point of the nose could be seen with the bunch of wool. Then the fox disappeared and the wool floated out upon the water. The fox having dived under the water came up several feet away.

The old hunter said he waded in to get the wool to see what the fox meant. When he reached the wool it was full of fleas and he understood our fox's strange movements.

## TALK'S MARKET VALUE.

A man's word is generally taken for what it is worth. This implies that the value of men's words vary. It matters more what a man is than what he says, for it is his character which determines the nature of his speech.

In this respect men are divided into three classes: Men of the first class have their words taken at par. They mean precisely what they say. Of this type of man it has been said: "His word is as good as his bond." Men of the second class have their words taken at a premium. Such men are usually slow to speak. Their words are few. But when they promise one rests assured that ordinarily they will do more than has been asked. To such men might be applied the remark of Josh Billings: "I don't care how much a man says, so long as he says it in a few words." The words of men of the third class are always discounted. Twenty per cent off—often more—is the value that others give them. So it often happens that, exactly the same words, spoken by three different men, have three different values.

It is rather curious that while most of us flatter ourselves that we cannot be fooled by the other fellow, few of us seem to realize that we cannot fool others. It does not take men very long to form a proper estimate of our real value. Everybody soon knows whether our words are to be placed at par, at a premium or at a discount. Therefore let's quit trying to

fool one another. It doesn't pay. It is a waste of time and of energy.

Listen to the addresses of the men in your local organizations. Soon you will learn to know just whose words count for most. It will not be the man who speaks on every question. It will not be the fellow who is always cock-sure. It will not be he who always agrees with you. It will be the man who is quiet, thoughtful, conservative—not dull and stupid, but of unquestioned character. This is the type of man who is coming to the front in labor circles, and it prophesies better things for the workingman's cause.—*Bible Record*.

## THE WEAKENED WILL.

"I WANT to be locked up in jail." There was a positive accent on the last word and a definite and convincing ring in the tone of voice that made the sheriff of Atlanta, Ga., drop his pen and wheel around in his chair with more alacrity than usual.

"Why, what have you done to be locked up?" inquired the deputy sheriff with some amazement as he turned and faced a man of middle age whose appearance in every detail bore out the first conviction that he was a gentleman, says the *Atlanta Constitution*.

"I haven't done anything," was the response, "but I want to be locked up and that right now. I feel this accursed thirst for drink getting the upper hand of me. It's a habit I can't fight off, no matter how hard I try, and the only way to keep myself from yielding to it is to be locked up in jail. My wife is sick or she would have come down with me, for she knows what a slave I am to liquor when it gets a hold on me."

"We can't lock you up on the expense of the county when there is no charge against you," returned the deputy sheriff, at a loss to know what course to pursue.

"It needn't be any expense to the county," replied the visitor, and his strong frame visibly trembled as he stood his ground and fought back the demon that was gripping his soul. "I only want to get away from this thing for a while and I will pay the expense, whatever it is."

"All right, then," said the sheriff, and he telephoned the jail, and the man whose moral sense of right was stronger than his will was given protection from this unseen, but powerful, foe by the strong arm of the law.

How much better, however, to lock up the enemy than the victim.

INGLENOOK week doesn't come very often and the offers made during those six days are just as rare. See that your neighbors and friends have a chance to avail themselves of these offers. Remember, May 4 to 9 inclusive.

## CURRENT COMMENTS

### Saving of Fuel.

A new locomotive, saving 20 to 25 per cent of the fuel burned would seem to be a sufficient advance to fore-shadow quite a revolution. The Brotan locomotive boiler, the invention of an engineer of the Imperial Railway Ministry of Austria, was first put to work in Austria in January, 1901, and it is claimed that the two comparative tests made have established superiority over ordinary boilers of 27 and 20.7 per cent respectively in coal per locomotive-mile and 23.6 and 19.5 per cent per ton mile. Of these boilers twenty-one are now in operation and twenty-nine are building, fourteen of the former and seventeen of the latter being for Austrian roads. The water chambers or water legs around the firebox of the old locomotive are a source of much trouble, and the chief improvement consists in replacing these by a series of thin-walled upright tubes on each side of the fire, extending in an arch to form the roof of the firebox. A steam collector twenty-eight to thirty inches in diameter is placed over the entire length of the boiler, giving the appearance of a large boiler surmounted by a smaller one. The water-tube firebox can be fitted to any locomotive, and this greatly increases the efficiency of the old engines.

### Police and Gambling in New York.

Desiring to establish the connection of the police with gambling houses, the New York "World" a few weeks ago, through one of its reporters, opened a gambling house in the so-called "Tenderloin" district of New York. At the first opening Rose, the newspaper man and his two partners were arrested, and, for lack of bail, compelled to spend the night in the police station, where a liberal use of money gave them all the favors they could ask. In preparation for the second opening Rose went into partnership with a saloonkeeper, who, Rose found, had close connection with the police, and through whom police protection was purchased. Rose paid \$250 to one policeman to be unmolested by the inspector, \$150 to another policeman for protection from the local police captain, and \$50 to a policeman belonging to a special "vice" squad, with the understanding that these payments were to be renewed once a month. After running for the better part of a week under the police protection thus secured "The World" closed the gambling house and supplied the Police Commissioner and the District Attorney with the information secured. The cases will, of course, come before the grand jury, and Police Commissioner Bingham has done what he can to punish the men implicated, pending developments. "The World" is to be commended for its work.

### Campbell-Bannerman's Resignation.

The resignation of Sir Henry Campbell-Bannerman, now long expected on account of the Premier's sickness, has been sent to King Edward, who is at Biarritz, France, and the sovereign has summoned the Hon. Herbert H. Asquith, the Chancellor of the Exchequer, to form a new cabinet. England was left for a day or two legally without a ministry, for Mr. Asquith could not become Premier until after he had seen the King. Never before in recent times

had the sovereign been out of the country when the Prime Minister resigned. Although the Liberal majority in the House of Commons has been somewhat reduced by the elections, it is still overwhelming. There are in the House at present 393 Ministerialists, 32 Laborites and Socialists, 159 Unionists and 83 Nationalists. The Laborites and Nationalists almost always supported Campbell-Bannerman. Mr. Asquith is not as thorough a believer in home-rule for Ireland as was his predecessor, and will probably not receive the same measure of support from the Nationalists as did Sir Henry. Sir Henry was loyal to his Liberal views during the Boer war and opposed the war spirit when such opposition was least popular. Mr. Asquith at that time temporized. Sir Henry was a Liberal first, last and all the time. Mr. Asquith is not so popular, but backed by such a majority in the House, he should be able to press on the Licensing Bill, the new Educational Bill, and the measures for social reform for which the Liberals stand, and make clear the issue against the House of Lords if they refuse to pass the bills. On the question of the limitation of the power of the Lords the Liberals will probably have to fight their next national campaign.

### The Venezuela Case Revived.

Following the renewed refusal of the Venezuelan government to submit to arbitration the various claims of United States citizens against that government, the whole dispute has been submitted to the Senate, which will decide what action the United States shall take. There are five matters in dispute. The first is a claim for \$25,000 damages, preferred by A. F. Jaurett, a naturalized American, who was notified after business hours one Saturday afternoon in November, 1904, that he would have to leave Venezuela inside of twenty-four hours. With no opportunity to arrange his business before his departure, Mr. Jaurett had a good claim for damages. The second is the claim for damages on the part of the Orinoco Corporation, whose exclusive rights in concessions in the Orinoco delta have been invaded by new and extra-legal concessions granted by the Venezuelan government. In the third case, the United States asks the resubmission to arbitration of the claim of the Orinoco Steamship Company, on the ground that the original decision abounded in error of law and of fact. The fourth case is that of the United States and Venezuela Company, which had a contract with Venezuela that only certain duties should be placed on its imports and exports. When Venezuela violated this contract, the company, ignoring the Venezuelan courts, appealed directly to our State Department. In this case the request for arbitration is justified on Secretary Fish's dictum: "It is useless to attempt to exhaust justice in a country where there is no justice to exhaust." The fifth case is the exceedingly intricate one of the New York and Bermudez Company. The Bermudez Company has apparently been guilty of irregular conduct. The Venezuelan courts recently fined it five million dollars for inciting revolution and have now confiscated its property. The Bermudez Company, however, may have been treated worse than it deserved. In regard to all these claims, the President and the Secretary of State feel that the resources of diplomacy have been exhausted and that if the United State is to retain its self-respect, some more vigorous action should be taken.

### British Affairs.

The illness of Sir Henry Campbell-Bannerman, the British premier, continues without much apparent hope of

his recovery, and it becomes increasingly probable that the Chancellor of the Exchequer, Mr. Asquith, will soon have to succeed him in name. Sir Henry has been a man of great tact in his management of affairs. Mr. Asquith, however, although skillful in politics, is commonly regarded as a "cold" man, able but austere. The Liberal party's majority in the House, although still large, has been reduced somewhat by the results of recent by-elections, and by defection of the Irish Nationalist and Laborite vote in regard to some measures. The election at Peckham last week showed in an extreme way the change which is taking place elsewhere in the sentiment of the country. There a Liberal majority of more than two thousand at the last general election became one of more than two thousand for the Unionists. The Liberals explained the vote as due to the brewing interests, and greeted the exulting shout of the Unionists with the taunting cry, "Beer, beer, glorious beer!" The Liberals go so far as to question the election on the ground that the voters were corrupted by the liquor interests, which are fighting the Government on account of its proposal to reduce the number of liquor licenses.

#### Korean Unrest.

Recently Durham W. Stevens, adviser to the Korean Council of State was murderously attacked by two Koreans in San Francisco. Mr. Stevens, on his arrival in San Francisco a few days preceding, had given out an interview praising the policies of Japan in Korea and making much of the benefits growing out of Japanese occupation. When he was visited by a delegation of Koreans afterwards and stood by what he had said, his visitors attacked him in the hotel lobby, and the next day he was shot at the Ferry Building. Mr. Stevens, who for many years was in the employ of the Japanese State Department, for the last three years or so has served the Korean government as Diplomatic Adviser to the Department of Foreign Affairs. His influence has been always exerted in behalf of the Japanese policy. In fact, under the present Japanese régime no man is allowed who is not Japophile. While the outside world has been treated to many accounts of the good work Japan has been doing in Korea—and Korea was grievously in need of administration reform—the fact is that Koreans are not happy. Japanese have taken their lands, soldiers have overrun the country, and Koreans have found it impossible to get justice in the courts. Last summer Koreans opposed to Japan organized the Righteous Army to fight the Japanese in every way possible. Members of this organization have killed Japanese soldiers and civilians. The Japanese soldiers have burned villages in reprisal and conflicts between the two races are of constant occurrence. On the ship which brought Mr. Stevens was a manifesto from the General of the Righteous Army, running in part thus: "But alas. Grievous times have come upon Korea, our compatriots. We who have been educated by our five-hundred-year-old dynasty and raised up by our four-thousand-year-old ancestry, have come under the domination of the barbarous savage islanders—the Japanese. They have swooped upon our country and are indulging their barbarous appetites with a cruel heart. It is so much we could not say it with our tongues nor could we write it with our pens. . . . Compatriots, we must unite and consecrate ourselves to our land and restore our independence. We are sure our God will help us. We must all do our best to kill all Japanese, their spies, allies, and barbarous soldiers."

The Koreans are in despair. They feel that their country is without a friend in the world. They have always looked to America as their best friend, but America was the first country to withdraw its minister when the treaty of 1904 with Japan, to which the Korean emperor and his council never agreed, was foisted on the world. The murder of Mr. Stevens, terrible as it is, has none the less served to call the attention of America to the Korean side of the present situation in the Hermit Kingdom.

#### The Hepburn Amendment.

Congressman Hepburn has introduced into the House the bill to amend the Sherman Anti-Trust Law according to the idea worked out in conferences between the President and the National Civic Federation. The bill, carrying out the method of amendment advocated by the President in his recent message, provides that corporations and associations which supply the required information may be registered—common carriers with the Interstate Commerce Commission; all others, with the Bureau of Corporations. Registered corporations and associations will be allowed to make combinations and contracts which are in restraint of trade so long as such restraint is not unreasonable in the judgment of the government authorities. The bill would insure reasonable publicity in regard to the business of corporations and would enable men to do legally what is commonly done already in modern business contrary to a strict interpretation of the law. Particular interest centers on the clauses assuring labor organizations the right to strike and to make trade agreements. President Gompers, of the American Federation of Labor, at the hearing on the bill, demanded its passage in the name of labor and threatened that the unions would hold the party in power responsible if it did not pass. He declared further, that if the unions were "driven out of business" laboring men would form secret organizations. Said he: "If Congress does not pass laws legalizing unions, granting explicitly the right to strike, and in general a right to be active through organization in our own interests, there will spring up in this country as our successors secret organizations, bound by oath to the service of the cause of labor and to the fight we have already waged." The Democrats are expected to conduct a lively campaign in Congress to force the passage of the law asked for by the labor leaders.

#### The Making of Criminals.

Men will go to great lengths to produce fine stock, but little attention is paid to the generation of desirable human beings. President Roosevelt advocates large families, yet it is known in certain quarters of the world, that numerous families are already too large for the ability of fathers to support. It is noted that in the first week in December, no fewer than 11,947 children in Berlin attended school without breakfast, and with no prospect of obtaining a midday meal. The city authorities were obliged to feed them from the canteens. Concerning the making of criminals, a Chicago journal said recently: "Seventy-five per cent of the crimes committed in Chicago is the work of boys under twenty-five. If the history of these youthful criminals were traced, would it not be found that a large majority of them come from homes where utter poverty exists? The children of poor parents in many cases have risen to great positions in the world, but they were not of the class that provides the pauper children of Berlin or of Chicago."

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## CLOSING UP THE RANKS.

It is a common saying that each person in the world has his own work to do, and some would go so far as to interpret this to mean that each one has a particular work to do—one for which he is especially fitted and which will remain undone until he takes it up. It seems to us that this is carrying the idea a little too far and if literally adhered to must result in greater or less confusion in the prosecution of the world's activities. It is true that every man has a work to do, but the boundaries set have not so much reference to kind as to quantity. Every man's work is to do *all* that he *can* do.

While it is apparent that in our work most of us are more or less acquainted with the plan by which we work, we know little of the ultimate results and how this effort or that may be worked into the plans of the great Master Workman. And we need not know. It is enough to know that we have no desire except to lend our services toward the consummation of his plan. And so when our little plans are disarranged or come to naught we dare not stand idle, and when a fellow-worker leaves our ranks we dare not let the work go undone. That work is ours which must be done and which we can do, whether it is the carrying out of our own pet plans or the shouldering of the well-begun work of another. Sometimes we must seemingly put to the test all our powers of mind or body in order that no necessary work may remain undone, and the cry of mine or thine dare not be raised. The work is of primary importance. The workers are insignificant,—unless their brain or brawn give the work an added impetus and complexion that shall bring it to a more perfect end.

We are bound, therefore, not to do *our* work, but to do *the* work that is to be done. And if our number is at times lessened, it does not mean that there is by so much less work to be done, but more work for each one of us.

## THE SOUTH LEADING.

IN viewing the progress of the world, a great many people of the United States, particularly of the North, will have to readjust their views when they come to the South. For many years they have been accustomed to looking upon that section as far behind all others in the carrying forward of the country's industries. In fact they have become so established in this belief as to hold it to be true from the very nature of things. But, as already said, these people must look again. The South may have taken some years to adjust itself to a new order of affairs, but in these years it has laid the foundation for such a clean and sober march forward that the other sections will have to put forth special efforts if they do not find themselves behind in the real business of the world. In the New South which in the beginning of the race has throw off the shackles of the saloon curse we will have a chance to see what our own progress might have been if we had not these years been handicapped by its degrading influence.

The best we can do under the circumstances is to confess that we have been on the wrong track and face about and follow the South's leading. The *Review of Reviews* for April comments on an article in the *Southern Workman* which discusses the moral dignity of Prohibition in the South. We quote most of the article that our northern readers may get an idea how the question was looked upon in the South. "What man has done man can do." The right attitude and the moral courage are the prerequisites to victory.

"Southern prohibition is not ordinary State prohibition, but an impulse of civilization, the outflow of the religious, educational, economic, social, and political resolution of Southern society. 'What is behind prohibition in the South?' Religious interests and energies. A proposition to restore the liquor traffic would receive almost the same response from the churches as a proposition to restore a state church establishment.

"Educational forces are behind prohibition. An army of 20,000 teachers has been commissioned to teach that the liquor traffic is an enemy to the personal and public welfare. The introduction of text-books on physiology into the schools was the inauguration of the prohibition propaganda. To the thousands of public school teachers consecrated to truth and consistency prohibition is moral and mental freedom. It ends for them a compromised relation to the public good which was revolting to many a sensitive conscience.

"The economic conscience is behind prohibition. The truth has at last been recognized in the South that the whiskey traffic belongs to the category of economic wastes—floods, famines, wars, and disasters of nature. Industrial conditions forced this conviction upon the

people. The great need of the South is labor. It has everything else. Cotton it had, and, also, available cultivable land; but skilled labor was wanting. It learned that the real profit in cotton lay in its manufacture,—that a bale worth \$40, by the addition of labor and brains in the factory could sell for \$400. It lacked the brains, and suddenly realized that what-ever injured the sources of labor was an industrial enemy. Hence, industry's fiat against liquor.

"The social peace and progress of the South are behind prohibition. The presence of 8 000,000 negroes has operated as a tremendous incentive for prohibition of the liquor traffic. The Atlanta and Mississippi riots showed the danger of the saloon. It was an attractive social center for the dangerous elements of Southern population,—the lower levels of both races. Following the racial lines from top to bottom, they converged at the saloon, which is situated in the acute angle of this inverted social pyramid.

"When they had been closed for a week in Atlanta, the people asked: 'Why not a year and forever?' The liquor traffic fostered and encouraged the depraved and criminal negro and the vengeful and irresponsible white. Of both the South is tired. So, the negro alone was not the only or chief cause for prohibition, although, admittedly, a powerful incentive.

"Prohibition is not on the defensive. It is a great, broad, deep movement of the most commanding proportions and with an inspiration at its heart. It has laid hold upon the spirit of Southern solidarity, and is making an appeal to patriotic imagination, to sectional pride, which is having a recognized effect on the national conscience. It will be recorded as the most important and influential moral deed achieved in American civilization during the first quarter of the twentieth century.

"The spectacle of the South in making a demonstration of sufficient social moral courage to deal materially with the most powerful enemy of the human race is immensely significant to humanity at large. Between the liquor traffic and its antagonists the battle heretofore has been a draw. With 30,000,000 people placed solidly in the balance against the liquor traffic the moral equilibrium of the world will be disturbed and a world-awakening against the drink evil will follow.

"Prohibition in the South in the civic program as a final policy is an exhibition of rare moral courage,—an innovation in Anglo-Saxon human nature, in which the liquor traffic has always found a responsive chord. There is another aspect in the situation which is inspiring to those who take the South to heart. It is that at last the Southern people are coming into a position of moral leadership in the nation. The South has taken a distinct step toward regaining its prestige

in the national life, and is struggling once more for that which is good for everybody everywhere."

#### WHAT SHALL WE READ?

THERE seems to be no way of checking the great mass of corrupt literature that is being scattered broadcast through the land except by educating the people along the line of what constitutes real character-building food and what contributes to the undermining of all that is good. It is impossible to determine whether writers and publishers developed in the readers their present appetite for that which appeals to the baser nature, or whether the people first let it be understood that this was the sort of food they wanted. However, the appetite is here as is evidenced by a large per cent of the printed matter and the eagerness with which it is snatched up.

Sometimes it occurs to us that there will be no radical change till the people are suddenly brought to realize the awful consequence of feeding the mind on food the like of which if given to the body would soon make of one a physical wreck. But whether we shall have to wait for the change to come in this way or not, we shall not cease in our effort to give to the people that which will contribute to their higher development. Our readers may help in this good work by endeavoring to widen the circle of our influence.

It will be a favor to us if you will concentrate your efforts in this line next week, May 4 to 9.

#### A HOME FOR A BOY?

WORD comes to us that a bright, healthy boy eight years old is in need of a good home. We are making the call through the columns of the INGLENOOK because we feel that among our readers there are many such homes in need of such boys. A home in one of the west central States would be preferred. Address inquiries to the INGLENOOK office.

#### AN APRIL DAY.

Rays of sunshine, drops of rain,  
Fall upon the window-pane;  
What is this they seem to say,  
On this fitful April day?

"We together come to bring  
Joy and gladness in the spring;  
Soon our influence will be seen,  
Turning woods and meadows green.

"April sun and April showers,  
Swell the buds and open flowers;  
Men and birds and beasts rejoice  
When they hear our welcome voice."

Life is like an April day,  
Shadows mixed with sunbeams gay;  
Smiles for sunshine, tears for showers,  
Germinate life's rarest flowers.

## FOOD PRINCIPLES

LENNA FRANCES COOPER, Principal School of Hygiene and Cooking, Battle Creek Sanitarium

### Starches.

STARCH forms the largest part of our foods. About sixty per cent of our menu should be starch. Its purpose in the body is to furnish us with heat and energy which we sometimes call strength. It is due to this class of foods largely that we have the ability to move about and to work. In other words they are to our body as the fuel is to an engine. Before the body can use them as such, they must be oxidized or converted into heat, just as the fuel of the engine must be converted into steam before it is of real use to it. This process of oxidization or burning is a wonderful process. Some one has described it as the "eternal fires." It takes place within the tissues of the bodies and continues as long as life lasts. Before our food can be burned to produce heat, it must go through a series of changes which reduces it to a liquid, so it can be taken up by the body. These changes are brought about by certain chemical fluids of the body which we call digestive fluids. The first of these is the saliva, the fluid secreted by the glands of the mouth, the chief purpose of which is to digest cooked starch. It seems strange, but this fluid is not capable of digesting raw starch. It would seem from this, that nature never intended that we should eat such things as green apples, raw potatoes, and such raw foods as oatmeal, wheat, etc.

There are five distinct steps in the process of digestion. Three of these are analogous to three stages that may be accomplished by cooking. In fact it is possible to accomplish a large part of starch digestion by thorough cooking. Hence the cooking of these foods becomes a very important one.

All of the grains or cereals contain a large amount of starch. They also contain a large amount of a very firm cellulose which requires prolonged cooking to soften. Hence the cooking of cereals is for two purposes—to cook the starch and to soften the cellulose.

The best way to cook these grains is to bake them till of a rich golden brown such as thoroughly toasted bread which is best accomplished by baking slices of

stale bread in a slow oven for one-half—three-fourths of an hour or until the moisture is driven off and then toasted to a rich brown. Bread prepared in this way is crisp and tender and very delicious.

The toasted flaked foods are also good examples of a well-cooked cereal. Mushes as generally prepared are not wholesome. In the first place they are rarely cooked sufficiently and in the second place they are so moist that we do not chew them sufficiently to thoroughly mix the saliva with them. Dry foods take up saliva very much like a sponge takes up water, but foods that are already filled with moisture cannot take up much saliva, hence are digested with more difficulty. If these cereals are to be eaten as mushes, they should be served with some hard food requiring thorough mastication such as a cracker, or a thoroughly toasted piece of bread and they should be cooked for a long time, usually, three or four hours in a double boiler.

Rice forms a very important food for a large share of the world. The Chinese, Japanese and people of India depend almost wholly upon it, although they generally add to their dietary some one of another class of food which we call proteid, such as peas, beans, lentils, eggs and milk.

When properly prepared, rice is one of the most wholesome of foods. It should be cooked with just enough liquid so that each grain will stand out whole and distinct and yet perfectly tender. Mushy rice is both disgusting and unpalatable. There are a number of methods of cooking rice. Below are given some methods of cooking some of these starchy foods. Remember that all measurements are made level.

### Boiled Rice, Japanese Method.

1 cup rice. 5 cups boiling water. 1 teaspoon salt.

Wash the rice carefully by letting hot water run over it for a minute or so, then rinse in cold water. Have the water boiling, then add the salt and the rice. Cover and let boil slowly for 15 minutes, then set in a moderate oven covered for another 15 minutes. Do not stir while cooking.

**Creamed Rice.**

1 cup rice.                      1 cup water.                      1 cup milk.  
                                          2/3 cup cream.                      1 teaspoon salt.

Wash the rice as above directed, then cover with the water and cook in a double boiler for almost an hour. Then add the hot milk and cream and cook one hour or until the liquid is absorbed.

**Corn Flakes with Tomato Cream Gravy.**

Place the corn flakes in a shallow pan and place in the oven till thoroughly heated and crisp. Serve with the following tomato cream gravy:

1 pint milk (part cream).                      1/2 teaspoon salt.  
                                          1/4 cup flour.                      1/2 cup strained tomato.

Heat the milk to scalding, moisten the flour with a little cold milk and stir into the scalding milk. When thickened set in a double boiler and cook 15 or 20 minutes. Then add just before serving the salt and the strained tomato, prepared by putting canned tomatoes through a colander. This is a nice breakfast dish.

**Rollled Oats in Apples.**

1/2 cup rolled oats.                      1 1/2 cup boiling water.  
                                          1/2 teaspoon salt.

Heat the water to boiling in the inner portion of a double boiler and stir into it the rolled oats and the salt. Let boil rapidly until it begins to thicken. Then place in the outer portion of the double boiler filled about 1/3 full of boiling water and cook for three hours or longer. Pare and core, making large cavities in the center, six large apples and cook in a syrup made of 1 quart of water and 1 1/2 cups of sugar. Turn the apples frequently to insure their cooking evenly all around. When the apples are done lift out immediately upon a platter and fill the centers with the rolled oats. Boil the sugar and water down until of the consistency of syrup and pour over the apples. This makes a nice luncheon dish. Cold oatmeal left from breakfast may be used in this way. Oats served at breakfast is best prepared the day previous and reheated.

**Fruit Toast.**

1 pint canned fruit (not too sweet).  
 2 tablespoons corn starch.                      Nicely toasted bread.

Heat the canned fruit or fruit juice to boiling and thicken with the corn starch. Let boil until thickened, then cook in double boiler 15 or 20 minutes. Sugar may be added if desired. Pour this sauce over thoroughly toasted bread. This is an excellent breakfast dish.

**HOME TRAINING.**

SARAH A. WANTZ.

OUR earliest and best recollections are associated with home. There the first lessons of infancy are learned. The mother's heart is the child's first schoolroom. The parents' examples are first imitated by the child whose earliest impressions are gained from them. In no way are evil habits more effectually propagated than by example and therefore parents should be what they wish their children to be.

*Cedar, Ind.*

EAT at your own table as you would at the table of a king.

**THAT BOY IN BED.**

How strangely quiet all the house does seem!  
 The sober ticking clock's inclined to scream;  
 Uninterrupted, mother sews her seam.

That noisy boy's in bed.

Poor patient puss lies stretched upon the floor,  
 In safe abandonment of tail and paw,  
 And purrs with close-shut eyes and sheathed claw.  
 That naughty boy's in bed.

In prim array—a most unusual sight—  
 See drum and marbles, air gun, books and kite;  
 Indeed, his cap hangs on its nail aright.  
 That careless boy's in bed.

But oh, how slowly those old clock hands go!  
 His playthings standing up in solemn row,  
 Do make it seem so lonely here, you know,  
 Without that boy in bed!

—Florence Bronson Tucker.

**HANDLING THE BABY.**

"MEDICAL TALK" insists that mothers handle the baby too much, and says that the nervous mother makes a nervous baby, and deprives the baby of the pleasure and education to be gained only through entertaining its own self. A healthful baby will lie for hours, "learning things" by studying its own wonderful activities, and any one who has ever noticed the baby's absorption in the study of its own feet and hands will readily understand this. If the baby is comfortably dressed, and in a comfortable condition, it will go through more exercises and motions than anything that could be arranged for it, and will enjoy every one of them. If the baby gets to expecting some one to amuse it, it will be hard to break the habit, and the mother or some one of the family must always be ready to serve. Even a sick child is better off, generally, out of any one's arms, and many mothers are as ignorant of the kind of handling a baby requires as it is possible to be. Teach the baby from the first to depend upon itself for all amusement, even while giving it every necessary care.

**HOT WATER AS A REMEDY.**

If cold-blooded persons, who are seldom troubled with thirst, will make it a habit to drink daily, a certain amount of hot water during the winter season, they will find they are less apt to take cold, as it improves circulation and benefits coughs and insomnia.

If taken just before retiring, it will prove more beneficial as it warms up the system and prepares it for a good night's sleep.

The most severe case of sick headache succumbs to the simultaneous application of hot water to the feet and back of the neck.

Indigestion and cold hands and feet may be cured in thirty minutes, by drinking slowly, one quart of hot water. Have it hot as possible to swallow without burning the throat.

A towel folded, dipped in hot water, wrung out quickly and applied over the stomach will relieve the most stubborn case of colic.

A hot salt bath, prepared by adding a teacupful of sea salt, purchased from your druggist, to the water, which must be warm as possible to stand, then rinsing off in clear water, followed by a good rubbing, will be found to be real strengthening for a child just recovering from the numerous diseases of children.

If bathed with hot water, in which potatoes have been boiled, one suffering with chilblains may be greatly relieved.

A towel folded several times and dipped in hot water, wrung out and quickly applied over the seat of pain, will promptly relieve neuralgia or toothache.

For an acute attack of croup, fold a flannel, several times lengthwise, dip in hot water, wring quickly and apply. Continue this process for fifteen minutes and the sufferer will be relieved.

Invalids and persons suffering from poor circulation, should never be without the hot-water bag. In traveling, it occupies a small space, is easy to pack away and is always on hand in case of sudden illness—often when out of reach of a physician.

For a complexion beautifier no other is more popular or efficient than a pint of hot water drunk just before retiring, and another pint, in which may be added a pinch of salt, first thing in the morning before partaking of any food.—*Vick's Magazine*.

#### PAINT FOR FLOORS.

FOUR pounds of yellow ochre, two pounds of whitening, one-half pound sizing glue, four quarts of water—cost of all 35 cents.

Have water quite warm; dissolve glue in a little hot water and add, after you have mixed other articles together.

If above gets too thick while in use thin with warm water. Apply paint with good size brush. After painting floor and the latter is dry, which will be in about two hours, go over the floor with boiled linseed oil. Apply oil with brush. This paint and oil will wear like iron and is most serviceable in homes where there are children. We painted reception hall, parlor, library, four bedrooms, and long hall with above quantity.

#### PETUNIAS AND THEIR SEED.

THERE is such a prejudice against the petunia that I may not meet with favor when I say that, in my opinion, there is no more satisfactory flower to grow than great masses of it in a bed or border. The bother is that most people mix a few plants of the ugly magenta strains in with cannas or scarlet sage, or other equally impossible combination. Then, when

their teeth are set on edge thereby, they revile the petunia instead of their own poor judgment.

Petunias are bright, free flowering, and so wonderfully accommodating. Why, they'll grow anywhere, except on an asphalt pavement, or a sandy beach—and even there, if you only remember to plant them in boxes. The soil may be rich and moist, or light and dry, while the hotter and drier a summer is, the better these little flowers seem to thrive. Some people tell you that the petunia must be sown indoors in February or March; but I have never had any trouble, though I sow my seed in the open in April, or even May.

I avoid, as a rule, the magenta tones, and make my beds of the whites, pinks and shaded pinks. I use almost exclusively the fringed varieties, double and single. The former sometimes need staking, as they are rather heavy headed. Among the prettiest of the doubled varieties are the Endymion, a soft rose color; Superba, a deep pink; Lucielle and Sapho, pink and white, and snowball, a finely fringed white. Good single petunias are Giant of California, Fringed Ruffled Giant, Howard's Star and Rosy Morn.

In saving seed from petunias for next year's garden, not every one knows that it is better to save from the weaker seedlings, instead of the most luxuriant. It has been discovered that seed saved from the most carefully hybridized flowers produces a very small percentage of double flowers, the rest being a very fine quality of singles. From the weaker seedlings, however, almost invariably spring the finest blooms. Even in saving seed from the single varieties, the same holds good, in a measure.

#### MY TULIPS.

The tulips stand like sentinels,  
Alert in bright array,  
And hold their gorgeous petals up  
To greet the god of day.  
Their chalices of red and gold  
And white the raindrops fill,  
Or passing sunbeams pause to kiss,  
According to their will.

O little group of flower-cups brave!  
God's promises to you  
Mean sure return of summer suns,  
Of raindrops, and the dew.  
A soul may wrestle with defeat,  
May feel pain's clinging kiss,  
May e'en life's choicest favors meet,—  
Yet hold not faith like this.

—Helen M. Richardson.

### DEVELOPING MY ALLOTMENT.

[Industrial talk by Thomas A. Eagleman, Sioux, at graduation exercises, Carlisle, Pa., 1908.]

My land comprises eighty acres of the Crow Creek Reservation in South Dakota. It is the east half of the southwest quarter of section thirty-four; township one hundred and nine; north of range seventy-two and west of the fifth principal meridian in South Dakota. This land has never been under cultivation and is therefore what is called virgin soil. The soil is composed of sand, clay and gravel in such proportions as to be classed as a sandy loam. It belongs to the formation known to the United States Soil Survey as the Iowa sheet and is very productive. A highway passes through the Crow Creek Reservation and terminates at the thriving little city of Highmore about eight miles away.

The state of South Dakota is subject to great extremes of temperature but the cold of winter and the heat of summer is far more endurable than in the more temperate states owing to the dryness of the atmosphere which makes the climate bracing and pleasant. The average annual rainfall is about twenty-five inches which is sufficient for the production of the staple farm crops.

My allotment being in the unbroken prairie would of course require at the very first to be enclosed by a fence. Then division fences crossing at right angles will divide the farm into four fields of twenty acres each. One field I will call the home twenty and upon this my buildings and orchard will be located.

The buildings will be located near the center of the farm. This will make it handy to each field and save the space for extra roadways. The first buildings to be erected are of course a dwelling and a barn. The dwelling does not have to be large and commodious but rather comfortable and convenient. The barn too must be a substantial structure in order to protect the stock from severe weather. A vegetable garden will be a requisite of the first season. All staple garden crops such as peas, beans, cabbage, radish, lettuce, onions, potatoes, tomatoes, etc., are well adapted to the soil and climate and are easily raised. The whole twenty will be broken this fall that it may be in better mechanical condition in the spring. One plot I will plant in potatoes which seldom yield less than one hundred bushels per acre and find ready sale. Another plot I will plant in corn. Corn in this section of the United States was at first a failure but by introducing and originating new varieties it has become acclimated so that good results are had from the land planted to corn. The rest of the twenty I will seed to oats which seldom yields less than forty bushels per acre in South Dakota. The remaining three fields will be in prairie hay which I will mow. This hay when properly handled is relished by stock and is quite nutritious.

In the fall the second twenty will be broken for growing millet, the second year. This crop flourishes in South Dakota and besides being an excellent feed it helps to rid the land of weeds and leaves the soil in a better mechanical condition. In the winter the lot which was planted to potatoes the first year will be fenced for a hog lot. The land which was cultivated in corn the first season will be set in orchard in the spring of the second year. All the hardy trees and small fruits are adapted to the natural conditions in South Dakota. The orchard and the remainder of the twenty I will cultivate in corn. This leaves two fields in prairie hay.

One of these I will plow in the fall and seed to millet in the spring. This year I will add some poultry buildings to my list of improvements. The second twenty I will cultivate in corn and oats. The remaining ten acres of the home twenty I will seed to alfalfa. This crop thrives in South Dakota and is the source of a large income to the farmers. Only one field is left in prairie hay.

This I will plow in the fall and seed to millet in the spring. The second twenty I will sow to wheat and the third will be cultivated in corn and oats. Thus at the beginning of the fourth year the whole of my allotment will be under cultivation.

You will notice that the plans for developing my allotment are gradual. This, in my judgment, is the best policy. Mistakes can be more easily corrected and are less costly when made on a small scale than on a large one. Then, too, considerable capital is necessary to mature my plans and the largest part of this I expect to earn as my land is improved. Labor, development and capital I expect to go side by side.

My allotment as I have said is of virgin soil. In order to maintain its fertility I will practice a system of crop rotations which will tend to keep the soil as near its original condition as possible. Corn followed by wheat, wheat by grass and clover, grass and clover by flax, and flax by oats and then to corn again will be the main rotation practiced. All these crops require different methods of culture, take their supply of plant food from different depths in the soil and give good returns for the labor and capital invested. Also by plowing under the sod of grass and clover organic matter will be regularly added to the soil and the clover will tend to maintain the supply of nitrogen in the soil. This rotation will if necessary be modified to suit existing conditions.

These plans for developing my allotment are not mere products of the imagination. All the crops which I have mentioned and others are profitably raised in the immediate vicinity of my land. What others are doing I can do. At Highmore which is only eight miles away, the State of South Dakota in connection with the United States Department of Agriculture has a large experimental farm upon which are grown

and tested all the leading varieties of farm, garden and orchard crops. The work upon this farm besides guiding me somewhat in my present undertaking will in the future enable me to keep in touch with the best methods of cultivating the land in my locality. These workers have abundantly demonstrated that South Dakota is one of the leading agricultural states in the union. All that is needed is well directed labor and capital. And it is with the aim of sharing in its present and future wealth and prosperity that my present plans have been developed.—*The Arrow*.

#### BUILDINGS MADE OF CEMENT.

AN interesting example of the use of concrete in building construction is given in several of the newer hotels in Atlantic City, N. J. This resort is on a flat, sandy island separated from the mainland by a marsh. The highest point is but a few feet above high tide and hard formation is at such a depth that most of the structures are supported on elaborate artificial foundations.

Trussed steel concrete has been successfully employed, and it is the method chosen in the erection of the Traymore which is illustrated here. Considering its dimensions, the building was erected in remarkably short time, the exterior being completed in three months and five days. It has a frontage of 76 feet, a depth of 122 feet, and is nine stories in height, not including the massive dome, which contains three stories.—*Scientific American*.

#### FENCE POSTS MADE DURABLE.

FENCE posts of many kinds of cheap woods which ordinarily would soon decay if set in the ground can be made to last for twenty years by a simple treatment with creosote. Most of the so-called "inferior" woods are well adapted to the treatment, and this is especially true of cottonwood, aspen, willow, sycamore, low-grade pines, and some of the gums. When properly treated, these woods outlast untreated cedar and oak, which are becoming too scarce and too much in demand for other uses to allow of their meeting the demand for fence posts.

A tank with a bottom 12 square feet in area will suffice for treating 40 to 50 6-inch posts a day, or double this number when two runs per day can be made.

The price of creosote is about 10 cents per gallon in the East and Middle West, 16 cents per gallon on the Pacific coast, and 27 cents per gallon in the Rocky Mountain States. The cost of treating a post will therefore vary from 4 to 15 cents. Properly treated, it should give service for at least twenty years.

Experiments of the Forest Service show that with preservative treatment the durability of lodgepole pine in Idaho is increased sixteen years. The cost of

creosote is there relatively high, yet by treating posts there is a saving, with interest at 6 per cent, of 2 cents per post yearly. More important than the saving, however, is the fact that through preservative treatment other woods are fitted to take the place of cedar, of which the supply is rapidly becoming exhausted. A detailed description of experiments in preserving fence posts, together with practical suggestions for treating

Building Made of Cement.

them on a commercial scale, is contained in Circular 117 of the Forest Service. This publication can be obtained upon application to the Forester at Washington.

### For SUNDAY READING

#### THE INEFFECTIVENESS OF ISOLATION.

RICHARD SEIDEL.

ONE cannot secure themselves by isolation from the common life of common men. Hours of solitude, occasional days of quiet, are needful to the development of the soul's deepest life. But monastic withdrawal from life has had its trial and proved its inefficiency. Nor can our end be achieved by isolation from the intellectual life of our day. No doubt a pious plowman or humble house servant may have a deeper and more joyous sense of the presence of God than some philosophers or men of science. No doubt

a little learning or a great deal may be dangerous and tend to the atrophy of the spiritual powers. Yet the problems of this day cannot be solved by ignoring science and philosophy, still less by a dogmatic obscurantism. Spiritual religion must prove its power to live in the atmosphere of intense intellectual life, as well as in the cobbler's shop and on the farm. If it is to come off victorious in this age, there must be men of deep spirituality who are, to say the least, not ignorant of what the men of intellectual power are thinking about and learning.

#### A FATHER'S PRAYERS.

THE emphasis of the hour is not upon the fact of religion as a system of theology. The emphasis is upon the fact that religion is not a theory of life, but a living process. My old father used to talk about experiencing religion. That was worth while, and there were investigations every morning. The old man would come from his chamber with a face shining like the sun. He had seen God. I ought to be a better man than I am. That father of mine lived to be ninety-two years of age, and lived with me for the last thirty years of his life. For fifty years that old man spent on an average of two hours a day in prayer before God, and he brought to us day by day blessed messages out of the heart of God.

Let us go back to family worship. Let us go back to the training of the home. My father was never so busy that he did not get us all down on the kitchen floor before he went out in the morning, and have prayers. He had the old-fashioned way of praying for each member of the family, beginning with the oldest boy. I was the little one of the family, and whatever I was doing, I would stop when he got to me. I felt that if he was interested enough to talk with God about me, I ought to listen, and I have never forgotten it.—*Charles L. Goodell.*

#### CONCERNING THE BIBLE.

"It is impossible to govern the world without God."—*George Washington.*

"The farther the ages advance in cultivation the more can the Bible be used."—*Goethe.*

"Christ proved that he was the Son of the Eternal by his disregard of time."—*Napoleon Bonaparte.*

"A better knowledge of the Christian religion is to be acquired by reading the Bible than in any other way."—*Benjamin Rush.*

"As to Jesus of Nazareth, my opinion of whom you particularly desire, I think the system of morals and his religion as he left them to us is the best the world ever saw or is likely to see."—*Benjamin Franklin.*

"All the good from the Savior of the world is com-

municated through this Book. But for this Book, we could not know right from wrong. All the things desirable to man are contained in it."—*Abraham Lincoln.*

"By the study of what other book could children be so much humanized? If Bible reading is not accompanied by constraint and solemnity, I do not believe there is anything in which children take more pleasure."—*Prof. Huxley.*

"So great is my veneration for the Bible that the earlier my children begin to read it, the more confident will be my hope that they will prove useful citizens to their country, and respectable members of society."—*John Quincy Adams.*

"Hold fast to the Bible as the sheet anchor to our liberties. Write its precepts on your hearts and practice them in your lives. To the influence of this book we are indebted for the progress made in true civilization, and to this we must look as our guide in future."—*Ulysses S. Grant.*

"I deem the present occasion sufficiently important and solemn to justify me in expressing to my fellow citizens a profound reverence for the Christian religion, and a thorough conviction that sound moral, religious liberty and a just sense of religious responsibility are essentially connected with all true and lasting happiness."—*Benjamin Harrison's Inaugural Address.*

#### THE GLORY OF GROWING OLD.

GROWING old and getting old are very different things. There are many in the world who get old, but who never grow old at all. Growing old is a process, like growing wise or growing good.

As the years pass by some people, they bring gifts, they add continually to their lives. As they pass others they are forever taking away something, subtracting from their lives.

One man loses physical powers; he cannot eat as much, or sleep as well, or enjoy his bodily life as thoroughly, and it is all a loss and a burden.

Another man goes through the same experience, and he discerns it to be God's voice saying to him: "You cannot now live as much in the body as you have been doing; you cannot get your pleasure that way; you must look to the mind and the heart and the soul for pleasure and interest and power of living." The first of these gets old and it brings nothing to him. The second grows old, and it is an enlarging, enriching, beautifying experience. Aging is like every other way of life; if we take it from God, as God meant it to be taken, it is a blessing; if we miss the Divine Providence in it, it may be misery and even a curse.—*Exchange.*

THE loud prayers are not always the first heard.

# Echoes from Everywhere

In a sweeping decision handed down yesterday the Massachusetts Supreme Court declares that sympathetic strikes for the purpose of preventing an employer from conducting an "open shop" are illegal.

Boston, April 6.—A wage reduction averaging ten per cent became effective today in cotton mills in New England employing 30,000 operatives. Last week the wages of sixty thousand were reduced and on next Monday the pay of about 35,000 additional mill hands will be cut, bringing the total affected by the present movement to 125,000.

While the reduction in steerage rates to \$11 to Gibraltar and \$12 to Naples and Genoa has stimulated the outward flow toward the Mediterranean, the exodus to the north of Europe also continues. The cut in Mediterranean rates has added to the exodus of thousands of Italians and Greeks who otherwise would not have left America.

Correspondence on file at Prohibition National Headquarters last year showed eighty-two Prohibition cities in seventeen states having a population of from 5,000 to 150,000 each. Now the records show more than two hundred such Prohibition cities with an average population of 15,658 each, and having an aggregate urban population of 3,178,588.

The house of Hohenzollern requires that each prince shall be skilled in some trade, and the present crown prince, Frederick William, is becoming an adept at wood turning. He works at his lathe, which has been set up in his apartments, in his shirt sleeves and turns out chair legs. Emperor William is a cabinet-maker, his father was a book-binder, and his grandfather was a turner.

Liverpool, April 16.—The new 1,000-foot steamship, the construction of which is to be commenced later in the year for the White Star Line, will be named the Olympic. It is possible that two leviathans of this size will be built, and their speed probably will be twenty knots an hour. The vessels are destined for the Southampton-New York trade, and will be constructed by Harland & Wolff.

Scotland, according to statisticians does not, as England does, show any decline in the drink habit. Last year in Edinburgh there were nearly 7,000 convictions for drunkenness, an increase over the preceding year of 550. Among women especially has drunkenness increased, and Edinburgh convicted more than 3,000 last year. The blame is laid largely to grocers' licenses and the "jug-bar" business.

Seattle, April 17.—On the steamship Glenlogan the American and German cars in the New York to Paris automobile contest will leave Seattle for Vladivostok tomorrow afternoon at 5 o'clock. The American car arrived here from Alaska this morning on the steamship Bertha, having failed to make any progress whatever on Alaska's frozen trails. The German car arrived here tonight from Ogden.

The United States Forest Service announces that 150,000,000 acres of forest land in British Columbia have been placed in reserve by the Canadian government. This includes all the timber lands of the province except that which has been leased. The action was taken to check wasteful exploitation of timber resources, and to bring the care and cutting of timber more effectually under government control.

The president in a letter to the attorney general has directed proceedings by injunction to compel certain railroads of the South where "Jim Crow" cars are operated to furnish equal accommodations to white and colored passengers, as ordered by the interstate commerce commission. He refers particularly to the case of the Nashville, Chattanooga & St. Louis railway, which has not complied with the order.

Here in Illinois, with unexampled recklessness, the rapidly growing Prohibition sentiment, which submerged over 1,000 saloons April 7, has apparently taught the enraged liquor men no atom of tact, strategy, or caution, but, on the contrary, has only provoked them to renewed raillery against "Sunday closing" and an audacious demand for the repeal of the new law, weak and defective as it is, by which the people of the State have been given their limited referendum privilege of the question.

The Eiffel tower, painted once every six years, claims an average of five victims every time the work is done. When, after five painters had met a terrible death by falling headlong from the structure, the directors proposed that ropes and belts should be provided for men at work on the tower the painters rebelled. It was a matter of professional honor and trade vanity with them. In the repainting carried out in 1895 seven men fell, their bodies crushing deep into the earth. In 1900 the directors endeavored to obtain the services of men who had previously painted the tower, deeming that their experience would diminish the danger of accidents. The men were obtained and agreed to work for the usual pay, provided only that they were not required to disgrace themselves with life saving belts and rigging.

The emigration from Germany via Hamburg for the quarter ending March 31 was 24,000, as against 103,589 the corresponding term of last year.

Without drawing to itself much public attention the good work of spinning the web of peace continues. In its intervals of killing time the Senate has lately ratified The Hague general arbitration treaty and special arbitration treaties with Mexico and Italy.

The startling discovery was made April 21 that the naval bill reported to the Senate by the committee on naval affairs fails to carry the necessary appropriation for the undertaking. How the appropriation of \$16,700,000 necessary to make the naval program effective could have been omitted from a naval appropriation bill is a matter that somebody will be called upon to explain. If it was an error it was one which would seem to be inexcusable.

After thirty years have elapsed several former and present employes of the Kittery navy yard have been notified that they are to receive money for overtime work at the yard done during the administration of President Hayes from 1877 to 1881. During President Hayes' term of office the then secretary of the navy, R. W. Thompson of Indiana, ordered that the men work ten hours instead of eight for which they received nothing extra. The amounts due the men vary from the sum of \$200 to nearly \$1,000.

Bills have been introduced into the house calling for the prohibition of the adulteration and mislabeling of paints in interstate commerce, and a few days ago Prof. E. L. Ladd of the North Dakota State Agricultural College appeared before the committee which is considering the bills and charged that the great bulk of paints sold in this country as genuine lead and oil compounds are heavily adulterated with water and other foreign substances. He told of the experiments he had made to determine the ingredients of the various paints and declared that the public needs a law for its protection.

President Roosevelt's action against anarchists is being followed here with the keenest attention because both the kaiser and Prince von Bulow are of the opinion that something drastic must be done in the near future to save the law-abiding section of humanity from the lawless. It can be stated with assurance that President Roosevelt has a golden opportunity open to him now of closing his term of office in a popular way by associating it with the initiative of calling together an international convention for the purpose of dealing with the acknowledged yet ever-growing scourge of anarchical socialism.

A Dutch inventor has recently taken out a patent for a lifeboat made of wicker which is said to possess unusual qualities for upholding weight and coping with the shock of pounding seas. The whole boat, except the ribs and

seats, is made up of watertight wicker. It simply will not sink and stands five times as much rough usage as steel or wooden lifeboats. It cannot be said that the wicker vessel is very elegant in appearance, nor will it matter much in time of peril as even the most fastidious will not cavil when life is at stake, but the boat will carry more passengers than other lifeboats and rides the seas with little trouble.

Money made of aluminum is now being used in some sections of the world. The British royal mint, for example, has struck off more than 31,000,000 coins of this metal. Each coin has a hole in the center, for the whole issue is intended for African countries over which Great Britain exercises a protectorate. To Uganda go the half-cent pieces and the one-tenth penny pieces are put into circulation in Nigeria. The natives like to string their money so as to keep it easily, hence the perforation in the center. As a very large number of coins had to be issued, all of a low value, a very light metal had to be used, such as aluminum.

The dead letter office during the month of March received more than 1,000,000 pieces of mail matter, of which number 600,000 were returned to the senders, this work breaking all records for this division. The experts employed in this division are selected from the city post-offices and the railway mail service. The average number of letters returned by each clerk in the division daily during March was 409, while for February the average was 308. Some of the clerks maintained a daily average of 800 letters during March, and one clerk deciphered the names and addresses of 916 letters and returned them to the writers in the course of one day's work.

Lakewood, N. J., April 22.—No information of an authoritative character was given out today concerning the condition of Grover Cleveland, whose medical advisers forbade his removal yesterday when the Lakewood Hotel, where he has been for more than a month, closed for the season. Watchmen guard the hotel on all sides and no one is permitted to approach the entrances. Mr. Cleveland occupies a suite on the second floor of the hotel and is constantly attended by Dr. Gaudenier, the physician attached to the house. It is understood that Dr. Joseph D. Bryant of New York, who has for many years been Mr. Cleveland's physician, has also been here for several days.

The Roumanian government has laid before the chamber of deputies a bill directed against the petroleum combine. This action is a result of the agitation against the Standard Oil Company which the Roumanian oil dealers have carried on for some time past. Several municipalities where the Standard company has attempted to establish oil tanks have made regulations, particularly in the matter of taxes, which have made it practically impossible for the Roumanians to conduct business. Minister of Finance Costinescu, speaking in the chamber in behalf of the proposed measure, said amid unanimous applause: "The Americans say America for the Americans; we will say Roumania for the Roumanians."

## CREAM OF MAGAZINES

### IMMIGRATION AND EMIGRATION.

Giving round figures for the purposes of easy comparison, 340,000 people went back to Europe from Atlantic ports in the year 1906, while 560,000 went back in the year 1907. An even more significant comparison is to be found by taking the last three months of the two calendar years. In October, November and December of 1906, 121,000 steerage passengers returned to Europe, while 264,000 returned in the corresponding months of 1907. Still more interesting, perhaps, are the figures for the opening weeks of the present year as compared with those of last year. We have obtained statistics for the ten opening weeks, including January, February, and nearly half of March. During these weeks, to give the exact figures compiled by the steamship companies, the arrivals from Europe were 44,712, and the departures from America for Europe were 131,740. We are, of course, confining our comparison to third-class passengers. The figures for the opening ten weeks of 1907 were almost exactly reversed,—that is to say, 139,052 arrived from Europe, and 43,642 took the return voyage. The steamship companies thus carried about the same number of passengers, but last year three-fourths of the steerage travel was from Europe to America, while for the corresponding period this year three-fourths of the travel has been from America to Europe. There is today no great movement based so precisely upon accurate information as the movement in the labor market. European workmen do not come here unless there is a definite demand for their services, and millions of letters going back and forth stimulate or retard the movement, according to conditions. There is of course a normal return migration that has to do with the seasons of the year and certain kinds of employment. But beyond that normal movement, changes in the ratios are to be regarded as a sort of barometer indicating the condition of industry and trade in the United States.

Their long marches and voyages as members of the world's army of workers help to train and educate these people. In due time the energetic ones establish themselves with their families either on this side of the water or in Europe. If they settle down in their old homes they are the more progressive citizens for what they have learned in America. In the majority of cases, however, they prefer the United States, become useful citizens, send their children to our schools, and become part and parcel of our great English-speaking democratic community. In a general sense, this freedom of labor migration as between Europe and America is not a harmful thing, and ought not to be hampered by harsh or arbitrary restrictions. Its careful and intelligent regulation, on the other hand, is both possible and desirable. There is no reason why, under cloak of the freedom of the labor market, we should allow this country to be a dumping-ground for the dependent or the vicious classes. Since the steamship companies have the largest motive in the promotion of this kind of migration, it is a good

plan to throw heavy responsibilities upon them and to compel them to aid our government in every way by sifting the unfit from the fit in the provinces of their origin or at the ports where they take passage.—From "The Progress of the World," in the American Review of Reviews for April.

### THE PEACE MOVEMENT.

On a great moral issue like the abolition of war, the mind and conscience of the people must be aroused. All classes of men must be induced to take a stand for methods of justice. No systematic attempt has yet been made to induce bankers, men of industry, judges and leaders in education and the Church to do this. Probably the labor organizations of the United States are more keenly alive on the subject of international peace than any other class of citizens, and the recent socialistic congress at Stuttgart showed that in Europe the labor party may prove to be a powerful deterrent to rulers who, in speaking of international matters, invariably use the phrase "my government." It is evident that the energy of peace leaders is unwisely directed, for at the recent congress in Munich much was said against war but very little about methods of educating the people to the new internationalism. There was a conspicuous absence of journalists, clergymen, teachers, university professors and captains of industry. This fact, in the opinion of the writer, suggests the work for the immediate future, viz.: to enlist the active and enthusiastic endeavors of clergymen, editors and educators, to make sure that young and old are conscious of the claims of human brotherhood, and to persuade all people that the territorial limits of the nation are artificial when viewed in the light of the solidarity of the race and the high destiny of mankind. In other words, the world's point of view is to be the rallying cry until all questions like immigration, tariff, copyright, and the postal service are treated in the light of that illuminating idea. How small and mean we ought to feel when visiting the Old World, if we manage our affairs in absolute selfishness, without reference to our larger citizenship in the world at large. The practical question arises, How can this work be organized? Who is to direct it and see that it is made effective? My own belief is that peace societies have a work of their own in their own neighborhood, but that they cannot do the larger work required. A national organization in each country, representative and strong, composed of men and women of all faiths and vocational interests, would seem to be the most competent agency. This body should be selected with the greatest care, and, as far as possible, its members should be nominated, at least, by great organizations, such as boards of trade, universities, learned societies, religious, philanthropic and educational organizations. This would insure the services of leaders of thought in the several sections, and would make the central body highly representative.

The great dominating purpose of such a body should be educational. It should definitely and systematically seek to reach educators and teachers, the clergy, journalists, men of affairs, and wage earners. It should send out agents who are practical, sane men and women, who not only know how to talk to an audience but to address themselves to busy men who will listen if what is said is sane and practicable. They should be equipt with every known fact regarding the interrelation of peoples and nations. They should not appeal so much to prejudice and sentimentality as to practical sense and good judgment. Religious and educational bodies in all the States should be induced to adopt internationalism as a regular feature of every program.

Whatever is done in America becomes potential in Europe, where things are more static and less responsive to agitation, and where a powerful example is needed. A practical program of education, practically and efficiently carried out, would take away the suspicion left by some that pacifists regard themselves as members of a cult with peculiar and exclusive tendencies. There would soon be so many groups of practical people committed to the cause that peace leaders would find themselves keeping step with a vast army of serious and practical people.—The Independent.

### WAS JESUS A SOCIALIST?

Among Socialists, Jesus has frequently been claimed as one of themselves. "One would like to say that he was," observes a writer in *The Interior* (Chicago), for he was "social in the largest sense because he sacrificed himself for the welfare of other men." But since "socialist," in the modern world has come to mean (the writer interprets) "the adherent of an economic cult that would reorganize society on the public ownership of property," he does not allow the ranking of Jesus among them. Against what he calls the "rash assertions of agitators," he places this "proposition" as capable of being established from the gospels:

"Neither socialism nor any other economic doctrine ever entered into the teaching of Jesus of Nazareth.

"He simply paid no attention to the economic phases of life. He treated industrial questions exactly as he treated political questions; he let them alone.

"There were doubtless two reasons for this. Jesus didn't come into the world to meddle with the clock of human progress. Some day the world would learn that democracy is better government than despotism, and free labor a better industrial system than slavery, and would get hold of the facts all the stronger for having had to dig them out. Jesus had no time to stop to teach the world what it would eventually come at on its own account.

"The second and positive reason why he did not concern himself with social questions was because it was part of his mission to throw temporal considerations into the background.

"His principal teaching business was to spread a doctrine of life that made a man's economic condition a secondary matter.

"Here Jesus differs from socialism the whole length of the diameter. The thoroughgoing socialist thinks poverty the worst thing that can happen to a man. His great plea is to abolish poverty. Jesus didn't think being poor mattered much—not at all if the man was the right sort. He was poor himself, and didn't care in the least.

"The overmastering principle that decides how Jesus looks at any or all human circumstances on this earth is this:

"If a man does the will of the Father in heaven, nothing in his earthly circumstances can be wrong.

"This confidence is half a faith that the Father will compel circumstances to turn out favorably; half a faith that a man who lives for the Father can be happy in any circumstances."

The nearest Jesus ever came to an economic question, the writer points out, was "when he saw that some certain man's economic condition was hindering his development in unselfish God-loving and man-loving character." He goes on:

"Modern social philosophers say it is the poor who don't have a fair chance at fine character, but Jesus thought different—he considered the rich the most handicapped.

"When with his marvelous inlook into the heart the Master understood that the rich young ruler thought so much about his wealth that he couldn't think much about his neighbors, the prescription for cure was instantaneous and unsparing: 'Sell that which thou hast and give to the poor.'

"Jesus didn't speak so out of hate for the property, but out of yearning for the man. If he could in this way give the youth a big heart full of spontaneous impulse to help people, he knew it would be worth the price.

"But where he didn't find worldly possessions hindering the growth of a man's nobler character, he simply ignored them. Giving half delivered Zaccheus from the bondage of avarice, and Jesus asked no more. He was equally at home with the poor and with the rich. He loved both for common qualities which are counted in no coin of earth.

"Jesus taught neighbor-love absolutely, not as an incident, but as an essential of religion, but he never so much as hinted at a social program for demonstrating that aspect of religion.

"Jesus was no program-builder. This is one of the very hardest things for the modern age to comprehend in the Master. The latter day must have an organization at work or it thinks it has nothing. But Jesus had an unbounded faith in the power of a spirit at work in and through the lives of individual men. He did not organize even his church; he simply put the motive of it in a few lives, and trusted that motive to make an organism.

"Likewise, when he said, 'Thou shalt love thy neighbor as thyself,' he did not deposit the dynamic of that love in some artificial social body, either then existent or afterward to be created, but he imparted it by contact to the affections and wills of his friends, and left them to extend it in the same manner.

"Their first expression of it—the communism of the Jerusalem church—was economically faulty; it wouldn't work. Taught by their experience, the early church leaders did not attempt the same system elsewhere. But the spirit which their initial communism crudely manifested did not disappear with that experiment. In that generation and in all generations after, adjusting itself more and more to the laws of society as they are continually better known, the manward-love of Jesus Christ has found, and is yet to find, an ever larger and more adequate demonstration."—Literary Digest.

## PLAYGROUND HAPPENINGS.

ALAMEDA, Cal., is preparing a bond issue, one of the items of which is \$125,000 for parks and playgrounds.—The special committee of school principals, appointed by the city superintendent, are organizing athletics for schoolboys in Buffalo, N. Y. The playground work of that city is also taking a fresh start, due chiefly to the satisfactory manner in which they are at present being conducted in connection with the public schools. The commissioner of public works in Albany, N. Y., has notified the board of education that the vacant lot in the rear of public school No. 8 will be turned over to the board of education for playground purposes.—The mayor of Allentown, Pa., in his annual message, recommended "playgrounds for the city's children" as one of the necessities for the coming year.—During 1907, Boston added 12½ acres to its list of playgrounds. This addition they made by filling in "Salt Meadows." The total area at present is reported to be 196.97 acres. Fifteen playgrounds are flooded during the winter for skating, making a total of about 144 acres of skating surface. The Municipal Journal and Engineer reports expenditures on Boston playgrounds during the year 1907 as follows: Walks, \$618.30; roads, \$146.12; new grounds, \$2,150.24; buildings, \$10,495.36; drainage, \$232.45; skating and other sports, \$4,220.29; women's and children's gymnasiums, \$1,841.02. Total, \$39,712.78. This does not include the expense of care and maintenance, which is reported to have amounted to about \$50,000.—The playground committee of Berkeley, Cal., has recommended a bond issue of \$450,000 for playgrounds. This action of the committee received public endorsement at a meeting held on January 9th.—The committee on appropriations for Greater Pittsburg, Pa., has allowed for playground maintenance \$15,000 to the Alleghany playground association, \$33,000 to the Pittsburg association. It has been the plan of the board of education of Pittsburg to turn over annually \$5,000 to the playground association for maintenance of vacation playgrounds.—A public meeting was held in St. Joseph, Mo., on January 24th, to consider the matter of public playgrounds. Professor R. L. Melendy, of the University of Missouri, addressed the meeting. A tentative plan was presented and unanimously endorsed.—The Woman's club of Boise City, Idaho, are making a campaign for public playgrounds. They are recommending them from the standpoint of "social insurance." They argue that the city can well afford to establish playgrounds for their recreative, educational and social benefits. *The Playground.*

## BETWEEN WHILES.

Commercial travelers in a railway carriage entered into conversation.

One of them tried very hard to make the other under-

stand something, but he was either very hard of hearing or slow in believing.

At last his friend lost his temper and exclaimed "Why, don't you see? It's as plain as A B C!"

"That may be," said the other; "but, you see, I am D E F."

**The Flatterer.**—"So he praised my singing, did he?" "Yes, he said it was heavenly." "Did he really say that?" "Well, not exactly; but he probably meant that. He said it was unearthly."

## Changing the Signs.

The lettering on the plate-glass window of a store recently acquired as the site for a new saloon read "ALBUM MANUFACTURER."

A painter was sent for to change it at as reasonable a price as possible, when he informed the successful license applicant that the cheapest and quickest method would be to obliterate the first two letters.—The Catholic Abstainer.

Ten mills make one trust;  
Ten trusts make one combine;  
Ten combines make one merger;  
Ten mergers make one magnate;  
One magnate makes all the money  
Wall St. Arithmetic.

"Yes," said the suffragist on the platform, "women have been wronged for ages. They have suffered in a thousand ways."

"There is one way in which they never suffered," said a meek-looking man, standing up in the rear of the hall.

"What way is that?" demanded the suffragist.

"They have never suffered in silence." *The Bits.*

"This is your little sister, Tommy," said the father, showing him the baby. "You will love her dearly, will you not?"

"Yes, of course," replied Tommy, inspecting the latest arrival; "but it'll cost a great deal to keep her, won't it?"

"I presume so."

"Yes," said Tommy, with a long drawn breath; "and when I asked you the other day to buy me a white rabbit you said you couldn't afford it."

## WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

**WANTED**—To impress upon more of our farmers, fruit growers and gardeners that the compressed air sprayer I sell for \$7.50 is the easiest to operate and BEST for results. A woman can do the spraying. Let me tell you about it. W. G. Nyce, St. Peters, Pa.

**FOR SALE**—Mill building, 40 H.P. engine, meal and feed machinery, all new. Good wheat territory. Ready for flour machinery. Brethren preferred. Address First National Bank, Mulberry Grove, Ill.

# Of Course You Know of the **MIAMI RANCH**

**Miami -- Via Springer, New Mexico**

**You Owe It to Yourself to Come and See Before Purchasing Elsewhere Because**

1. Our climate is healthful.
2. Our soil is unsurpassed.
3. **Miami Ranch** is soul-inspiring in natural beauty.
4. Our water supply is abundant and chemically pure.
5. Our gigantic irrigation plant is practically completed and is built to stand for ages.
6. We are already storing a supply of pure mountain water in our mammoth reservoir for this season's irrigation.
7. Thirty families of permanent settlers imbued with purpose and with ability to accomplish are already located upon their farms.
8. A post office and general store are in full operation in our new town--**MIAMI**.
9. Church and school privileges are already provided for.
10. Sale of intoxicating liquor is forever prohibited upon the ranch.
11. **Miami Ranch** is peculiarly adapted to fruit culture and will produce abundantly all crops adapted to the temperate zone.
12. Our lands, which are now selling at from 35 to 70 dollars per acre, will double in value within one year.

**Cheap excursions the first and third Tuesdays of each month to Miami Ranch.**

**Only \$30.00 for the round trip from Chicago.**

If you want more information write for **WESTWARD HO!** but Come and See.

Buy your ticket to Springer, New Mexico.

## THE INGLENOOK

### The Spirit's Sword

For all Ministers and Personal Workers.

By Evangelist J. R. Beveridge.

Vest-pocket Size, 2 3/4 x 5 1/2 inches. 1/4 inch thick. 128 pages, 1,200 Scripture references. 133 Subjects. Special Notes.

The  
Greatest Book  
out for  
Christian Workers

#### Synopsis of Contents.

Importance of Personal Work. Personal Experience and Equipment, in the Holy Spirit, the Word of God, Prayer and Faith. Personal Conduct in dealing with Souls. How to approach persons. How to get cases. The Fundamentals of Salvation. Texts for Christians under all conditions of Sin. The Natural and the New Heart. The Way of Life and the Way of Death. Hell.

Answers to nearly every question asked by Sceptics, and all classes of unconverted. False Hopes Swept Away. Guidance for those seeking to find Christ.

The Holy Spirit, Acts to 1 John. The Divine Nature of Christ. The Human Nature of Christ. A Personal Devil. Bible readings on Prayer and Thanksgiving.

#### Price, by mail, Prepaid.

Red Cloth, Embossed and Stamped in Black, .....25 cents.  
Red Morocco, Embossed and Stamped in Gold, .....35 cents.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

### A Special Offer for One Month On White Plymouth Rock Eggs

The White Rocks have no superior as a general purpose fowl; they mature young; are excellent layers; make good mothers. My fowls are bred right for size, vitality, color, laying, etc.

Price \$1.25 for 13 or \$2.00 for 26 and a free prescription given with each order for any poultry disease if description and symptoms are given.

Dr. H. H. Lehman, Ashland, Ohio.

Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, W. A. DICKEY, North Manchester, Ind.

### Thirteen Orders With Scarcely Any Effort

"I hereby enclose you an order for 13 of the new Revised Minutes. I have long wished that my members would get the book and become acquainted with what it requires of us. I believe it would be much easier to care for a church whose members are posted on Annual Meeting decisions, so I just took in hand and secured the order with scarcely any effort."—Eld. J. H. Baker, Astoria, Ill.

#### EACH ELDER OR PASTOR

could help his congregation wonderfully along this line with just a little effort. Try it in your congregation as did the above Elder and the results may surprise you.

The new Revised Minutes contain all the revised minutes up to 1898 and the minutes since that date including the late meeting held at Los Angeles, Cal., last May.

The book is durably bound in cloth and contains over 300 pages.

Price prepaid, .....\$1.00  
Six copies to one address, prepaid, ..... 5.00

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Ill.

### HIS LIFE

A complete story of the Life of Christ in the words of the Four Gospels, using the text of the American Standard Revised Bible.

In this book we have a complete harmony of the Gospels in a single narrative, giving what each of the four gospel writers has recorded in chronological order.

#### SUNDAY SCHOOL SCHOLARS

will do well to secure a copy to be used during the first six months of 1908, since our lessons will be on the Life of Christ.

Price, paper bound, each, ...15 cents  
Price per dozen, prepaid, .....\$1.50  
Cloth, per copy, .....25 cents

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

### SPRING WINDS

ARE HERE

Guard Against Colds by Using  
**ANGEMA**

#### EXTRACTS FROM A FEW TESTIMONIALS.

**ANGEMA** cured daughter of Asthma. Best thing for Croup and Colds in children. Had marked effect on Catarrh and piles. Would not be without it. Can recommend its use to everybody.

Rev. J. L. Kendall, Garrett, Pa.

Excellent for Croup and Diphtheria by using on throat and chest. Would not be without it.

Mrs. Harry Smith, Berlin, Pa.

Best remedy I ever used for Neuralgia and all other aches and pains. Would not be without it.

Mrs. Henry Weyand, Berlin, Pa.

Used **ANGEMA** for Rheumatism. Hands crippled for years. Found **ANGEMA** very good.—Conrad Lichty, Miner, Meyersdale, Pa.

I use **ANGEMA** for Headache and would not be without it in the house.

Mrs. Warren Mason, Berlin, Pa.

**ANGEMA** cured Bealing in Head. Good for Catarrh.—Geo. Penrod, Conductor B. & O. R. R., Meyersdale, Pa.

25 Cent-tube for 15 cts., if not Sold in Your Community.

AGENTS WANTED. NO CASH NECESSARY.

**THE ANGEMA LABORATORY**  
GARRETT, PA.

### PASTOR'S POCKET RECORD

Arranged by Rev. Sylvanus Stall, D.D.

This record affords space for the recording of 63 church officers; 714 members, over 6,000 pastoral calls; 42 communion services; 126 baptisms, 84 marriages, 105 funerals, 273 sermons; 63 addresses; 168 new members, besides ten other departments.

#### Ministers.

You will find this an excellent little volume to carry with you at all times. It contains nearly 200 blank pages and is bound in black leather, size 3 3/8 x 5 1/2 inches. Very convenient to carry in pocket.

Price prepaid only 50 cents.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

### CRADLE ROLL SUPPLIES

There is a demand for Cradle Roll Supplies coming from some of our wide-awake Sunday schools, and we are now ready to meet the demand.

Every Superintendent and Teacher ought to be enough interested in this new department to ask for particulars. Drop us a postal asking for our illustrated descriptive circular of these supplies. DO IT NOW.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Ill.

# Facts Regarding Imperial Valley

Some people in trying to induce their friends to settle in the country where they themselves are located, frequently send them advertising matter that is gotten up by unscrupulous land agents that deviates from the truth. Their friends come and buy property and soon find out that the facts do not correspond with the advertisements sent them. The result is they soon become discouraged and sell out at a sacrifice, and go back where they came from, worsted financially and in some instances say worse things of the country than they should, and thus bring reproach on a good country (though not as good as the advertisement represented it to be). The undersigned has known this to happen more than once, and for this reason has decided to tell his friends about the Imperial Valley in his own words, so that he alone shall be responsible, and so that the wonderful Imperial Valley may never be made a reproach and a by-word.

Imperial Valley is situated in San Diego County, California, 183 miles east of Los Angeles on the Imperial branch of the Southern Pacific railroad. The soil is an alluvial deposit and all crops are grown by irrigation, with water from the Colorado River. The main irrigation canal is 80 feet wide on the bottom and 100 feet wide on the top, and 10 feet deep. The soil is adapted to the growth of wheat, barley, alfalfa and nearly all kinds of fruit. Alfalfa having plenty of water can be cut eight times per season, yielding as high as ten tons of nice hay per acre which sells at present from \$8.00 to \$11.00 per ton. Barley can be sown for winter pasture in alfalfa stubble after the last crop of hay is harvested. Alfalfa can be cut every three weeks if the hay is wanted for dairy cows, or every four or five weeks if wanted for horses. I have known of alfalfa yielding \$40.00 worth of seed per acre and my own yielded \$20.00 per acre with the first season's sowing. Dairying and hog raising are very profitable. Butter sells from 20 cents to 45 cents per pound; hogs, 7½ cents on foot; also beef, cattle and horses do excellently. One colt weighed 960 pounds at less than one year old. One acre of alfalfa will keep from 2 to 3 head of dairy cows or horses and from ten to fifteen head of hogs. Oranges, lemons, dates, figs, apricots, grapes and berries do well. A single grape vine has yielded 30 pounds of grapes 18 months from setting. Grapes, apricot and cantaloupe growing is very profitable as they will ripen here from three to four weeks earlier than other places, and be placed on the eastern market before they are ripe in other localities. One man at Coachella was offered \$600.00 cash for the grapes on a single acre of vines and refused the offer and sold at retail for \$1,400.00. Cantaloupes will net the growers from \$50.00 to \$300.00 per acre. I have lived in the valley as long as any one, being one of the first settlers, and my experience and observation has taught me that you can grow almost anything here you plant, including vegetables, if planted in the proper seasons and properly cared for. The selling price of land at present is from \$40.00 to \$100.00 per acre, owing to location. President Roosevelt says that when it is thoroughly developed it will be worth from \$500.00 to \$1500.00 per acre.

Reader, when you shiver around your fireside the coming winter, just think of the Imperial Valley where you can go in your shirt sleeves nearly every day in the year. And on the 10th day of this month (May, 1907), while there was a snow storm raging in many places in the eastern states, we were making hay and picking and eating fruit in the Imperial Valley.

# **INGLENOOK WEEK**

¶ In the INGLENOOK for the first week of May will be found several features that should make it the most popular Weekly Magazine published.

¶ A traveler and lecturer of world-wide reputation will begin the story of his trip "Around the World without a Cent." These articles are to be illustrated and will doubtless be read with great profit.

¶ Lessons in Esperanto will also appear in the INGLENOOK beginning with the same issue.

¶ If you have not already subscribed, take advantage of "INGLENOOK Week" offer. Ask your friends to subscribe. Telephone, write or see them personally, but whatever you do, act today.

¶ Do not mail your order before May 4 or after May 9. The offers mentioned below are good for five days only.

¶ Your subscription will begin with the issue of May 5, provided the order reaches us during "INGLENOOK Week."

## **Three Great Offers**

that are good during "INGLENOOK Week" only.

### **OFFER No. 1**

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

# POOR DIGESTION

These words mean more than what many men and women realize.

Study mankind. He derives his strength from what he eats—if it is properly digested. If this is true then how can he gain strength if he does not have an appetite or what he eats does not digest?—Weak? Yes he is weak and grows weaker by degrees. You say he needs a tonic,—this is what he needs: **BRAWNTAWNS, THE VICTOR TONIC.**

Brawntawns builds up run-down systems,  
Restores appetites, strengthens and  
Aids the digestive organs by  
Working in harmony with Nature.  
Nervous, weak men and women who need a  
Tonic and will try it, especially  
All nursing Mothers and convalescents,  
Will find it a great blessing as a  
Nerve renewer, Health restorer and a  
System builder. 50 cents postpaid.

Mr. Wm. E. Gannon, the express driver of Frederick, Md., says: From personal experience I am made to say I firmly believe **Brawntawns, The Victor Tonic**, is the best Tonic and System Builder, in fact it has proven to be in my case.

I was so weak and run down that it was very difficult for me to ascend a pair of stairs, but after using **Brawntawns, The Victor Tonic**. I became much stronger and could go about my work with much more ease.

I wish further to say that I have been using the **Victor Remedies** in my home for 29 years during which time I have given all a fair trial and have never known any one of them to fail to do what is claimed for them. **Victor Remedies** compose my medicine chest.

**BRAWNTAWNS, THE VICTOR TONIC**, can be sent by mail upon receipt of price 50 cents.

## Victor Tea

*(The Old Fahrney Blood Purge)*

**The Blood Purifier,                      The Liver Renovator,  
The System Cleanser**

**VICTOR TEA** is a purely vegetable compound just as pure as if you were to go into your garden, along the bank of a stream or on the mountain heights to select your own herbs, roots, barks or berries, and the proportion of roots, herbs barks and berries contained in Victor Tea are unequalled for all Blood and Liver Diseases, Colds, Headaches, Constipation, Over-loaded Stomachs, Etc.

Do you have a tired, dull, sluggish feeling, cannot rest, work drags? All this is caused from an inactive, torpid liver, which is clogged by the impurities of the system and if not carried off will cause a more serious trouble.

**VICTOR TEA**, The Blood and Liver Purge, purifies the Blood, renovates the Liver and acts upon the bowels thereby thoroughly cleansing the entire system. **VICTOR TEA** can be sent by mail or purchased through the Dealers. Price 50 cents postpaid. Try a package now.

### TOURIST SLEEPING CARS.

A striking feature of the Union Pacific passenger trains is the tourist service. The tourist sleepers are identical with the standard sleepers, with the exception that their furnishings are not on so grand a scale, but the accommodations are equally good and are sold at HALF THE PRICE of the standard. The seats are upholstered, and at night the berths are hung with heavy curtains. Each car is accompanied by a uniformed porter whose duties are the same as those upon the Pullman Palace Sleepers.

### DINING CARS.

Union Pacific dining cars are operated on all through trains. These cars are all new in style and models of beauty and elegance.

### DINING ROOMS AND LUNCH COUNTERS.

Dining Rooms and Lunch Counters are located at convenient points along the line, and all through trains which do not carry dining cars are scheduled to stop at these points. Well prepared meals of the best quality are properly served at popular prices. Full time is allowed for meals.

Be sure to buy your ticket over

Who Said There Was Nothing Doing in

# BUTTE VALLEY?

April 18, 1908.

GEORGE L. McDONAUGH, ESQ.,  
Colonization Agent  
Union Pacific Railroad Company,  
Omaha, Nebraska.

Dear Sir:

Replying to your favor of the 15th, I enclose a list of purchasers of land in Section 4-46-1 Butte Valley, California, who are having their land cleared of sage brush and planted in oats this Spring. After the oats have been harvested, a large part, if not all of this land, will be planted in orchards.

Yours very truly,  
Lewis W. Parker.

|                                                                                                | DR. CLARK W. HAWLEY,<br>Physician, .....                                                             |
|                                                                                                | 30                                                                                                   |
|                                                                                                | LEWIS W. PARKER,<br>Attorney at Law, .....                                                           |
|                                                                                                | 27                                                                                                   |
|                                                                                                | Total in Section 4, 567.5                                                                            |

¶ Of course, these are just the ones in Section 4. In Section 8 Mr. R. A. Smith of the Passenger Department, Union Pacific Railroad, and others, are doing the same thing. This is not all. The above are the non-residents that are doing things. You ought to see what the people are doing who live there. In another letter we will try and furnish you a list of those who are living in the valley, who are planting orchards. Did you read our advertisement last week? Better see what the Government expert says about it.

# The Better Way

Each year thousands of people are having their eyes opened to the baneful effects of drugging the system by means of nerve deadening narcotics and mineral poisons. The legislatures of several States have even gone so far as to pass laws, placing restrictions on the sale and use of such remedies, when not altogether prohibiting them. The more intelligent classes, people who think and reason, and who do not blindly swallow any medicine offered them are strongly in favor of the safe and practical system of herb treatment for the cure of disease.

Old Dr. Peter Fahrney, the originator of DR. PETER'S BLOOD VITALIZER was one of the early pioneers and exponents of the botanic system of medicine. His plain old herb remedy, known as DR. PETER'S BLOOD VITALIZER, which has now been in constant use for over a century with such unqualified success, has probably, more than any other medicine, demonstrated the advantages of the botanic system of treatment. Thousands of ailing men and women have found it a boon to health.

## **CALLS IT A BLESSING.**

Rodney, Mich., March 7, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Your Blood Vitalizer does grand work. Through the help of God it saved a neighbor's child and restored the health of my wife. We would not like to be without the Blood Vitalizer. It is a blessing, especially for poor people who cannot afford to pay big doctor bills. We think a good deal of you and your work and hope your usefulness may stretch over many years for the benefit of sick people. With kindest regards,

Yours very truly,

R. S. Smith.

## **CURED SICK HEADACHE.**

Chicago, Ill., June 1, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen:—I desire to send you my thanks for your good medicine, the Blood Vitalizer. I suffered nearly every day from sick headache, and at last I got so bad I had to take to my bed. But thanks to your Blood Vitalizer, it has cured me and I have had no further touch of it.

Yours truly,

Mrs. E. G. Dahlberg.

2362 Avondale Ave.

## **REGAINED HIS HEALTH.**

Athol Springs, N. Y., April 2, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—I desire to inform you that since using the Blood Vitalizer I have regained my health. It is now all I could wish for. I was a sufferer from indigestion and stomach troubles. Next to God, I thank your Blood Vitalizer for my recovery. Whenever I have an opportunity I recommend your medicine.

Respectfully yours.

Henry F. Rolf.

## **THE SWELLING DISAPPEARED.**

Greenwood, Mo., April 24, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen: The trial box of Blood Vitalizer arrived all O. K. I had a peculiar lump in my left side and a severe cough which bothered me a great deal before using the medicine. I had not taken more than one small bottle of the Blood Vitalizer when the lump in my side disappeared. I would not want to be without the Blood Vitalizer in the house. Your medicine has not been introduced here. I have given several bottles away. You may expect another order from me soon.

Yours truly,

R. R. No. 2.

Mrs. N. Dimmitt.

The sane, safe and practical way of treating disease by means of health-giving roots and herbs appeals to all thoughtful people. It accounts for the surprising popularity of DR. PETER'S BLOOD VITALIZER. The demand for this plain old herb remedy is today greater than at any time in its history. No one is so low with disease and no one is so well but what the BLOOD VITALIZER will do good.

Unlike other ready-prepared medicines, it is not to be had in drug stores. It is not an article of commercial traffic, but is supplied to the people direct through local agents—friends and neighbors whom you know and trust.

For further particulars address the sole proprietors,

## **JERRY McAULEY An Apostle to the Lost**

Edited by R. M. Offord

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser of human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them is to find the clew to his power. Here is one of them. "I have nothing to be proud of; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

### **Kindle the Flame in Other Hearts**

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

### **Every Church Worker**

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

# **THE SPRING OF 1908**

will witness a new influx of thousands of settlers in the fertile valleys of **SOUTHERN IDAHO**. A great many have gone and a large number are making arrangements to go soon.

## **80,000 ACRES Open For Settlement**

**Last Week in May at Twin Falls, Idaho**

Under the Cary Act, filings on 40 to 160 acres may be made by power of attorney. Price \$40.50 per acre, payable \$3.25 down, balance in nine annual payments. Easy way to get a valuable farm.

### **EXCURSION FOR THIS OPENING**

**Tuesday, May 19, 1908**

**ROUND TRIP** rates from Chicago to Twin Falls, Idaho, \$50.80. Corresponding rates from Peoria, Kansas City, Omaha and all principal points.

## Around the World Without a Cent

H. M. Spickler

### Chapter I.

THE fine large ship of the Atlantic Transport Line, the Minnehaha, carries only first-class passengers. But she is also a cattle-ship and on our voyage there were also six hundred cattle, some horses, sheep and poultry and about twenty cattlemen to care for the cattle. As the cheapest berth on this boat was about one hundred dollars I was fortunate to get passage as a cattleman on so large, safe and swift a ship. The work lasted but four hours a day in watering and feeding the cattle. The water was carried to the troughs in big iron pipes, and the hay and corn were brought up from the lower decks by means of steam elevators. If the rougher men had not used so much profanity this work might have been charming. Among the cattlemen thus securing passage were two Princeton students, a preacher's son from Kansas, a doctor and dentist, two Jews and a Japanese Missionary returning to his native land.

The work was heavy enough and long enough to give us a good appetite, while the sea-breeze and rollicking fun

between times wonderfully improved our spirits. Three pounds of good beef were allowed each man every day, with all the potatoes, bread and tea he cared for. Our beds were down below in what would be the steerage on any other vessel. But we seldom slept in them. Instead, we brought up the heavy woolen blankets and with the aid of the big blocks of baled hay, made our beds on the deck, with the cows. We piled these bales of hay exactly like an Esquimaux piles the blocks of ice to make his hut in the polar regions, leaving only a small door on one side. Some of the best dreams of my youth were dreamed here, in this snug, warm, safe self-made house. Several of the boys

were in the habit of selecting their locations in the most favorable parts of the deck, to the detriment of the others. One night a big rain at sea came up and completely drenched them, their block-houses having been previously torn down by the others. The next night they were eager to share, with the others, the good positions. We were never quite safe, however, in

One of the Jolly Cattlemen Dressed Ready to Carry Water to the Cattle.

these improvised berths. The sleeper inside was never quite sure whether his fellow cattlemen were going to climb up on his house, take off the roof, and drop one or two of the heavy bales of hay down upon him. This very uncertainty, amid the security, added still more zest to the trip,

Companions of the Ocean Voyage.

and we were a right jolly crowd, living on the great boat as though we owned it, chasing one another down the long feed-ways, throwing sea-water in the face, playing hide-and-seek, and catching in full the rough but happy life of the sailor at sea.

Some of the men fell seasick, which increased the work for those who were immune. The cows likewise grew seasick and some of them lay and groaned, day and night, arising, however, contrary to all the rules of seasickness among human passengers, to eat four meals a day. One big, black cow near my berth groaned all night long, at every breath she took. We were all sure she would die. But no. She ate and drank with the rest. But her pitiful bellowings were pathetic indeed. It seemed as if we must have the ship stopped and turned sideways so as to avoid the hardest blows of the waves that made our boat roll heedless of the suffering passengers and cattle aboard.

These prime fat cattle were good companions. One of them a big, red ox, took a liking to me, and every time I passed near his trough he would reach over and lick my neck or cheek with his big, wet tongue, knocking off my cap, and uttering a little bawl of affection when I passed out of his reach. He would look so tenderly at me, with his big, soft eyes, and although he was the biggest on board, he was the

gentlest. At London we took our sad leave of one another, he to grace London tables with thirty-cent porterhouse and I to go on around the world!

Queer as it may seem, this big, floating barn, with its six hundred cows, was heated by steam, the temperature kept at about seventy degrees, with a thermometer hanging in the middle of the boat, among the beasts, to show the foreman just how to regulate the temperature. Sometimes it was a little too warm for us at work, but as a rule the sea air made it rather too cool. If the janitors of churches and opera houses would exercise as much kind care over the animals they are expected to care for during an hour's sitting only, as this foreman took for these dumb animals, the results of our public meetings would be improved forty per cent. How often is the air in a church so stifling as to put the listener into a semi-unconscious condition of sleep. Many a time I have fought, as for my life, to keep my head from nodding, when what I wanted was not sleep, but a whisk of fresh air. More than half of the time it is not the preacher, but the janitor or lack of one, who puts the people to sleep. If these New York shippers, trading only in

flesh at so much a pound, understood the value of a thermometer, and the honoring of that thermometer by obedience to its markings, how much more should the officials of a church or school or public meeting place see that the air to be breathed by hundreds of human souls should be fresh and invigorating and of a right temperature. The lives of those cattle ended

Passing Inland.

in London. The lives of those of us who find ourselves entrapped for an hour or two in an environment filled with deadly microbes,

where we must sit and breathe it out, dead or alive, unless we are humane enough to leave the house and publish abroad the reason of our going, live on and on, but the inspiration God meant us to catch at the meeting is smothered by tight windows and overheated or unheated stoves.

On the tenth day out from New York we caught our first glimpse of land,—the historic Dover chalk-cliffs, that rose higher and higher out of the sea, as we approached them. A little later our big vessel was being towed down the Thames, where the passengers and cattle disembarked, each for their *destined* destination.

I was glad I was not a cow. My joy was only beginning. The English isles lay like trophies at my feet. Beneath my shining wheel their wondrous landscape was to glide as I rolled along, with light heart, strong muscles, smiling face, on the easy-running, ball-bearing wheel.

### INDUSTRIAL EQUILIBRIUM.

RICHARD SEIDEL.

THE problem of industrial equation, however simple, has been so muddled by the public press and intentionally mystified by contributors, both from the labor and capital sides of the house, that it is difficult for the average mind to unravel the tangle of conflicting arguments, or even to interpret its terminology correctly. I will endeavor to give my views upon the subject in plain language, and by means of the most simple illustrations show the root of the whole trouble. By pointing out the cause, the remedy for the difficulty will become self-evident.

All of the wealth in existence is derived from the earth. If the earth were thrown out from the sun, as claimed by scientific men, all wealth came from the sun originally. But we have not been able to accumulate very great riches from that source directly, even in this day of great inventions, so we will have to depend upon Mother Earth for all material supplies. In order to get it, however, we must either dig it out of the ground, fish it out of the water, or allow it to grow up, and gather the crop, and all this requires muscle. Earth and muscle, therefore, constitute the parents of all the wealth in existence; and the child rightfully belongs to both parents,—as much to the one as to the other. The names of these parents appear in the newspapers as labor and capital, when notice is given regarding the family quarrels they are having over their children.

Now, right here, when it comes to dividing the combined product of capital and labor, we arrive at a

point of vital importance which is often overlooked. We find the wealth produced to be of two kinds, one, taking after the father, being of a perishable nature, the other, like Mother Earth herself, being permanent in character. To illustrate this difference, we will suppose a man to be spending a week in fishing and hunting. He succeeds in salting down enough meat to

They Take Us from Our Big Liner on a Smaller Boat to the Dock, for the Tide Was Out.

last his family for two or more weeks, at the end of which time the wealth is gone; it was perishable property. Another man spends a week in the construction of a fish-dam, which will not only supply fish during his lifetime, but will go on doing the same for his children, generation after generation. Justice demands that this man be protected in the ownership of this improvement, and that the benefits from his investment of labor in permanent wealth be assured to him and his heirs forever.

Now let us suppose that two men had coöperated in building the fish-dam. While the one was putting in all his time in creating the permanent improvements the other was employed in securing the necessary perishable property,—catching fish to feed them both while the building was in progress. Now we come to the vital point; and right here is the whole labor question in a nutshell. Should the fisherman have half interest in the permanent wealth resulting from their combined efforts, or is he only entitled to have his perishable property returned fish for fish? Wherever labor is applied to land, a permanent deposit of wealth necessarily remains; and if the laboring man should be properly protected in his rightful ownership of the real estate of his own creation, his children would be richly provided for, for all future time. The trouble is in taking fish as wages, accepting the same as final payment, and relinquishing all claims to the

permanent wealth that keeps on working for somebody after the builders thereof are dead and gone.

It is not a question of how many fish the laborer should have, the wrong is in the wage system, and I hope this simple illustration will clearly show just where the injustice creeps in. There must be a coöperation of capital and labor, just as sure as land and muscle united produce wealth. By the correct system of coöperation, both may contribute what they have to invest; the immediate returns will be divided

between them, and the permanent interests that remain behind will be proportioned to their credit according to the value of their investment, either of labor, land, or material. The usual way of dividing wealth is like the Irishman dividing a crow and a partridge. Capital takes the improvements, leaving to labor the perishable part; or labor takes a little of the perishable part, leaving all the rest for capital. Wake up, ye that labor with muscle! Come and get a deed to your rightful property.

## Eugene Field

O. H. Kimmel

EVERY boy and girl in the land has read some of Eugene Field's poems. From the early youth when the child begins to understand things, we picture the youth at his mother's knee listening, in breathless silence, as the mother recites: "Little Boy Blue," "The Duel," "The Sugar Plum Tree," etc. Such classics as these will soothe the fevered child into rest and sleep, will calm the little fellow with the ruffled temper, will quiet the most boisterous into sleep at evening, or will awaken the most drowsy at morning tide.

Eugene Field was a friend to children. Not only was this friendship shown in his writings, but it was exhibited to the world in the circle in which he lived. It was just as natural for the children in Eugene Field's community to seek his lap and listen to his fascinating stories as it was for these children to live. And it was just as natural for Field to seek the children. One writer has said that it was just as natural for Field on going into a strange household to seek out the children as it is for a cat to seek and inspect the garret. I wish to reinforce the statement that this was his natural way.

Field's desire to be natural was almost an impulse. He never compared himself with others, and, in his regular walks in life, lost sight of the unfriendly side of the world. In manner he was simple and childlike and took no more delight in singularity than a nine-year-old boy. He had abundant ambition, but ambition did not rule his life, and he made no pretense at living the intense life. He made no show at living only the simple and pure life, but the person who thought he saw the tinge of waywardness in his life realized how badly he was mistaken when his alluring temptation was vigorously and firmly spurned. This show of waywardness but concealed firmness of purpose and was his natural way, and he dared to live this way every day of his life. In this way a force of character such that few men possess was shown and with a vigor to which ostentation would have to pay tribute.

This continuous living the natural life frequently caused a stranger to associate this great man with in-

ferior walks in life than those which he pursued. One story is related which vividly illustrates this mistaken identity. A guest at a certain hotel table in a large inland city, called the colored head waiter to him and asked him if the man pointed out at another table in the dining room was not Eugene Field.

The porter replied, "I dunno, sah; but I reckon 'tis: who is dis Mr. 'Gene Fiel'?"

"Why, he is the famous author," replied the man.

"Oh! yas, sah; yas sah; sho' nuf! yas sah, I reckon dat is Mr. Fiel'; sho' he is, fir I been a thinkin' all de time evah since he been heah dat he looked lak a book agent," replied the flustered porter.

Mr. Field was always perfectly happy to be mistaken for some other person, or a representative of some business quite beneath him, and he never left a place reluctantly if he could leave a "laugh on him" behind.

Besides being the unassuming, true, natural self, he was kind-hearted and affectionate. In his autobiography he said:

"If I could have *my* way, I should make the abuse of horses, dogs, and cattle a penal offense; I should abolish all dog laws and dog catchers, and I would punish severely all persons who caught and caged birds."

The poet's wife said of him: "Mr. Field was fond of birds and they seemed to know and love him. Even the sparrows would cease their chattering when he tried to hush them, and would go ahead again when he encouraged them to do so.

"He was kind-hearted to a fault. When he was fourteen years old he accidentally stepped on a little chicken one day and killed it. He carried it home tenderly and hours afterward his aunt found him still holding the chicken and sobbing as if his heart would break."

As he lived the natural life his dress was often quite neglected. He disregarded his own personal appearance almost entirely, yet he liked to be in company with well-dressed people. His speech was usually as sim-

ple as his dress, but the simplicity and kindliness of the voice caught and held the auditor. He regarded dialect quite highly and had the greatest respect and compassion for the backwoods slogans, words and phrases. He recognized dialect as the only means of giving the local coloring to his writings, that would cause them to seek out the remotest hovel. The child dialect so often seen in his writings certainly does add to the vividness of the picture. In his "Jest 'Fore Christmas," "Seein' Things at Night," and "Fiddle-dee-dee" the childlike simplicity is expressed at the outset, so that rare attention is attracted before we begin to read the poems. And before we have finished reading, we are unconsciously living the boy's life again, with the same real joy and pleasure that enchanted us in our real boyhood days.

While Field lived, not a day passed by that he did not mingle his thoughts with child life. Strange though it may seem, yet nevertheless it is true, that every succeeding year added newer charms to his fascination for child life; not only did he love the children, but he loved their joys and pastimes. He admired all kinds of toys, especially, dolls. A friend went with him shopping one day and noted that after the other purchases were made he bought in addition a dozen dolls. This aroused the friend's curiosity and he inquired of Mr. Field why this purchase was made. Mr. Field replied: "Oh, I like to have them, and when little girls come to see me I can give them a dolly to take home."

Mr. Field was a journalist by profession and in 1873 was reporting for the St. Louis *Evening Journal*. The same year he married Miss Julia Sutherland Comstock and to this union three daughters and five sons were born. In 1889 he visited Europe, as his health was broken, and while there spent most of his time in England, Germany, Holland and Belgium. After a fourteen months' sojourn in Europe he returned to America and the family took up their residence in North Chicago. Mr. Field was born in St. Louis in 1850, and comes of good old New England stock. He was left an orphan at an early age, but kind relatives took him in and educated him. He attended school at Williams College, Knox College and Columbia University, but he left school at the age of twenty-one, an undergraduate, and traveled abroad.

He held various editorial positions, but the one of greatest importance was his connection with the Chicago *Morning News*, now the *Record-Herald*, in which he conducted a column called "Sharps and Flats," and in which he had absolute freedom of expression. It was while he was editor in charge of this department that the world began to realize what a great factor in the literary world Field really was, and he very soon became prominent on the lecture platform, where he delivered readings of his own composition.

Field came close to the people because he kept his works within the bounds of the appreciation of the masses, and his child poems and stories are simple enough for the youngest accountable mind.

In "Little Boy Blue," he sings:

"The little toy dog is covered with dust  
But sturdy and stanch he stands;  
And the little toy soldier is red with rust,  
And his musket moulds in his hands.  
Time was when the little toy dog was new  
And the soldier was passing fair,  
And there was the time when our Little Boy Blue  
Kissed them and put them there."

And in the next stanza he explains:

"'Now, don't you go till I come,' he said,  
'And don't you make any noise!  
So toddling off to his trundle-bed  
He dreamt of the pretty toys.  
And as he was dreaming, an angel song  
Awakened our Little Boy Blue,—  
O, the years are many, the years are long,  
But the little toy friends are true."

But in the last stanza the full explanation, the full understanding, falls darkly and tenderly upon you as the sad story which has attached itself to the whole world is revealed. He says:

"Ay, faithful to Little Boy Blue they stand,  
Each in the same old place,  
Awaiting the touch of a little hand,  
The smile of a little face.  
And they wonder, as waiting these long years through,  
In the dust of that little chair,  
What has become of our Little Boy Blue,  
Since he kissed them and put them there."

The story is sad, it is true. Parents have been fortunate indeed, if the truth of these words has not fallen in their own fold, and to how many a little brother and sister throughout the wide world is "the vanished hand" a reality! What tender sentiments are inspired! What noble feelings! What a wonderful place in life such a story fills!

But, not only does this poet feel the sad side of life as does a little child, he feels and expresses the joyous side. In fact, in "Jest 'Fore Christmas" the joyous anticipation with which a young boy awaits Christmas is as real as life itself.

He exclaims:

"Got a yeller dog named Sport, sick him on the cat;  
First thing she knows she doesn't know where she is  
at!  
Got a clipper sled, an' when us kids goes out to slide  
'Long comes the grocery cart, an' we all hook a ride!  
But sometimes the grocery man is worried an' cross,  
He reaches at us with his whip, an' larrups up his hoss,  
An' then I laff and holler, 'Oh, ye never teched mel'  
But jest 'fore Christmas I'm as good as I kin be!

\* \* \* \* \*  
"An' then old Sport he hangs around, so solemnly an'  
still,  
His eyes they seem a-sayin': 'What's the matter, little  
Bill?'

The old cat sneaks down off her perch an' wonders  
 what's become  
 Of them two enemies of hern that used to make things  
 hum!  
 But I am so perlite an' 'tend so earnestly to biz,  
 That mother says to father: 'How improved our Willie  
 is!'

But father, havin' been a boy hisself, suspicions me  
 When jest 'fore I'm as Christmas as good as I kin be!"

No one can mistake the author's intent in writing  
 the above, for certainly it pictures the real live boy as  
 we meet him at Christmas time.

Friendship and love show throughout his works.  
 While the family were abroad Mr. and Mrs. Field  
 desired to put their children in school, but they found  
 it more and more difficult to part with them, as both  
 parents idolized their children. At last they decided  
 that, on the following morning, the children should  
 go, and the parents were to leave the city to be gone  
 some days, perhaps weeks. When the little cots were  
 clustered about the bed and the children were asleep  
 Mr. Field arose and wrote the poem, "Sometime."  
 In it he sung:

"Last night, my darling, as you slept,  
 I thought I heard you sigh,  
 And to your little crib I crept,  
 And watched a space thereby;  
 And then I stooped and kissed your brow,  
 For oh! I love you so—  
 You are too young to know it now,  
 But sometime you shall know!"

\* \* \* \*

"Look backward, then, into the years  
 And see me here tonight—  
 See, O my darling! how my tears  
 Are falling as I write;  
 And feel once more upon your brow  
 The kiss of long ago—  
 You are too young to know it now,  
 But sometime you will know."

How strangely inspiring he found children to be!  
 Greatest thoughts in verse that have come from the  
 language for children are inspired in this man by the  
 children.

While visiting a friend at Louisville, Mr. Field  
 heard the little boy of the house talking in his sleep.  
 The next day he had a long heart to heart talk with  
 the boy, in which the little fellow unfolded to the poet  
 all his natural little fears and superstitions,—just the  
 same fears and superstitions that every boy has had at  
 that age. Immediately the poet wrote "Seein'  
 Things," and it is said, dedicated the poem to this  
 Louisville boy.

In "Seein' Things" he sings:

I ain't afeared uv snakes, or toads, or bugs, or worms,  
 or mice,  
 An' things 'at girls are skeered uv I think are awful nice!  
 I'm pretty brave, I guess; an' yet I hate to go to bed,  
 For, when I'm tucked up warm an' snug an' when my  
 prayers are said,

Mother tells me, 'Happy dreams!' and takes away the  
 light,

An' leaves me lyin' all alone an' seein' things at night!

"Seein' Things" pictures the true condition of a  
 little boy's mind. It pictures the things that are real  
 to him and the things that result from his actual con-  
 tact with life. In the same selection a passage which  
 will more fully explain this truth is:

"Once, when I licked a feller 'at had just moved on our  
 street,

An' father sent me up to bed without a bite to eat,  
 I woke up in the dark an' saw things standin' in a row,  
 A lookin' at me crosseyed an' p'intin' at me—so!  
 O, my ! I wuz so skeered that time I never slep' a  
 mite—

It's almust alluz when I'm bad I see things at night!"

In his later years the poet became very popular  
 and the demands for lectures made serious intrusions  
 on his time and health. It was while he was making  
 preparations for an extended lecture tour in 1895 that  
 he sickened and died, thus ending his career on earth  
 when he was only forty-five years old. He often ex-  
 pressed the hope that he might be permitted to live  
 to a good old age, for the reason that he felt that his  
 writings in his old days would be mellowed and  
 sweetened with age, but this was decreed not to be.  
 He always idolized his wife and children, and when  
 he died they were veiled in deepest sorrow, but this  
 was comforted, to some extent, by the loving words  
 of a compassionate and sorrowing public.

Again it is seen that a man has lived and died just  
 past middle age leaving treasures to the world that  
 shall live and grow forever. In this man a new world  
 has been opened to childhood which can but make the  
 world better and brighter, and if we cannot understand  
 why he was so early plucked "from the flowers that  
 grow between," perhaps, in expressing his own words,  
 our own understanding may come:

"Sometime when, in a darkened place  
 Where others come to weep,  
 Your eyes shall look upon a face  
 Calm in eternal sleep,  
 The voiceless lips, the wrinkled brow,  
 The patient smile shall show—  
 You are too young to know it now,  
 But sometime you may know!"

### BRONZED GRACKLES.

MRS. M. E. S. CHARLES.

THE bronzed grackles, or as they are more com-  
 monly called, blackbirds, come to us very early in the  
 spring in suits of glossy black. They are very familiar  
 objects in all of the States east of the Rocky Moun-  
 tains.

In the Central States four species of blackbirds are  
 quite common. The crow blackbird, the red-winged  
 blackbird, the rusty blackbird, and the yellow-headed  
 blackbird. The most common one is the crow black-

bird, to which this article will be confined mainly. It has a number of names as, bronzed grackle, purple grackle, keel-tailed grackle, and maize thief. The first two of these names seems to be most appropriate and descriptive. When they arrive from the South, all bedecked in holiday attire, the rich bronze and purple colorings of their heads and necks scintillate in the sunshine, making them objects of great beauty. It is only the male that is thus gorgeously dressed; the female being much less brilliant. The iris of the eye is bright yellow and conspicuous, and the tail is longer than the wings.

The bronzed grackles will often follow the plowman all day long, keeping well in the fresh furrows, destroying grubworms and cutworms which are so destructive to the growing corn. They will become very gentle and manifest no fear of being harmed.

In the matter of food this bird is almost omnivorous. Its partiality for corn, wheat, rice, oats and other grains is well known, and is the cause of nearly all the complaints about its depredations. This diet is supplemented by various fruits, berries, nuts, seeds and insects, the latter in large proportions. But the character of the food varies with the season. In the fall and winter they eat weed seeds and grains; as spring approaches they begin to hunt for worms and insects; in the summer they take to small fruits, and in autumn as soon as the corn ripens they eat considerable quantities.

L. S. Keyes mentions two feats of these birds in getting food which are a little out of the ordinary. "How great was my surprise, one summer day, to see a purple grackle stalking about in his regal manner on the flat rocks of a shallow woodland stream, and then suddenly wheel about, pull a crab out of the water, and fly off with it to a log, where he beat it to pieces and devoured it. I doubt if many persons are aware that this bird dines on crab. On the same day another grackle, striding pompously about in the shallow water, suddenly sprang up in the air, some six or eight feet, and caught an insect on the wing. This was a performance on the part of a crow blackbird never before witnessed by me." This spring I have been throwing out bread crumbs to the robins, and often the grackles are the first to reach the food.

Blackbirds are very sociable and migrate in immense flocks, and usually breed in colonies. Their nests of sticks, twigs, and mud, are lined with grass and feathers, and are generally built in pines in the North and in bushes in the South.

"Soon they fix by sign or token,  
On a snug and sheltered nook;  
What though ne'er a word is spoken,  
Birds can talk by loving look."

Young blackbirds present a very unusual appearance. The back part of the head of the baby birds remains bare a week or two after other parts of their

bodies are fully feathered. This is true of the bronzed grackle and the red-winged blackbird, and I presume it is also true of the other species, although I have never seen the young of the dusky blackbird or the yellow-headed blackbird. The bald portion includes the forehead, part of the crown, the chin, and throat, and extends behind and below the ears, which are covered with a tiny tuft of fuzz. "If this unfeathered portion

The Blackbird.

were red instead of black, the youngsters would look quite like diminutive turkey buzzards." One may be pardoned for being somewhat puzzled over the conundrum, why young blackbirds, of all the birds in the circle of one's acquaintance, must go bareheaded during the first few weeks of life. By and by, however, the feathers grow out on this space as thickly as on the remainder of their bodies.

Much has been said of the grackle's unmusical voice. John Burroughs writing of their spring appearance says: "There is evidently some music in the soul of this bird at this season, though he makes a sad failure in getting it out. His voice always sounds as if he were laboring under a severe attack of influenza, though a large flock of them, heard at a distance on a bright afternoon of early spring, produces an effect not unpleasing."

#### THE WHISKEY VENDORS' WANTS.

C. D. HYLTON.

INASMUCH as the temperance and prohibition people are putting forth a desperate effort to take men's liberties and enjoyable privileges from them, it behooves us, the liquor vendors of the world, to set forth our wants to the public.

We want our liberties. We want to live without so much toil. We want a lucrative business by which our families can live at ease. We want to educate and prepare our children for society. We want to be numbered with the wealthy.

In order to supply our wants we must look to our patrons. They are drunkards and dissipated fellows who are short-lived and we cannot depend on the pres-

ent number but a very short while because they are dying daily at the hands of the murderer, suicide and disease. Their places must be filled or our business will suffer. Therefore we, the liberty-loving whiskey vendors, make this urgent call for ONE HUNDRED THOUSAND BOYS annually. Don't conclude the call is too great, for we assure you that you will not live to be in each other's way. We want nice boys, good looking boys, refined boys, intelligent boys, boys of much influence, boys of wealthy parents and a special inducement to preachers' boys. However, we will take any kind of boys from any family or any circle of life, provided they have money. Those without money or the means of obtaining it need not apply. It makes no difference with us how you obtain the money.

If you have no experience in the drink habit, don't be discouraged, we can give you some simple directions so that you can soon grow into the habit. To begin, we recommend that you acquire the habit of using tobacco. All drunkards use it in some form. Next begin on soft drinks, kept in some country stores and groceries. These vendors belong to our craft. By this time you have acquired a taste for something stronger. If there is no saloon near you, consult your county or city newspapers as to where to get good whiskey. We have a number of editors working for us. If yours is not one of them consult your family physician, we have a number of them working with us and some of them are among our most liberal customers, and they can prescribe for you to get it of your druggist. Or you can have it shipped right to your railroad station.

Now, boys, come on, don't be afraid. We can make use of any number and our future prosperity depends upon you.

Now, parents, don't be too particular with your boys. You were once young and you know how sweet to gratify "youthful lusts." Let us have some of your boys, at least, and we'll do the training.

#### JUST WATCH YOURSELF GO BY.

Just stand and watch yourself go by;  
Think of yourself as "he" instead of "I."  
Note, closely as in other men you note,  
The bag-kneed trousers and the seedy coat.  
Pick flaws; find fault; forget the man is you,  
And strive to make your estimate ring true.  
Comfort yourself and look you in the eye—  
Just stand aside and watch yourself go by.

Interpret all your motives just as though  
You looked on one whose aims you did not know,  
Let undisguised contempt surge through you when  
You see you shirk, O commonest of men;  
Despise your cowardice; condemn whatever  
You note of falseness in you anywhere.  
Defend not one defect that shames your eye—  
Just stand aside and watch yourself go by.

And then, with eyes unveiled to what you loathe—  
To sins that with sweet charity you'd clothe—  
Back to your self-walled tenement you'd go  
With tolerance for all who dwell below.  
The faults of others then will dwarf and shrink,  
Love chain grow stronger by one mighty link—  
When you, with "he" as substitute for "I"  
Have stood aside and watched yourself go by.

—Unidentified.

#### THE FLOWER DOCTOR.

THE discovery of the commercial value of flowers is one of the most remarkable developments of our times. Even the advanced gardeners of a century ago had not the faintest idea that one day huge industries would spring into being, having for their sole object the culture and marketing of blossoms. As one would expect, the appearance of this floral enterprise has led to the creation of many positions for those who specialize, which otherwise would never have seen the light of day. Quite the most remarkable of these novel vocations is that of the flower doctor—a man, or not infrequently a woman, who gives his or her whole time to the handling of blossoms with a view to making good any imperfections which they may possess.

Nature is quite perfect in her ways as a general rule, the flower doctor readily admits, but even she will sometimes make mistakes, and quite often will be all the better for a few touches from his skillful hand. Of course the very first principle of this curious art is concealment; the work must be done so well that no one can discern that it has been done at all. Flower doctoring is very much more widely practised than might be supposed, and it speaks well for the skill of the operator that so few people are even aware of the existence of his strange profession. In the present article it will be the endeavor of the writer to give the reader a little peep behind the scenes in a modern flower-growing establishment.

To begin with, the flower doctor, no less than his namesake in the medical profession, must have his case of instruments. These are much like a portion of a surgeon's stock in trade; delicate pairs of dissecting scissors, forceps of all shapes and grades, cutting pliers, in addition to the host of brushes in all sizes. There are also a number of accessories the use of which will become apparent when the flower doctor is seen at his work. The whole paraphernalia, which makes quite a formidable array, includes spray producers, and bottles containing gums and scent essences.

The most ordinary duties of the flower doctor consist in simply correcting imperfections in the flowers which are placed in his hands. A great box full of freshly-gathered rose buds is brought in to him. Many of these are not quite as they should be. A withered, or perhaps a badly developed petal spoils what would

otherwise be a perfect flower. With a pair of forceps in his deft hand the doctor rapidly goes over each bloom. This petal, which is out of its place, is put into a right position; that ill-shaped one is torn away altogether. In the end the flower is placed aside without the least blemish to detract from its market value. If the roses are wanted for some purpose where it is important that the buds should not open, such as for use in a bouquet for instance, each bud must be separately treated. As near to the base of the bloom as is possible, thin wires are cunningly inserted right through the center of the bud, so that all the petals are held in such a way that they can never fall apart. All other kinds of flowers are examined in the same manner as has been described above, faulty petals removed and displaced ones put into the correct position. It is not at all an unusual thing in the case of chrysanthemums, to go over the flower with an instrument much resembling a pair of curling tongs, and with delicate twists bring the petals over in an elegant curling fashion.

Some of the most desirable flowers, from the florist's point of view at any rate, have been provided with only very weak stems, and sometimes with scarcely any stem at all. The beautiful Marechal Neil rose can scarcely hold up its head, while the fragrant white tuberoses bloom by the time they have been gathered from the central stalk have not more than a fraction of an inch of stem. Such flowers could never take their place in decorative schemes in the condition in which Nature has given them to us. But your flower doctor can easily get over such trifling difficulties as these. With metal thread the weak stems are strengthened, often in such a way that it is impossible to detect the supports, and the blossoms without stems are provided with ones made of stout wire. All this is done so cleverly that by the time the flower takes its place on the dinner table, or in the bridal bouquet, no one can say that the bloom has received any attention from the hands of man at all.

It has been held that to attempt to give scent to the rose is an undertaking which is altogether ridiculous. Nevertheless the flower doctor does not view the matter at all in this light. It is a sad fact that many of our modern strains of one-time fragrant flowers are more and more woefully lacking in sweetness. Some of the most lovely varieties of roses, the finest kinds of violets, are almost scentless. This will never do for the florist; buyers expect their roses and violets to smell pleasantly, and if Nature does not provide the wherewithal, well, the deficiency must be made up somehow. And it is just here where the spray-producer comes in so usefully, hissing out its sweet vapor in response to the ball pressure over the fresh blossoms. It is only fair to say that the doctor is very careful to use only the finest scent, which, of course, has had its origin in flowers, and is a natural product. He is

also most particular in selecting the right kind of fragrance for each bloom, so that the fair lady who buries her nose in this bunch of violets has not the least conception that the purple blossoms have been tampered with in any way. Of course good scent is so permanent that its odor will remain quite as long as the flowers last, and often much longer, making folk wonder at the delightful fragrance of the modern blooms even when they are dead.

It seems a strange thing to talk about sticking flowers with gum, and yet this is a very common practice in the florist's workshop. All the lovely azaleas in pots which delight our eyes during the spring months have been doctored with a vengeance. Azalea blooms drop very quickly, some time before the petals of the flower really begin to fade, and were it not possible to fix the blossoms in some style or other the plants could hardly be marketed at all. In order to prevent the flowers from falling too quickly, at the joint of each stalk with the stem, a wee drop of gum is placed by means of a brush, which when dry holds the flower firmly in position. As may be imagined, the sticking on of azalea blooms is a process which is tedious in the extreme. Many fine plants will bear hundreds of flowers, and as each of these will require attention individually, it will be seen that the matter is no small one. In the case of other flowers where it is known the petals are apt to be shed somewhat hastily, a touch of pure gum here and there will often very much lengthen the life of the blossoms. If this has been done with proper skill no one need ever detect that the flower has been attended to in any way.

In most big flower stores a person with some knowledge of flower doctoring is usually retained. Those flowers which look so fresh were really not picked today at all, nor is it necessary that they should have been; but they have been stimulated to hold up their heads a while longer by clever treatment. Although methods vary slightly, they mostly consist in placing the stems of the flowers in very hot water for five minutes, and then putting them in a cool, dark cupboard for an hour or so. Just before the blossoms are placed on the display counter it is not an unusual practice to spray them over with clear spring water. This produces a delightful effect of glistening dew-drops on petal and leaf, which is bound to make the show pleasant and attractive in the eyes of the would-be buyers. After all, it must be admitted that the flower doctor does very much to assist in the meeting of the greater demand for blossoms, which it is safe to say, is one of the best desires which the public has evidenced for a long time.—*Scientific American Supplement*.

"NOBLER far than the victories of the sword are the triumphs and the trophies of the plowshare."

### CRIPPLING THE CRIPPLES.

IN September, 1902, a railroad employé in Michigan had both legs mangled while coupling cars. In February of the next year his attorneys commenced suit for damages.

The case was tried in October, a little over a year after the injury. The jury awarded \$15,000 damages. The railroad appealed to the Supreme Court, which tribunal, in March, 1904, remanded the case for new trial. This new trial was had in February, 1905, and the jury gave a verdict of \$20,000. Again the railroad appealed to the Supreme Court, which in May, 1906, again ordered a new trial. But on rehearing the Supreme Court changed its mind and affirmed the judgment of the lower court. Meanwhile, the railroad had been reorganized. So, in January, 1907, it was necessary to begin suit against its bondsmen to collect the judgment. In April, 1907, the trial jury gave judgment against the bondsmen, and the defendants promptly appealed to the Supreme Court.

Five years and one month after the injury this judgment was affirmed by the court of last resort, and the injured man sees some ground for hoping that, after the usual argument for a rehearing and appeal to the United States Supreme Court, he may receive enough money to pay his law expenses and have a little left.

The court records of every State in the union are actually loaded with cases just like this. No more monstrous abuse of the forms of justice can be found in the world. The cynical brutality with which railroads and mills habitually exhaust every resource of legal jugglery to thwart the man who establishes a claim against them for personal injury would disgust an honest pirate.—*Saturday Evening Post*.

"It is not what people eat, but what they digest, that makes them strong. It is not what they read, but what they remember, that makes them learned. It is not what they profess, but what they practice, that makes them holy."

### CURRENT COMMENTS

It is worth a people's while to note the history thus far of the "Yukon Gold" stock sold thru Mr. Thomas Lawson's advertising a few weeks ago. He told the public on March 27 the stock could be sold for \$10 per share, but he had sternly ordered the brokers to sell "at not less than \$5 nor more than \$7.50." The public took the stock. On Monday, the 30th, Mr. Lawson announced that he would "stay with it for a week longer" to show how he could "keep the stock in great demand at, say, \$10." It sold at \$6 that day, at \$5 the next, and since then has declined to \$4.50. "The orange was squeezed."

The exposure and conviction of grafters still continues. Now it is St. Louis that is cleaning house. Recently a councilman was found guilty of taking a bribe of \$500 and sentenced to two years in the penitentiary. The case of another member, indicted at the same time, will come up for trial next. The assistant clerk of the council, convicted on a charge of accessory, has resigned his position. Such measures to establish the principles of right must surely bring about some good results. Those entrusted with the affairs of others will serve the people better than in the past, whether from fear or principle. At the same time the people will exercise greater care in selecting those who are to look after their interests. Let the house-cleaning go on.

The Chinese are treating Japan to the same medicine which they administered a while ago to America. The Chinese are boycotting Japanese goods and ships on account of the Tatsu Maru affair, when the Japanese objected to the seizure by the Chinese of a Japanese steamer, which was importing arms supposedly for Chinese revolutionists. The cable dispatches show the spread of the boycott. One of the latest recruits was the Chinese Merchants' Guild, of Hong Kong, which decided to cable its agents at Japanese ports not to place any more orders for Japanese goods and to ship goods already ordered in vessels other than Japanese. At Canton, according to reports, the merchants met in public assembly and listened to a dirge recited by a twelve-year-old boy describing China's wrongs, and thereupon tore their garments and wept and vowed relentless warfare against Japanese manufacturers.

The Jews are not at all pleased with the attitude of the Christian church toward their religion in belittling the influence upon Christianity of the Jewish church. Rabbi Schanfarber recently gave expression to the feelings of the Jews in this matter. He said: "It is to be deplored that the Christian church has not risen to the height of judging the mother faith fairly. . . . It seems that the Christian church, in its ardent endeavor to show the superiority of its faith, feels that the only way it can do this is by detracting from other faiths. None would deny the great factor and force that Christianity has been in developing the civilization of mankind, but that should not lead it to deny the influence that the mother faith has exerted in the upbuilding of the spiritual treasures of humanity." The Jews in general may not be aware of it, but many Christians have deplored that tendency in the Christian world to expend strength in the tearing down of other religions which should be spent in making more attractive its own. Arguments by the latter method are always more effective and do no violence to the golden rule.

It is amazing to see the many wisps that float on a day's news, showing how fast the world is drawing together, and the feeling that "my fatherland is the world's" is spreading. The same paper, which announces that Great Britain has invited the governments participating in the last conference at The Hague to send experts to London to formulate a code of procedure for the proposed international prize court, announces a new plan for the exchange of American and Prussian secondary schoolteachers. The idea is for the Prussian ministry of education to send to the United States teachers in the German gymnasiums who later are to teach En-

glish, and leave them there for six months or a year to teach German in the American high schools. This sojourn will give them an opportunity to perfect their English. American teachers will come to Prussia for the same purpose and under the same conditions. The exchanges are to begin next October. This system of exchange is already in operation between Germany and France and Germany and England; but in the latter case the results have not been wholly satisfactory because the English appear rather indifferent in the matter, and there are few pupils in England who are disposed to learn German. Better results are to be expected in the United States.

### The Song Cure.

That the exercise given to the lungs in singing is valuable in the prevention and cure of diseases of those organs is asserted by two English physicians, Dr. Leslie and Dr. Horsford: "They consider that song treatment would be useful to (1) persons in whom, either from family predisposition or from individual weakness or abnormality of the chest, the onset of pulmonary consumption is to be feared; (2) early cases of consumption as soon as the disease becomes quiescent; (3) certain more advanced cases where no active disease or ulceration is in progress. To secure the desired end they suggest that some public institution should be founded, either independently or as a special department of our already existing colleges of singing, and that such institution should be open to suitable cases referred from the hospitals."

### Unemployment in New York.

It is not possible to tell how many men are unemployed at present in this country. A conservative estimate based on figures supplied by the labor unions puts the number at two hundred thousand in New York city alone, of whom 30,000 are probably homeless vagrants. At its second meeting the Ethical Social League took up the great problem presented by the unemployed and urged four measures in particular in view of conditions. First, that the State and city immediately undertake public works involving an expenditure of \$195,000,000, which have been already authorized in order to relieve the distress of the unemployed. Second, that there be established by the Legislature State farms in one or more localities to which vagrants from our cities can be committed. Third, to request the Governor and the Legislature to institute such a thorough inquiry into the causes of unemployment as shall lead to remedial legislation of a permanent character. Fourth, to suggest to corporations and individuals employing others that in order to ameliorate the present situation they extend employment as much as possible, pro-rating work and reducing time rather than discharging employes or closing business.

### Imitations of Gold.

It is worth noting that metallurgy has succeeded in producing a composition that not only resembles gold very much in appearance, but also has unusual durability. The best imitation is the mixture of copper, gold and aluminum, as the price is very low, and it therefore is possible to manufacture ornaments and jewelry much cheaper than double-plated articles. The color of this combination very much resembles that of gold in its various alloys. The composition is extremely ductile and malleable, and, when polished, is very brilliant. "This

gold metal is composed of 978 parts of copper, 2 parts of gold, and 20 parts of aluminum. The first step in its production is the melting of the copper and the gold in a melting-pot of fire-clay or some other fireproof material. The mixture is kept in a molten condition about half an hour, after which 50 parts of borax are added as flux. The mass can then be poured out into bars. This alloy can be wrought into plate or wire, thus allowing of the manufacture of manifold varieties of ornaments and trinkets." The time can be altered by changing the proportion of the three metals. To produce red, less gold and less aluminum are needed; for yellow, a little less gold, and for green, less gold and more aluminum.

### The New British Cabinet.

Mr. Asquith, having returned from kissing the King's hand at Biarritz, has announced his new Cabinet as follows: Lord President of the Council, Lord Tweedmouth; Secretary for the Colonies, the Earl of Creive; Chancellor of the Exchequer, David Lloyd George; First Lord of the Admiralty, Reginald McKenna; President of the Board of Trade, Winston Spencer Churchill; President of the Board of Education, Walter Runciman. John Morley, Secretary of State for India, and Sir Henry H. Fowler, Chancellor of the Duchy of Lancaster, have been created Viscounts, and to take seats in the House of Lords, but retain their present offices. Mr. Asquith, the new Premier, was Chancellor of the Exchequer in the Campbell-Bannerman Cabinet; David Lloyd George was President of the Board of Trade; Lord Tweedmouth was First Lord of the Admiralty; the Earl of Creive was President of the Council; Reginald McKenna was President of the Board of Education; Winston Spencer Churchill was Under Secretary of State for the Colonies, and Walter Runciman was Financial Secretary to the Treasury. The shifting about of the Cabinet has involved only the loss of Sir Henry Campbell-Bannerman and the Earl of Elgin, who was Secretary of State for the Colonies. Winston Spencer Churchill and Walter Runciman are the two new members. The consensus of English opinion is that the Cabinet has been strengthened by the change. Lord Tweedmouth's removal from the post of First Lord of the Admiralty to a less important and less paid office is generally attributed, in part, at least, to his indiscretion in connection with the Kaiser's letter, but his policy at the Admiralty was also unacceptable to some of his colleagues. Mr. McKenna's promotion to the Admiralty is much criticised even in Liberal circles. He is supposed to be a "little navy man." His promotion is partly due to Mr. Asquith's personal friendship for him. Under British law, a newly appointed Cabinet minister who is in the Commons must receive a new election before he can serve. Accordingly, four by-elections will be necessary. The principal interest in these elections is centered on the contest Mr. Churchill will have to make in Oldham, Manchester. For a decade before his election from that district in 1906, it had been a conservative stronghold, and it will take a hard fight for the Liberals to retain it. But Mr. Churchill is a fighter. He has already issued a vigorous fighting address to his constituents, defending the policy of his party. After speaking of the fact that it is not customary to oppose for re-election a Minister already once elected a member of the Government, he declares for free trade and upholds the Government's licensing bill, and challenges the liquor trade to show the strength of its vaunted organization. The suffragettes have already started an enthusiastic campaign against Mr. Churchill.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## OUR REPRESENTATIVES.

IN defining our form of government these oft-repeated words strike most of us as being as comprehensive as any that could be used: "A government of the people, for the people, and by the people." For many reasons it has not seemed practicable for all of us to convene and enact the laws that should govern us in our relations with each other and with others, as they do in several of the cantons of Switzerland. Instead, we elect men to represent us, to carry out our wills for us in the making of laws.

Evidently there is a difference of opinions as to the real nature of the positions of these lawmakers, or else some of them at times defiantly repudiate the title of representative. Sometimes the will of the people is not carried out and they have the mortification of seeming to bring about their own undoing. To be sure, a legislator should be more than a mere machine. He should be able to understand the questions that come up for settlement and judge of their final influence, however settled. He should have the expressed will of the people ever before him, and yet he should be able to interpret it in the light of conditions and events unrecognized by them. However, in an issue which the people have studied carefully and where much is at stake, the right course would be to uphold the will of the people, whatever the representative's private beliefs. The people had better learn of their mistakes through their own actions than to learn that their representative has not been such in truth. A man who cannot conscientiously give himself over to bring about the will of the people, after he has made himself thoroughly acquainted with them and knows what that will might be, has no right to pose as their representative.

While it may be true that in most cases the people may safely rest their interests in the hands of their representative, it is the part of wisdom to be so well acquainted with the progress of affairs that any turn

of events may be provided for and the representative be under no necessity of moving in ignorance of his people's will. In the event of a servant proving unfaithful to his trust, considering first his own or others' interests, his constituents will be in a position to call him to account. For, after all, the people have the last word.

An illustration of the power of the people in holding the lawmakers to their duty as representatives is found in the recent fight in the State of New York against race-track betting. While the bills were being discussed in the legislature it was learned that a number of the lawmakers who "voted for the bills really desired to oppose them and had been restrained from doing so only by the pressure of public opinion in their districts."

There is really no reason why the people should spend any time in bemoaning the fact that they have been betrayed by the men who pledged themselves to stand by their interests. They have at command that which will give expression to their wishes in no uncertain terms and they need fear no legislator, however subject to corruption he may be. If for a time the people seem to be deprived of their inalienable rights, they may put it down that they themselves have not been as zealous as they should in asserting and maintaining them. In this instance we must put in practice the generally selfish principle that if we do not look out for ourselves no one will do it for us.

## AN EXCELLENT OPPORTUNITY.

ELSEWHERE in these pages the attention of the reader is called to the offer of the Battle Creek Sanitarium of a short course in Domestic Science. This is especially suitable for those desiring to take the work who for most of the year are otherwise engaged. And it would be difficult to find an institution better fitted to give the training desired.

## AN ACKNOWLEDGMENT.

"HONOR to whom honor is due" is a principle we have endeavored to observe in the making of the INGLENOOK. Sometimes we desire to make use of material when we are not acquainted with its origin. In such cases it is our aim to have it appear in such a way that the reader is not likely to attribute it to the pen of the Editor. Sometimes it is not advisable that the name of the author should appear, in each separate case, with his writings. As an instance of this kind we call the readers' attention to the Current Comments that appear in each issue of the INGLENOOK. Many of our readers find these comments very interesting. With few exceptions these are furnished by Richard Seidel, of Fort Hancock, N. J., and we hereby give him the credit that belongs to him with our grateful thanks and appreciation of his help.

## NOTICE!

Now is the time when we particularly desire the help of our friends in extending the INGLENOOK's circle of influence. There are only a few days during which one may avail himself of the offers elsewhere described in these pages. Get to work now and use them as an argument with your friends who are not now on our subscription list; or hand them this issue to read and let them get started on H. M. Spickler's series of articles and the lessons in Esperanto.

## LESSONS IN ESPERANTO.—No. 1.

## WHY LEARN ESPERANTO?

Because it brings all nations together on the basis of one common language. It does not claim to displace any existing language but to furnish a common basis of communication between people of all tongues. It may be of commercial value to you, as thousands in all parts of the world are now learning Esperanto. Why not be up to date? It does not require a lifetime to acquire a practical knowledge of Esperanto.

## HOW TO STUDY ESPERANTO.

Any individual can take up the work alone, but it is better to form a class, if of only 2 or 3, as you will need help that you can only receive in conversing in Esperanto. If classes are formed with one of your number as leader, or if you are studying alone, send us the names or name with the address on a postal to the INGLENOOK office, % Brethren Publishing House, Elgin, Ill. We do not invite correspondence, but if you desire will print names for a post card exchange, as this will be good practice in reading the style and also the composition of the postals of your friends.

## WHEN STUDYING

Always speak the letters aloud, as it is very important to give the letters the correct sound. Esperanto is strictly phonetic. A letter has but one sound and there are no SILENT letters. Be sure you have the proper pronunciation.

## ACCENT.

The principal accent is on the syllable next to the last, no matter how many syllables the word may contain. Do not get into the habit of slighting the remaining syllables. Pronounce every letter distinctly. In talking Esperanto, speak about two shades louder than you generally speak.

A syllable is necessary for every vowel, no matter how many come together. There are NO DOUBLE VOWELS in Esperanto. Compound words are formed the same as in English.

## ALPHABET.

1. The alphabet consists of 28 letters, viz,—

A B C Ĉ D E F G Ĝ H Ĥ I J Ĵ

K L M N O P R S Ŝ T U Ŭ V Z  
a b c ĉ d e f g ĝ h ĥ i j ĵ  
k l m n o p r s ŝ t u ŭ v z

With the following EXCEPTIONS THE LETTERS ARE PRONOUNCED as in English:

A is always pronounced as "a" in ASK.

E is always pronounced as "e" in THERE.

I is always pronounced as "i" in BIG.

O is always pronounced as "o" in FOR.

U is always pronounced "u" in PUSH.

C is always pronounced as "ts" in hats.

Ĉ is always pronounced as "ch" in chop.

G is always pronounced as "g" in gold.

Ĝ is always pronounced as "g" in gentle.

Ĥ is always pronounced as "ch" in loch.

J is always pronounced as "y" in yes.

Ĵ is always pronounced as "s" in vision.

S is always pronounced as "s" in so.

Ŝ is always pronounced as "sh" in show.

AŬ is always pronounced as "ow" in cow.

AĴ is always pronounced as "i" nigh.

OĴ is always pronounced as "oy" in toy.

EĴ is always pronounced as "ayi" in saying.

UĴ is always pronounced as "ui" ruin.

EŬ has a sound similar to a quick pronunciation of "choo" or "ayoo," eliminating most of the "oo" sound.

"A" should have the short Italian sound; be careful not to give it the flat sound.

H is never silent. Every letter must be sounded separately, even in double letters, and the sound is always the same whether at the beginning or in the middle or at the end of a word.

"W" and "th," so difficult to foreigners, are omitted as well as Q, X and Y.

Practice pronouncing the following until you have thoroughly mastered them:

Al as in ahl, Eĉ as in ehts, Eĥ as in ehch, Bir-do as if beer'do. The letter "R" should be sounded more as we do when in singing, it should be trilled.

## EXERCISE 1.

A-be'-lo, A-ce'-ro, A-ĉe'-ti, A-di'-aŭ, A-e'-ro, Aĵ, Ak-cen'-to, Aŭdi, Aveno, Arĉo, Baldaŭ, Bapti, Aĵ, Bedaŭri, Beni, Branĉo, Buŝo, Cifero, Cigno, Ĉar, Citrono, Ĉapo, Ĉevalo, Dangĉero, Detruĵi, Deziri, Ĉie, Dimanĉo, Dolĉa, Enviĵi, Eraro, Eterna, Falĉi, Dio, Familio, Faŭko, Foiro, Ftizo, Fiziko, Suferi, Ec, Eks.

## EXERCISE 2.

Gaja, Glito, Gorĝo, Hajlo, Haŭto, Hejmo, Hieraŭ, Horloĝo, Ie, Ig, Iĝ, Infuĵi, Io, Iri, Ja, Jen, Juĝi, Ĵaluza, Ĵaŭdo, Kaĝo, Kaŭzi, Laŭbo, Lupolo, Maĉi, Muzeo, Naskiĝi, Oceano, Oleo, Pajlo, Paŝti, Piedo, Reĝo, Skarabo, Ŝveli, Tio, Zuzi, Veŝto, Voĉo, Zinko, Zizelo, Zorgi, Zuavo.

ALLAN EISENBISE.

## The Family Altar

Catharine Beery Van Dyke

"If you would bind your little one to you,  
Bind your own soul to all that's high and true  
And let its light shine clear thru all you do.

"Think not that he is all too young to teach,  
His little heart will like a magnet reach  
And touch the truth for which you find no speech."

MUCH of the power both of our physical and our moral efforts expended in child training is ineffective because it is not definitely directed to a particular end. We get our babies and we think they are pretty, or sweet, or precious and some of us even have tremors of awe as to their future; but so few of us take the matter of baby getting and baby keeping as a business. It is a business of limitless magnitude—a business that has certain real, distinguishing characteristics.

We watch the growth of our child and instinctively desire to see it evolve into symmetry of character as well as of body, and yet we overlook the fact that it is incumbent upon us to provide for it the conditions of mental and spiritual development with as much care and judgment and regularity and constancy as we provide for the sustenance and upbuilding of its body. It is time that Christian parents should be wide awake to the needs of the situation if they expect or desire their children to stay or become rooted and grounded in the religion of Jesus Christ. The matter of conversion lies close along the line of continued influence that bears upon a human being during the early years of life.

Froebel, in speaking of the things a child should learn on entering school, puts for the first—not language, nor art, nor mathematics, nor even forms and nature—but—what do you think? Instruction in religion. He defines school as an endeavor, and religion as an effort. "School," he says, "is the endeavoring to bring to the pupil's knowledge and consciousness the being or inner life of objects and himself; the intimate relation of objects one with another; with man the boy himself, and with the living basis and conscious unity of all things, God.

"The effort to lift into clear sight our presentiment that our soul, the human spirit, is in its origin one

with God; the effort founded on this sight, to be, and live, in union with God, undisturbed in every lot, unweakened by any event of existence; this is religion. Religion is not something fixed, but an eternally advancing endeavor, and therefore something eternally subsisting."

These words are not at first easy to understand, but the many questions asked and unasked, which arise in the mind of the child might well be satisfied by teaching him his unity with God and that all nature and all things have their origin in God and belong to him as working parts of him. When we once recognize ourselves what these mean then we can and will without need of apology or excuse establish in our homes a time each day for purposeful communicating with him who is

"The life of all life  
The light of all light  
The love of all love  
The good of all good—  
God."

Now there is not so much need for saying how family worship should be observed after the decision to establish it is once made. "Love finds the way." "Where there's a will there's a way," but anything that savors of an excuse for the service is unworthy of the slightest consideration.

I am often reminded of the story of the Christian shoemaker who, when asked what his business was, replied with pride: "My business is serving the Lord and I make shoes to clear expenses."

We should weave it into our business as wise parents, to have family worship every morning and allow the subsequent work and happenings of the day to follow as secondary in importance as well as in place. The parts of ideal family worship are these: 1. The Word. 2. The Praise. 3. The Prayer.

Oh, the value of these few minutes daily set apart—sanctified—with husband or wife and children in school with God! Who can express or estimate the good that comes through this channel that would be wholly missed by us were the channel clogged or unused?

I pity the child who has never heard his father's voice reading from the Holy Bible, or, who has never heard his mother's voice raised in prayer for him. Talk about incorrigibility in the home! Until we ourselves have learned to obey the law of God and are submissive to that law we have no right to expect our children to yield an honest obedience to us and have in us even a workable faith or confidence.

Once the children know that we, too, are governed by law (and they can best appreciate that situation through the influence of the family altar) they will in sympathy and sincerity yield the more readily to our commands and suggestions.

The Bible is too much an unknown piece of literature in the home and all without reasonable excuse. We all know that a mow full of hay is not going to make a stable full of horses fat and strong unless the hay and other feed enter the mouths of the horses. And our shelves and tables filled with Bibles, pictorial or plain, will never make us spiritual unless we eat the Word of God—unless we know, accept and obey its teaching. If one-fifth of the time spent on daily papers and magazines and light books were spent in the careful perusal of the Word before our children and with our children, the book itself would subserve us better while, at the same time, our children would be growing in the knowledge of God and in reverence for all things pertaining to him, and to their own higher selves.

Then the songs, what a good chance we have here to keep up the favorite old hymns—adding to them the new favorites! And let me suggest that some childhood hymns be used for the real little children so that all may have some part in the devotions. "Rock of Ages," "Guide me, O Thou Great Jehovah," "Children of the Heavenly King," "Direct me Through this Day," "I'll be a Sunbeam," "Face to Face," "Glory Song," "Break Thou the Bread of Life," "He is so Precious to Me," and the dear little kindergarten thank you hymn that the babies love so well and that goes like this:

"Father, we thank thee for the night  
And for the pleasant morning light;  
For rest and food and loving care  
And all that makes the world so fair.

"Help us to do the things we should;  
To be to others kind and good;  
In all we do, at work or play,  
To grow more loving day by day."

Any other hymns that have endeared themselves by association or choice to any of the children or to yourselves may be kept hold of by often singing them at the family altar.

And then the prayer part! When any member of the family is especially burdened, or afflicted, or tempt-

ed, or in prosperity, or joy, or just any how, how the prayers of papa or mamma, or brother or sister are appreciated, and oh, how they help! This is not fiction nor poetry. Then when a birthday is at hand it is better than a gift to hear good wishes for us voiced at a throne of grace. When a trip is contemplated or a death mourned for, oh, how our hearts are softened and strengthened to hear the words of our friends spoken to him in our behalf!

A long time ago, when almost a child yet, I was kneeling as a guest with relatives around my aunt's family altar. She was a devout minister of the Gospel and as she earnestly entreated the dear heavenly Father in my behalf, who had but lately put on the armor of God to serve him, my heart was lifted to desires for a higher and better life of usefulness and of love. She has long since gone to her reward, but her prayer has been a blessing to me all these years.

There is some wonderful power, almost a magical power, felt over us when we hear people even speak a kind word of praise of us. One of my friends makes me really think I am of some account when she exalts some suspected virtue in me. That power is increased when we hear some one bear our names to a throne of grace in loving desire for our good.

It would not be appropriate for us to pray for our children by name nor each other—husband and wife—in the public service; in secret prayer they could not hear us and might not know it; but at the family altar such supplications are at home, and it is right that we should see to it that every day we go out from each other with the best wishes and prayers of all the members of our households. Here, too, is the place to discipline the children. They ought early to be encouraged to express themselves in thanksgiving, in confession and in petition to their heavenly Father. It is so much easier for any of us to pray in public when we have been brought up to pray around the home altar, and surely I think it would be hardest of all for a child after conversion—especially if his parents were church members—to pray in the presence of his father or his mother if he had never heard them pray before he was converted. It would be a very selfish, indifferent Christian at best, it seems to me, who would sit down and eat his meals without first expressing thanks in some way to the Giver of his food; but even if he does with thankful heart ask the blessing at the table I cannot quite see how that devotion could take the place of family worship and answer for it.

But there is no need of apology for establishing, with a direct and unwavering purpose, the family altar, and no adequate excuse for not establishing it when we learn to think of these things in their right relationships and according to their bearings upon future Christian character and citizenship.

Oh, let's just come out heroically and bravely and

say as we enter upon the erection of this altar dedicated to his honor and for our own great benefit:  
 "I'm not ashamed to own my Lord or to defend his cause."

185 Hastings St., Chicago, Ill.

### THE MOTHER'S DECALOGUE.

THE following commandments, typifying the domestic ideals of the Germans, will be of interest to American women:

1. Be healthy.
2. Be joyful.
3. Be beautiful.
4. Be gentle and placid.
5. Be firm without severity.
6. Do not stint with your mother love. Tenderness is not effeminacy.
7. Discipline as life disciplines. It does not scold, it does not plead, it does not fly into a passion. It simply teaches that every deed has its adequate effect.
8. Do not laugh at the little sorrows of children.
9. In illness and danger protect, nurse, cherish and cheer as much as in your power. And do not weaken your vitality by giving way to anguish and sorrowing. What can be done must be done as well as possible.
10. Do not forget; the happiness of having a child includes the duty of smoothing his way in the world—of endowing him with health, gladness, courage, victory.

### Ten Commandments for the Home-Maker.

1. Make your household one harmonious whole, no matter how small the scale.
2. Use only what you can comfortably afford in good quality and ample quantity.
3. Let your home appear bright and sunny. It is not easy to be unpleasant in a cheerful room.
4. Treat your servants wisely and kindly, and it will be impossible for them to either impose or oppose.
5. Have time for everything, and be never in a hurry.
6. A certain formality is necessary to save everyday life from frivolity and freedom from looseness.
7. Don't forget that "society" is the death of home life; hospitality its flower.
8. Know how to talk and how to listen; how to entertain and how to amuse.
9. Have many interests and no studies.
10. Do not forget—your home should not only be a well-conducted dormitory and boarding place, but truly a home, the center and focus of all interest, pleasure, and happiness for everybody connected with it.

REMEMBER, this is INGLENOOK week.

### A LITTLE CHILD LAUGHED.

A little child laughed—and the sun came out,  
 A little child laughed—glory echoed his shout,  
 The birds caught the wonder and carried it far  
 In the song that they sang to the clouds and the star.

A little child laughed—and the shadows and mist  
 By the beams of love's beautiful sunshine were kissed.  
 A little child laughed—and our burden and care  
 Fell away as our sorrows fall away after prayer.

—Baltimore Sun.

### THE WANE OF POLITENESS.

VALUATIONS in business are being got down to a fine point in the commercial world these days, and if a point of politeness comes into conflict with earning capacity, the politeness must go. In Philadelphia, the Keystone telephone company has ordered its 450 girl operators to cease saying "please" to the patrons, and the patrons are requested to leave off the "please" in speaking to the operators. In the course of a day, it has been computed, a great deal of time is consumed in saying "please" over the telephone, and as "please" does not seem to be of any commercial value, the Philadelphia company has decided to drop it. According to calculations made the 450 Philadelphia telephone girls say "please" 900,000 times every 24 hours, and allowing half a second for a word it turns out that 125 hours a day are spent in this courtesy that has no money equivalent. This is but one of the many little courtesies that the commercial spirit is driving away. Ours is the most commercial age the world has ever known and in it have passed many of the little comities that made public and private life a pleasure and a culture. Now if the business world would get to calculating and see just how much time is lost each day in beginning a letter "Dear Sir" and closing with the lengthy "Yours truly" or "Very truly," it might see that a great deal of time can be saved by leaving out these terms which have no monetary value, and perhaps some day a shorthand method for all letters will be agreed on so that time can be saved in the writing of the words of the letter. Knowing the value of time has been called the secret of success, and the man who wastes time had better waste money instead; but politeness, too, has its place in the world and has its indubitable value. We cannot afford to dispense with true courtesy, and while men may today be wealthier than they were in former times, one cannot but look with regret upon the passing of the old school of polite address—the school that taught the son a reverence for and politeness toward parents, that prompted the husband to raise his hat a little higher and bow a little lower to his wife than any other woman, because he honored her more than any other. We may gain time by leaving out some of the acts of politeness handed down to us from a few generations ago, but we lose in other ways.—*The Pathfinder*.

**DANGER IN DARK CLOSETS.**

PEOPLE would wonder far less why sickness is so common in their households if they would inspect their back yards and turn to light the contents of some closet underneath the stairs. In many homes, for instance, the clothes closet is a danger spot unnoticed, of which there are two kinds, in most homes at least; those large enough to be entered, and those built in small recesses accessible only from a door occupying a part of one side. Both kinds are usually arranged to fill the spaces not available for other purposes, and are dark and unventilated, so that, with other conditions supplied, they form excellent breeding-places for germs as well as moths and other undesirable tenants which are so common.

The original purpose of most closets is the keeping of wearing apparel and the storage of articles not in constant demand. In many instances, however, their use far exceeds their legitimate end, resulting in a picture of general confusion—shelves piled with boxes, bundles, bottles, papers, and all sorts of odds and ends; while on the floor, boots, shoes, slippers, and rubbers lie about promiscuously, the place seemingly having become a "catch-all" for anything and everything found lying loose in other rooms.

If only things clean and wholesome were stored in the closet one would need to be less concerned; but too often soiled aprons, dresses, and other garments mixed among the mass of clothing hanging upon hooks or accumulated in a heap upon the floor in corner, waiting for the weekly washing. All garments during wear necessarily absorb more or less effete matter constantly given off by the body; they retain in a greater or less degree, according to fabric and its texture, until cleansed by washing or by some other method. In this soiled condition they would be a source of pollution to the air of the closet in which they might be kept; particularly in a small, unventilated closet.

Thus, the closet in which such garments are stored is likely to be a veritable nest of germs, from which the dust atoms to be sent whirling about in the air of adjoining rooms every time the door is opened, or a movement of any sort takes place. The large rooms of the dwelling are thus free from every appearance of dirt, but are nevertheless "bottled-up" dust and germs in the ever-present, possible source of disease in the household.—*Mrs. E. E. Kellogg*

**FARMERS AND HO**

IN his recent trip through the West, President Roosevelt made many remarks regarding farming and government, worth noting. In pointing out the need for the transportation of f-

"Nothing is more important to this country than the perpetuation of our system of medium sized farms worked by their owners. We do not want to see our farmers sink to the condition of the peasants of the old world, barely able to live on their small holdings, nor do we want to see their places taken by wealthy men owning enormous estates which they work purely by tenants and hired servants.

"At present the ordinary farmer holds his own in the land as against any possible representative of the landlord class of farmer—that is, of the men who would own vast estates—because the ordinary farmer unites his capital, his labor and his brains with the making of a permanent family home, and thus can afford to hold his land at a value at which it cannot be held by the capitalist, who would have to run it by leasing it or by cultivating it at arm's length with hired labor.

"In other words, the typical American farmer of today gets his remuneration in part in the shape of an independent home for his family, and this gives him an advantage over an absentee landlord. Now, from the standpoint of the nation as a whole it is preëminently desirable to keep as one of our chief American types the farmer, the farm home maker, of the medium sized farm. This type of farm home is one of our strongest political and social bulwarks. Such a farm has proved by experience the best for the nation's leaders alike for economic

The enemy against which the declaration of hostility has gone forth is the rat, that pestiferous creature that carries infection and destroys property and life, that plague of shippers and grain handlers, and of those who prefer cleanliness to filth.

Science has lately discovered that rats carry disease, particularly the bubonic plague and even the typhoid fever. Swarming in cellars and sewers and in other places where filth accumulates, the rats emerge on their food-hunting rounds and spread the germs of disease broadcast. If they could be exterminated to the last individual the health of the world would be improved by a large percentage, and the problems now confronting the sanitarians would be simplified to the point of solution.

Just at present San Francisco is the seat of war in this country, the rat plague having reached such proportions there that the Government has appropriated several hundred thousand dollars to exterminate the rodents. The campaign has been carefully organized, and is being intelligently and vigorously prosecuted. As an evidence of the keen interest which business men are taking in this crusade, comes a dispatch from San Francisco that the Santa Fe Railroad Company has sent a check for \$15,000 to the plague fund, which a committee of citizens is raising, to exterminate rats, and also that E. H. Harriman has authorized a contribution of \$30,000 from the Southern Pacific for the same purpose.

When the corporations spend their money at this rate the rat war must be regarded as a serious enterprise. It is likely that during the current fiscal year, what with Government funds and privately-raised means, over a million dollars will have been spent in San Francisco in this work.

Poisons that drive the rats out of their holes to die and thus prevent the festering of their bodies in their deep-hidden nests are to be used in large quantities. Other means are being adopted. The whole range of human knowledge on the subject of rat killing is to be exhausted. Systematically, scientifically the war will be carried on until San Francisco will be cleansed of its filth and ridged of its rats, and will no longer have reason to fear the plague or any other disease that may be carried about by these creatures. Such an accomplishment will be well worth the money.—*Washington Star*.

#### BACK TO THE SOIL.

The city of Berlin erected last year more buildings than did Chicago. This comes not as a startling bit of news, but as a reminder of the mania which seems to be driving the peoples of all countries in a mad rush from the farm to the city. The proportion of our own urban population to the whole number of our people, which was only three per cent in 1790 and twenty-

two per cent in 1880, is now thirty-three per cent, and is growing by leaps and bounds.

The discouraging thing is that this movement is taking place now when labor on the farm is needed so much and when farm life was never so wholesome or attended with so many conveniences. Boys are leaving a comfortable living in the country to work for starvation wages and live under unsanitary conditions in the cities. Instead of returning to their homes in the small towns where they might almost immediately come to positions of trust and influence, the graduates of our colleges are settling down in the cities where many years of labor in subordinate positions must precede distinction. The situation is not at all a wholesome one and needs to be met with a vigorous campaign of education in which the pulpit, the college and the newspaper stand shoulder to shoulder.—*Home Herald*.

### For SUNDAY READING

#### IF.

MARY C. STONER.

There's sweetness in the deepest sorrow,  
There's joy in every woe,  
If trustful hearts can find the meaning  
The Lord would have them know.

There's blessed joy in humble service,  
There's balm for every need,  
If patient hands perform the labor,  
If love controls the deed.

There's sunshine o'er the hills of darkness,  
There's rest for weary feet,  
If earnest toil will struggle bravely  
Till all the task's complete.

There're countless visions filled with glory,  
There're stores of wondrous worth,  
If human eyes could lose their blindness  
And look above the earth.

There's boundless love to fill the longings,  
There're showers from above,  
If hearts would ope their doors to heaven,  
If hearts would know the love.

There's wond'rous life within the Spirit,  
There's joy beyond compare,  
If only self would yield its idol,  
If self would yield its care.

There's satisfaction in his fullness,  
There's grace for ev'ry hour,  
If hearts would cease to care for sinning  
And trust his saving power.

There's mercy free in Christ the Savior,  
There's pardon sweet for all,  
If men would know the need of cleansing,  
If men would heed God's call.  
North Manchester, Ind.

**"I AM DIFFERENT."**

SOMETIMES children may find things wrong in the home, and not think for a moment that to make them right they themselves must change. It is very easy to put the task of improving things on other people. I once heard of a little girl who was much dissatisfied with her home-life, and always telling her grievances, and showing her discontent in voice, look and manner. One day a friend who knew all about her complaining, was greatly surprised when she met her to see her quick step and bright smile, and to hear her sweet and happy voice. She was so different in her disposition that the friend was moved to ask how things were at her home, thinking that some good news had been received, or some happy home event had happened. The little girl exclaimed, "Oh, everything is just the same at home, but I am different." Many a home would be much more pleasant if those in the home who find fault would pursue this little girl's course, and be different.—*Exchange*.

**THE VALUE OF HOME TRAINING.**

SOME things we learn from our parents will stay by us in later years, however much the world may encroach upon our hearts and minds. The fact is, truth has a mighty force of its own when taught in love. The child's mind is in a plastic state and the impressions made by the truth spoken by father and mother are likely to endure, when love seals every word. This fact has a pleasant illustration in the following simple event:

A Christian family highly esteemed in a western New York village, removed to Michigan. Guy, an industrious, conscientious lad of this family, wishing to become helpful to his parents, was employed by the publishers of a leading paper to sell the daily issues in that town. After the bargain had been made, he was told that he would be expected to sell on Sundays as well as on week days. This he had not taken into the account, and it troubled him exceedingly. He was very anxious to have the situation, but could not see how he could spend his Sabbaths in that way. He appealed to his parents who very wisely told him "to think the matter over," knowing that the principles which they had inculcated would lead him to a correct decision.

At first he thought of employing another boy to do the Sunday work, but after a little thought concluded this would not be right. Finally he determined to give up the position altogether, and so informed the editor of the paper.

"I can't work on Sunday," said Guy.

"Oh," replied the editor, "I used to feel so too; but now we all work on Sunday, and you had better continue with this."

"No," he firmly answered; "if I must sell papers on Sunday, I'll stop altogether."

This noble stand taken by the young lad must have caused his employer to think of earlier days, and perhaps of his own mother, for he soon responded:

"You need not give up your position. Keep it and I promise you I will stop printing a Sunday edition of my paper."

Guy went away delighted, of course, and the editor has kept his word although his paper had a large circulation. That is what a boy can accomplish.—*The Mennonite*.

**WHY CHURCH IS A FAILURE.**

CHURCHES are failures in doing what they are supposed to do because they depend upon charity, and in depending upon charity they look to those who are best able to give charity. Because they must depend upon the voluntary contributions of the wealthier class of people they fear to offend these people, and because they fear to offend they fail to tell the truth either in pulpit or in Sunday school.

As a matter of fact, congregations are largely made up of people other than the workers and they do not care to hear of any reform that will rob them in any way of the right or power to tax other people. The only people who ever did take kindly to the religion of Jesus Christ, as taught by him, were the poor. Churches and preachers have tried to construe his teachings to fit all kinds of conditions, but when Christ said that it was as hard for a rich man to enter the kingdom of heaven as for a camel to go through the eye of a needle, he meant that the rich man must cast aside his riches before he could enter the kingdom, but instead of doing that the rich man fixes his possessions so that he can keep them forever if possible. He considers his family as part of himself and by continuing his wealth in his family he virtually keeps it, and it keeps him from heaven. He also helps to make laws that allow his children and his grandchildren to tax the public perpetually, and much of this legislation is bought and paid for. These are millstones about the necks of the rich members of the congregation and the preacher fears to talk real reform for fear of its effect on his salary.

There is no compromise between right and wrong, and the preacher who is trying to preach the religion of Christ so as to satisfy the speculators and gamblers of the world may as well make up his mind to be satisfied with the pay he gets on earth and let go the idea of a crown and harp in heaven.

CHARLES DUDLEY WARNER once said: "To teach a child how to read and not what to read is to put a dangerous weapon into his hand."

# Echoes from Everywhere

Conditions for a good crop of spring wheat in N. Dak. were never better at this time of year. Nearly all the wheat has been sown, and at the time of this writing a rain is falling which will insure an even stand of grain.

The mine operators of Montana have bought a smelter, and will smelt their own ores. They have been at the mercy of the smelter trust for some time, and refuse to submit to its excessive charges any longer.

The Minneapolis Journal, which opened up the question as to why the women follow the fashions, has taken quite a dislike to the Merry Widow hats. Hardly a day passes without an editorial comment on these monstrosities.

The postmarking of postal cards at the office of the address has been discontinued because of complaints that the practice disfigured the picture postcards, or obliterated the message, even when the mark was made on the address side.

"I VIEW THE UNCONTROLLED CONDITION of the liquor traffic as a serious danger . . . if the State does not soon control the liquor traffic, the liquor traffic will control the State."—Lord Roseberry, former Premier of England.

The new Catholic church laws, published last August, went into effect at Easter. Engagements now, to be binding, must be in writing and the marriage must be performed by the priest of the parish in which one of the parties lives.

Both the House and the Senate have passed an anti-betting bill which prevents gambling on horse-races in all parts of the District of Columbia. The bill passed the senate just 24 hours after the spring meeting at the Benning race track in the District had closed.

Joseph H. Patterson, the wealthy president of the National Cash Register Co., has decided to remove his factory from Dayton Ohio, on account of what he terms the "petty annoyances" of the people. He admits that his "welfare" work with employees is a failure.

It is well known that in experimenting with the Roentgen light many a scientist has lost his hand or even his life as a result of the burns and cancers which set in. A Cornell professor, A. C. Geyser, now announces that he has invented an appliance which will obviate this danger so that patients need no longer fear the painful burns which have hitherto attended its employment. He makes use of a tube, called the Cornell tube, in connection with the X-ray machine and in using it 5,000 times not a single lesion resulted. The use of the tube was recently demonstrated before a meeting of radio-therapeutic experts and a number of patients who had been cured without suffering injury were exhibited.

The construction of a huge new waterway across Siberia, nearly parallel with the course of the Trans-Siberian Railway, is projected in Russia. It is proposed to connect five great Siberian rivers—the Tobol, Ishin, Irlish, Ob, and Yeniesse—and other less important streams, by canals or light railways.

About 35 years ago Hon. W. W. Thomas, U. S. Minister to Sweden, brought over a colony of farmers and they established the town of New Sweden, in Northern Maine, now one of the most prosperous towns in the State. The Swedes are to be found all over New England and stand in the forefront for honesty, industry, sobriety and general good citizenship. F.

The latest electrical lighting apparatus makes use of quartz. Mercury vapor is used and a quartz tube is placed inside a glass tube, the whole contrivance resembling an arc lamp in general appearance. The device will give light for 1,000 hours, and an advantage that is claimed for it is that it is unnecessary to replace any electrodes.

The speed of submarine telegraphy is illustrated by the fact that five minutes are usually sufficient to cover a complete buying and selling operation between the London Stock Exchange and Wall Street. The distance between these two points is about four thousand miles, and it takes the message less than a minute for the journey.

The American Society of Equity claims that it has kept up the price of spring wheat in the face of the financial panic. At a meeting held in Fargo, N. Dak., this claim was made, and it is proposed to make a strong campaign to extend the influence of the society in Minnesota and the Dakotas. A movement is on foot to have the society erect terminal elevators in Duluth and Minneapolis.

The town of Wishert in Kankakee County, Ill., has sixty-three votes. The voters are nearly all Hollanders, most of whom are truck gardeners. The liquor people said: "Oh, those Hollanders will all vote for saloons." There were only two anti-saloon speeches made during the campaign, as it was considered a hopeless case. Forty-three of the sixty-three votes were against the saloon. You can't always tell about these foreigners.

The North Dakota Durum Wheat League was in session in Grand Forks recently. The purpose of this league is to secure a better rating and better prices for Durum (macaroni) wheat. Prof. Ladd, of the North Dakota Agricultural College, reports that analyses show that there is a large proportion of Durum in the flour from various milling centers, yet Durum sells at from ten to twenty-five cents less per bushel than other wheat. The league protests against this discrimination.

MILFORD, Mass., April 14.—Large quantities of granite are being shipped from local quarries to Washington, D. C., for the material in the United States Treasury building. The blocks are mammoth ones, weighing some fifty tons, measuring 32 feet in length and tapering from four feet at the base to three at the top. Thirty blocks were included in the first shipment and it will take about two years for the required amount to be quarried.

According to the "Scientific American Supplement," the production of denatured alcohol for the first six months of 1907, under the new law covering its manufacture, amounted to 1,774,272 gallons. The supplemental new alcohol law will, it is estimated, lead to a production of 4,000,000 gallons for the calendar year. The operation of the law has already reduced the cost of wood alcohol from prices varying between 60 and 75 cents to 30 cents a gallon, a fact which plainly indicates that a fairly efficient monopoly has been established in the wood alcohol business.

Indianapolis, April 23.—Attorney-General Bingham will file suits against all brewing companies in the State on the charge that they have been operating saloons and transacting a retail liquor business. There are more than twenty brewing companies in the State, and it is declared that practically all have been controlling saloons. The State will contend that conducting a retail liquor business by brewing companies is illegal. The suits will ask injunctions restraining further violation of the law, revocation of charters, appointment of receivers, and practically means the elimination of such breweries from the State, if the suits are successful. This action, also if successful, will put out of business more than 3,500 saloons.

Hongkong, April 24.—The Chinese are strenuously fostering the boycott. It is now clinched for continuance by the signing of a document in which the Chinese pledge their adherence under the penalty of a fine of \$200 for each offense of having their own fathers and grandfathers' names posted in public thoroughfares among China's traitors and of having their names expunged from the guilds. The document is ingeniously worded to avoid mention of the boycott of Japan. It is signed by 190 leading firms having branches in Hongkong, Canton, Singapore, Shanghai, America and Australia, and representing the entire community of South and Central China. They bind themselves under a solemn pledge to buy no Japanese goods, to accept no Japanese insurance policies, to send no remittances through Japanese banks and to ship no cargoes in Japanese bottoms.

The development of the big scandal in connection with land frauds that have taken place under the very nose of Congress and the rest of the government at Washington is likely as a result of a provision inserted in the public building bill reported to the House. It is shown that peculiar methods in the land grab game have not been confined to the public land States of the far West. Information has reached the authorities that titles have been obtained illegally to sections of land in the district which afterward have become suddenly of great value. Attention was attracted to the matter originally by the case of Sidney Bieber, formerly a protégé of Speaker Cannon. Bieber had secured tracts in the district in a manner which called from Senator Carter of Montana the severest grilling of an individual heard on the floors of Congress in years.

Wilson D. Wing of Bangor, Maine, has recently been in the South making investigations in regard to the use of rice straw in the paper manufacturing business and his work along this line is being watched with interest by the prominent pulp and paper men of Maine as well as other sections of the country. According to a well-known paper manufacturer of Bangor the project is entirely feasible, altho, according to this manufacturer, paper of a quality fine enough for writing purposes could hardly be made of rice straw.

Believing that the boys and girls of New England can learn, through occasional visits to Boston, a great deal that is really essential to their regular studies, the city of Boston publicity bureau is sending a circular letter to the heads and teachers of the various schools, academies and colleges, outlining the value of educational pilgrimages to the "Modern Athens." This idea has been already tried by a number of the New England schools especially in connection with class trips to Washington, and the teachers and principals in charge of these excursions, as well as the pupils themselves, have invariably been delighted with their experiences. Several parties of bright boys and girls have visited Boston on the way to the national capital this spring.

Cando, N. Dak., is highly gratified by an unusual honor paid one of her citizens by the President and Gov. Burke. Mr. F. L. Thompson, who has had a prominent part in the development of this section of the State, having first proposed the Brethren as colonists for the government lands near Cando, and having done much to make the movement a success, has been invited to attend the conference of governors and other notables at Washington, May 13 and 14.

Mr. Thompson came to the State in the early days from southern Illinois, where he knew the Brethren well. He was a very successful farmer, and prospered in spite of early discouragements. When the Brethren came, he was able to give them good advice as to methods of work, and was always generous with his assistance. He is now the head of the Thompson Realty Co., one of the soundest institutions in the Northwest. His friends among the Brethren will be especially glad to hear of the honor conferred upon him.

#### Farm Help Wanted.

Commissioner of Labor Lyons this year is investigating the farming opportunities thruout Maine. Blanks have been sent all over the State asking information along these lines: Opportunities for securing farms and cost, opportunity to secure labor, permanent or temporary and also the class of labor, that is, the nationalities preferred.

While he is laying particular stress on the farming proposition, Commissioner Lyons also is asking for information concerning the chances laborers, other than those of the farm, have of employment in the State.

Up to this time, the returns show that demand for farm labor is far in excess of the supply. From all portions of the State the reply is, that "we cannot get men to work on the farms; we want farm help and there is ample work for it."

The immigrants from Sweden are most wanted. The experience all over Maine, in the farming sections, indicate that the Swedes make very desirable citizens. They are good workers, thrifty and are a valuable acquisition to the community.

## CREAM OF MAGAZINES

### PEACE DAY IN THE SCHOOLS.

The following letter, says the Advocate of Peace, has been sent by the secretary of the American Peace Society, under instructions from the board of directors, to all the state superintendents of public instruction in the United States, and to the superintendents of schools in all cities of 25,000 population and over:

Dear Sir: Permit me to call your attention again this year to the observance of the 18th of May, the anniversary of the opening of the first Hague Conference, as general Peace Day in the public schools.

The importance of this observance can hardly fail to impress itself upon educational leaders who give the subject careful attention. The international peace movement, which is expressing itself through The Hague conferences and the great national and international peace congresses, is now confessedly the most important philanthropic movement before the world.

Such a Peace Day affords opportunity in the schools to bring before the minds of the children and young people in a simple way the newer ideals of the relation of races and nations which are rapidly coming to the front. It is self-evident that the boys and girls who are going to be the workers and leaders in the world's progress the coming generation should early have instilled into them right notions of the relations of nations and peoples to each other, and some elementary knowledge of the movements which are rapidly bringing about the unity and ultimate peace of the world.

Where exercises of this kind have taken place in the schools the past two or three years, the boys and girls have responded eagerly to the appeals made in behalf of humanity and peace, and, where asked to do so, have themselves taken part enthusiastically in the exercises.

It is not proposed that the 18th of May be made a holiday, or that any large amount of time should be taken from the regular school duties, but that only half an hour, or at most an hour, should be devoted to this subject. The freshness of spirit aroused by such exercises compensates many times over for the time devoted to them.

During the past three years the state superintendents in no less than twelve states—Massachusetts, Rhode Island, Vermont, Ohio, Kansas, Pennsylvania, Montana, Colorado, California, Connecticut, New Jersey, and Idaho—have recommended the observance of the day in the schools under their supervision, and in a considerable number of other states local superintendents have taken the matter up and secured most satisfactory results in the schools under their charge.

It is to be hoped that this year the Superintendents of Public Instruction in all the states and the superintendents in all the important cities of the nation, to whom this letter is addressed, will coöperate in securing the general observance of the day throughout the country in the way proposed.

The American Peace Society will be glad to place its

literature, at a merely nominal price, at the service of superintendents and teachers who may desire to use it in making preparation for the day.

Asking your favorable consideration of the suggestion here made, I am, on behalf of the Board of Directors of the American Peace Society. Yours very sincerely,  
Benjamin F. Trueblood.

Boston, March 2, 1908.

### RECENT WORK OF LUTHER BURBANK.

One of the most important examples of the work to which Luther Burbank has devoted himself is the development of a plant-friend of his earliest years—the opuntia; for, as he expresses it, a thornless cactus was one of the first pets he had. There are hundreds of varieties of the opuntia, or prickly pear—so many that it has been a difficult matter to classify them; and they grow in almost as many different portions of the globe. Commonly supposed to be naturally thorny, in reality the opuntia was originally spineless and in addition possessed leaves. Lack of rain in the wild regions in which it spread caused it gradually to discard its leaves and substitute its stems (enlarged) as moisture-gatherers. And in time thorns developed as the ravages of hungry animals increased, for nature usually gives her offspring some means of defense. Some varieties of wild thornless cacti are still to be found in Hawaii and other countries, growing in crevices of rocks or other spots inaccessible as feeding grounds. But in the places where forage is most needed, upon millions of arid acres all over the world, the opuntia's spines are most huge and fierce, its fine, sharp needles most deadly. In periods of drought and famine hundreds of thousands of animals have perished on Texas tracts and other wide stretches for lack of food and water. At its best the prickly pear means both, but even where ranchmen singe the cactus for their cattle the spines cannot be entirely destroyed, so that in such instances animals suffer and die as well as when driven desperate, to the unsinged plants.

Our own government and scientific men of other countries have taken this work of Mr. Burbank's very seriously, since it has been found that the cultivated, spineless opuntias he has bred will withstand adverse conditions of climate or soil quite as well as those native to desert regions and at the same time produce ten times more food than the average type of wild opuntias. But it is not only in desert regions that the thornless cactus is practicable and useful. The usual farm-crop of forage is about twenty tons per acre; the new varieties, Mr. Burbank says, will produce 200 tons per acre, that is, under favorable conditions on good cultivated soil; and upon gravelly or rocky stretches where nothing now brings returns to the farmer this easily grown fodder-crop will assure excellent results.

Although in one sense the thornless opuntias have virtually been brought to perfection, Mr. Burbank is still at

work upon them, developing another phase of their usefulness, and one of the very latest things he has accomplished is to prove that the seeds may be made to go the way of the thorns. He has now two kinds of prickly pear whose fruits are practically seedless. The few still in evidence are almost as small as tomato seeds now, he says, and growing fewer all the time. The fruit is of value to stock from its juiciness and from the amount of sugar it contains (14 per cent, more or less). Also, the best cactus contains  $2\frac{1}{2}$  per cent of fat, while others contain only a small fraction of 1 per cent. He reckons that on the poor types of soil the average crop of fruit alone is 18,000 pounds per acre. As food for man the fruit is not new, but the type oftenest found hitherto has been rather insipid—not unpleasant, yet distinctly peculiar in its flavor and of mucilaginous consistency. The wild specimens have chiefly been valued to quench thirst, yet in a number of the warmer countries they are eaten to some slight extent as a dessert-fruit, in marmalades, and are used for coloring ices, jellies, and other concoctions, the usual color being crimson. Mr. Burbank, however, has bred both crimson and yellow opuntias which he considers superior to the banana in flavor and they are delicious, variously prepared. One novel use to which both fruit and leaf-juice are put is as an addition to whitewash, since it acts as a preservative against exposure to inclement weather.

#### FACTS ABOUT OUR TREES.

"All our standing timber is estimated to be somewhere between fourteen hundred and two thousand billion feet," says Emerson Hough in "The Slaughter of the Trees," in the May Everybody's. "If we use forty billions per annum, we can run thirty-five to fifty years at the present rate, provided we do not have any waste. If we use one hundred billions per annum, our timber will last fourteen to twenty years, on the same basis. If we use one hundred and fifty billions per annum, in nine to thirteen years our timber will all be gone! We have now about 165,000,000 acres in our national reserves. If we had three times that much, we should not have enough.

"If it costs twenty acres a Sunday, or forty acres a week, or 2,080 acres a year to print one daily newspaper, what does it cost in acreage to print all the newspapers in all the cities and towns of America? Add to this the enormous editions of our magazines. Add to this the paper used in books. The total staggers the imagination, and yet the amount of timber cut for pulp in the United States annually is less than five per cent of what is cut for lumber. Last year we made more than 315,000,000 lead pencils. A lead pencil is not very large, but the total number of lead pencils required 7,300,000 cubic feet of cedar. We have cedar enough to last us just twelve years.

"More than 100,000 acres of timber, in the whole United States, are cut over every working day. We use many times more timber per capita than any other nation. We have left not over 450,000,000 acres bearing commercial timber. Cast up in your mind some of the small demands of industry upon this supply. Our railroads are said to use one-third of the industrial timber cut for ties. Suppose we could cut one hundred ties to the acre; we should require a million acres a year for ties. We annually reap for telegraph and telephone poles somewhere between three and four million acres of land. Our tanneries two years ago required 1,370,000 cords of bark. In the same year we cut 11,858,260 shingles and 3,812,807 laths. Then we had to timber our mines, and for that we used 165,-

000,000 cubic feet, not board measure, much of which was the best of hardwood."

#### THE INDETERMINATE SENTENCE.

The Commission on the Indeterminate Sentence of Maryland appointed under a law of 1906 has just made its report. The commission was composed of five citizens all interested in questions relating to the care of prisoners. One member had served for twenty years as the warden of the Maryland Penitentiary, and another member had served for several years as president of the Board of Visitors of the Baltimore City Jail. The commission has given earnest attention to the subject. The report gives a brief account of what the indeterminate sentence is and what is claimed for it by its friends and states that "the main question at issue between the indeterminate sentence and the definite sentence is whether it is for the best interest of the State that the trial judge or a board of managers acting as a board of parole should determine the length of sentence." A very slight study of the definite sentence and its application by the courts shows that it is one of the worst legal instruments ever devised for the perpetuation of crime. It is not surprising, therefore, that some of our most eminent judges and jurists who have given attention to the subject feel that the definite sentence is not fitted to the requirements of modern life. It is a relic of an archaic system and belongs to the period of candles, whale-oil lamps and tinderboxes. It is a part of our legal machinery which ought to go to the junkshop. What a modern judge with the help of the jury should be asked to decide is whether an accused person has actually committed a certain act or acts and whether his offense, taken in connection with a study of his character, is such as to make it important to remove him from society instead of placing him on probation. The question whether a man should be removed from society for discipline and correction is totally different from the question as to the day when he may or should be released. The judge and jury may well decide the first question, but they are incompetent to decide the second. Any doctor who, when a patient was committed to a hospital or asylum, should attempt to fix the precise day of his discharge as cured or convalescent would be considered a quack. Legal quackery is no better than medical quackery. Our criminal codes are full of it and our judges are unfortunately obliged to practice it because they have no other resource.

It seems not a little curious that the ancient and mediæval method of inflicting a certain amount of suffering as the supposed equivalent for a certain offense should retain its hold so tenaciously in our legal system. It is one illustration of the conservatism of the law. It is a method which does not furnish protection to society. In these days of electric lights we need to turn the searchlight upon our legal system and its consequences.

Evidently an important reason and perhaps the most influential, in deterring the Indeterminate Sentence Commission of Maryland from applying this principle to the penitentiary of that State was the fear of disturbing or reducing the large profits made in that institution from the labor of prisoners. The penitentiary, which cost the State \$1,500,000, has an average prison population of about 950. Prisoners are largely employed in the shirt industry, about one-fourth of them in the boot and shoe factory and about one-fifth in the hollow-ware foundry. In 1906, a surplus of \$44,000 was returned to the State of Maryland over and above expenses, and during the year the prison-

ers earned for themselves \$41,682 in addition to receipts mentioned above.

It is a matter of some surprise that the Maryland commission, while declining to convert the penitentiary into a reformatory on the Elmira plan, did not at least in a qualified form apply the indeterminate sentence as it has been applied with excellent effect to state prisons not classed as reformatories. Without disturbing to any serious extent the productive features of the penitentiary, unless to reduce the surplus turned over to the State, it would not be difficult to classify the prisoners and establish a system of marking and grading and a board of parole such as has been created in many States. That would be a great improvement over the present commutation system now applied in the penitentiary. The experience of a great number of the States of the Union and a great number of the countries of Europe in the direction of the conditional release of prisoners after serving a term of imprisonment, has been so convincing that it is not to be overborne by the timidity of any single State, or by the experience of any governor. In scientific penology, facts and experience are worth any amount of theory and these all sustain the wisdom of good parole laws.—Charities and the Commons.

#### MOTHER EARTH.

Old Mother Earth woke up from sleep  
And found she was cold and bare;  
The winter was over, the spring was near,  
And she had not a dress to wear!

"Alas!" she sighed with great dismay,  
"Oh, where shall I get my clothes?  
There's not a place to buy a suit,  
And a dressmaker no one knows."

"I'll make you a dress," said the springing grass,  
Just looking above the ground,  
"A dress of green, of the loveliest sheen  
To cover you all around."

"And we," said the dandelions gay,  
"Will dot it with yellow bright."  
"I'll make it a fringe," said forget-me-not,  
"Of blue, very soft and light."

"We'll embroider the front," said the violets,  
"With a lovely purple hue,"

"And we," said the roses, "will make you a crown  
Of red, jeweled over with dew."

"And we'll be your gems," said a voice from the shade.  
Where the ladies' eardrops live—  
"Orange is a color for any queen,  
And the best that we have to give."

Old Mother Earth was thankful and glad,  
As she put on her dress so gay;  
And that is the reason, my little ones,  
She is looking so lovely today.

#### THE RULE OF THREE.

THREE things to wish for—health, friends and a cheerful spirit.

Three things to delight in—frankness, freedom and beauty.

Three things to admire—power, gracefulness and dignity.

Three things to avoid—idleness, loquacity and flip-pant jesting.

Three things to govern—temper, tongue and conduct.

Three things to hate—cruelty, arrogance and affectation.

Three things to think about—life, death and eternity.

Three things to love—purity, truthfulness and honor.

Three things to be—brave, gentle and kind.—*The Pilgrim.*

#### BETWEEN WHILES.

"How do your people here stand on internal improvements?" asked the congressman, who was around feeling the pulse of his constituents. "Well," replied the influential grocer of the village, scratching his chin, "I guess they're in favor of 'em. I'm sellin' more of these new-fangled breakfast foods this year than I ever did before."

Mr. Justcott—"Why, what are you crying about, dear?"

Mrs. Justcott—"O, George, the mice have got into the pantry and eaten up a beautiful custard pie I made myself!"

Mr. Justcott—"There, there! Don't cry over a few little mice!"—*Western Christian Advocate.*

#### The Fact.

"I see that the Supreme Court of Nebraska has decided that a woman has a right to get off a street car backwards."

"Yes, but that's because it was useless to say that she shouldn't get off backwards."—*The Commoner.*

Reluctant—"Your wife likes the last word, doesn't she?"

"I don't think so," answered Mr. Meekton. "Any way, she's mighty reluctant about reaching it."—*Washington Star.*

"If I knew you and you knew me,  
If both of us could clearly see,  
And with an inner sight divine  
The meaning of your heart and mine,  
I'm sure that we should differ less,  
And clasp our hands in friendliness,  
Our thought would pleasantly agree,  
If I knew you and you knew me."

---

#### WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

---

FOR SALE.—Mill building, 40 H.P. engine, meal and feed machinery, all new. Good wheat territory. Ready for flour machinery. Brethren preferred. Address First National Bank, Mulberry Grove, Ill.

# Of Course You Know of the **MIAMI RANCH**

**Miami -- Via Springer, New Mexico**

**You Owe It to Yourself to Come and See Before Purchasing Elsewhere Because**

1. Our climate is healthful.
2. Our soil is unsurpassed.
3. **Miami Ranch** is soul-inspiring in natural beauty.
4. Our water supply is abundant and chemically pure.
5. Our gigantic irrigation plant is practically completed and is built to stand for ages.
6. We are already storing a supply of pure mountain water in our mammoth reservoir for this season's irrigation.
7. Thirty families of permanent settlers imbued with purpose and with ability to accomplish are already located upon their farms.
8. A postoffice and general store are in full operation in our new town—**MIAMI**.
9. Church and school privileges are already provided for.
10. Sale of intoxicating liquor is forever prohibited upon the ranch.
11. **Miami Ranch** is peculiarly adapted to fruit culture and will produce abundantly all crops adapted to the temperate zone.
12. Our lands, which are now selling at from 35 to 70 dollars per acre, will double in value within one year.

Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, W. A. DICKEY, North Manchester, Ind.

## CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused **Annual Meeting** to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

### Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.

A complete Index,  
100 Membership Cards.

This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 150.

Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.

A complete Index,  
200 Membership Cards.

This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.

Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## 6 PER CENT NET ON NORTH DAKOTA FARM LOANS

All loans are first mortgage loans. No loan is made exceeding 50 per cent of the actual value of the property. Title in all loans is passed on by reliable Attorney and no loan sent out unless title is perfect. Interest is collected and remitted each year free of charge.

Write for reference as to my reliability. I will refer you to men that you know either personally or by reputation.

## THE INSTITUTE TIE

Dr. R. A. Torrey

Answers Practical and Perplexing Questions, similar to these recently published:

"Some teach that a believer is sanctified instantaneously; others declare that sanctification is a gradual process, perfected in heaven only. What does the Bible teach as to this?"

"Is it ever right to ask unconverted though moral people to teach a Sunday-school class or do other definite Christian work?"

"How would you prove the existence of God to an inquirer?"

"What is the Scriptural means of raising money for church or other Christian uses?"

"Kindly explain Acts 13: 48; 'And as many as were ordained to eternal life believed.' Are some born to be lost?"

Another department **Dr. Torrey** maintains is: **STUDIES IN THE LIFE AND TEACHINGS OF OUR LORD.**

**Dr. Jas. M. Gray** conducts regularly his Bible course.—**THE LAYMAN'S COMMENTARY ON THE OLD AND NEW TESTAMENTS.** He began the **BOOK OF EXODUS** with the April issue.

Other Regular Departments.

Editorial Notes, Contributed Articles, Bible Book Studies, Methods of Christian Work, etc., For Sermon and Scrap Book, Anecdotes, Outlines, World News, Notes and Suggestions, The Evangelistic Field, Book Notices.

Monthly, \$1.00 a Year. Specimen Copy Free.

It is expected that **THE TIE** will report the addresses of several Bible conferences during the coming summer.

**THE INSTITUTE TIE,**  
80 Institute Place, Chicago.

# Facts Regarding Imperial Valley

Some people in trying to induce their friends to settle in the country where they themselves are located, frequently send them advertising matter that is gotten up by unscrupulous land agents that deviates from the truth. Their friends come and buy property and soon find out that the facts do not correspond with the advertisements sent them. The result is they soon become discouraged and sell out at a sacrifice, and go back where they came from, worsted financially and in some instances say worse things of the country than they should, and thus bring reproach on a good country (though not as good as the advertisement represented it to be). The undersigned has known this to happen more than once, and for this reason has decided to tell his friends about the Imperial Valley in his own words, so that he alone shall be responsible, and so that the wonderful Imperial Valley may never be made a reproach and a by-word.

Imperial Valley is situated in San Diego County, California, 183 miles east of Los Angeles on the Imperial branch of the Southern Pacific railroad. The soil is an alluvial deposit and all crops are grown by irrigation, with water from the Colorado River. The main irrigation canal is 80 feet wide on the bottom and 100 feet wide on the top, and 10 feet deep. The soil is adapted to the growth of wheat, barley, alfalfa and nearly all kinds of fruit. Alfalfa having plenty of water can be cut eight times per season, yielding as high as ten tons of nice hay per acre which sells at present from \$8.00 to \$11.00 per ton. Barley can be sown for winter pasture in alfalfa stubble after the last crop of hay is harvested. Alfalfa can be cut every three weeks if the hay is wanted for dairy cows, or every four or five weeks if wanted for horses. I have known of alfalfa yielding \$40.00 worth of seed per acre and my own yielded \$20.00 per acre with the first season's sowing. Dairying and hog raising are very profitable. Butter sells from 20 cents to 45 cents per pound; hogs, 7½ cents on foot; also beef, cattle and horses do excellently. One colt weighed 960 pounds at less than one year old. One acre of alfalfa will keep from 2 to 3 head of dairy cows or horses and from ten to fifteen head of hogs. Oranges, lemons, dates, figs, apricots, grapes and berries do well. A single grape vine has yielded 30 pounds of grapes 18 months from setting. Grapes, apricot and cantaloupe growing is very profitable as they will ripen here from three to four weeks earlier than other places, and be placed on the eastern market before they are ripe in other localities. One man at Coachella was offered \$600.00 cash for the grapes on a single acre of vines and refused the offer and sold at retail for \$1,400.00. Cantaloupes will net the growers from \$50.00 to \$300.00 per acre. I have lived in the valley as long as any one, being one of the first settlers, and my experience and observation has taught me that you can grow almost anything here you plant, including vegetables, if planted in the proper seasons and properly cared for. The selling price of land at present is from \$40.00 to \$100.00 per acre, owing to location. President Roosevelt says that when it is thoroughly developed it will be worth from \$500.00 to \$1500.00 per acre.

Reader, when you shiver around your fireside the coming winter, just think of the Imperial Valley where you can go in your shirt sleeves nearly every day in the year. And on the 10th day of this month (May, 1907), while there was a snow storm raging in many places in the eastern states, we were making hay and picking and eating fruit in the Imperial Valley.

# ALBERTA

---

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

### **TOURIST SLEEPING CARS.**

A striking feature of the Union Pacific passenger trains is the tourist service. The tourist sleepers are identical with the standard sleepers, with the exception that their furnishings are not on so grand a scale, but the accommodations are equally good and are sold at HALF THE PRICE of the standard. The seats are upholstered, and at night the berths are hung with heavy curtains. Each car is accompanied by a uniformed porter whose duties are the same as those upon the Pullman Palace Sleepers.

### **DINING CARS.**

Union Pacific dining cars are operated on all through trains. These cars are all new in style and models of beauty and elegance.

### **DINING ROOMS AND LUNCH COUNTERS.**

Dining Rooms and Lunch Counters are located at convenient points along the line, and all through trains which do not carry dining cars are scheduled to stop at these points. Well prepared meals of the best quality are properly served at popular prices. Full time is allowed for meals.

# Read this Telegram and then Have Your Ticket Read to Macdoel

**RECEIVED at**

27 yt hd 10 dh

SAN FRANCISCO, CALIF 4-30-8

E.M.Cobb, 3 Edison Ave. Elgin, Ill.

Through trains between Weed and Macdoel commenced running May first.

Geo.L.Mc Donough

7:10 P.M.

¶ Macdoel lies in one of the richest valleys in California. Towns that are surrounded by a rich agricultural and fruit-raising community are the ones that grow rapidly. The climate is ideal. No excessive heat or cold. Winters pleasant. No blizzards, drouths or earthquakes. A famous health retreat and pleasure resort. Health and wealth at the same time.

¶ We feel sorry for you people back East in the midst of May snows and frosts. Too bad your gardens and flowers are all frozen. Come West. Don't wait till next year. It's not likely to be any better then. Don't stay where it is nine months winter and three months late in the fall.

¶ You ought to see the buildings going up here this Spring. The farmers have cleared thousands of acres of sagebrush land and sowed it to oats and other grain. Many large orchards will be planted this fall. "Something doing" then. People north of us who have had time to grow fruit received \$1000. an acre for their apples on the trees last Fall. We can produce the evidence for this.

¶ Shake the snow off your hat, put your overcoat in the trunk, get out your summer clothes and buy a ticket for Macdoel. Sell your tank heaters, soapstone footwarmers, and bobsleds to the neighbors; they'll need 'em. Tell them not to let the fire in the furnace go out for a few weeks yet, or the water pipes will burst.

¶ By the way, do you want a lot in Macdoel? The railroad is here now and there will be a sale on the lots soon. Don't wait till you have to buy a half-mile back from the center of town, and then blame us for it. Write us now.

# JERRY McAULEY An Apostle to the Lost

Edited by R. M. Offord

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser of human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them is to find the clew to his power. Here is one of them. "I have nothing to be proud of; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

## Kindle the Flame in Other Hearts

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

## Every Church Worker

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

# **THE SPRING OF 1908**

will witness a new influx of thousands of settlers in the fertile valleys of **SOUTHERN IDAHO**. A great many have gone and a large number are making arrangements to go soon.

## **80,000 ACRES Open For Settlement**

**June 1, 1908, at Twin Falls, Idaho**

Under the Cary Act, filings on 40 to 160 acres may be made by power of attorney. Price \$40.50 per acre, payable \$3.25 down, balance in nine annual payments. Easy way to get a valuable farm.

### **EXCURSION FOR THIS OPENING**

**Tuesday, May 19, 1908**

**ROUND TRIP** rates from Chicago to Twin Falls, Idaho, \$50.80. Corresponding rates from Peoria, Kansas City, Omaha and all principal points.

## **Wonderful Possibilities**

for homeseekers and investors. Climate Mild. Soil Very Productive.

Alfalfa, Sugar Beets, Fruits, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

### **An Opportunity of Your Life**

This is an opportunity of your life. Grasp it before it passes. Be sure to make arrangements now to go on this excursion with scores of others that are now planning for the trip.

## Their "Big Brothers"

Samuel B. Heckman

THE special Children's Court of New York City tells a pathetic story. Between nine and ten thousand children are brought before the tribunal of this court each year to answer for misdemeanors of various kinds. The story of these children and their crimes is usually the story of the lack of proper home surroundings. Often it is the story of indifferent or vicious parents whose lives teach the child all kinds of wrong. Often boys have got the upper hand of mothers who have to spend the entire day washing or cleaning office buildings. In many cases there is no father, or if there is he is worse than none and the boy learns his morals from the street. Pernicious influences of many kinds hedge the child about, dwarf his right development and rob him of the sunny side of life which should be his by heritage. The fault is rarely the child's that he is found in a course which, if unchecked, will lead to the reformatory or to prison. The officers of the court give as their conviction that out of fifty thousand cases tried, nine-tenths of them are traceable to the environment in which the child grew up, and not to the fact that he was "born bad," the old theory of crime.

About three years ago Mr. Ernest K. Coulter, who is Deputy Clerk of the Children's Court of New York, addressed the Men's Club of the Central Presbyterian church one evening telling of the work of the court. He gave a very vivid description of the living conditions in the overcrowded tenement districts from which most of the boys come who appear before the court. He gave as his belief that most of these boys who are arrested for various crimes could be saved to useful lives and made good citizens if only someone would be willing to show himself a friend to the boy, take a personal interest in him, advise him, help him out of his environment, and be a sort of big brother to him. A remarkable movement was born then and there, known ever since as the Big Brother Movement. Forty men pledged themselves at that meeting, each to look after one boy. These were busy professional and business men. They were men who had

comfortable places in which to live, plenty to eat and to wear, and in many ways enjoyed the good things of life. They were now to come in touch with boys many of whom knew scarcely any other home than the streets, who never had regular meals and often went a whole day without anything to eat, and who were acquainted only with the gray side of life. These men felt, however, as all philanthropic and charity workers are coming to realize, that genuine human sympathy and righteous personal contact are wonderful powers in reforming and uplifting society, and it is better to help our needy fellows to help themselves than it is to bestow charity outright, except for temporary relief. The movement thus begun soon spread to other clubs and to the Young Men's Christian Association, there being at present six hundred men in this city who are devoting themselves to helping their less fortunate Little Brothers.

There is no fixed way of being a Big Brother. Each man must express his friendliness in his own way. The main object is for the Big Brother to take a kindly interest in the boy and to have for his aim to see that he has a fair chance to become a good citizen. When a man decides he wants to become a Big Brother he is given the name of a boy and such information as is known about him by the court. He then calls at the boy's home and tries to make his acquaintance and that of the parents. This is not always an easy matter and requires much tact. Such an attempt is often viewed with much suspicion at first because the purpose is not understood. One Big Brother received a pail of dirty water in his face when he made his first call. Various means are used to win the boy's friendship and confidence. The Big Brother invites the boy to his own home, takes him to a ball game or to some good entertainment, has him attend some meetings of the Young Men's Christian Association, and gradually a new life opens up to him who was headed for the reformatory or a career of crime.

The Little Brothers have been organized into a club and the West Side Branch of the Y. M. C. A. has

arranged special classes of physical training for them. The workers do not lose sight of the fact that they are responsible for the moral and religious training of the boys as well as their mental and physical. They live their religion in manly fashion and the boys are quick to see that religion is something honored by manly men.

The work is naturally not always crowned with success. There are some failures. The secretary of the movement, who keeps a record of all the boys and of the Big Brothers in charge of them, reports that less than a dozen of the six hundred whose names are on the file have never come back to the Children's Court. Two of these have been reclaimed and are doing well.

The Little Brothers are not alone in receiving the benefit. The Big Brothers share the blessing. They learn what it means to give a little of self to another who is in need. They get a new outlook on life. They learn what practical Christianity is.

The platform of the movement is simple and practical. It says: "If you believe that a boy in the open is better than a boy in jail you are in sympathy with the Big Brother movement. If you believe that a boy unaided can not always overcome the tendency of unfortunate environment or be happy and of use without any of the things which make for happiness and usefulness, you concur in the platform."

The efforts of the Big Brothers have been confined thus far to the helping of boys who have come into conflict with the law. There are thousands of others who are in just as great need as these who have been arrested, but the beginning had to be made somewhere and some of them who happened to be caught are now receiving attention. The work is furthermore confined to children of Protestant parentage. The children of Roman Catholic and Hebrew parentage are cared for by charitable organizations of their own denominations.

The movement is spreading, not only in New York City, but is now organized in other cities, such as Portland, Oregon; Dayton, Ohio; and several cities in Maine.

*New York City.*

#### COMMENT: PRACTICAL AND OTHERWISE.

RICHARD BRAUNSTEIN.

THE chief fact to be considered in our onward struggle is *a call to order*. To assert that order is heaven's first law is to put the case rather strongly, but thinking men seem to agree that there is an element of truth in the familiar saying. "Good order," said Burke, "is the foundation of all good things." And among the maxims for young men engraved upon the tomb of John Donough the New Orleans merchant, is this: "Let the greatest order rule the actions of your life."

The advantage of proceeding with your daily work methodically and according to system whose value has been proved by time is beyond calculation. System is the modern keynote of modern business methods. Our largest employers of labor are giving much of their time to the study of it, and not only our captains, but our generals of industry are striving to develop it in the Titanic enterprises they are directing.

This, that is so valuable in a big business, is no less so in the smaller sphere of our daily affairs. "Let all your things have their places," said Ben Franklin in his "Code of Morals." "Let each part of your business have its time." If we keep this idea constantly in mind and practice we shall learn that order is not only "the beauty of the house" but the beauty of the life as well.

A wide range of interests is, for men and women of leisure, the best antidote for ennui. For hard workers, it is the very *elixir of life*. Whoever strives to look continually beyond the narrow confines of his daily routine, and to keep himself in sympathetic touch with varying phases of human activity is young, be his years eighteen or eighty. Life is rich for us if our horizon is broad; it is meagre and not satisfying if we never glance up from the particular row we are hoeing, to enjoy the beauty of the more distant view.

By all means, then, let us not get into a rut, but rather train ourselves to manifest a healthy curiosity in regard to the efforts our fellow-mortals are making to bring about ideal conditions upon the earth. Nothing short of the whole of human experience should be the limit of our interest. "I am a man," said Terence, "and nothing that relates to man is a matter of indifference to me." Business, politics, religion, art, literature, and wholesome sport,—all these should we deem worthy of our attention at the proper time and place. *There is good in everything if we are looking for it. Let us unite in soul-expansion.*

#### THE TREES.

Time is never wasted listening to the trees;  
If to heaven as grandly we arose as these,  
Holding toward each other half their kindly grace,  
Happily we were worthier of our human place.

Bending down to meet you on the hillside path,  
Birch and oak and maple each his welcome hath;  
Each his own fine cadence, his familiar word,  
By the ear accustomed, always plainly heard.

Every tree gives answer to some different mood;  
This one helps you, climbing; that for rest is good;  
Beckoning friends, companions, sentinels they are;  
Good to live and die with, good to greet afar.

O ye glorious creatures, heirs with us of earth!  
Might we win the secret of our loftier birth,  
From our depths of being grow like you and climb  
To our heights of blessing,—life would be sublime!

—Lucy Larcom.

## Around the World Without a Cent

H. M. Spickler

### Chapter II.

AN Irishman once carried a brick around under his arm as a sample of a house he had to sell. I will have to content myself with but a little dust of the brick as I sit in Gladstone's chair in Parliament, hang my hat where Rosebery and Chamberlain hung theirs, become madly confused in the British Museum as I pick up a tablet on which was inscribed a bill for a suit of clothes that were made in Egypt two thousand years before Abraham was born, wrinkle my face at a mummy of one of the Pharaohs and leave for the Art-gallery, Spurgeon's tabernacle and the Tower of London.

You never get lost in London. No, you always come back to the place where you started—whether you want to, or not, for the streets are like *Chinese puzzles*. Their names would make you blush. One day I rode through Thread-needle street into Petticoat Lane, along Helen's Place, past the Boar's Head saloon, to Blackfriars, Whitefriars, Shoe Lane, Charing Cross, King's Cross, Marblebone, Mincing Lane, Paddington, Eastcheap, Cheapside, Piccadilly, Cripplegate, to Billingsgate and Puddin' Lane. Here I fell off!

The streets are very smooth in most parts of the city and as there were no street-cars and no ugly rails to ride over I found London one of the most interesting of great cities through which to ride. But where the streets are very narrow and the traffic is usually very heavy in the narrow lanes, it was almost impossible for me to ride.

When I could leave my wheel at the hotel I took a ride on the penny-bus, where everybody tries to get

a seat on the roof, during good weather. There is little to be desired to the tourist who has a good seat on the top of one of these swinging busses, where among the fluttering ribbons of gay passengers, and fragrant flowers carried by the children, he can see the city at the very best advantage.

The bus is drawn by two medium-sized horses that trot away with it as though it were a light load of provisions for market. There is always some one getting on or off, some one going up or down the fragile, winding stairway at the rear.

If you are walking you enjoy the sight of one of these busses as much from the pavement as you do the scenes around you when you ride upon it. And to get the best impression you must see it come toward you, with the driver, squat tight in his seat on top, among a lot of passengers, who pull on the lines as though he would throw the horses back on their haunches. Then, as it passes, you catch

Bicycle and Outfit Used by Mr. Spickler on His Trip "Around the World Without a Cent."

a good glimpse of the people on top, as they look down into your eyes, their faces beaming with good humor, but with an air as if they owned that part of London over which they rode. With fluttering parasol, a slender woman scales the stairway and seeks a seat on top. Below her, clinging dangerously to the almost perpendicularly curved railing, climbs a woman of fifty, just as eager to ride on top as any American boy. The short English conductor stands in the rear doorway,—there is no front one,—his whistle in his mouth, his hand seeking the railing by which to mount and collect the penny fares of those

above. The immense London traffic in passengers has been conducted in this way for generations. Yet all the while, below us, under the ground, the new tube railway carries another big multitude of folks.

In an old graveyard in the center of London town I stood by the grave of Daniel De Foe, and I remembered that it was he who wrote the immortal Robinson Crusoe. In another spot I stood by the homely tomb of Mrs. Wesley, on the plain slab of which I read these words: "Here lies the body of Mrs. Wesley, the mother of *seventeen* children, of whom the most famous were John and Charles." I thought that any woman who gave birth to seventeen children, or even to two children like John and Charles Wesley, ought to have a better monument. And while I stood in reverent meditation on the great life of that mother there arose before me a monument that reached straight up to heaven and pierced the very throne of God with its pure white shaft of noble motherhood. She had done what she could. She raised that family with the hand of discipline, governed by the best light she had in that day of coarse customs and spiritually blind leaders in the church.

London, if not all of England, is historic. Everywhere the soil is sacred by the countless steps of events long since passed down the corridor of sad-eyed Time into history that reads as fresh as the morning air. Nowhere can I go but I feel the impress of ages of conflict over these Isles. Here a bishop, following his Savior closely, was burned at the stake. There a king, hating the common people that made him great, trampling their rights into the soil with their heart's blood, was utterly defeated. Yonder a skinny witch, her good deeds all forgotten in the mad blaze of wrath to take her life, was beheaded. On that knoll Prince Hal posed in gallant attitude before the belles of his day. Here Shakespeare held the horses before the play-house; there his great tragedies were played, Mrs. Quickly came too slowly, and Falstaff bluffed about his bravery.

Here in London is the typical slum of the world. He is clad in an old overcoat in the summertime, a cast-off garment of some more favored or industrious Cockney. His walk is taken with wee steps—just enough energy to get along and no more. He stands a little stooped, sagging down all over, gaunt in face and blear of eye, unwashed, unshaven, uncombed, *unsaved*, so hungry he smiles every time he talks to you, so utterly irresolute and so lacking in ambition, you feel as you talk with him that God himself could not, by any ordinary miracle of grace, transform him into a real man.

God pity London's poor. God pity those two little children I found on a dark street at midnight. God pity those two girls, each eleven years of age, living in the street, with no idea of a home ever being theirs, who looked startled when I asked them what

their father worked at. "Father!" cried one, wide-eyed in intense agony of loneliness and poverty, "what's that?" "Father!" said the other, "do you mean a policeman?"

As I turned aside, half afraid to be found in such company, I sought my comfortable hotel, hearing the queer laugh of the girls as they ran along, looking for a place to sleep in the great city of London, with sixteen hundred churches! And a million people who never go into them.

## HOW TO WRITE A POEM IN SIXTY MINUTES.

JOHN H. NOWLAN.

FIRST be born with a love for poetry and music and increase those characteristics by constant practice.

Read, but above all things made by man, read the book of Nature, for

"There isn't a flower under our feet  
But teaches some lesson short and sweet."

Secure one or more volumes of poems by standard authors and make a close study of them. Avoid light trashy literature but read as many good prose selections as possible.

Make a close study of English literature. Two invaluable books are the Bible and Shakespeare. The latter furnishes a vast number of words, and the former supplies noble sentiment along with intense feeling.

The poetical part of the Bible is not confined to portions of the Old Testament as some think. What is more pathetically poetic than the words of Jesus—"O, Jerusalem, Jerusalem," etc.?

Memorize passages here and there.

Take a subject and run all the references.

When studying grammar give close attention to that division called Versification. Pay particular attention to the poetic feet, noting the most agreeable combinations.

The course in phonics as outlined in some of the school readers will be found valuable.

Rhyme is not essential to poetry, but is commonly used to embellish it, hence a careful study of a good dictionary of rhymes gives good results.

The figures of speech should be noted, as they embellish poetry more than rhyme, or rather are almost essential.

Having attended to these preliminary trifles, especially the first, select your subject. Ponder over it all your spare waking hours so earnestly that you dream of it when asleep. Look at it from every possible viewpoint.

Don't write—school yourself to think. If you forget select another subject and begin again.

Find the central thought in the subject and make everything else subservient to it.

You are now ready to secure a notebook. (The back of an old envelope or any other blank paper may be used in the absence of a book.)

When you feel an almost irresistible desire to write do so. It is not necessary to write the first stanza first. Word the main idea first and around that weave your poem, letting the idea appear where it suits best.

Don't attempt to write poetry at all unless you feel an almost irresistible, indefinable longing for something elevating, and be sure it is not just a case of biliousness.

By following these directions you may produce a creditable poem of five stanzas or less in the allotted time.

*Mulberry Grove, Ill.*

## Life of Frances Willard

Mollie Wine

THE name of Frances Willard is known wherever the English language is spoken. Miss Willard was a worthy representative of her sex, known to the world for her devotion to the cause of temperance and for her efforts in the interest of the human race. She had a wonderful career. Beginning in poverty, struggling with adverse conditions, with courage and faith in the right she overcame all obstacles in her pathway and became one of the foremost women of her time.

The story of her life is inspiring to her sex and uplifting to humanity. She was born in Churchville, New York, September 28, 1839, being a descendant of the well-known Willard family of Massachusetts, the first of whom settled in the new world in 1634 and was one of the founders of Concord, which was later the home of many famous literary men.

Her parents were brave, honest, intellectual, strong-minded, patriotic, Christian people. They were among the pioneers who left New England about 1840 to seek their fortunes in the west. In 1846 the Willard family located near Janesville, Wisconsin, on the banks of Rock River. Here on her father's farm her early life was spent.

As a child she seemed to like to grapple with great truths and she also felt that she was destined to perform an important work in the world. This we have in her own words in after life when speaking of her childhood. She says it was a beautiful childhood. "I do not know how it could have been more beautiful, or how there could have been a truer beginning of many things. To me it has often seemed as if those earlier years were seed to all my after good. Long years have left their writing on my brow, but yet the freshness and the dew-fed beam of those young mornings are about me now. Wherever I may dwell no place can be so dear, so completely embalmed in my heart, so truly the best beloved to me, as Forest Home."

The wide, free fields were the playgrounds of her childhood. The primeval woods impressed her unfolding soul with their vast and vital calmness. Home meant to her all that the poets have sung of it

and more. It was a refuge, a dwelling place of joy, a place where peace, love, safety and all unselfishness reigned with a sovereignty unchallenged.

Miss Willard attended the Northwestern College at Evanston, Illinois, a woman's college of high grade, from which she was graduated with honor. After teaching at several institutions of learning she completed her education by two years' travel and study abroad.

In 1871 she became president of the Evanston College for ladies, which was entirely under the control and direction of women; the president and trustees all being women. Later, when this college was made the women's department of the Northwestern University, she became dean and professor of *Æsthetics*.

In 1874 she resigned her position in the Northwestern University. Some years afterwards, when the famous evangelist, Moody, invited her to become associated with him in his work, and inquired why she left the Northwestern University she gave this characteristic answer: "Dr. Fowler, the president of the institution, has the will of Napoleon. I have the will of Queen Elizabeth. When an immovable meets an indestructible object, something has to give way."

On her resignation she had many flattering offers to continue in the educational world, where she would have become, in a few years, the foremost woman educator in the United States, but she declined them all, and as the apostle of universal womanhood, her whole life was dedicated. Her object was to make the homes of the millions pure, to render sweet and strong those human relations which constitute the family. This was her mission and there cannot be a wiser method of uplifting mankind; no better way to make a nation noble and enduring; for the home is the foundation on which the State is built.

Miss Willard did not have a philosopher's creed, but received her inspiration from a higher source than human thinking. She knew no questioning. The Master's message was her command. The Bible was to her in very truth divine, and it was the Bible that gave Miss Willard her mission, her strength and her argument.

Thus prepared she went out into the world and to her work. Nothing can measure what she did. The half million of women whom she brought into organized coöperation in the Women's Christian Temperance Union is but a suggestion of the real results of her activities. She made purer the moral atmosphere of a continent and almost a world. She rendered the life of a nation cleaner, the mind of its people saner and millions of homes today are happier for her; millions of mothers and wives bless her. Yet with the praise of a nation she did not escape those who were always ready to criticise.

In 1873 a great woman's Christian crusade arose in Ohio on temperance. Miss Willard was early attracted toward the temperance movement. She saw in it an opportunity to perform a great service to the human race. She accepted the invitation to become president of the Illinois Woman's Christian Temperance Union, and abandoning a brilliant educational career, in 1874 she entered on what was to be her last work. From that time until her death, for more than a quarter of a century, she devoted her splendid energies to the temperance cause and other reforms.

The Illinois Temperance Union, when Miss Willard was elected president, was a small band of women, the outgrowth of the women's crusade. She received no salary, gave her whole time to the work, addressing large noonday meetings daily in the worst districts of Chicago, practically living on the charity of her friends.

In 1879 she was elected president of the National Temperance Union, and in that position her splendid executive ability and faculty for organization had full sway. She traveled over the country constantly, talking in behalf of her white ribbon cause in every town and city in the United States, having a population of ten thousand or more. In 1883 she projected the Union of which she later became president, all over the world. Under her leading the temperance cause spread as if by magic thruout the United States.

Not content with what she had accomplished here at home, on several occasions she visited England and assisted the temperance movement, where she addressed immense audiences in different parts of that country.

Miss Willard was not only an advocate of temperance, but of all other beneficial, progressive reforms, purity in politics, equal rights for women, and woman's suffrage as a means to secure political reform. She believed that there is such a power in the influence of woman, if exerted right, to shake the foundations of the base and selfish human thinking. She was recognized as an able public speaker and a rare gift of eloquence and magnetism which drew thousands into the temperance ranks.

During her years of active life she probably addressed a larger number of public audiences than any man or woman of her time.

She established temperance instruction for the children in the schools and tens of thousands of men were induced to sign the total abstinence pledge.

Notwithstanding her busy life and her varied duties as a leader of this world-wide organization, she

Frances Willard.

found time to write many books. She was a woman of rare literary attainments. Some of her books have been circulated throughout the world, translated into several languages.

In her autobiography she tells us of her ambition in these words: "I have been called ambitious and so I am, if to have from childhood the sense of being born to a fate is an element of ambition. For I never knew what it was to aspire and not to believe myself capable of heroism. I always wanted to react upon the world about me to my utmost power, to be widely known, loved and believed in, the more widely the better. Every life has its master passion; this has been mine."

Her ambition was gratified, for at the time of her death, Feb. 17, 1898, she was one of the most beloved women of America.

Frances Willard sacrificed her life to the happiness of her sisters. She thought that the only way to achieve the service of unselfishness was to sacrifice herself. So she gave up her life and all her riches and glories, that all her sisters might have fuller, purer and sweeter lives themselves. It meant to her all that she had and she gave it to her sisters.

## WILL THEY TELL?

JENNIE TAYLOR.

There's a pleasant air of mystery  
About the world today;  
Some fairy toilers are at work  
To make the brown earth gay.  
But what the secret really is  
That they should keep so well—  
With all their tiny whisperings,  
I wonder if they'll tell?

The winds are singing to the trees,  
The leaves are waking up,  
There is a hint of summer things—  
Primrose and buttercup.  
The birds are flitting to and fro,  
I hear the bees' low hum,  
I think the secret of it all  
Is that the Spring has come.

Anemones and violets, soon  
Will dot the turf-grown way  
With purpling reds and bits of blue.  
On willows, catkins sway.  
The hyacinth and crocus, too,  
Now each a message bring,  
And if we listen close, may hear  
Them saying, "It is Spring."

Tipton, Iowa.

## ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

## XIII.—J. L. Motley.

JOHN LOTHROP MOTLEY was born April 15, 1814, at Dorchester, Mass., and was the son of a prosperous Boston merchant, Thomas Motley, who had married Anna, daughter of Rev. John Lothrop. His great-grandfather, John Motley, early in the eighteenth century came to Falmouth (Portland), Maine from Belfast, Ireland.

He appears to have been a bright boy, since at ten he spoke of a novel he was reading as "better than any new novel I have read for two or three years, except Scott's," and said of a Turkish history that it was very interesting, "much more so by its being in French." He went to the Round Hill School at Northampton, conducted by Bancroft and Cogswell. Then he went to Harvard College and graduated when he was barely seventeen years old.

After he graduated he went to Germany and staid two years, and became at home in the modern languages. He met Bismarck at Göttingen, and was a fellow-student of his the next year at Berlin, "sharing meals and outdoor exercise," with each other. After traveling in Italy and Southern Europe, he returned home and studied law in Boston and was admitted to practice. He was married in 1837 to Miss Mary Benjamin, an accomplished and clever young lady. His first work in literature was a novel, "Morton's Hope, or, The Memoirs of a Provincial," published in 1839, which was a failure.

In 1840 he was appointed secretary to legation of

the American Embassy to Russia, but soon resigned on account of homesickness and the rigors of a Russian winter. He published an essay in the *North American Review*, "Peter, the Great," in 1845, which was favorably received, and thus encouraged, prepared another on Balzac (1847), and a third "The Policy of the Puritans," in 1849. This year he served a term in the Massachusetts legislature and became acquainted with practical politics.

Neither law, politics nor diplomacy suited him as a field of labor, and as he had failed in another romance, "Merry-Mount, a Romance of the Massachusetts Colony," he found more solid literary work to be the best for his pen, and for himself in a financial way as well. He had become so interested in the history of Holland that he decided to write a book on the subject, but found it impossible to do so without the proper material which could be found only in that country. He found that his friend Prescott was working on a life of Philip, the Second, and went to see him to find if their work would conflict. On finding Prescott willing to give him any aid in his power, he went in 1857 with his family to Europe, where he poked about among the old musty archives and documents for five years, in Dresden, The Hague, Brussels and Paris, and published the result at his own expense in three large volumes of which "not a page or a line is tedious." This stupendous work, "The Rise of the Dutch Republic," met with such astonishing success that it was translated into French, Dutch and German, and caused him to be elected to the French Institute and many learned societies in Europe, and he also received the degrees of LL. D. from Harvard, and D. C. L. from Oxford. "He used to say that he did not know the living people of Holland, but if he could wake up in the sixteenth century he would be on intimate terms with every prominent Dutchman he would meet."

He was appointed United States minister to Austria in 1861, which office he filled seven years, resigning on account of an uncalled-for offensive letter from the American Secretary of State. By this time he had completed and published "The History of the United Netherlands, from the Death of William the Silent, to the Synod of Dort," in two volumes.

He returned to the United States in 1868, and delivered an address in Boston on "Four Questions for the People at the Presidential Election," and as orator of the sixty-first anniversary of the New York Historical Society, delivered an able address on "Historical Progress and American Democracy." In 1869 he was appointed Ambassador to England and served one year when for some reason, never clearly or properly explained, he was recalled. In 1874 he published "The Life and Death of John of Barneveld." and afterwards began preparing for a "History of the Thirty Years' War," which he was unable to do much

work on. He lived two and a half years after his wife died, passing on at Kingston Russel, near Dorchester, England, May 29, 1877.

"Motley was not a fine writer in the sense of being visibly scrupulous about the choice of words and the balance of sentences. He impresses one as of the opinion that a man can ill afford to give too much time to the problem of expression. The prevailing characteristics of his style are a natural dignity and a manly negligence. It may be said that if Motley's work is not at every point cloth of gold, it has at least a metallic dignity."

Worthy of mention: D. G. Mitchell, essays connected; D. L. Miller, travels; J. B. McMaster, history; James Madison, political; John Marshall, biography; Cotton Mather, theology; Matthew Maury, sea geography; Joaquin Miller, poetry; C. C. Moore, poetry; Louise C. Moulton, stories and poems.

*Bryan, Ohio.*

### 'FORE THE SNOW'LL FLY AGAIN.

Ain't it fine to think how many splendid days are stored away

To be taken out and sorted 'twixt this time and Christmas? Say.

Think of June, July and August, with the good things they're to fetch,

And September and October comin' in there on the stretch,

With their loads of juicy gladness for the benefit of men! Think of all the joy that's comin' 'fore the snow'll fly again!

Can you wonder that the robins are so glad they nearly bust

And wake up and go to singin' just as though they thought they must?

Is it strange that every little timid sprout is peepin' out, Seemin' anxious to discover what the cheerin's all about? Ain't it queer that anybody should be feelin' grumpish when

There's so many good things comin' 'fore the snow'll fly again?

Why I feel the way I used to, when I'd hear on Saturdays

We were goin' to grandpa's—my, the whoops that I would raise

Thinkin' of the fun a-comin' and the splendid things to eat!

Them were times, I want to tell you, 'twould be mighty hard to beat!

But, returnin' to the present, ain't this old world heaven when

There's to be a whole glad summer 'fore the snow'll fly again?

### "MY OLD KENTUCKY HOME."

(Story of the origin of the famous song.)

THE song was written by Stephen Collins Foster, a resident of Pennsylvania, while he and his sister were on a visit to Judge John Rowan, a short distance east of Bardstown. One beautiful morning, while the

slaves were at work in the cornfield, and the sun was shining with a mighty splendor on the waving grass—first giving it the color of a light red, then changing it to a golden hue—there were seated upon a bench in front of the Rowan homestead, two young people—a brother and a sister. High up in the top of a tree was a mocking-bird warbling its sweet notes. Over in the hidden recesses of a small bush the thrush's mellow song could be heard. A number of small negro children were playing not far away. When Foster had finished the first verse of the song, his sister took it from his hand, and sang in a sweet, mellow voice:

"The sun shines bright in the old Kentucky home;

'Tis summer, the darkies are gay;

The corn-top's ripe and the meadow's in the bloom,  
While the birds make music all the day.

The young folks roll on the little cabin floor,

All merry, all happy and bright;

By-'n'-by hard times comes a-knockin' at the door—  
Then, my old Kentucky home, good-night."

On her finishing the first verse the mocking-bird descended to a lower branch. The feathery songster drew his head to one side, and appeared to be completely enraptured at the wonderful voice of the young singer. When the last sweet note died away upon the air, her fond brother sang in a deep, bass voice:

"Weep no more, my lady;

Oh, weep no more today;

We will sing one song for the old Kentucky home,  
For the old Kentucky home far away."

The negroes had laid down their hoes and rakes, the little tots had placed themselves behind the large sheltering trees, while the old black women were peeping around the corner of the house. The faithful old house-dog never took his eyes off the young singers. Everything was still; not even the stirring of the leaves seemed to break the wonderful silence. Again the brother and sister took hold of the remaining notes, and sang in sweet accents:

"They hunt no more for the 'possum and the coon

On the meadow, the hill and the shore;

They sing no more by the glimmer of the moon,  
On the bench by the old cabin door.

The day goes by like a shadow o'er the heart,  
With sorrow where all was delight;

The time has come when the darkies have to part—  
Then, my old Kentucky home, good-night.

"The head must bow and the back will have to bend  
Wherever the darky may go;

A few more days and the trouble all will end  
In the field where the sugar-canes grow;

A few more days for to tote the weary load,  
No matter, 'twill never be light,

A few more days till we totter on the road—  
Then, my old Kentucky home, good-night."

As the song was finished tears flowed down the old people's cheeks; the children crept from their hiding-places behind the trees, their faces wreathed in smiles;

the mocking-bird and the thrush sought their homes in the thicket, while the old dog still lay basking in the sun.—*Bardstown (Ky.) Record*.

#### WHY LATIN IS USED BY PHYSICIANS.

"I DON'T see," said the man who was leaning against the drug store counter, "why a doctor can't write his prescription in English instead of Latin."

The druggist said, "You think, I suppose, that the doctor writes his prescription in Latin so it can't be read so easily—so the layman can't steal his trade and learn what he is giving him. But that's all wrong. In the first place, Latin is a more exact and concise language than English, and, being a dead language, does not change, as all living languages do.

"Then, again, since a very large part of all the drugs in use are botanical, they have in the pharmacopœia the same names that they have in botany—the scientific names. Two-thirds of such drugs haven't any English names, and so couldn't be written in English.

"But suppose a doctor did write a prescription in English for an uneducated patient. The patient reads it, thinks he remembers it, and so tries to get it filled from memory the second time. Suppose, for instance, it calls for iodide of potassium and he gets it confused with cyanide of potassium. He could safely take ten grains of the first, but one grain of the second would kill him as dead as a mackerel. That's an exaggerated case, but it will serve for an illustration. Don't you see how the Latin is a protection and a safeguard to the patient? Prescriptions in Latin he can't read, and consequently doesn't try to remember.

"Now for a final reason. Latin is a language that is used by scientific men the world over, and no other language is. You can get Latin prescriptions filled in any country on the face of the earth where there is a drug store. We had a prescription come in here the other day which we had put up originally, and which had since been stamped by druggists in London, Paris, Berlin, Constantinople, Cairo and Calcutta. What good would an English prescription be in St. Petersburg?"—*New York Herald*.

#### MAKING ICE IN INDIA.

THE following method is adopted by the Ganges wallas (native coolies) for making ice in the region of the Hugli, near Kalikata, in fields composed of a black loam soil upon the stratum of sand.

The ice plot is a rectangular piece of ground, say 130 feet long by 30 broad, running in an easterly and westerly direction. The soil is removed to a depth of a couple of feet. This excavation, when made, is smoothed, and then allowed to remain exposed to the torrid rays of the sun to dry. Then rice straw in small

sheaves is laid in oblique direction in the hollow (with loose straw upon the top) to the depth of a foot and a half, leaving its surface half a foot below that of the ground.

Numerous beds of this kind are formed (the ensemble constituting the "ice farms"), with narrow sidewalks between them, in which here and there large covered earthen water jars are sunk in the ground for the convenience of having water near by to fill the shallow unglazed earthen vessels in which it is to be frozen. These dishes are 9 inches in diameter at the top, diminishing to 5 inches at the bottom, 1½ inches deep, and ¼ inch thick, and are so porous as to soon become moist throughout when water is placed in them.

During the day, the loose straw in the beds above the sheaves is occasionally turned over, in order that the lot may be maintained in a desiccated state; and the water receptacles between the beds are replenished with soft pure water from the nearby springs. When evening comes, the shallow earthen-ware pans are placed in rows upon the litter; and, by means of little burnt-tile pots secured to the ends of lengthy bambusa canes, each pan is half filled with water. The quantity, nevertheless, varies according to the expectation of ice; the natives can forecast that by the aspect of the heavens, and the evenness with which the air currents come from the northwest. When favorable, about half a pound of water is put into each little dish or plate; but when less ice is expected, about a quarter pound of water is the usual amount; but, in any case, more water is put into the dishes nearest the west end of the beds, as the yield there is always a trifle bigger.

There are about 5,000 plates in each of the beds, and the ice yield will average, say, ¼ pound from each dish.

In the cool season, when the temperature of the air at the ice fields is under 50 deg. F., and there are gentle breezes from the north and west directions, ice appears in a night in all of the shallow pans. Native watchers are on the lookout to note when a thin film appears on the water in the pans, when the contents of several are mixed together, and sprinkled over the other dishes. This method augments the freezing action. Stagnation has been discovered by the natives to diminish the quantity of ice produced. When the firmament is entirely clear, with zephyr currents from the northwest, the congelation begins before or about midnight, and continues to advance till morning, when the thickest ice is formed. It is often an inch thick, and sometimes the whole contents of the dish are frozen compact.

The ice dishes present a large moist external surface to the air currents, producing rapid evaporation and a lowering of the temperature. The water which percolates through the porous trays exposes so large a

surface to the breeze that it is promptly frozen. In addition to the evaporative effect we also have the influence of heat insulation to fall back upon in explaining the phenomenon.

The thick layer of dry straw in the ice beds forms a large surface, which is a poor conductor of heat. The heat can penetrate but a little way into it during the day. So soon as the sun sets, this large and powerfully radiating surface is brought into action, and affects the water in the thin, porous pans, themselves strong radiators.

Some of the natural-ice "farms" of Bengal produce in a single night over ten tons of ice, employing 300 persons of all sizes and ages; and the early morning harvesting of the ice by these lithe gentry darting about, is one of the few animated scenes worth noting in the Ganges region.—*Scientific American*.

#### A TRICK OF THE WHISKY GANG.

VERY few people know the amount of trickery there is used by the lawless and immoral factors in society. It is very unwise and unsafe to accept as truth much of the news service as given in many prominent papers, as we will proceed to show.

Down at Washington the Brewers' Association keeps a very strong delegation of men whose duty it is to fight all temperance legislation and at the same time secure more liberal laws for the saloon. Not only this, but this saloon gang that lounges around in the halls of Congress all the time, often send dispatches to newspapers in various parts of the country telling of some failure of prohibitive law.

A recent dispatch sent out from this Washington delegation was that one thousand licenses had been taken out in Oklahoma to sell liquors in that State since it became prohibition. They send out reports like this in order to make the unwary think that prohibitive laws are a failure and that more whisky is used in temperance territory than in open saloon territory. Some of these reports have been looked into and found to be utterly false, just a made-up lie to deceive people.

It takes a while to run down and disprove such reports, but when it is done the temperance cause not only holds the ground it has already gained, but has also opened the way for a further advance. The cause that must resort to such deception is digging its own pit when it resorts to such means of keeping on its feet.

"It takes so little to make a child happy, and the dividends are so great, the wonder is that more men do not make the investment."

"ALL the earnestness, enthusiasm, and industry imaginable cannot make a bad business good."

## CURRENT COMMENTS

### Marshalling their Forces.

Without doubt, the great cause of prohibition of the liquor traffic is assuming gigantic proportions. It is said that more than 40,000,000 people now live under some form of laws either restraining or prohibiting the sale and use of intoxicants. Strenuous effort is being made to abolish the sale of liquors in the District of Columbia. Fitting, indeed, would be success attending such effort. It would doubtless do more to assist the cause of prohibition than the various movements now under way in the States; for it would be the result of the exercise of direct Federal power, though in territory much restricted. While the prohibitionists are marshalling their forces, the whisky element is doubly active. A gigantic whisky trust or organization of distilleries, breweries, and saloonkeepers is in process of formation. It will control several millions of voters, and the effort is to utilize every vote in the direction of thwarting the prohibition movement. It is desired to defeat every legislative measure looking to the restraint of the whisky traffic, whether taking the form of provision for local option, or sweeping prohibition. Before the American civil war, the various States endeavored to deal with the problems of Negro Slavery; and while in some instances measures were adopted whereby the spread of slavery was forestalled, it was not abolished in the slave States until the Federal power was exercised. The States are not large enough nor powerful enough to successfully cope with the combined forces of the liquor traffic. It is a national curse, and must be made a national issue, fought out in national campaigns to a finish, and the liquor business banished from the nation as a whole.

### Labor's Protest.

Recently trades-unionists throughout the country met to pass resolutions pledging themselves to active political work for the election of representatives, senators, and president, and other executive, legislative, or judicial candidates who will "safeguard and protect the common interests of the wage-workers, as well as the people of our common country." The resolutions call upon Congress to enact the amendment to the Sherman anti-trust law, which will allow combinations acceptable to the proper Federal authority; also to enact the Pearre bill, which aims to define the injunction power and restrain its abuse, the Employer's Liability law, and an eight-hour day law for Government employés or all employés engaged in Government work whether in the employ of a contractor or subcontractor. The resolutions also declare that the trades-unionists will hold Representatives and Senators strictly accountable upon their records upon those measures during the present session of the present Congress, and close with this statement: "In this movement for our common protection we are moved by a high sense of duty and a profoundly conscientious purpose to serve not only the workers of our time, but all the people of our great country for their industrial, political, social, and moral progress and uplift." In not aligning themselves with any particular party, but promising their votes to those candidates who will favor them, the unionists probably take the most effective course open to them. In

New Zealand through such a course the comparatively small number of trade-unionists have had an immense influence on legislation. 'Employers' associations are exciting themselves to offset the labor agitation and have sent to Congress a petition in which the amendment to the Sherman anti-trust law is particularly opposed on the ground that it would legalize the boycott.

#### Italy and Turkey.

Mail sent through Turkish postoffices is likely to be opened. Especially is this the case with papers and printed matter which frequently never reach their proper destination. Accordingly certain of the great powers, Great Britain, Austria, and one or two others, maintain postoffices at certain cities in Turkey in order that their mail may be inviolate. The Turkish government has refused to allow Italy to conduct postoffices at places where other nations enjoy that privilege, and recently has gone so far as to put troops about Italian postoffices in order to prevent their transacting business. The ordinary peaceful representatives of the Italian government have failed to make the Porte yield on the matter and Italy is now preparing to make a naval demonstration in Turkish waters. A fleet of eleven warships and eight destroyers carrying seven thousand men was prepared to sail for Asia Minor. Unless the Porte gives way, the fleet will take possession of some island on the Asia Minor coast. The Italians, however, have no thought of occupying territory permanently. According to the Turkish Ambassador in Rome, Turkey has never granted to any power the right to establish a postoffice in Turkish territory. It has simply "tolerated" the offices which other powers established. France also has a grievance against Turkey just at present. The Turkish Government wants to regain control of coal mines at Ereğli in Asia Minor, which had been granted to a French company. The French company backed by the French Government, refuses to resell the mine until it is sure of the purchase money. The Turkish treasury is so empty that the precaution is a wise one. In the meanwhile France has refused to take up any Turkish loan, and her embassy has announced to the Sultan that the French government will demand an indemnity of \$2,500 for every day that settlement is delayed.

#### Competition and Poverty.

Saloons take a portion of the earnings of thousands of workingmen, after wages are paid to them. But corporations keep back a large portion of their earnings. Mere pittance are doled out to men, women and children in the great factories; these pittance are termed wages. They are small sums which the white slaves are compelled to accept for their services. No amount of attention to household economy could enable such to rise above want while made the subjects of the greed of their employers. There are phases of poverty which the most temperate habits alter but little; and they are phases which will persist until the end of the competitive system.

When the Japanese journalists visiting in this country called on Speaker Cannon, he inquired of them whether Japanese newspaper men pressed the method of Americans in the same business of picking up stories when there was no actual news and so having the opportunity to make news the next day by denying the report of the day before. The spokesman of the Japanese media-

correct for the honorable great gentleman; Japan newspaper men study news hard so he shall understand excellently; then write those things very intelligent, very honest, thank you." Japanese newspapers are evidently models of their kind, thank you.

The Virginia "license elections" this month have resulted in two notable victories for the "Drys," Danville and Winchester voting that all saloons within their borders shall close their doors May 1. These contests have been attended by the scenic features which have become almost conventional in connection with Southern prohibition campaigns. In both cities great processions of women and children bearing banners covered with temperance inscriptions paraded the streets while the voting was in progress. During the recent election in Texas, thousands of white-clad women and children tramped the dusty roads, stopping at each voting place to sing hymns and to put in a little personal effort. In a few places this method has been rudely discountenanced, but in most the Southern chivalric regard for women and children has been the all-sufficient protection for the agitators.

#### The President and Congress.

The defeat of the bill asking for four new battleships has brought about another flourish of the "big stick" in the form of another special message. The President was already armed for the event and the same day the bill was voted down in the Senate, congressmen were in possession of a copy of the special message, although it was not given a hearing in either house that day. The President has lost all patience with the way Congress has put in the time without accomplishing any real work, and now that reasonable appeals have failed to arouse them he is trying other means. He says: "It is unwise stubbornly to refuse to provide against a repetition of the abuses which have caused the present unrest. In a democracy like ours it is idle to expect permanently to thwart the determination of a great body of our citizens." and it would seem that this has had the desired effect. At any rate Congress is stirred up. Whether this will result in the President securing the legislation asked for remains to be seen. It appears that the defeat of the four-battleship bill in the Senate was due largely to the desire of the oligarchy in that body to make the President feel their power. We are glad, it is true, that the bill was defeated by some means, but at the same time one cannot help being disgusted with the childishness displayed at times by these lawmakers who would risk the welfare of the nation for the sake of "getting even" with the President. Some of the measures repeatedly urged for passage and mentioned in this last message are: Restriction of federal injunctions; Strengthening of anti-trust laws; Child-labor law for the District of Columbia; Financial legislation including a commission to study the situation here and in Europe and providing for postal savings banks; Appropriations to permit the Interstate Commission to take actual control over the accounting systems of railroads; Forest reserves in the Appalachian Mountains. Many of these measures would have no bearing in the presidential campaign and would be a credit to this session. It is to be doubted whether the people will stand for the adoption of any of these measures. The plan is not worked out in the President's choice. This plan is not worked out in the President's choice.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## WEAKNESS IN OUR PRESENT SYSTEM OF EDUCATION.

IN view of the present disregard for law and authority of whatsoever kind, in view of the consequent corruption and increase of crime, out of proportion to the increase of population, and considering the alarming condition in the social world due to the lax views of marriage and the family tie, many of our able thinkers are beginning to cast about for a reason for these conditions. Nothing comes by chance. "Whatsoever a man soweth, that shall he also reap." The question is, what sowing or what combination of sowings, has brought us this harvest? Is it the harvest of seed we have sown with good intentions, or has an enemy sown "while we slept"? Whatever the causes, the seriousness of the results warrants a thorough looking into them and the casting out of everything pointing toward these conditions.

Some who have made a study of the question have laid a part of the blame at the door of our present system of education. A writer in the current number of *The Educator-Journal* holds this view and in defending it says, in part:

"There is a widespread feeling—growing into conviction—among educators and other thoughtful people that however efficient our schools may be in knowledge, they are not made as effective as they might be and are not doing as much as they ought to do for the moral training of the young—training in the art of living. The leaders of religious thought who have the nation's interests at heart are projecting plans whereby they may assist the schools in this matter, one of the most notable movements being that of the inter-denominational ministerial association of New York, participated in by men from every Protestant denomination, as well as Roman Catholics and Jews. They are trying to secure for every child one-half day each week for instruction in the church of his parents' choice. This plan is not worked out yet in

detail, but promises well, for religion is the cornerstone of morals. And I would place the banishment of the Bible from our public schools as the first cause of our fall.

"Dean Delany, of Wisconsin, says: 'We have already in this country seen at least one generation that is the product of a purely secular education. That is the generation now in its prime—the dominating element in the life of the nation. Previous generations had at least some knowledge of the Bible instilled into them in childhood, and were for the most part brought up under the old regime of Puritan strictness in the home. The present generation is the fruit of an education with religion left out and of a reaction from the extremes of Puritan severity. What are the results as seen in the moral character of the men and women of this ruling generation? Do they prove the wisdom of an education without religion, or at least, with only an indirect moral influence from certain teachers and from certain studies? Since the new century began we have witnessed the uncovering of scandals in business, and government, and social life, such as have never before been dreamed of in American history. We have seen an unprecedented increase of crime in proportion to the population. We have had to chronicle an alarming growth in the frequency of divorce. We are forced to admit a deepening animosity of class against class. These are a few of the data from which we must form our judgment of the moral character of the men and women of this generation, according to the Divine principle, "By their fruits ye shall know them."

"It would be foolish to assert that these disturbing phenomena are all directly traceable to the policy of leaving religion out of the public school education; nevertheless, in the presence of these facts, we are surely justified in drawing the inference that the vague and indirect moral training that now obtains in the public schools is too weak to be vital and enduring in its results. Only a serious and well-grounded morality can withstand the allurements of greed, and lust, and luxury, and power, which are daily becoming stronger in their appeal. Indeed, something far more reaching and thorough is needed than the teaching of mere morality, even though it be taught in the most systematic fashion as ethics or moral philosophy. The foundation of morality is to be found only in the facts and revealed truths of the Christian religion. Unless religion be taught along with morality, the resulting morality will be most unsubstantial, and likely to vanish with the dreams and fancies of childhood."

\*\*\*

## TO ESPERANTISTS.

LET all who are following the Esperanto lessons feel free to write the author of them concerning any point related to the subject. We would like to have

the names of all who are taking up the work, as given in these pages.

### LESSONS IN ESPERANTO.—No. 2.

**NOUNS.** All nouns end in "o." The plurals are formed by the addition of the letter "j,"—domo—house; domoj—houses; virino—woman; virinoj—women. When a noun is used in the objective case (sometimes named the accusative), "n" is added to the singular or plural as domon—house; domojn—houses; the plural sign always precedes the objective sign.

Form plurals to the following words, also learn the meaning:

|                |                 |                  |
|----------------|-----------------|------------------|
| tapiŝo—carpet  | seĝo—chair      | horologio—clock  |
| tapiŝeto—rug   | libro—book      | forno—stove      |
| speĝulo—mirror | familio—family  | fenestro—window  |
| kuŝejo—couch   | kurteno—curtain | kuseno—cushion   |
| pordo—door     | lampo—lamp      | vestiblo—porch   |
| ĉambro—room    | tablo—table     | pentraĵo—picture |

The feminine of nouns is formed by adding the suffix "in" to the root word as in patr-o meaning father; patr-"in"-o meaning mother; frat-o meaning brother; frat-"in"-o meaning sister.

|              |              |                 |
|--------------|--------------|-----------------|
| knabo—boy    | viro—man     | leono—lion      |
| knabino—girl | virino—woman | leonino—lioness |
| edzo—husband | onklo—uncle  | reĝo—king       |
| edzino—wife  | onklino—aunt | reĝino—queen    |

**Adjectives:** All adjectives end in "a." Cases and numbers are the same as with the noun. When used with plural nouns they end in "j" the same as the plural noun.

Granda—large, granda domo—a large house. grandaj domoj—large houses.

If an adjective qualifies or refers to a noun in the objective case such adjective must take the objective sign ending in "n."

Knabo batis la grandan leonon. A boy beat the large lion.

Comparison of adjectives is effected by means of various words.

|                                                     |  |
|-----------------------------------------------------|--|
| pli . . . ol—more . . . than.                       |  |
| malpli . . . ol—less . . . than.                    |  |
| tiel . . . kiel—as . . . as.                        |  |
| tia . . . kia—such . . . as.                        |  |
| tia sama . . . kia—the same . . . as.               |  |
| ju pli . . . des pli—the more . . . the more.       |  |
| ju malpli . . . des malpli—the less . . . the less. |  |

Degree may be expressed by the suffixes "eg" and "et," "eg" referring to an increased degree and "et" to a less degree.

Varm-et-a—lukewarm, varm-a—warm, varm-eg-a—hot.

The superlatives are expressed by "plej" and "mal plej"; La plej granda—the largest; La malplej granda—the smallest; "Pli" meaning more; "plej"—most; "mal" denotes the opposite.

Learn the following adjectives:

### EXERCISE 3.

|                 |                      |
|-----------------|----------------------|
| alta—high       | granda—large         |
| forta—strong    | longa—long           |
| sana—healthy    | klara—clear          |
| hela—bright     | pala—pale            |
| nigra—black     | pura—pure, clean     |
| brila—brilliant | verda—green          |
| blua—blue       | ruĝa—red             |
| flava—yellow    | griza—gray           |

| ŝenta—silent    | mola—soft            |
| malmola—hard    | facila—easy          |
| nova—new        | malfacila—difficult  |
| malnova—old     | juna—young           |
| multaj—many     | maljuna—old          |
| malmultaj—few   | malriĉa—poor         |

### ARTICLES.

No indefinite article such as "a" is used, it is implied in the noun: tablo—a table; benko—a bench. The definite article is "la," it is used the same as in English.

"Kaj" (a conjunction) means "and." There are a few other words used as conjunctions which will be given in a later lesson.

"De" (a preposition) showing possession, meaning of, by and from.

"Estas" (a verb) is the present form of "to be, is."

La familio estas granda. The family is large.

### EXERCISE 4.

Translate the following into English:

La ruĝa tapiŝeto. Blua libro. Blankaj libroj. La patro estas sana. La domo estas malgranda. La tablo estas nova kaj la seĝo estas malnova. La riĉa frato estas maljuna. La familio de la patro estas granda. Multaj pentraĵoj. Flava kaj verda kurteno. La patrino kaj frato estas sanaj. La patro kaj fratino estas malsanaj. La tapiŝeto estas ruĝa kaj la tapiŝo estas verda. La nova speĝuloj estas brilaj.

### EXERCISE 5.

Translate English into Esperanto.

The wooden clock is new. The family of the sister is well. The boy is good and the girl is bad. The cushion is soft. The chair is old and the couch is new. The man is silent. The good sister is sick. The yellow curtain is dirty. The stove is warm. The white door is large. The old man is sick. The boy is young and the girl is old. The father of the girl is sick.

ALLAN EISENBISE.

## FOOD PRINCIPLES

LENNA FRANCES COOPER, Principal School of Hygiene and Cooking, Battle Creek Sanitarium

### Sugars.

SUGAR in Nature is a highly sweet liquid substance circulating in plant life. We have a good example of this in the sap of the Maple which begins circulating in the tree in the early spring months. It is food for the tree. But man is not content with it in this form, so gathers the sap, evaporates the liquid, reducing it to a state of crystallization, its highest point of concentration. In this form, when taken in any but very small quantities, it proves irritating both to the intestinal tract and to the lining of the stomach, often producing intestinal catarrh and digestive disorders.

Starch and sugar together form the class of food principles known as carbohydrates. Their use in the body is about the same. They are both fuel foods, being used to keep up the bodily temperature and as a source of muscular energy. Their relation as a food may be better understood when their relation in nature is defined. Sugar is the form in which this plant food circulates in the plant and starch is the form in which it is stored up.

When the plant is growing and using the food for the upbuilding of its own self it is in the soluble form, but a little later when it reaches its maturity it begins to provide for the young plant of next year's growth which is imbedded in the seed of the plant. The seed consists of the tiny plant surrounded by food sufficient to nourish it when planted the next year until it is able to send down roots and gather its nourishment from the soil. To protect this stored up food from being washed away by the rains, Nature renders it insoluble.

Try to dissolve some cornstarch in cold water and note that no matter how long the starch remains in it, it is still starch and can be reclaimed from the water in the same form as it was before putting it into the water. The cornstarch and sugar are both different forms of plant food and are both found in the seed. The cornstarch is the form in which the food is stored up and the sugar is the form in which it is circulating. The most familiar to us is the cane sugar which is derived from the juice of the sugar cane.

the sugar beet and the sap of the maple tree, the name of this class of sugars being derived from the sugar cane which formerly was almost the only commercial source of this sugar. The cane sugars all have the same chemical formula: C, 12 parts; H, 22 parts; O, 11 parts. They also have the same physiological effects. On account of the great degree of concentration, when taken except in very small quantities they are irritating to the intestinal tract and are productive of intestinal catarrh as well as indigestive disturbances.

There are other and more wholesome sugars. The fruit and the grape sugars are probably the most wholesome and the most easily digested. But there are different kinds of sugars; they are,

- Cane,
- Milk or lactose,
- Fruit or levulose,
- Grape or glucose,
- Maltose.

Indeed the fruit sugar is already digested and ready for assimilation. It is found in ripe fruit and hence is the result of the digestion that takes place in the fruit during the ripening process. For this reason, fruit juices and fresh fruit are so refreshing.

Grape sugar or glucose so-called, because it is found so abundantly in grapes, is very similar to the fruit sugar or levulose. They are both found abundantly in most fruits. The grape sugar or glucose is also the end product of the digestion of starch.

It is much better to provide children with plenty of fruit, than to give them so much candy as most parents are prone to do. The sweet fruit, such as dates, figs, bananas, etc., are especially good substitutes for the ordinary sweetmeats, but these should all be taken at mealtime.

Housewives should also guard against the use of too much sugar in the cooking. Lactose, or sugar of milk, is the sugar found in milk. It is only slightly sweet, hence does not give a sweet taste to the milk.

Maltose is one of the sugars formed in the diges-

tion of starches. It is further converted into glucose or grape sugar. This does not have reference to the commercial product known as glucose, which may contain many serious impurities.

#### Prune Whip.

2 cups prune marmalade  
2 tablespoonfuls powdered sugar  
4 egg whites  
1 dozen pecan or walnut meats

Prepare the marmalade by pressing stewed prunes from which the liquid has been drained through a colander. Beat the whites of two eggs to a stiff froth and fold into the marmalade. This is done not by stirring but by putting the egg whip down at the side of the dish and bringing it up through the material. This is repeated until the ingredients are thoroughly blended. The mixture is then put into a baking dish and baked in a moderate oven for from 20 to 30 minutes or until set. Then a meringue is made by beating the remaining 2 egg whites to a stiff froth and folding in the powdered sugar. Spread this lightly over the top, arrange the nuts symmetrically over the top and replace in the oven until the meringue is of a golden color. Serve with plain or whipped cream.

#### Lemon Apple.

Select a few tart apples of the same degree of hardness and remove the cores. Unless the skins are very tender pare them. Fill the centers with a mixture of grated lemon rind and sugar. Squeeze a few drops of lemon juice over each apple, place in a covered pan with one or two tablespoonfuls of water in the pan and bake. When almost done, remove the cover and finish baking. Serve with or without whipped cream.

#### Date Cream Pie.

3 cups milk                      2 eggs                      ¾ pounds dates

Seed the dates and put to cook in sufficient water to cover. When perfectly tender and quite dry, rub through the colander, then add the beaten eggs and lastly the milk heated to the scalding point. Mix thoroughly, then turn into a pan lined with a single crust. Bake in a moderate oven until "set." Be careful not to bake too long.

#### TO WASH A BLACK DRESS.

LILLIE E. BOWSER.

HERE is a little hint that may be of some use to some of the ladies who read the INGLENOOK:

If you haven't a better way for washing a nice black dress, you will be glad for this one. Wash the dress through the one suds of rainwater, if one has it; rinse, dip in sweet milk; hang out to dry, but before it gets entirely dry, press it without dampening and the dress will be as stiff and pretty as when new.

#### CHILDLESS WOMEN SHOULD ADOPT A LITTLE ONE.

THE woman who has no children never knows the greater joy of devotion. Her sympathies, instead of extending themselves, will narrow more and more, and tend to concentrate themselves upon the merely pleasurable experiences and sensations which only lead souls about in their own labyrinthine domain. She may win personal distinction and high fame. She may surely deserve them, but she will be in danger of following the false way which begins and ends in self. If the fates deny her marriage, or leave it bare of offspring, let her win to her arms some motherless child, and study the lesson taught by the dear Christ when he placed a child before his disciples and bade them learn from him the great science of life.

The beauty of childhood is not easily over-appreciated,—the mobile countenance, the flexible muscles, the fair, smooth forehead, the unconscious grace of movement. What a lovely presence is this! It illuminates your whole house, be it a hovel or a palace. The babe newly born, so fine, so soft, so tender! By degrees, it enters into possession of its bodily powers. Soon he follows her about, walks beside her, begins to question her regarding the meaning of all that he sees. He learns to pray at her knee. He goes to school. All the way from infancy to adolescence is strewn with flowers. It has no doubt an offset of anxieties and cares, but would any of us dream of giving up the rose because of its thorns?—*Delineator for May.*

#### FUSSING.

QUIT fussing! It spoils your temper. It spoils the temper of those about you. It will spoil the beauty of your countenance, for the habitudes of the soul will register themselves in the lines of the face. A face with the corners of the mouth drawn down and with a sneer gathered about the nose and the upper lip is not a lovely face.

Do not fuss at the children; do not fuss at them for what they have done, or what they are doing, or what they seem about to do. Call them to you and quietly tell them what they may do and what they may not do, and have no fuss about it. Quarreling with children! is not that a sight! It will make them quarrelsome and fussy also. It will drive all the beauty out of the home.

Do not fuss with your associates in business. It looks childish. Put up with small irregularities, remembering that people must put up with something from you. Be generous in your attitude toward your fellows, for you need their generosity.

Fussing. It is a remedy for nothing. It is a wrong to all about you.—*Arkansas Methodist.*

## BANDAGING.

[Industrial talk by Elizabeth Band, Oneida, at graduation exercises, Carlisle, Pa., 1908.]

THERE is an art in bandaging of which every woman should have some knowledge as one never knows when an emergency may call it into service. Accidents occur so frequently, especially among children, that she should so thoroughly acquaint herself with the nature and use of at least all simple remedies that she will not lose her presence of mind at the most trying moment. There is an old saying, that "necessity is the mother of invention." This is true in some cases but it does not hold good in the work of surgery where skill and dexterity are needed in order to relieve suffering and in some cases save life.

The object of bandaging is to retain dressings and splints in position and to supply pressure. Almost any kind of household muslin or cheese-cloth may be used, though cheese-cloth or gauze is best on account of its elasticity. This may be applied to any irregular surface without reversing it. Shaker flannel cut on the bias is used where greater strength and firmness are needed.

There are many kinds of bandages, some named from their applications, as the circular, spiral, spica, figure of eight and recurrent bandages, while some are named after persons who devised them, as Barton, Gibson, Dassault and Valpeau.

In applying the bandage the roll should be held in one hand while the loose end is held in the other. The outer part of the bandage should be against the part to be bandaged and it must be applied smoothly, all pressure being uniform. Care must be taken to make the bandage snug, but not too tight, as there is danger of gangrene setting in on account of the circulation being interfered with. The ends of the fingers or toes in most cases should be left exposed in order that the circulation may be watched. They should feel warm to the touch and the color should disappear on pressure and reappear when pressure is removed; if they feel cold or numb, swollen or have a livid appearance the bandage should be loosened.

The spica bandage is used to cover shoulder, thumb, foot or groin and the turns take the form of the Greek letter (A) lambda, and when completed resemble the leaves of an ear of corn.

The circular bandage consists of several simple turns about a part as the wrist, but the turns neither go up or down and each turn exactly overlies the previous one.

Two of the simplest kinds of bandages are the spiral and figure of eight. The spiral consists in covering the limb by a series of spiral turns, each overlapping the one below for about one-third of its width. In most limbs the enlargement of the upper part prevents the application of a spiral bandage without making

a reverse turn. Without this turn only one edge of the bandage would come in contact with the part. The other would stand away from it. The reverses are made by placing the thumb on the lower edge of the bandage to hold it firmly in position while the bandage is folded down upon itself. The turns should not be made over the prominent part of a bone. When possible they should be made on the outer side of a line; on making the turn the bandage should be held loosely. Then, after the turn is made it can be drawn as tight as is necessary. The hand should be held a little above the limbs in making the turns and care should be taken not to unroll more bandage than is needed.

The figure of eight bandage is most frequently used in bandaging joints as the elbow, or knee, because it is easy to apply and fits the part better. It can also be used instead of the spiral reverse. This is applied above and below the joint, each succeeding turn overlapping the previous one by one-third its width. This kind of bandage needs very few reverses, yet they must be employed should occasion require them.

The recurrent bandage is used to retain dressings about the head and amputation stumps. The part is covered by a series of turns each one of which recurs to its point of origin.

Fixed dressings are used in the treatment of fractures, injuries and diseases of joints, after an operation upon bones and in treatment of certain deformities. In order to make such dressings some material which will give firmness is incorporated into the meshes of the fabric.

Such dressing may be solid, be used of plaster of Paris, starch, silicate of soda, glue, zinc oxide, paraffin gum, chalk or celluloid.

The material most generally used is plaster of Paris, which differs from the other materials used, in the fact that it does not contract as it hardens but expands a little. The bandage becomes very hard and unyielding, but it can be cut down through the middle with a knife in order to remove it.—*The Arrow*.

## DANDELIONS.

Good-morning, Miss Madcap, with curls tossing free,  
Perhaps you despise such plain people as we;  
But though we are lowly enough, we are fair;  
Pray, what would the rose be unless it was rare?

The bees love us dearly, as no doubt you've seen,  
And find us at once in our coverts so green,  
And tell us that crocuses die when they do,  
From envy alone of our halcyon hue!

But then bees are flattering rogues, it is clear;  
They buzz pretty compliments into your ear,  
And make you believe half the nonsense they say,  
While cleverly stealing your honey away.

So we prize the soft dew, the dear sunny breeze,  
And give scarce a thought to those wicked young bees

With whom, as no sensible flower but knows,  
Today it's the lilly, tomorrow the rose!

We greet the dawn's freshness; we droop not at noon,  
We dampen our blossoms below the white moon;  
And plain as we are, we would rather dwell here,  
Than queen it in hot-houses half the long year.

But still we have troubles enough, little child,  
For yonder brown cattle whose looks are so mild,  
Some morning, as sure as the heavens are blue,  
Will eat us for breakfast—and relish us, too!

—Edgar Fawcett.

### THE DISADVANTAGE OF BEING SMART.

PAUL MOHLER.

It is considered so desirable nowadays, to be intelligent, that the child that has a hard time learning, is pitied: he seems to have so little chance with the others. Enough has been said for him. I wish to call attention to the fact that the unusually smart child has just as many disadvantages, and as hard to overcome.

In the first place, an unusually bright child is often a victim of some nervous weakness, and perhaps a physical weakness that makes all mental work an injury to his health. How many very bright children have we known, who could not even attend school on account of their health.

If the child is bright and strong, he has an easy time doing the work of his class—too easy. For, when he has his work done, he finds some time on his hands, which he must fill with play. There are some pupils in school so much quicker than the other pupils; that they will do all the work required of the class in school hours with little or nothing to do outside. The bright boy will find something to do. It will generally be play. If this condition continues, the boy will soon be an idler. Some such boys and girls actually succeed in finishing the grammar grades without ever having learned to study.

No matter how smart a boy may be, if he pursues his education, he will sometime come to the place where he must study. The longer he has escaped that condition, the harder it will be for him when he does strike it. When it comes to solving the hardest problems, there is nothing that equals hard close application. "Smartness" will not answer. There are very few "smart" boys that ever learn to apply themselves well to any problem. Consequently they fail. Many times have I seen the boys that were at the head of their classes in the lower grades drop out of the school entirely when the hard work was reached. Verily the last shall become the first, and the first last.

But not only in school is he at a disadvantage. All through life it clings to him and holds him back. Knowing that he is naturally smarter than other men, he considers that he is superior to hard work. If he must make a living he will make it by his wits. Lack-

ing the industry to do any really valuable mental work, he soon becomes a mere trickster, by fraud, or by stealth, or by hypocrisy securing the fruits of other men's toils. I can think of no failure in life more pathetic than that of the talented man who has wasted his powers.

It may be said, and truly too, that this is not near always true; but it is so often true, that I have almost as much hope for an exceedingly dull boy as for an exceedingly smart one. No teacher can spend many years in the schoolroom without being impressed with the fact that that pupil is most fortunate who can get his lessons only by an effort that really costs him something.

### OLD ENOUGH TO VOTE.

SELECTED BY SNOW MAHORNEY.

So you are twenty-one? And you stand up clear-eyed, clean-minded to look all the world squarely in the eye. You are a man! Did you ever think, son, how much it has cost to make a man out of you?

Some one has figured up the cost in money of rearing a child. He says to bring up a young man to legal age, care for him and educate him, costs a lot of money. But that isn't all. You have cost your father many hard knocks and short dinners and worry and grey streaks in his hair, and your mother—ah, boy, you will never know! You have cost her days and nights of anxiety, and wrinkles in her dear face, and heartaches and sacrifice. It has been expensive to grow you. But—if you are what we think you are, you are worth all you cost and much more. Be sure of this: while father doesn't say much but "Hello, son," away down deep in his tough, staunch heart he thinks you are the finest ever. And as for the little mother, she simply cannot keep her love and pride for you out of her eyes. Do you know, sonny, if you were to do anything low or mean it would just about kill your mother?

You are a man now. And sometime you must step into your father's shoes. He wouldn't like you to call him old, but just the same he isn't as young as he used to be. You see, young man, he has been working pretty hard for more than twenty-five years to help you up! And already your mother is beginning to lean on you. Doesn't that sober you, twenty-one?

Your father has done fairly well, but you can do better. You may not think so, but he does. He has given you a better chance than he had. In many ways you can begin where he left off. He expects a good deal from you, and that is why he has tried to make a man of you.

Don't flinch, boy. The world will try you out. It will put to the test every fibre in you. But you are made of good stuff. Once the load is fairly strapped on your young shoulders you will carry it, and scarcely feel it—if only there be the willing and cheerful mind.

All hail, YOU, on the threshold! It's high time you were beginning to pay the freight, and your back debts to father and mother. You will pay them, won't you, boys! How shall you pay them? By being always and everywhere a man!

#### PHILOSOPHY FOR FARMERS—AND OTHERS.

TEMPER is a good thing in a tool, but a bad thing in a fool.

The horse has too much pull to be supplanted by the auto.

Not every nail needs hitting on the head. Some need pulling out.

The man who talks against the farm talks against his best friend.

Somebody, once describing a miserly neighbor, said that he kept his bonds and mortgages under his pillow at night so that he might hear them drawing interest.

Anybody can turn the handle of a separator, but it takes a smart man to get the milk to put in it.

A man who is not trusted by his horse is one to be avoided on general principles.

If you have any grudge to pay, put it off until tomorrow—and then settle some other way.

It doesn't matter how much a man calls a spade a spade, the question is, Does he know how to work with it?

Grafting is a very good thing on a tree, but a mighty poor thing in a town board.

The boy who is born with a silver spoon in his mouth usually swallows the spoon before he learns how to use it.

Fail once, and it is an education. Fail twice, and it is a warning. Fail three times, and it becomes a hoodoo.

Listen to any man who knows more than you do, or knows better than you do the thing you already know.

Don't expect to find shade trees, easy chairs and rippling brooks in thick profusion along the road to success.

It is right to be contented with what we have, but never with what we are.

No man is hopelessly down who does not lose heart.

Success doesn't make a fool out of a man unless he has other weak spots.

The man who blows his own horn too vigorously is more than apt to be the first to get winded.

A little less time than we need, and a little less money than we desire, come nearer constituting happiness than many of us are willing to admit.

If all the money now being spent in search of the North Pole could be invested in bean poles, the country would be just that much better off.

Your horse may not be religious, but he can tell pretty well when Sunday comes.

Some bad corporations are like the good farmer in one respect at least—they water their stock well.

Let something less important wait,  
And go and mend that broken gate!

Where there is a will there is, a good road.

The most discomforted-looking man to be found is the one lying flat on his back under an automobile trying to find out why the wolly-wobble won't go round.

Many a man would not be married to his work if he could live by getting a divorce.

Follow the advice of a man who is busy following it himself.

Some men make their mark in the world by marking what they make.

You cannot keep your happiness by building a fence around it. The more you let it scatter over your neighborhood, the more you will have.

Be stingy in melancholy matters and a pauper in pessimism.

If the government compelled everyone to denature his alcohol, there would be an end of denatured men staggering homes from the grogshops.

Those who stick to patent medicines long enough will presently find that they need a patent stomach.

The farmer would do well to remember that while the weather may be often vexatiously uncertain, it is nothing like as uncertain as the stock market in town.  
—*Farm Journal*.

### For SUNDAY READING

#### SEEK TO PLEASE JESUS.

JEANNE BERENICE MOE.

Seek to please Jesus in bright days of youth.  
Seek to please Jesus, the Light and the Truth;  
Seek for the favor of his love and grace,  
If thou, in heaven, would see his dear face.

Seek to please Jesus as older you grow,  
And unto others his wondrous truth show.  
In all temptation, his spirit draws near,  
Faithfully guards us while we journey here.

Jesus will draw near and pardon our sin,  
Open his great heart for us to come in;  
Cleanse us, deliver, redeem us from dross,  
Tenderly show us the way to the Cross.

Seek to please Jesus, you'll find every day  
Flowers of gladness will brighten your way.  
Sunbeams reflecting his presence so bright,  
Will truly watch us and guard through the night.

Seek to please Jesus and Satan will flee.  
Seek to please Jesus and happy you'll be.  
Seek first the kingdom of God and his love  
And gain a home in the mansions above.  
North Manchester, Ind.

RICHARD SEIDEL.

to be a more general, more attractive and blind kind of  
look upon in the first forms, betwixt, corporal,  
or of the spirit  
generally, makes self of him, low, and so,  
that you prefer another, and postpone yourself, even

ARTHUR T. PIERSON says: "There is enough jewelry, gold and silver plate, buried in Christian homes to build a fleet of fifty thousand vessels, ballast them with Bibles, crowd them with missionaries, build a church in every destitute hamlet and supply every living soul with the Gospel in a score of years. Only let God's fire come down and take possession of our hearts and tongues and the Gospel will wing its way like the beams of the morning." What an exchange! Earth's jewels for heaven's treasures.—*Scl.*

United States. A church is no evidence of great

## Echoes from Everywhere

Twelve hundred of Ohio's 1,371 townships and 500 of its 800 towns are "dry"; 100,000 of Cleveland's population live in "dry" territory.

The Japanese tourists visiting in Boston send \$100 for the relief of the sufferers from the great Chelsea fire, one of the deeds that help to make war impossible.

Russia is much interested in the great tuberculosis convention which is to be held in Washington this summer, and plans to send a large representation to it. The White Plague is one of the greatest scourges of Russian life.

Dr. Flores Ontaneda, a noted Ecuadorean chemist, died at Guayaquil recently from bubonic plague, which he contracted at the municipal laboratory while preparing Haffkin's prophylactic, for treating the epidemic.

Chinese students continue to take honors in competition with our own boys in our colleges. V. Kejuin Kee, son of the secretary of foreign affairs of China, has been chosen editor of the Columbia Spectator, the daily paper issued at Columbia University, New York.

An exact statement made to Congress by the secretary of the navy shows that the cost of building the battleship Connecticut in a government yard was \$6,387,260, while that of her sister ship, the Louisiana, was only \$6,057,647, the latter being built by private contract.

The Western Drawing and Manual Training Association which recently held its 15th annual meeting at Indianapolis, will have its next year's convention in St. Louis. It is announced that the North Central Association of Colleges will hereafter recognize manual training and domestic science as college-entrance subjects.

The temperance movement has begun to reach Rhode Island. The State House of Representatives last week passed a bill to limit the number of licenses to one for every five hundred inhabitants. Should the measure become a law it would reduce the number of licenses in the State by 447. It would wipe out nearly two hundred in Providence alone, and almost cut in two the number of places in Pawtucket and Woonsocket.

The new Greek census shows that in spite of the large emigration the population of Greece is increasing at a comparatively rapid rate. The growth was nearly two hundred thousand in a single year. Greece has now 2,631,952 people. Since the establishment of the kingdom, in 1830, the population has more than quadrupled, and yet one and two-thirds times as many Greeks live outside Greece as in it. These Greeks are scattered thru Crete, Cyprus, Southern Italy, Turkey, Southern Russia, and the United States.

For several days during the latter part of April the South and Southwest were visited by a terrific wind storm. About four hundred lives were lost and the property loss will reach the millions. Special appeals for aid were issued in Mississippi, and the governor was asked to provide tents for the homeless in the storm-swept regions.

Guthrie, Okla., May 1.—The House today passed the nepotism bill previously passed by the senate. The bill is very stringent and provides that no one shall be employed in any judicial, executive or legislative department where a relative, even in the third degree, is an officer. The penalty is \$150 to \$1,000 fine and works a forfeiture of office.

The Government, in other words, we in our corporate capacity of the State, needs to economize. The excess of expenditures over receipts since July 1 has been about \$43,000,000 where last year at the same time we had a surplus of \$52,000,000. In April alone, the Government expenditures exceeded the income by nearly \$16,000,000 as noted elsewhere—a very good argument against battleships.

Cecil Rhodes' dream of a railway from Cape Town to Cairo will probably be realized within the next six years, when the line from Lobito Bay to the Katanga district will be opened. The railway from Cairo southward has already reached Khartoum, while the line northward from Cape Town stretches to Broken Hill, four hundred miles north of Zambezi and 2,000 miles from Cape Town.

U. S. Judge Goff, at Grafton, W. Va., has issued orders which forbid the United States Express Co. to deliver "C. O. D." shipments of liquor in the State. It is a common ruse to seek to evade prohibition laws by sending liquor in from outside States in this way, as the State laws are not supposed to interfere with interstate commerce. Gradually these schemes are being headed off, however.

With the 2-cent fare law in operation for the greater part of the period, the eight representative railroads of Iowa show a net gain of \$383,057 in passenger earnings for the year ending Jan. 1, 1908. Notwithstanding a decrease of \$386,000 in the gross earnings for the same period, the conclusion is drawn that the reduction in the price of mileage has benefited the railroads as well as the people.

The legislature of North Carolina at a recent special session passed a compulsory school attendance law for the blind children of the State, similar to the one passed for deaf children last year. The law requires the several counties to bear the traveling expenses of indigent deaf and blind children to the schools and return, in addition to the \$20 already required for the clothing. The State meets other expenses.

England had a big taste of winter in April. In the three days ending April 25, more snow fell in London than in the entire winter.

"Uncle Dan" Whipple, aged 109 years, died recently at Traverse City, Mich. Mr. Whipple was born in Cattaraugus County, New York, March 1, 1799. He was a member of Gen. Fremont's exploring party on the historic trip across the Rockies. He was a companion of Kit Carson, and later served through the Civil War in an Iowa regiment. Mr. Whipple's grandmother lived to be 133, and his father died at the age of 113.

Before the Civil War, the statue of Andrew Jackson that stood in Court Square, Memphis, Tenn., bore the historic words of the former president, "The Union must be preserved." But during the conflict a local confederate took a chisel and removed the motto. It has now been decided by the Memphis park commission that the motto shall be replaced. "Now that the Civil War is long past," said one of the commissioners, "and we are all so proud of the Union, it seems that it would be only proper to put the language back."

The President has approved the new employers' liability law, which was passed with the express view to overcoming the objections of the Supreme Court to the last one. This new law applies only to railroads, and it makes them liable for injuries received by employes, even though the road may not be at fault. It is the plan to have an amendment passed next Congress extending the law so as to include other employers besides railroads. Every prominent nation is in advance of this country in having provided legislation of this character, while among us men have been killed or injured by the thousands and there has been no regular provision for any recompense.

London, May 1.—Negotiations for a settlement of the shipbuilding dispute have failed again, and the lockout notices issued a week ago will go into effect tomorrow at all yards in the United Kingdom. Fully a quarter of a million workmen will be directly involved. The trouble began early in January with a strike of shipbuilders on the Tyne. By the middle of February the strikers had been joined by the allied engineers, who voted by an overwhelming majority against a reduction of wages. On April 24 the Employers' Federation refused arbitration and decided on a lockout, effective tomorrow unless the men resume work.

Washington, April 24.—Secretary Wilson says we ought to have a "bumper" crop throughout the country this fall. All the conditions are favorable for record-breaking yields of all sorts, and unless something happens to head off Mother Nature's industry between now and the time the grains and fruits and vegetables are ripe the farmers from Maine to California ought to be rolling in plenty before the snow flies. "Will the prices of edibles continue to be high?" the secretary was asked. "Of course they will; they are bound to be high," replied Secretary Wilson. "The reason is easy to find. The population of the country has increased faster than the crop acreage. The number of men that have gone into business and manufacturing pursuits is far greater than the number that have taken up farming. But there need be no general alarm on that account. The problem will adjust itself in time, and we will always raise enough wheat to feed all the mouths in this country."

Plans have been inaugurated for a general revival campaign in New York City by the combined forces of the evangelical churches. At a meeting held in the Metropolitan Opera House 5,000 people enthusiastically dedicated themselves to the cause, and an unprecedented effort will be made to reach the classes of the population, high and low, who never go into a church. Twelve tents will be put up, in various parts of the city, and these will be made headquarters for revival work. Even Wall Street will be invaded, though the denizens of this "human canyon" are considered to be the most hard-shelled reprobates within the scope of the crusade.

Washington, May 1.—The monthly statement of the public debt shows that at the close of business April 30, 1908, the debt, less cash in the treasury, amounted to \$925,167,236, an increase as compared with March 30, 1908, of \$15,445,899. This amount, however, does not include \$1,315,840,869 in certificates and treasury notes outstanding which are offset by an equal amount of cash held in the treasury for their redemption. The statement of the government receipts and expenditures for the month shows the total receipts to have been \$43,919,321 and the expenditures \$59,888,784, leaving a deficit for the month of nearly \$16,000,000, a deficit for the ten months of the present fiscal year of \$51,644,615, as against a surplus for the corresponding period last year of \$56,475,751.

Boston, April 15.—Acting Gov. Draper yesterday signed the bill appropriating \$10,000 to begin the work of exterminating the dogfish, which has for several years played havoc with the shore fisheries. Altho the money is now ready, it will be some time before the commissioners of fisheries and game perfect a program of extermination. Several schemes have been considered. All of these provide for experiments, the most comprehensive of which has been submitted by Representative McIntire of Gloucester. His plan provides for an effort on the part of the State to discover a market for the fish. The first desire of the commission, Secretary Field said, is to protect the fishing grounds, and restore the industry to the same efficiency that characterized it before the appearance of the dogfish off the coast in such large numbers some years ago.

The century-old custom of holding a child labor market each year has again taken place at Friedrichshafen, Germany, and has aroused a storm of indignation in the frontier provinces of Austria, Switzerland, and Germany. Each year in the market place between 300 and 400 boys and girls of from 11 to 14 years are contracted out for seven months to farmers of Southern Bavaria, Wurtemberg, and Baden. The children, generally in charge of their parents, are drawn up on the market-place for inspection by a crowd of farmers who look them over and feel and poke their limbs, while discussing their physical merits and demerits. Gradually all are disposed of, and those in charge of the children then sign with the farmers agreements for the seven months bondage, and the sums decided upon are handed over. This usually amounts for the entire period of seven months to \$12.50, but sometimes it attains to \$20. The terms of the contracts are harsh, providing that the children, regardless of sex, may be utilized for "cattle herding, housework, stable and stall cleaning, nursing children, feeding cattle, running errands, and whatever else the master may require them to do."

## CREAM OF MAGAZINES

### THE HUMAN BRAIN.

Briefly, the two brain hemispheres in our head are analogous to two phonographs, because phonographs can no more themselves cover their wax leaves with words expressing ideas than they can make wax think. The phonographs are wonderful instruments, but they are never anything but instruments; and so the brain hemispheres are the instruments of the thinker, and nothing more, for if they could themselves think, then both hemispheres would think as a matter of course, when, as a matter of fact, only one of them has a single imprint of the human mind in it.

What is it, therefore, that thinks? Unquestionably the human personality, which is itself independent of the brain that it uses. So far as the brain is concerned, it is simply physical in its structure and chemical in its composition. But in one of its halves we are face to face with the tremendous exception to everything earthly. The evolutionist can make a good showing that in structure man's brain differs but little from the chimpanzee's, just as it ought to in the ascending series of animals. But when it comes to the human mind, the evolutionist has to quit. What but a mind worked by a man could both weigh and accurately locate in the heavens a great planet, which neither he nor any one else had yet seen? And so the human world abounds with innumerable utter impossibilities for mere animals to achieve. Every article in an ordinary city house, be it a thermometer or a book, or anything else in it, is equally an impossibility for animals, by any process of evolution, to attain the power of producing.

Mentally, therefore, man is as much out of keeping with the entire succession and development of evolution as any being from another world would be, and those who would still say that because the human brain so closely resembles that of the ape, these two cannot be far apart, are themselves their only good arguments. Meanwhile, for this human thinker one instrument for thinking is enough, and he does not need two hemispheres any more than a violinist needs two violins. The second hemisphere is then only to provide against accidental damage to the first, when, if he be yet young, the thinker can in time teach it to become human also in mental powers, but not if its chords have become too stiffened with age.—Dr. William Hanna Thomson, in the *May Everybody's*.

### DISCIPLINE AND THE BOY.

Between the ages of fifteen and twenty, as has already been pointed out, the boy needs the closest attention. While budding into a man he becomes abnormal in mind and body. Egotism becomes his dominating characteristic. He resents advice, and chafes under parental discipline. He is like a caged tiger, ever seeking to burst his bonds. He has no perspective of life, none of its bitter and wholesome educational experiences, and cannot believe them essential. It is a time when the wisest parents, in spite of their own experiences, which they

generally seem to have forgotten—are perplexed. Noting that the boy is often more susceptible to outside influences than to those of the home, he is sent away to school, if such a thing is possible.

Sometimes this act of the parent is the result of mere laziness or a confession of weakness to cope with a difficult situation. The father, engrossed in business, is apt to be tyrannical in the discipline of his son, or else let him go his own way unmolested. The mother, whose affections are so curiously set on sons, is apt to interfere with the father's ideas. It may be that both have the same love for and the same pride in their son, the same desire to develop him into a good man, but they are apt to take radically different and independent measures. It is no uncommon event for a mother secretly to side with the son against the father, simply because she thinks she understands the boy better. And often that is exactly the case. Her sympathies are broader and her resentment over foolish conduct much less. This psychological problem of adolescence is the most important in the history of any family. It is a subject to which Dr. G. Stanley Hall has devoted two large volumes which form one of the most valuable scientific works in recent years.

But the boy is often sent to school simply because, all other remedies having been exhausted with poor results, a career beyond the hearthstone seems on all grounds to be the last resort. This is apt to be the very best policy, no matter what the social or financial status of the parents. It is good for all concerned. The boy gets a new chance, and the parents, experiencing a powerful sense of relief from the necessity of constant discipline, have time to expend their affections on the absent son without restraint.

A boy will generally take discipline more patiently from strangers than from his parents, since an assumption of inherited rights leads him to assume that he is master of the home, or at least free from its fretting discipline. He does not see the reasons for restrictions imposed upon him, and jumps to the conclusion that they are unjust and not based on real love for him. On the contrary, he more readily accepts discipline at school as just or merited, no matter how disagreeable it may be to him.—Joseph M. Rogers, in *May Lippincott's*.

### THE CHURCHES AND THE PEACE MOVEMENT.

"It is refreshing," says the *Boston Advertiser*, commenting on the protests of ministers sent to Congress against the appropriation for four battleships, "to see the American churches waking up at last to the fact that the world's inordinate naval program presents a great moral issue. This protest of the clergymen of New York and Boston, with similar ones from other cities, is a memorable act. Our churches have too long abdicated their proper leadership in this imperative matter. This solemn protest by so great and eminent a body cannot be dismissed as careless or inconsiderable. The protest is itself a condensed and intense argument, which should startle

the country into soberness. It is to be hoped that it is the forerunner of a hundred such, with sermons everywhere to match, rousing the American churches to a more worthy part in the most urgent service of our time.

"For the war against war is the commanding cause of today; as the war against slavery was the commanding cause of the period before us. Mr. Carnegie put it rightly the other day when he said that the great duty of our generation is to put a stop to man-killing, as the great work of Lincoln's generation was to put a stop to man-selling. It would hardly seem as if this needed to be said to disciples of the Prince of Peace. Yet there was never a war so bad that the clergy in plenty have not been found ready to bless it; and so many of them today are found ready to apologize for the world's crushing armaments and to boom the big navies, that it is little wonder that the plain people are moved to ask, as they have had to do in the face of the same men's attitude often toward lawless and corrupt wealth and other gross wrongs and public menaces, what the Christian church is for.

"We see all the melancholy old phenomena of the anti-slavery struggle repeated. Indeed, one of the leading religious journals of the country gave conspicuous place and apparent endorsement the other day to an article by an eminent college president in which, by way of plea for a stronger navy, he condemned as un-Christlike the effort to abolish militarism, linking it distinctly with the old struggle against slavery, which he also pronounced un-Christlike. Christ would have taught us, he urged, not to war against the institution of slavery itself, but simply to try to make the slaves and their masters more honorable and faithful slaves and masters! It was a grewsome reminder of a record of shame. If there be one thing for which religious men should strive, it is that in the war against war, into the thick of which we have now come, the American churches may be saved from the mournful part into which so largely they were betrayed in the war against slavery.

"It is a capital misfortune that our religious journals are so often in this matter the organs of compromise and timidity, plausible apologists for what now is or worse, and ingenious discouragers of reform, yet failing again and again to give just expression to what is really prophetic and courageous in their own religious bodies. At a time when the military and pension expenses of this republic are two-thirds of its entire revenue, with a bare third of our national resources left for constructive purposes, and when the world's most awful present problem is that of its burdensome armaments, we find certain religious newspapers declaring that the citizens of the republic, even the trained minds of the pulpit, men eminently charged with the shaping of public opinion, ought not in propriety to petition or protest upon this great matter, but should simply leave it to 'the government'! They are not called upon or are not competent to exercise judgment! Paralysis and anæmia in a democracy could not well go farther. These teachers must needs, of course, give the same counsel to the people and pulpit of England and Germany, whose governments are now engineering naval increases greater than our own, and of Russia, on the eve of building its new billion-dollar navy. Whether their logic would quail if the present demand at Washington were for fourteen or forty new \$10,000,000 battleships instead of four, it would be interesting to know. Is there perhaps some stage at which the plain people of the republic, or their bishops and other clergy, might properly in the eyes of these mentors do some

thinking of their own on this subject, and respectfully open their mouths?

"There is no such folly or pusillanimity as for men to indulge in pious declamation about the madness of the rivalry of the nations in their great armaments, which have now become vastly more a provocation than a defense, and then refuse to coöperate in any positive effort to check the extravagance. The only way to begin the limitation of armaments is to begin."

#### TAGGING THE DISAGREEABLE PEOPLE.

With all our getting we do not get understanding. We mistake words for truth and qualities for qualifications. And in matters of judgment we make primitive, rather than intelligent distinctions. For example, we still regard the person who breaks another's head in a momentary fit of anger as a worse man than the one who persecutes his wife for forty years with a disagreeable disposition. The one is tried and sentenced as a criminal, while the other may be honored in the community as being of an extraordinary righteousness. In our efforts to discipline the crude, honest, outbreking sinners we have neglected to chasten a certain class of perverse people who are no less at fault because they possess so many virtues. All the virtues do not make some people virtuous, just as all the wealth would not make a miser rich. And we have failed in this duty because more courage is required to deal with one mean, good man than with many bad men. There is something prickly about him which forbids a firm, right-hand grapple with his particular fault. For one thing, his most exasperating qualities are invariably based upon his virtues, and his chief gift is the power to discover every other person's weakness, real or potential, which gives him the advantage of an offensive and accusing relation to them. And being in no need of a conscience himself, he exercises it vicariously, constantly and scrupulously for others. Nothing is more difficult than to indict a person for a fault who has already fixed his eye victoriously upon our own failing.

However, it is time to tag some of these people with the reputations they deserve. What they need is to contribute less to public opinion and to have more of it contributed to them.

Persons who bully public servants in public places are rarely punished for their viciousness. The instinct to persecute where there is no danger of retaliation is so strong in them that they will brave the silent contempt of the crowd about them for the pleasure of humiliating a clerk. Men who are brave enough to their equals show this kind of cowardice to their subordinates; and women distinguished for good breeding in their own social circles display virago qualities in dealing with their social inferiors. Women who hector shop girls and grocermen on the ground that they pay their bills also belong to this class; so does the man who becomes obviously angry when a baby cries in a railway coach or other public conveyance where he happens to ride. Such persons should be reminded of the fact that the world, including the railways, all real estate and the future, belongs more particularly to the baby. The rest of us are only regents of property, rights and government. He is the one person among us who has a natural imperative advantage of the situation by reason of his extreme youth, inexperience and magnificent unconcern. It is not possible, therefore, to punish such an offender for his yells, because he has not arrived at an age to be affected by outside opinions, and it is the meanness of mortifying the

infant's mother which indicates the peculiar quality of the disagreeable man's spirit.

The person in whom truth is a sort of niggardly trait for apprehending the honest, but more elastic and figurative, truths of other people as lies, is very objectionable and injurious to society, because he sets up a narrow, false and foolish standard of veracity, and is ever ready to fling his little fact like a stone in your face by way of contradiction. This person is the same who, being in the minority, contrives to make more noise with his outcries of defeat than the majority can with acclamations of victory. And this is because he lacks the honorable veteran quality which enables one to bear defeat no less sedately than conquest. His only element of strength consists in placing the other person, and as many other persons as possible, at a disadvantage; and being in that predicament himself, he is to be recognized by his impotent bellowings.

Religious people who love darkness rather than light belong to this order and are to be known by their paucity of ideas, by the narrowness of a critical spirit, and, above all, by their fear of knowing anything beyond the creed circle of their own catechism. Others also are to be mentioned here in whom righteousness is more a missionary instinct than a personal quality. They have a kind of peripatetic piety which urges them into a nagging relation to other people's souls, when really they are less likely than almost any of us to have souls of their own.

Many more might be mentioned, of course—the man who wants to argue till he proves the other person wrong; the other who imagines that he is a brilliant conversationalist because he can sustain a monolog longest at the expense of the rest of the company; and the woman in whom talking has become a sort of high treble hysteria. It will be observed that the two last-mentioned individuals never marry each other! No one ever saw a bullying, brilliant, egotistical man with a vivacious, talkative wife, nor an intellectually vain woman with a noisy husband. He is always her soft pedal.

And last, but by no means the least disagreeable, are the men or women who have an almost audible sense of their own nerves and a pessimistic vocabulary with which to interpret them. If euthanasia is ever admissible, it should be practiced upon women who are perfectly willing to die, but who cling faintly to life; who have neurasthenia and prize it; whose disease is a selfish, physical obsession of the mind which exhausts the body—and it might also be practiced with mutual relief upon men who are more interested in their vitals or their victuals than their business.—The Independent.

## Between Whiles

### POETRY AND REALITY.

Country Editor—I'm glad you brought these spring poems in early.

Spring Poet—Yes, sir!.

Country Editor (putting them in the stove)—Yes, sir! Most spring poets wait till the weather gets too warm to use them. Judge.

There's something kind of pitiful about a man that growls Because the sun beats down too hot, because the wild wind howls,

Who never eats a meal but that the cream ain't thick enough,

The coffee ain't been settled right, or else the meat's too tough.

Poor chap! He's just the victim of Fate's oldest, meanest trick:

You'll see by watching mules and men—they don't need brains to kick.  
—Chicago Inter-Ocean.

### RIGHT.

"It costs more to live than it did years ago," said the man who complains. "Yes," answered the man who enjoys modern conveniences, "but it's worth more."—Washington Star.

### BURIED.

A merchant of a certain town in Illinois one day entered the office of the editor of the only newspaper in the place. He was in a state of mingled excitement and indignation. "I'll not pay a cent for advertising this week!" he exclaimed. "You told me you would put the notice of my spring sale in with the reading-matter."

"And didn't I do it?" asked the editor, with reassuring suavity.

"No, you didn't!" came from the irate merchant. "You put it in the column with a lot of poetry, that's where you put it!"—Northwestern Christian Advocate.

### MORE IMPORTANT.

"Can't I go out in the backyard and play in the garden, mama?"

"Certainly not, child. You must stay in and study your nature books."—Life.

### A MODEL.

Mrs. Scott—You used to point Tom out to us as a model husband, and now you say he's lazy.

Mrs. Mott—Well, he's a model all right; only he isn't a working model.—Boston Transcript.

### THE RUB.

"You can't imagine," said the musical young woman, "how distressing it is when a singer realizes that she has lost her voice."

"Perhaps not," replied the plain man, "but I've got a fair idea how distressing it is when she doesn't realize it."—Catholic Standard and Times.

### DON'T ABBREVIATE.

Pupil (reading)—And his body was interred in St. Paul's Cathedral with er—er Pompey the Great.

Teacher—With what? Are you mad?

Pupil—Well, it ses here "with great pomp," but you told me last week that I wasn't to 'breviate when I was readin', so I read it out full.—London Opinion.

### A SPENDTHRIFT.

Publican—And how do you like being married, John?

John—Don't like it at all.

Publican—Why, what's the matter wi' she, John?

John—Well, first thing in the morning it's money; when I goes 'ome to my dinner it's money again, and at supper it's the same. Nothing but money, money, money!

Publican—Well, I never! What do she do wi' all that money?

John—I dunno. I ain't given her any yet.—Punch.

# Of Course You Know of the **MIAMI RANCH**

**Miami -- Via Springer, New Mexico**

**You Owe It to Yourself to Come and See Before Purchasing Elsewhere Because**

1. Our climate is healthful.
2. Our soil is unsurpassed.
3. **Miami Ranch** is soul-inspiring in natural beauty.
4. Our water supply is abundant and chemically pure.
5. Our gigantic irrigation plant is practically completed and is built to stand for ages.
6. We are already storing a supply of pure mountain water in our mammoth reservoir for this season's irrigation.
7. Thirty families of permanent settlers imbued with purpose and with ability to accomplish are already located upon their farms.
8. A postoffice and general store are in full operation in our new town—**MIAMI**.
9. Church and school privileges are already provided for.
10. Sale of intoxicating liquor is forever prohibited upon the ranch.
11. **Miami Ranch** is peculiarly adapted to fruit culture and will produce abundantly all crops adapted to the temperate zone.
12. Our lands, which are now selling at from 35 to 70 dollars per acre, will double in value within one year.

**Cheap excursions the first and third Tuesdays of each month to Miami Ranch.**

**Only \$30.00 for the round trip from Chicago.**

If you want more information write for **WESTWARD HO!** but Come and See.

## The Spirit's Sword

For all Ministers and Personal Workers.

By Evangelist J. R. Beveridge.

Vest-pocket Size, 2¼x5½ inches. ¼ inch thick. 128 pages, 1,200 Scripture references. 133 Subjects. Special Notes.

The  
Greatest Book  
out for  
Christian Workers

### Synopsis of Contents.

Importance of Personal Work. Personal Experience and Equipment, in the Holy Spirit, the Word of God, Prayer and Faith. Personal Conduct in dealing with Souls. How to approach persons. How to get cases.

The Fundamentals of Salvation. Texts for Christians under all conditions of Sin. The Natural and the New Heart. The Way of Life and the Way of Death. Hell.

Answers to nearly every question asked by Sceptics, and all classes of unconverted. False Hopes Swept Away. Guidance for those seeking to find Christ.

The Holy Spirit, Acts to 1 John. The Divine Nature of Christ. The Human Nature of Christ. A Personal Devil. Bible readings on Prayer and Thanksgiving.

Price, by mail, Prepaid.

Red Cloth, Embossed and Stamped in Black, .....25 cents.

Red Morocco, Embossed and Stamped in Gold, .....35 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## PASTOR'S POCKET RECORD

Arranged by Rev. Sylvanus Stall, D.D.

This record affords space for the recording of 63 church officers; 714 members, over 6,000 pastoral calls; 42 communion services; 126 baptisms, 84 marriages, 105 funerals, 273 sermons; 63 addresses; 168 new members, besides ten other departments.

### Ministers.

You will find this an excellent little volume to carry with you at all times.

It contains nearly 200 blank pages and is bound in black leather, size 3¾ x 5½ inches. Very convenient to carry in pocket.

Price prepaid only 50 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## THE INGLENOOK

## FREE SAMPLE

Send letter or postal for free **SAMPLE HINDOO TOBACCO HABIT CURE** We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

## EUREKA INDESTRUCTIBLE POST

**FIELD POST** Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, W. A. DICKEY, North Manchester, Ind.

## CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused **Annual Meeting** to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

### Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.

A complete Index.

100 Membership Cards.

This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.

Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.

A complete Index.

200 Membership Cards.

This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.

Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## CRADLE ROLL SUPPLIES

There is a demand for Cradle Roll Supplies coming from some of our wide-awake Sunday schools, and we are now ready to meet the demand.

**Every Superintendent and Teacher** ought to be enough interested in this new department to ask for particulars. Drop us a postal asking for our illustrated descriptive circular of these supplies. **DO IT NOW.**

BRETHREN PUBLISHING HOUSE,  
Elgin, Ill.

Practical Exercises in

## MUSIC READING

for Self Study, Day Schools, Singing Schools, Institutes and Normals, by Geo. B. Holsinger.

### JUST FROM THE PRESS

This book is a valuable one in its line and will fill the demand for a first-class instruction book in music, either for individual study or for class use. The author has had over thirty years' experience in teaching and writing music. He knows just what the student in music needs most, and has it brought together very uniquely in this book. Besides numerous exercises and instructions in music reading, it contains a goodly number of first-class songs and hymns.

### Music Lovers and Teachers,

here is a book you have been looking for, and at a price that each can afford to own a copy.

It contains 32 pages and has heavy paper cover. Can furnish both round and shaped note. Be sure and mention which notation you desire. Shaped note sent if notation is not named.

Price prepaid, each .....15 cents

Price per dozen, prepaid ....\$1.50

Special prices in quantity to teachers.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## OLIVE BRANCH

OF

Peace and Good Will to Men

By S. F. Sanger and D. Hays.

Partial List of Table of Contents.

The Persecutions of the Brethren in Germany and America.—The Peace People of the South during the Civil War.—What Will a Nonresistant People Do in Time of War?—The Western Movement from the Valley of Virginia in 1862.—Reminiscences of the War Between the States.—The Brethren in Tennessee During the Civil War.—Arrest and Imprisonment of Brethren and Mennonites in 1862.—Sketches of B. F. Moomaw, John Kline and Others.—A Group of Virginia Sisters.—Nonresistance; or the Spirit of Christianity Restored.—The Exemption Act of the Confederate Congress.—Exemption of Nonresistants from Military Duty by the United States Government in 1903.

Price Prepaid, .....75 cents

### 500 Agents Wanted

to push the sale of this book in your home congregation. Good commission. Write at once for terms.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

# Facts Regarding Imperial Valley

Some people in trying to induce their friends to settle in the country where they themselves are located, frequently send them advertising matter that is gotten up by unscrupulous land agents that deviates from the truth. Their friends come and buy property and soon find out that the facts do not correspond with the advertisements sent them. The result is they soon become discouraged and sell out at a sacrifice, and go back where they came from, worsted financially and in some instances say worse things of the country than they should, and thus bring reproach on a good country (though not as good as the advertisement represented it to be). The undersigned has known this to happen more than once, and for this reason has decided to tell his friends about the Imperial Valley in his own words, so that he alone shall be responsible, and so that the wonderful Imperial Valley may never be made a reproach and a by-word.

Imperial Valley is situated in San Diego County, California, 183 miles east of Los Angeles on the Imperial branch of the Southern Pacific railroad. The soil is an alluvial deposit and all crops are grown by irrigation, with water from the Colorado River. The main irrigation canal is 80 feet wide on the bottom and 100 feet wide on the top, and 10 feet deep. The soil is adapted to the growth of wheat, barley, alfalfa and nearly all kinds of fruit. Alfalfa having plenty of water can be cut eight times per season, yielding as high as ten tons of nice hay per acre which sells at present from \$8.00 to \$11.00 per ton. Barley can be sown for winter pasture in alfalfa stubble after the last crop of hay is harvested. Alfalfa can be cut every three weeks if the hay is wanted for dairy cows, or every four or five weeks if wanted for horses. I have known of alfalfa yielding \$40.00 worth of seed per acre and my own yielded \$20.00 per acre with the first season's sowing. Dairying and hog raising are very profitable. Butter sells from 20 cents to 45 cents per pound; hogs, 7½ cents on foot; also beef, cattle and horses do excellently. One colt weighed 960 pounds at less than one year old. One acre of alfalfa will keep from 2 to 3 head of dairy cows or horses and from ten to fifteen head of hogs. Oranges, lemons, dates, figs, apricots, grapes and berries do well. A single grape vine has yielded 30 pounds of grapes 18 months from setting. Grapes, apricot and cantaloupe growing is very profitable as they will ripen here from three to four weeks earlier than other places, and be placed on the eastern market before they are ripe in other localities. One man at Coachella was offered \$600.00 cash for the grapes on a single acre of vines and refused the offer and sold at retail for \$1,400.00. Cantaloupes will net the growers from \$50.00 to \$300.00 per acre. I have lived in the valley as long as any one, being one of the first settlers, and my experience and observation has taught me that you can grow almost anything here you plant, including vegetables, if planted in the proper seasons and properly cared for. The selling price of land at present is from \$40.00 to \$100.00 per acre, owing to location. President Roosevelt says that when it is thoroughly developed it will be worth from \$500.00 to \$1500.00 per acre.

Reader, when you shiver around your fireside the coming winter, just think of the Imperial Valley where you can go in your shirt sleeves nearly every day in the year. And on the 10th day of this month (May, 1907), while there was a snow storm raging in many places in the eastern states, we were making hay and picking and eating fruit in the Imperial Valley.

# ALBERTA

**¶ Of Alberta a distinguished writer has said:**

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

**¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.**

**¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.**

**¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.**

**¶ We have excursions every first and third Tuesday of the month.**

### MAILED ON TRIAL FREE

We want you to try Pure Herb Tablets

### TEN DAYS FREE

and prepare your system for the changeable weather of your climate.

## Pure Herb Tablets

Quickly relieve Constipation, Stomach and Kidney Trouble and Rheumatism.

No Alcohol, no Opiates, no Narcotics.

### 3 MONTHS' TREATMENT \$1.00.

If you have a stubborn case of Constipation, Rheumatism, Kidney or Stomach Trouble, or if you feel bad in any way, try Pure Herb Tablets. They are a wonderful treatment for the digestive system. They strike at the root and cause of the disease.

In most people Uric Acid is present in the blood, gradually accumulating as they grow older, and by lodging in various organs of the body, it causes disease. The blood grows old and impure, thus undermining the strongest constitution.

### SEE HOW EASY.

Just send us a mere postal card, mentioning the Inglenook and we will mail three months' treatment of our Pure Herb Tablet treatment. Use them ten days, if perfectly satisfactory send us \$1.00, if not, simply return the balance and you still have your money. We claim this treatment has no equal for above diseases, and take this honorable way to prove it to our patrons. Don't hesitate.

Speed the day by sending now to

### TOURIST SLEEPING CARS.

A striking feature of the Union Pacific passenger trains is the tourist service. The tourist sleepers are identical with the standard sleepers, with the exception that their furnishings are not on so grand a scale, but the accommodations are equally good and are sold at **HALF THE PRICE** of the standard. The seats are upholstered, and at night the berths are hung with heavy curtains. Each car is accompanied by a uniformed porter whose duties are the same as those upon the Pullman Palace Sleepers.

### DINING CARS.

Union Pacific dining cars are operated on all through trains. These cars are all new in style and models of beauty and elegance.

### DINING ROOMS AND LUNCH COUNTERS.

Dining Rooms and Lunch Counters are located at convenient points along the line, and all through trains which do not carry dining cars are scheduled to stop at these points. Well prepared meals of the best quality are properly served at popular prices. Full time is allowed for meals.

# It's Your Move Next!

---

OME people may think that it makes no difference where you live, but it does. There are lots of places to live—that is, exist, not live. To live, is to really enjoy life and its pleasures. Some people like to live in ice huts in the frigid zone and eat whale blubber. They like it. It would be wrong to take them away from such environment, for they would be homesick elsewhere.

Some folks love the mountains, some the prairie, while others like to roam the woodlands. People are differently constituted. Their tastes are not the same. Man is only happy when his environment is congenial to his nature. After all, happiness is the most valuable thing of this life. So, if you are happy, contented and prosperous where you are—you stay there. That's good sense, and it's good business.

But say, if you are tired of shivering around in a fur overcoat, in the first week of May, in a damp, dismal, gloomy, catarrhal, rheumatic climate, when you feel that you ought to be cultivating the summer crop, and eating the fresh, crisp garden vegetables—then it's time to think. It's your move. What else did we have this spring, from the Mississippi to the Ohio, and to the Hudson Bay? It costs something to shovel fuel from Hallowe'en to Decoration Day, but it costs more to feel all the time like you were in the wrong place. Why, this discontent is enough to drive a fellow crazy. It's your conscience, man, that's after you. You KNOW you ought not to STAY in such a CLIMATE as is not CONDUCTIVE to HEALTH, HAPPINESS and PROSPERITY.

Go West, to the land of sunshine, man. Turn the children out among the flowers. Get you a little farm that is all your own, plant you an orchard, eat lots of good fruit, make a barrel of honest money, thank God for his goodness to you, and be happy.

Remember we are not talking to the people who are satisfied, but those who really want to better their condition. For climate, health, opportunities for wealth, scenery, in fact real life, we have one of the best propositions on earth.

# Carried on Snow Shoes

It has been said that one-half of the world does not know how the other half lives. Situated, as we are, in the midst of civilization, within the reach of friends and neighbors, accustomed to the convenience of modern transportation, even though we live in sparsely-settled communities, it is hard for us to fully realize the severe hardships and rigors experienced by some of the settlers of the far north and west. Hundreds of miles from doctors and drug stores, sickness becomes the direst calamity, and the possession of a reliable household remedy, at such a time, a veritable godsend. Mr. John R. Peterson is one of that body of hardy pioneers which forms the opening wedge for civilization in the distant west. He is located near Sawyer's Bar, Upper California. In speaking of his experience, he related, with evident satisfaction, his success in obtaining a supply of **DR. PETER'S BLOOD VITALIZER** this winter in spite of blinding storms and heavy snows which had almost cut him off from the rest of the world. The medicine which he said was prepared by Dr. Peter Fahrney & Sons, of Chicago, Ill., had, with considerable trouble and expense, reached Etna Mills, via San Francisco, but the most difficult part of the trip yet remained, to get it across the mountains in the heavy snow, a distance of nearly thirty miles. This seemed to be an almost insurmountable task, but it was finally accomplished by means of snow shoes. Judging by the confidence which Mr. Peterson places in the medicine, it must, indeed, be a remedy above the ordinary and such "faith" in itself ought to be able to ward off almost any form of sickness.

## A LETTER FROM THE HOLY LAND.

Mr. Conrad Weiss, of Saron, Palestine, Syria, writes: "Dr. Peter Fahrney, Chicago, Ill. Dear Doctor: The medicine which you shipped me was received in due time and good condition and is all sold and used. The fact that I am again placing an order for five dozen bottles of Blood Vitalizer is sufficient proof that the demand here in Palestine is continually increasing. I have even received orders from Jerusalem and Jaffa. We find that the worst forms of malaria yield to your remedy. Chronic cases of disease have been cured by your Blood Vitalizer. A woman, who has suffered for years with a terrible stomach trouble, has been cured from her frightful sufferings by means of your remedy.

kindest greetings,

## FROM THE LAND OF THE MIDNIGHT SUN.

Mr. Nicolai Johansen, Stenkjaer, Norway, writes: "Dr. Peter Fahrney, Chicago, Ill. You will no doubt recall that I sent for a box of your Blood Vitalizer some time ago. My wife had been suffering for many years with what the doctors call chronic intestinal catarrh and impoverished blood. The physicians also declared that her nervous system was completely ruined. She had not taken more than two bottles of your Blood Vitalizer when she experienced relief and an improvement in her condition was noticeable. After taking nine bottles she is able to be up and attend to her household duties. Physicians had failed to help her. We cannot be otherwise than thankful to God for the grand results it has brought about.

The merits of **DR. PETER'S BLOOD VITALIZER**, the old, time-tried herb-remedy, has become known the world over, so that it finds its way into almost inaccessible regions and even the remotest parts of the earth. Shipments of **BLOOD VITALIZER** for such distant lands as Africa, China, Finland, South America, Palestine, Australia, etc., are almost of daily occurrence at the laboratory of

Elgin, Illinois

small, population is beginning to realize that Russia is so awfully centralized that it even owns its people as it owns its enterprises, and these fairly intelligent people are asking that the evils of such a condition be lessened.

They are demanding, first of all, a constitutional government. This light seems to come from the United States. Our own Constitution which has preserved us a nation, seems to have enraptured the eyes and minds of the Russian students. Beyond this they demand freedom from arbitrary arrest; freedom of the press; freedom of organization, meeting and speech, and last of all a right to educate and freedom of education.

Thinking over these questions as Americans, we wonder why it is that Russia, a great, powerful, resourceful, wealthy nation, lies helpless at the mercy of one autocratic man. Why do they not rise up and hurl forever from him, his power, and why do they not govern their own affairs? Why, we in America could not submit for a day to such an awful *hæverno* on earth without arising, and in our might stamp it out!

But we Americans cannot measure Russian deficiencies by American standards. We have our own great problems and Russia has hers. One of her great problems to solve in throwing off this autocratic yoke is the utter state of apathy of the greater number of Russian subjects. The reasons for these conditions and this apathetic mind are fully apparent. If the great mind of America could imagine itself censured to the extreme, if it could imagine its thoughts and utterances all given out in secret, for fear of the wrath of the ever-present spy to the Czar; if it could but imagine all of the conditions which, rigidly enforced, would prohibit thought, education, social and intellectual intercourse, and all knowledge that pertains to the condition of the Russian subject in relation to the greater peoples of the earth, we could gain just a slight and insignificant insight into the Russian condition as it really is. For the press is subject to strictest censorship, all kinds of gatherings for the discussion of government are prohibited; all things and institutions pointing toward free speech, free thought, free action and free being are strictly prohibited. Under these conditions—with a death penalty, or a Siberian banishment threatening one for the petty offense of speaking one's thoughts or some like offense,—thoughts are usually left unspoken. And when no condition exists to promote action, thought itself, in the minds of the masses, cannot exist. For this reason the masses do not think, or if they do, they very rarely speak their thoughts. Under these conditions the one who *will* think is classed as a non-conformist, and, measuring from the standpoint of autocratic government, justly so, for the inborn thought

is not permitted utterance and it dwells pent up in the individual until at last it can be contained no longer, but is given out rashly in the assassination of some tyrannical government official, the only result that could be expected, and the result which has always followed a strict autocratic policy throughout the annals of history.

The great empire, with all its domain, with its great national wealth, with resources that all the world might envy, and with everything within reach that would tend to make a people happy, is called by the world the home of autocracy, of ignorance, of superstition, and even anarchy. Thus it seems that if this nation continues to grow, in the future, as it has in the past, the evil influence of autocracy must be spread to all lands where the Russian autocrat may plant his foot. But, if this rising power of Nihilism should ultimately prevail, it might be that light would come out of darkness and spread itself with the public domain. Or, if this new power should rise in some parts and not in others, it might arrest the nation's growth, and in the reign of terror which it would produce, might stay the autocratic hand of Nicholas until the lands he craves might fall into other hands.

Let us now think of Russia, with its great wealth of resources and its dearth of human honor, with its browbeaten subjects, still pushing outward to secure more subjects to enslave, for this is really what her political policies are pulling to. Our great American diplomatist, John Hay, once said of St. Petersburg: "It is a capital where men have arranged things and consequently bungled them. The great Tsar Peter slapped his Imperial Court down on the marshy shore of the Neva, where he could look westward into civilization and watch with the jealous eye of an intelligent barbarian the doings of his betters." Peter the Great early conceived the idea that Moscow, great Moscow, with its great population, great wealth, great mosques, statuary, gardens, fairs, courts, and its wealth of landscape beauty, was too far inland to ever become the capital of the great world power. He craved all the advantages that would be derived from a seaport capital. Constantinople was to his liking, but he could not take Constantinople. The only opening that lay before him was the shore of the Neva in northern Europe. This region was wrung from its people and on the marshy banks of the river Neva he built his city St. Petersburg a "window looking out into Europe."

The site is low, marshy and swampy and unfit for a city, but Peter did not stop for this. It is built on stolen land, but even this did not affect his conscience. In fact it seems to have been a sort of impetus, or excuse for Peter and all his successors to desire to continue in the land-grabbing business. St. Petersburg stands looking into the west, but Russia has

ever been dissatisfied with her capital city. It is so far north, so out of the way, frozen in for half the year, and not at all the city that Russia would see grow into the capital of the greatest empire, to be, on the face of the globe. The present Czar looks longingly toward the beautiful and commanding site of Constantinople and contrasts it with the marshy flat in which out-of-the-way St. Petersburg is located. If only Constantinople can fall into his hands. Then Russia stands on preëminent heights above every other nation, above all other nations in the world.

The Russian court is one of the finest in the world. Its extravagant display of wealth in all its phases is a direct contrast to the abject poverty of the lower classes, and majority of the people, which is a direct result of this lavish expense of maintaining so

gain permit from the Sultan ere she can move her Black Sea fleet. She feels the humiliation of bowing to the tottering, unrespected, unstable government of Turkey in any cause whatsoever, but yet she must do so, so long as the other powers of Europe keep their eyes upon the Turkish Empire.

The Czar is only hoping that some turn of events may open the way for him to cross over into the Balkan territory, but the other powers of Europe are watching as relentlessly as he. Some think the Czar's call for a peace convention was an insincere movement on his part, instituted for the purpose of withdrawing the attention of the powers from the secret desires of his heart, *i. e.*, the desire to take Constantinople. Whether this opinion is well founded or not, we are not prepared to say, but it is both meet and proper

Palace and Cathedral, Kremlin, Russia.

great a court. But the classes feel that if Constantinople could only be Russia's capital, then, and not until then, would Russia really know a real fine court.

Russia, as a political power, actually feels the need of Constantinople more than any nation and, since the Russia-Japanese War, she feels it more keenly than ever before. If she could have won out in the war with Japan, a more southernly port on the Pacific might have been made; and all-year-round capital might have been built, and St. Petersburg could have been deserted. But with all going against her in this struggle, the idea of a Pacific capital had to be given up, and now, more than ever before, she has turned her eyes toward Constantinople. She grieves because she must

to suggest here that International Peace Congresses have shown, as yet, no attitude toward disarmament and toward the desired end of which the white dove would stand in approval. It more resembles the thrusting of peace upon all nations because of a sort of international fear that each other nation is too strongly armed to justify a nation declaring diplomacy at an end. It is perhaps safe to say in prediction, that so long as all of the great nations of earth are outwitting one another in building the mightiest engines of destruction that have ever existed on earth, that the dawn of the reign of the white dove is still a thing for the future to bring us, and that, some day, these mighty engines will clash with all their pent-up fury.

So while nations are talking peace they are preparing for war. They desire to be ready to be in the ring when the anticipated time shall come.

When we remember the present condition of the Turkish empire, and when we think of the fact that all the eyes of Europe are turned toward Constantinople, and when we remember that this tottering old government has about run its course, we can but picture the downfall of this government as the flickering of the spark that shall start the political unconformity.

Cathedral of St. Basil the Beatiſied, Moscow.

If Russia continues in the future as she has in the past she will reap the richest harvest in this great field, and shall gain the supremacy that the Czar hopes she may reach. But if her domestic trouble should continue to grow,—as it has given promise to do in recent years,—this government may be deprived of her desire to be a dominant figure in the scuffle.

And Russian affairs are all but satisfactory to the Czar. He lives in constant peril of his own life. He, of recent years, keeps himself hidden most of the time in fear of assassination. "Nihilism," says Leroy-Beaulieu, "though it shows only at the surface, and affects, so to speak, only the nation's epidermis, is not a transient accident, a trifling ailment which the Russian constitution is strong enough to throw off if left to itself. Unless it is treated, the disease threatens to become incurable, to eat its way into the nation's vitals and marrow."

The Czar's consent to permit a national legislature was finally given in response to an irresponsible clamor, but the fact that two successive doumas were dissem-

bled by the Czar shows that he is dealing in bad faith with his subjects.

The third douma is now in session but its powers are chained to the Czar. Prof. Paul Milyoukoff, leader of the last douma's democrats, in his recent visit to this country said: "The third douma may not be able to do much for the cause of Russian freedom, because it is out of touch and out of sympathy with the people. This does not mean that the cause of Russian freedom is losing ground, however. On the contrary, the struggle of the douma for the past two years has had a tremendous effect upon the masses of the people. It has made them think, and thinking has prepared them for any struggle which will lead to greater liberty." He said also: "Emperor Nicholas is a man of weak character, and accordingly he is easily influenced by his advisers. Russia is practically in a state of civil war."

And the march of events of very recent years seem to bear out what Prof. Milyoukoff has said, and, if the great heart of the Russian people should awaken from its apathy, Russia has within its boundaries enough reforms needed to keep her busy at home for a hundred years. And if this comes to a real national issue, if democracy makes its just demands felt, Russia's Czar must take his eyes off of Constantinople and seek to clean up and build up his own domain. He shall have to separate church and state, espouse the cause of education, maintain an equilibrium of court and people, and give the new Russian the civil rights that he may demand. If he cannot thus join hands with democracy, and promote a peaceful revolution, the nations will have the right to say that in the desire for perpetual peace Czar Nicholas is insincere. And while the nations are saying this, Russia without the help of the Czar will be at the work that shall establish her, as she should be, a free and great people.

THE object of education is not to improve your food or your clothes or your material surroundings, though these things are very apt to be added unto you as a secondary result of increased culture; but its real object is to develop your heart and brain and soul, so that you may be able to appreciate the great discoveries that are being made now in science, the splendid work of the past in literature and art, to sympathize with human struggle and effort as revealed in history, to perceive with a seeing eye the beauty and order of Nature, to take a worthy part in the life around you and to participate in the highest aspirations of man.—*Sir Oliver Lodge.*

"EXPERIENCE is a great teacher, but by the time it hands a man his diploma he is too old to make much use of his knowledge."

## Around the World Without a Cent

H. M. Spickler

### Chapter III.

LONDON is always perennial. It is interesting in its vivacious freshness. I met many Americans on the street and at the hotels. How glad we are to see one another in distant lands. I can always tell an American crowd of tourists. Anybody can. Their dress, their walk, their expression, all speak of Yankee-land. But the loudest and best tongue of the American abroad is his spirit of democracy. He is the uncrowned king wherever he goes.

Every one loves to look at a beautiful face. I do not turn my head another way myself. The English girls, when beautiful at all, are very beautiful. Their voice is charming,—their accent is just as fascinating as can be, if at all cultured. Cultured! What does that mean? It means the difference between the sour crab and the sweet apple. Why, the way these pretty girls pronounce their

syllables is captivating to an American. "Apples of gold in pictures of silver." I talked with a seventeen-year-old English girl about the various customs of her land. She had other charms than those of voice, but the way she says, "Yes," throws the magnetic spell of love over you. The Chicago girl is the "I will" of civilization and progress. The girl of London is the "I would if I could, but I can't," for the loss of so many men in the English wars of conquest has left an over-abundance of women, and, like everything in commodity bargaining, she suffers a glut in the market.

There are at least three types of woman here. One is that type which for coarseness and wickedness,—

masculine in her make-up,—outdoes the worst in American coarseness and wickedness. There is another type of the very poor, whose blankness of stare and ambitionless movements make you feel ill at ease.

In the third type I will describe,—as well as a boy may,—the beauty and dress of a real beauty. Though many of the girls wear more flounces, ruffles, tucks, puckers, gewgaws and gingersnaps than our own American girls wear, the more modest and sensible

ones adorn their well-formed bodies with Gospel plainness. It seems to be a fact that the most cultured and religious women here wear the plainest, most becoming and sensible style of dress. The English beauty that is most admired for her dress usually wears pure white, with little or no trimming or curleygews. The skirt is not gathered about the waist in a thousand and one plaits or folds, or at

Mr. Spickler Preaching to an Audience of 3,000 Englishmen near the Royal Arsenal, London.

the bottom. It is just simply plain. She attracts more admiring eyes than a dozen fussily-robed girls, and her face is a thousand times more charming. In her glance is sweet modesty, quiet reserve, calm thought, purity of soul, depth of vision. Any man who can look full into the face of such an angel of light without believing in God and honorably loving such a face is "fit for treason."

Some of the girls have wonderful hair,—the natural gift of the island. The hair is allowed to flow over the shoulders in a spreading mantle. It is very light in color and yet has the power, at certain angles, of showing darker hues. There is a decided tinge of flame in it that pervades the head as the orange in the

rainbow softens the other colors. It is always carefully brushed and a silken finish is the effect. Of course the girls with loose hair are very young, and most of them when at that age that prompts dreams of St. Agnes, have a remarkably clear and beautiful complexion. The pink cheeks are surmounted by a color not at all red, but which by some strange mixing of colors produces that effect that is as unsurpassed as it is indescribable.

In laughter and when at play, this color is supremely beautiful, and it tells of good health, good motives and a good disposition. The eye is mild, soft and inclined to be blue,—blue sometimes as the sea is blue, or the sky is blue, and just as wonderful in its mystery. The forehead is well proportioned, the chin small, rather retreating, round and delicately set. The nose is straight or slightly beaked. The mouth has the full, rich curve of the Venus bow and from it baby Cupid shoots his flaming arrows. Armed with this grace she goes forth to battle—break men's hearts.

With all of her noble armament, she lacks the proud independence, that, rightly trained, proportioned and exercised in deeds of loving mercy, makes our American girl, in sensible, becoming and modest attire, the Queen of the whole world.

Of all enjoyments purely pleasurable the first trip to a foreign land is the most perfect. Up hill and down, winding around dreamy hawthorne hedges, and over old stone bridges, and through deep, fragrant woods, skirting the meadows where the yeomanry are pitching the hay on queer old wagons, and the children play in the grass, pictures never seen in our own country except on Christmas cards or in story books, with history hanging like the London fog over every bit of ground you look upon or ride over, where some hero died for human rights, a king was defeated, an army was routed.

In Canterbury Cathedral town I stood by the cathedral and, as in my imagination, with Stoddard, saw Charles the Fifth, Henry the Eighth and Cardinal Wolsey pass through, arm in arm, an historic fact. In the cathedral I stood where Thomas A'Becket was murdered by the misadventured knights because of a mis-

understood king. In another spot I stood by the tomb of the Black Prince and saw his fading, rotting armor. I addressed two big audiences almost under the shadow of the cathedral one Sunday evening, heard the solemn curfew that has always rung at eight o'clock, when everybody had to be in doors, lights out and abed. Leaving the city I pumped over the path taken by the Chaucer pilgrims, and up Gad's famous hill where Falstaff played the mighty coward, at the very top of which I entered the beautiful but modest home of Charles Dickens and laid my hand on the desk on which he wrote out his immortal humor,—on through gnarled old oaks looked upon and climbed into by the author of *Oliver Twist*, past the Leathern Bottle Inn where Dickens took his gin, on through the gardens and berry patches into London, again.

All Rights Reserved.

Oaks and Lindens Grow in the pretty fields. Note Farmhouse and Barn Adjoining It.

I WOULD rather plant a single acorn that will make an oak of a century and a forest of a thousand years, than sow a thousand morning glories that give joy for a day and are gone tomorrow. For the same reason I would rather plant one living truth in the heart of a child that will multiply through the ages, than scatter a thousand brilliant conceits before a great

audience that will flash like sparks for an instant and then like sparks disappear forever.—Ed. Leigh Pell.

#### THE LANGUAGE OF THE WORLD.

THE Berlin board of education has made the study of English compulsory in all the higher schools of that city. The Kaiser speaks English better than he does French, although he is said to be an expert in the use of the French language. The English language is gaining rapidly over all other tongues among a billion and a half of people in the world.

Charles V., of Spain, used to say he spoke French on matters of business, Italian to women, German to his horses and Spanish to God. The English language had no place in his thoughts or in his immense domains. Bacon wrote in Latin, because he was afraid the English tongue would not survive the sieges of time. Even the language of diplomacy is rapidly changing from French to English.

By far the largest single force in giving the English language world vogue has been our own country. We are the greatest travelers on earth, and in the past quarter of a century have made a deeper impression on the world's history than any other nation. The collective force, will and potential power of the two great English nations has now become so large that the language used by them has become of vital interest to the rest of the world.

## VARIATIONS OF THE EARTH'S MAGNETISM.

JOHN H. NOWLAN.

How are lines run on the earth's surface?

The principal instrument of the surveyor is his compass, hence a knowledge of the laws of magnetism are essential to accurate work.

In 1576 Norman had discovered that a compass needle which was balanced in one locality would not be in another, but when suspended so that it could move freely the north end would point downward more or less. In making compasses he first balanced the needle, then after it had been magnetized he would add a weight to the south part to restore the equipoise.

Compasses now have a sliding brass ring on the south part by which they can be balanced. This downward motion is called the dip and further investigation proves that the dip also undergoes secular change.

That the needle pointed other than north was long an established fact, but it remained for Gellibrand in the 17th century to discover that the magnetic declination undergoes a slow change, called the secular change. In 1580 the declination at Deptford, England, was 11 deg. 15 min. E. while in 1634 Gellibrand found it to be 4 deg. 6 min. E. In retracing lines this required the consideration of this new fact.

Referring to the Magnetic Declination Tablets as published by the United States government we learn that in 1580 the compass was 11 deg. E. at London; about 1658, the year of Cromwell's death it was on the meridian; while in 1812 it was 24 deg. W., in all a variation of 35 deg. "The direction of a street a mile long laid out in London in 1580 in the direction pointed out by the compass would be seven-tenths of a mile too far to the east at the north terminus according to the compass direction of 1812. At Paris the declination was 9 deg. 36 min. in 1580; due north in 1664; and 22 deg. 36 min. W. in 1809. At Rome it was 11 deg. E. in 1570; due north in 1660; and 17 deg. 06 min. W. in about 1810.

This change of direction is especially interesting to the original States of the Union, as land in them was described by metes and bounds, and not by meridians as in the west. To be able to retrace these lines the surveyor must first ascertain due north and then know the amount of allowance to be made for the change. At Baltimore the change was from 6 deg. 6 min. W.

in 1670 to 39 min. W. in 1802, so that a street one mile long laid out by the compass in 1670 would be 504 feet too far to the west at the north end in 1802.

One more fact. In 132 years the change at Baltimore was 327 min. or an average of about  $2\frac{1}{2}$  per year, hence surveyors often assume that at the same station the rate of change has been uniform, which is not the case.

At this station the change varies from 0 to 4 deg. The motion is like the swing of a pendulum. When it has reached the greatest west deviation it remains stationary for about five years then increases in speed till it reaches the due north point then the motion decreases till the extreme east point is reached and then the motion is the same as from the west—stationary for a period and then accelerated till the north point is reached. At no place in the world has a record been kept of one complete swing—that is the motion from east to west and back again from west to east. At some stations a half swing or more has been observed, and from a comparison of the time intervals we have another interesting fact—that "the intervals between the extreme positions of the needle are of different lengths at different parts of the world. The average of the cities of London, Paris, and Rome being about 240 years and for the Eastern States about 150 years.

This is not all. The needle has also a diurnal variation—the direction changing from hour to hour. Observations taken at Baldwin, Kansas, show this to amount to as much as 3 min. in winter and more than 8 min. in summer. Two lines each one mile long, one run in the morning and one in the afternoon, starting from the same point and surveyed in the direction indicated by the compass, diverge 10 to 15 feet at their extremities in summer and one-third that in winter. It will thus be seen that it is of sufficient importance to be taken into account in accurate surveys.

As we approach the magnetic pole the range of diurnal variation increases. At Ft. Conger Grinnell Land, it is 98.8 min., while at Key West, Fla., it is but 4.7 min. The variation is east in the morning and west in the evening—being toward the sun.

It has also been noted that the range increases during the months when the sun is north of the equator and as the range is also greater for the same month during years of sun-spot activity we infer that there is some connection between the sun and terrestrial magnetism. Those who use telephones or telegraphs are acquainted with electro-magnets.

The most commonly accepted theory is that the diurnal variation is due to electrical currents in the upper air acting somewhat like the current in the electro-magnet, but the precise manner of action is not clear.

How may we know the true north if the compass changes so constantly?

A method that will be near enough correct for all ordinary purposes is to hang a plumb line in such a manner that its shadow falls on a level surface. About noon place a peg, nail, or any similar object on a moderately level surface and note the shortening of its shadow by careful marking. At the time when the shadow seems to be neither shortening nor lengthening place two tacks in the shadow cast by the string. This gives a north and south which may be extended at pleasure. One advantage of this method is no tools but the commonest are needed. This method is an easy one for a class in school to use to orient their schoolhouse.

Another way is to place two sticks in line with the north star. This is only approximate. If you want a more exact method hang a plumb line from the limb of a tree, or any support allowing north and south view. A brick or stone will do as well as a turned and finished metal. Place a light so that it will strongly illuminate the line just below the point of support, but place an opaque screen between it and the observer. Make a peep sight by sawing a narrow slit in a board and nail to a square block so arranged that it will stand vertical when placed on a smooth horizontal rest placed south of the line in such a position that Polaris will appear about a foot below the support of the line.

"Select that one of the two stars which at the time of the year when the observation is made passes *below* Polaris. Delta (D) Cassiopeiae is on the meridian below Polaris and the pole about midnight about April 10, and is, therefore, the proper star to use at that date and some two or three months before and after. Six months later the star Zeta (Z) Ursae Majoris will supply the place. Place the peep sight in the line with the plumb line and Polaris, and move it to the west as Polaris moves east, until Cassiopeia, for example, appear on the plumb line together, and carefully note the time by a clock or watch; then by moving the peep sight preserve the alignment with Polaris and the plumb line (paying no further attention to the other star); at the expiration of the small interval of time given below, the peep sight and the plumb line will define the true meridian, which may be permanently marked for future use."

For Zeta in 1908 wait 5.4. minutes. Annual increase, 0.35 minutes.

For Delta in 1908 wait 5.04 minutes. Annual increase, 0.33 minutes.

*Mulberry Grove, Ill.*

#### NORTH DAKOTA'S FIRST IRRIGATION PROJECT.

ETHA EVANS BEISEL.

THE actual pumping of water from the Missouri River into the canal system of the Williston Irrigation

project in western North Dakota was begun in October and until the cold weather prevented, test of apparatus and the gradual filling and priming of the main canals and pressure pipes was continued in order that the system might be in good condition to deliver water for the next season's crops.

A great deal of interest attaches to this project by reason of the fact that it is the first to be undertaken in North Dakota, and also because of the unique engineering features in connection with it.

The Missouri River has a habit of constantly cutting its banks and changing its channel, so that it was found impossible to locate any structure for the diversion of water by gravity without incurring enormous expense to protect it from the scour of the stream. Moreover, its grade was so flat that any gravity canal would be of prohibitive length. Fortunately, large beds of lignite coal were discovered in the vicinity, affording cheap fuel, and the engineers conceived the plan of building a power house at the coal mines and conveying it electrically to the river. The pumps are placed on floating barges which will accommodate themselves to changes in the river channel and at the water level. The water is delivered thru pipes with flexible joints into several basins located at sufficient distance from the shore to be safe from encroachment by the shifting river. From these basins the water will be pumped into canals to cover the irrigable lands. The basins also serve for the purpose of settling silt, large quantities of which are carried in solution by the Missouri River. This winter the barges have been drawn out of the water to points where they will be safe from ice gorges and sudden freshets.

On Sept. 25, 1907, the steam turbine generating machinery was started for the first time and on the following day the electric power at 22,000 volts was sent over the transmission line to the intake pumping station. On Sept 27 the two pumping units located on the barge were started. During October the pumping system was operated at various times, raising the water gradually in the settling basin so that the banks could be puddled wherever there was any indication of weakness.

A semi-gas-producing furnace designed for burning lignite coal is used. As the mine is carried farther into the vein, the quality of the coal improves and the little difficulties experienced in starting the plant to operating satisfactorily are being overcome. It is expected that 5,000 acres will be irrigated during 1908.

The Williston power house will also supply power for the Buford-Trenton project, transmitting it by wire twenty-two miles. The installation of the electrical apparatus and the pumping units in the station which receives the power from Williston have been completed at Buford, and the pumping machinery mounted. Some obstacles have been encountered in securing the right of way for the transmission line, but the wires

will be manufactured this winter and it is hoped to have them placed on the poles early in the spring, so that power may be transmitted in time for supply-water as anticipated. It is expected that more than 3,500 acres can be supplied with water under the Buford-Trenton project during this year.

*Buford, N. Dak.*

### HAY FROM THE SEA.

SELECTED BY C. C. ROOT.

HAY-MAKING on the tide-water lands is one of the interesting occupations of the natives of New Jersey around Barnegat Bay, and hundreds of dollars' worth of the stuff are literally snatched from the water each year. Late summer resorters along this coast enjoy the busy scenes. Bordering Barnegat Bay are meadows miles wide, intersected by salt water channels, often divided into many islands. At high tide the tall grass often stands deep in water, and sometimes at low water, and always after rains the grass is several inches in water.

Forked River, the largest, richest and most popular resort on the bay, with agricultural machinery, stout motor boats and barges, presents the most picturesque spectacle in haying on the bay. The town and river have the same name, but the latter has three navigable forks which come together, forming the estuary of the same name. Anchored anywhere in the estuary, or passing through it, one may see mowing machines, the horses, knives and wheels splashing through the layer of water on the meadows, cutting down the tall grass. At the same moment, other men are spreading the cut grass to dry, carefully elevating it on little hillocks, while the wheelrakes are busy with the dried grass elsewhere. On another stretch, men with wagons are gathering the hay and removing it to be put in stacks, either on the river's edge on platforms above the high tide, whence it can be taken away on barges when needed, or well back on the high ground adjoining the evergreen forests. Frequently there pass the observer huge barge loads of hay, towed by motor boats or catboats, removing the product to the railway stations for transportation to the cities. Holland in all its glory can present no more picturesque views, contributing to which are the innumerable clam and oyster craft, catboats, motor boats, schooners, sloops, dories, sneak boxes and sharpies under sail, loaded with anglers and visitors out for fishing, clambaking and bathing.

The Barnegat flats ship annually some 50,000 tons of hay to the markets, retaining perhaps half as much for local consumption. The producer gets an average of eight dollars a ton at the railway stations and the dealer \$13, in the cities. Salt water hay has several uses in addition to its value for bedding stock. Manufacturers pack bottles with it and nurserymen find

it useful in packing young trees and shrubs for shipment. It is also used in stuffing mattresses.

### AN APPEAL TO LOGIC.

A CROWD stood closely packed around a dark, ragged-looking object in the Burlington Railway yards in a Missouri town one morning in May. The "thing" was hacked and jagged and bloody beyond language to describe.

"Drunk and lay down on the track last night."

Those nine words told the whole pitiful and too common tragedy. Even the newspaper reporters spent scant time over the matter, because it would not yield over five lines at the most.

The coroner came and smelled of the empty whiskey flask, which by some curious chance was unbroken. Four or five deaths of the sort had occurred in the railway yards there the past twelve months, and in every instance the whiskey bottle had been unharmed, while the man who carried it was ground to pieces. It might have been the mute lesson of providence.

When a man gets drunk he will hunt the railway track. This man was only thirty-five. He had a wife and several children in the mining town of New Cardiff, and they were left penniless. They had done no wrong, but they were the sufferers.

"The man was drunk; there's no liability," said the railroad attorney, as he turned away. The prosecuting attorney advised the coroner not to put the county to the expense of an inquest. "It's too clear a case," he said; "the man was drinking. There's nobody but himself to blame, and the county board would object to a bill for taking evidence."

The crowd turned away. The show was over. An undertaker picked up the bunch of clothes and bones and blood and put them into a cheap box. The railroad furnished free transportation to the destination. Next day the little tragedy was completed, and the widow and her children walked sorrowfully away from the hillside cemetery where the bread-winner lay. In the morning the woman consulted the lawyer. He listened sympathetically but not hopefully.

"I fear there's no liability," he said. "Your husband was intoxicated."

The woman went home with her little ones huddled about her. She had no bread for them, but told them she would get some. She went to a saloon-keeper. He was so indignant that she should call on him that he refused to give a cent. "My husband spent most of his money with you," she said.

"Well, he got what he paid for, didn't he?" retorted the man of the white apron.

There was one friend left—her preacher. She had not been to church much of late, because women dislike to appear in public in tattered garments. This minister was a Western character. He stood high in the community because he was absolutely fearless and

devoted to the cause of man. Big, brawny, clear-headed, true as the road to the cross, he never hesitated.

He went over to the county-seat and got the names of men and women who had signed the petition for the saloon where the dead man got most of his whiskey. Then he took the woman and her children along. Arriving at the store of the first merchant, he said:

"Mr. —, I see your name here on the Crystal Palace petition. That's where this woman's husband got the whiskey that killed him. The law has let the railroad company and the saloonkeeper out, and the woman is penniless. Now, it's up to you. Shall she and her little brood go to the poorhouse, or will you do your duty? You see, she's driven to the source for redress. Legally she can't collect a cent from you. But that man's blood—"

"That's enough," said the merchant; "here's twenty-five dollars."

Some got mad at the parson for "butting in," but the majority saw the terrible logic of his argument and paid what he asked. It was the first time the issue had been brought squarely before their eyes, and, being good men for the most part, it was a startling realization. The "chickens had come home to roost," and they didn't look good.

The preacher wasn't rough and peremptory about it; he was just very grave and earnest. He was pleading at the court of last resort, and every man knew in his heart of hearts that the woman's friend was operating in the proper jurisdiction. There was no escape from it. The woman got enough to tide over the trouble until she could obtain employment.

When the time came to renew his license, the saloonkeeper started around with his petition and a box of cigars. He was smiling genially, because it was only a matter of form.

"Excuse me, Bill," said Smith, the big merchant, handing the paper back, "I'd rather not."

"W-h-a-t?"

"I'm not going to sign any more saloon petitions."

"You're joking."

"Well, have it your way. I don't sign."

"After all the goods I have bought of you?"

"I appreciate your patronage," said the merchant.

"I won't buy another nickel's worth from you."

"All right."

The saloonkeeper went out noisily. He was less sanguine when he approached the next man, but more diplomatic. But his luck was the same. The man didn't sign. When he returned to his saloon he had three names on his paper, and those were of men to whom he rented houses. Next month there was a sign on the saloon door:

*This Building for Rent. Will be Refitted for Drug, Grocery or General Merchandise Store.*

—Home Herald.

## CURRENT COMMENTS

### The Italian-Turkish Difficulty Settled.

In announcing that it intended to make a demonstration in Turkish waters in order to receive the rights it held itself entitled to, Italy pursued the very most effective course. Scarcely had the demonstration been decided on before the Turkish Ambassador at Rome communicated to the Italian Government, not only that Italy could establish postoffices at the five cities in Turkey where other powers have such offices, but that Italians would be allowed to purchase property on Turkish territory, and that certain restriction on coast navigation would be withdrawn. The Italian Government thereupon withdrew the order for demonstration. The precipitancy with which the Sultan yielded suggests that Italy's desire for Tripoli may not be wholly vain in the future. Now that France has dropped her role of protector of the Catholic church in the East, Italy is taking it up. It remains to be seen how she will fulfill her greater role.

### Still in the Fight.

The anti-saloon forces of Illinois are not resting on the victories gained in the recent elections. These victories have only given them renewed strength and courage. Despite the fact that fifteen hundred saloons were closed as a result of the April elections, Illinois still has more saloons than any other State in the Union,—a fact that ought to arouse to action every lover of home and country within its borders. May 6 the Prohibitionists held their convention in Springfield. One of the needs at present is that of officials who will enforce the laws already passed and another is that of lawmakers to secure further legislation against the liquor business. The Lincoln temperance Chautauquas which are believed to have had a great influence for good, are to be continued, it being arranged to visit 125 towns in 25 weeks.

### Will Congress be Good?

If present indications are to be relied upon, the recent flourish of the "big stick" is likely to bring about some of the results so earnestly desired by the President. Members of Congress are becoming aware of the fact that the people not only know what they, as lawmakers, are supposed to do, but also know what they have done, or failed to do in this session. And if they do not do some effective work on the measures before them because of their importance to the welfare of the country, they will do it for their own self-preservation. Recently there was a conference between the President and the Speaker of the House who represents, almost in toto, the hindrance to the desired legislation. It is understood the President told the Speaker some plain truths as to whom the country would hold accountable for the skipping of matters upon which action might be had. One must feel ashamed that such things must be resorted to in order to secure needed legislation, but since higher motives have been wanting it is to be hoped that these threats may bring the results.

### "Save the Trees."

All honor to the men who have fought for the preservation of the forests and for the protection of the same by state superintendence. That the Appalachian forests may

be protected in this way is the fervent hope of the friends of the movement, and the Adirondack forests, also, before it is too late. Every hamadryad spirit of the woods will rejoice that their tree homes are not to be ruthlessly destroyed, that they are to be kept from the vandalism of the improvident person, as well as from the expediency of the utility fiend. The sentiment of the country is, "Preserve the trees," and when the whole world is beginning to recognize that it is the deep-down interlacing of the gnarled roots which tends to the conservation of the water supply, it would be strange enough if certain small communities should hold stubbornly to a different opinion. Why, all the schools are teaching the necessity of renewing the forests, and lamenting that so many of the century-old trees have been destroyed, and are assuring us that, if this is continued, this earth will soon become an arid desert, a moonless waste (for they say there is water in the moon). In the great economies of nature they serve a deeper purpose than we know. There is healing and conservation of force, both in root and branch, which people are just beginning to realize. Would that they had paid more heed to this thought in the past history of our country. In that case whole avenues of beautiful trees might have been preserved which cannot be restored in the lifetime of the youngest among us, and yet not one protesting voice was lifted in their behalf. Who that has spent an hour in the depths of a real forest has not felt a sense of uplifting in the presence of trees of a century's growth? It is something more than delight in their protecting shade. To every tree lover it is companionship, help, soothing—something which the tree-hater cannot understand, but which will be more and more brought within the limits of his comprehension as the years go on, for both scientist and sentimentalist will unite in the cry, "Let the trees live!"

#### An Arbitration Treaty With England.

The United States Senate has now ratified arbitration treaties with Spain, Italy, Switzerland, Portugal, France and Great Britain. An arbitration treaty with Germany is now being drafted. We hope that one with Japan will be prepared in the near future. The treaties with countries other than Great Britain are like the treaty with France. The Senate's ratification of the treaty with Great Britain is particularly gratifying. Two such treaties have failed in the past, one in 1897 and one in 1905, owing in good part to Irish opposition and the taste for "twisting the British lion's tail" which appears still to be latent in a portion of our population. Even in the case of the present treaty Irish opposition appeared, but melted away when it was made clear to the objectors that the treaty was not a treaty of alliance, and bound us no more to Great Britain than the arbitration treaty with France, for instance, bound us to that country. The present treaty guards against an inequity which has existed in former treaties with Great Britain by the provisions that the treaty shall not be binding until the two governments have exchanged notes to that effect. In the past treaties have been held binding on Great Britain as soon as they were signed, but not on the United States until they were confirmed by the Senate. But the most notable innovation is the provision in regard to the right of the British government to obtain the concurrence of any self-governing dominion of the British Empire whose interest is affected by the treaty. This principle has never before appeared in any British treaty which was purely diplomatic. It puts the colonies one step nearer to absolute federation with the mother country as equal powers in the Empire.

#### Mr. Bryan on Negro Disfranchisement.

At the close of a speech on "Brotherhood" at Cooper Union, during his recent visit to New York City, one of the questions which was asked Mr. Bryan was to this effect: "Is the disfranchisement of the Negro in the South consistent with the principles of brotherhood of which you have been talking?" Here was a splendid chance for Mr. Bryan to have said a word for justice to all men. To have done so might have cost him the support of all the Southern delegates at the Democratic convention in Denver, but it would have made him a moral hero. And moral heroism has a very practical value in vote getting. However, instead of giving a direct answer to the question, Mr. Bryan began by inquiring with some heat whether it was a Republican or a Negro who asked the question. The questioner turned out to be a young white man not yet old enough to vote. Defrauded of part of his thunder, Mr. Bryan explained that if the questioner had been a Republican he would have asked him how he could talk about the disfranchisement of the Negro in the South while he was not allowing the Filipinos to vote at all. If it had been a Negro, he wanted to ask him how he could support a party which refused the Filipinos the franchise. Mr. Bryan went on: "As I have said before, under the laws disfranchising the Negro by demanding educational requirements in the South the Negro has an opportunity to get within the law by coming within the qualification . . . The white man in the South has disfranchised the Negro in self-protection; and there is not a Republican in the North who would not have done the same thing under the same circumstances. Those Republicans in the North who dispute this or say that they are different from the South, either are not frank with themselves or are assuming what is not true. The white men in the South will not allow a few men to use the solid black vote to further their own financial and political interests. And that is what was being done. I want to say right now that the white men in the South are giving the Negroes better laws than the Negroes would give to the white men if they were making the laws. Why, right in Washington they disfranchised every Negro, even if they had to disfranchise some white man to do it. The white men of the South are determined that the Negro will and shall be disfranchised everywhere; it is necessary to prevent the recurrence of the horrors of carpet-bag rule."

This is darkening counsel. We have very great respect for the real ethical feeling which Mr. Bryan possesses. We believe heartily in his foundation idea that government should be so ordered in this country that the people should really rule. How far they come from that at present is shown by such occurrences as the defeat of the anti-race-track gambling law in New York and the weakening of the initiative and referendum law in Ohio, two of many recent instances. We sincerely lament that Mr. Bryan did not come out strongly on this question of disfranchisement and assert the American principle of equality of rights. It is right to require an educational qualification for the franchise. Perhaps it is right to require a property qualification. It is not right that the qualification for a black man should be different from that required for a white man, whether that difference is secured through a clause giving a man a vote if his grandfather voted, or through the practice of election boards discriminating against one race and in favor of the other.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## AN EDUCATION, OR WHAT?

THE present age is preëminently one of material progress, and most things are valued in proportion to their influence upon this progress. Business is claiming and getting the ablest young men. If at first they sought an education which did not look directly toward the dollar, as time passed their views changed and they came to look at success in business as the highest success to be attained. Whether the present tendency is to continue is for the future to reveal.

And yet, in spite of the spirit of the age, there are young men and women who have not entirely given themselves up to it. They have ideals, and are striving with all their might to make them real. One of the desires of many of them is to become well educated; and the desire is a good one for some of them, but we think not for all. School men sometimes make the mistake of urging all young persons to attend school and seek a thorough education. We believe in education, but we do not believe in the same kind of an education for all. Indeed, there are some who can get the knowledge that will be most useful to them, the kind they can use to the best advantage for themselves and others, without spending much time in the study of books. Of course we cannot always tell who will be benefited by an education, and who will not. And no doubt that is why all are urged to develop their minds.

Whether he is to go to school or not, depends on the young man himself. He needs training in some line; he needs some education in any work he may take up. But to tell how much and what kind is not a problem easy of solution; and yet it is one of very great importance. Many a young man has spent restless days and night in trying to decide what he needed. He does not know his powers; he does not have a special inclination toward any one thing. He hesitates, and sometimes is over-persuaded and enters a trade or profession for which he has no real aptitude. And

thus he becomes a failure, disappointing those who believed in his ability to do something worth while.

In most cases, perhaps, there is no decided preference for one thing over another; in some cases there is within an impelling force which makes it almost impossible to enter but one course. Those belonging to the latter class may be considered the more fortunate; they are not likely to take up a work for which they are not fitted. The former class need wise counsel; not so much the telling them what they shall do as the trying to make them study themselves in order to learn what they should plan to do. This is the better way. It is a great responsibility to say what we shall do ourselves; it is a much greater one to undertake to decide for another. We do not, we cannot, know all about him. He needs help to find himself.

Often the young man or young woman asks, Shall I go to school and secure, or endeavor to secure, a thorough education? And if the one asked has a good education he is nearly certain to answer in the affirmative. It would be an ideal condition to have every one well educated; but it is an impossible condition. Not every one is capable of securing it, and for the majority it would be a hindrance instead of a help, making them dissatisfied; for the majority must always be hewers of wood and drawers of water.

So whether the young man or woman is to endeavor to secure a higher education depends on several things, but most of all on the capacity and probable future work. Of course the plans of many are changed; but still the fact remains that the great majority are better off without the higher education. What are you planning to do in life? What goal have you set before you? What can you do? Answer these questions honestly and you will come very near knowing what you should do, whether seek to continue in school or to develop along other and not less important lines.

We like to see men and women fitted for the work in which they engage, and we like to see them well developed mentally. We have no fault to find with education; we simply wish to call attention to the fact that an education is not everything and is not always a blessing.

CORRECTIONS: Our attention is called to a news item appearing several weeks ago in which was noted the suppression of the anarchist paper at Patterson, N. J. In the item it was mistakenly called a socialist paper. —In the article on Socialism in INGLENOOK of April 28 on first page, near top of second column read "according to every one's deeds," instead of "needs."

## GOOD HOMES NOT WANTING.

WE are much pleased with the results that have come from the notice which appeared in these pages several weeks ago of a little boy needing a home. We

felt then that there were many homes among our readers that might open to such a child and we were not disappointed. The actual demonstration strengthens one's faith in the real goodness in humanity.

### LESSONS IN ESPERANTO.—No. 3.

**Pronouns.** The personal pronouns are *Mi*, I. *Vi*, you. *Li*, he. *Ŝi*, she. *Ĝi*, it. *Ni*, we. *Ili*, they. *Ĝi* (it), is used, as in English, to represent things and also persons and animals where the name does not reveal the sex. *Oni*, they, we, people, it. *Si* is a reflexive pronoun of all genders and numbers. The objective is formed in the same way as in nouns: *Min*, me. *Vin*, you. *Lin*, him. *Sin*, her. *Ĝin*, it. *Nin*, us. *Ilin*, them.

Possessive pronouns are formed by adding the adjective ending "a" to the corresponding personal pronouns. *Mia*, my, mine. *Lia*, his. *Ŝia*, her, hers. *Ĝia*, its. *Via*, your, yours. *Nia*, our, ours. *Ilia*, their, theirs.

*Mia frato kaj via patro estas en la domo.*

My brother and your father are in the house.

The objective case is formed the same as in nouns and adjectives, by adding "n."

*Ili batis vian hundon.*

They beat your dog.

Plurals are formed as in nouns and adjectives, by adding "j" to the singular.

*Ŝi perdis siajn librojn en la arbaro.*

She lost her books in the forest.

The reflexive pronoun is always in the third person and can only refer to the subject of the clause in which it is used.

*Li amas min, sed mi lin ne amas.*

He loves me, but I do not love him.

### NUMERALS.

**Cardinals.** Unu (1), du (2), tri (3), kvar (4), kvin (5), ses (6), sep (7), ok (8), naŭ (9), dek (10), dek-unu (11), dek-du (12), dek-tri (13), dek-sep (17), du-dek (20), du-dek-du (22), du-dek-kvin (25), tri-dek (30), ses-dek (60), cent (100), kvar-cent (400), sep-cent-okdek-du (782), mil (1,000), mil-naŭcent-ok (1908).

The use of a hyphen is not obligatory.

**Ordinals.** "A" is added to the cardinals to form the ordinals. Unua (first), sesa (sixth), oka (eighth), dek-tria (thirteenth), kvardek-kvina (forty-fifth), tricent-sesdek-sepa (three hundred and sixty seventh).

Adjectival ordinals take the same case as nouns and adjectives.

Adverbial ordinals end in "e" unue (firstly), trie (thirdly).

Adjectival fractions are formed by adding "ono" as in kvarono, one fourth.

Adverbial fractions are formed by adding "one" as in sesone, one sixthly.

**Multiples** are formed by adding "obl" with the adjective or adverbial ending: duobla, double, trioble, triply.

Collectives are made by adding "op" to the cardinals with either the adjective or adverbial endings: duope, two together; kvinope, by fives. Once, twice, thrice are formed by adding the word "foje" to the cardinals. Unufoje, (once). Dufoje, (twice).

### THE VERB. ACTIVE VOICE.

There are no irregular verbs in Esperanto. When you learn the conjugation of one you have them all.

Verbs in the infinitive mood end in "i," as: Brili, to shine; Legi, to read; Doni, to give.

*As*, final, denotes present tense of verbs. *Mi legas*, I read, *Li legas*, he reads.

*Is*, final, denotes past tense of verbs. *Vi donis*, you gave, *Ili amis*, they loved.

*Os*, final, denotes future tense of verbs. *Ŝi legos*, she will read, *Li donos*, he will give.

The conditional, imperative and subjunctive moods will be given in a later lesson.

### VOCABULARY.

*kuŝi*, to lie down.

*resti*, to stay.

*trovi*, to find.

*rajdi*, to ride.

*plori*, to weep, mourn.

*paroli*, to speak.

*vidi*, to see.

*koni*, to know.

*doni*, to give.

*manĝi*, to eat.

*diri*, to say.

*trinki*, to drink.

*veni*, to come.

*aŭdi*, to hear.

*stari*, to stand.

*teo*, tea.

*kanti*, to sing.

*akvo*, water.

*lerni*, to learn.

*en*, in, into.

*legi*, to read.

*sur*, on, upon.

*ami*, to love.

*pomo*, apple.

*brili*, to shine.

*havi*, to have.

### EXERCISE 6.

Translate: *Mia frato legas la bluan libron. Mi konas vin. La knabino kantis. La pordo estas alta. La fratinoj trovas iliajn librojn. Li spegulo brilas. Ŝi trinkas teon. Mi vidas vian seĝon en la ĉambro. La virino restis sur la kuŝejo. Li staras sur la tapiŝeto. La patrino amas bonan knabinon. Mi vidas kaj aŭdas lin. Ni manĝis kvar pomojn. Li parolos. Tri viroj ploris.*

### EXERCISE 7.

Translate the following into Esperanto:

The red rug. The house is small. Blue book. White books. The father is well. The table is new and the chair is old. The rich brother is old. The family of the father is large. Many pictures. Yellow and green curtain. The mother and brother are well. The father and sister are sick. The rug is red and the carpet is green. The new mirrors are brilliant.

ALLAN EISENBISE.

16 S. State St., Elgin, Ill.

## Stories

Catherine Beery Van Dyke

WHAT lullabies are to infants, stories are to older children. We now enter a field of resource in gathering material to aid in the training of the child which is practically limitless.

Do you want to teach your child truth, honesty, unselfishness, thrift, helpfulness, punctuality, patience, obedience, these and all other child virtues? The thoughtful, resourceful mother has but to keep her eyes open to the childish stories that come in her way or better still be wise enough to weave your own stories, make them as you go, as occasion calls for them, make them a vehicle and in a short time, with more enduring effect these principles may thus be taught, perhaps, than any other way. So important is this method of instructing children recognized to be that it is the chief one in the kindergarten and is used largely by Sunday-school teachers of the young people.

As a matter of entertainment or instruction of the mind, as a matter of pastime to the convalescent person or child out of his normal "setting" such as when traveling or visiting or waiting for the train, or in an abnormally wakeful condition, or in a pout, or disappointment, or in sorrow, this method of dealing with the child is invaluable.

Many mothers say: "I cannot tell a story." Well, it is a blessing we have so many duplicates of little George Washington, but making up stories is not lying and to aptly reproduce a good story made up by another is a mental acquisition any mother could be proud of.

I used to belong to that class of timid creatures who thought it beyond their power either to make up or to reproduce a story for their children.

Some years ago I visited a friend who was the mother of six vivacious youngsters. In the evenings we gathered on the porch "between the dark and the daylight," some in the swing, some standing, some sitting, while that little mother with all the interest that age has evinced (and we all had eyes, ears and mouths open) we veined from her own experience and elsewhere, the most fascinating and wonderful stories. My babies were few and small then, but I

determined that her gift should also be mine. I have been practicing since then and though I am not yet a scientific story-teller as are the kindergartners and others, the power has developed in me to the extent that I am able to please my own and sometimes other people's children in that line. I am sure many others will be able to do this well and some far better than this.

When can stories be used? Sometimes on Sunday; sometimes in the evening, sometimes when there is a little hitch or halt in the locomotion of the family machinery; sometimes on special occasions, such as birthdays, holidays, the different school vacation days; sometimes all alone with your child and God and at such other times as will suggest themselves.

As to kinds of stories, their variety is like that of a bed of tulips or phlox in early summer, bright, sober, seldom sad, funny, poetical, soothing, heroic, instructive or just stories. More specifically considered they may be classified something like this:

1. Bible stories.
2. Stories of travel.
3. Descriptions of places and things.
4. Family history.
5. Personal reminiscences.

Bible stories should be made up of a true reproduction of facts, so arranged as to meet the comprehension of the auditors. There is such a rich store of these, both in character, number and circumstance, and they become such an important aid to the "bringing up 'of the child' in the nurture and admonition of the Lord," that no parent can afford to pass by this opportunity. Not only are the biographies interesting to the children, but the stories of families, tribes, nations, cities and lands; and the descriptions of places, occasions and events also hold their attention and command their reverence.

Stories of travel may be either true or "made up" and can be constructed so elaborately as to detail that the children will, in imagination, see and enjoy the trip and the country.

For instance, one of our children's favorite kinds of story is taking trips. We have all traveled enough

from place to place, visiting friends, spending summers and keeping house in different parts of the country to appreciate something of the amount of planning and preparation it takes. So sometimes when we lie down to rest, a "trip" is called for. At times we go from one part of the city to another. Here a chance is given to describe some museum, a big store or some scene on the street. Sometimes we go a hundred miles or so when street car or carriage must convey us to the station.

Last spring when so many of our friends were taking that magnificent trip across our continent, we went to see some of them at the different depots. We got an idea of their plans of travel, saw the sleeping cars and such things so we concluded to go, too,—not on the Santa Fe nor the Northern Pacific, but resting upon our cots we went by the way of five or six vivid imaginations. Our wardrobes were carefully selected, providing for day and night, cool or warm weather. The lunches were prepared in separate boxes for each meal, those for breakfasts being tied with red ribbons, the dinners with white and the suppers with blue. At last all hands and faces were finally washed, wraps put on and we started for the street car. The first one passed us by and in waiting for the next we divided our baggage among the different children to care for. The car came, transfers were made and we reached the station. Then came the purchasing of tickets and the selection of apartments in the tourist train and we settled for the long journey. Preparations for the night were gone through, even our prayers said, and away sped the train toward the setting sun. Morning came and instead of the crowded, noisy, busy city we were speeding through broad prairies with here and there flocks of sheep and herds of cattle. Breakfast time came, then supper and breakfast again. On opening the second breakfast box which was planned to have in it, hard boiled eggs, bread and butter, sandwiches and dates, we received quite a shock to find the bread and butter all right, the dates and package of salt, but the eggs had been forgotten. And so on the long trip was made with many an interesting incident and scene.

The trouble with this story of mine, it grew so long and eventful that by the time we got to the Pacific coast it was time for me to go to my housework. Then for about a week it was: "Mamma when are you going to bring us home from California?" Much may be learned by the mother and taught to the children by stories of this kind.

The descriptive story may be used to develop accuracy of speech and judgment, both in mother and child. It is a benefit to the child to have him describe things that have come to his view and for the mother to correct and supplement his impressions.

Now comes the fairy story. Shall we use it? Yes, but whether fairy story or any other story, be sure

you leave your child under the right impression as to its being a true story or a make-believe one.

Fairy stories and stories of mythology need to be intelligently selected and used, also with care and good judgment, that the highest good may be drawn from them.

Family history is always interesting to the children. Where stories from the lives of grandparents, uncles, aunts and cousins are given for the information and benefit of the children, their stock of knowledge of persons is greatly enhanced.

Lastly, Reminiscences. The children like no stories better than those that begin with: "When mamma was a little girl," or, "When papa was a little boy." In our mothers' meeting some time ago we developed this simple outline for story telling.

1. A good beginning.
  1. Arrest attention.
  2. Introduce the scene
2. Body.
  1. Facts.
  2. Incidents.
3. Conclusion.
  1. Avoid ending with sinfulness or death.
  2. Leave a tranquil impression upon the mind.

### MY BABY SLEEPS.

CARL NELSON.

My baby sleeps, and where the dim light falls,  
I see reflected from his pearly face  
The light of pure and glorified love,  
Which makes a conquest by its peace and grace;  
And while he sleeps, within his dreamy smile  
A hope is veiled that only half was mine—  
Such hope as, imaged by the pure white ray,  
Now links his cradle to the stars that shine.

My baby sleeps, and on my heartstrings rapt  
A spirit hand has found a melody.  
Oh, rapturous music of this evening hour,  
That lifts me in its cadence full and free.  
Sleep thou and let me dream my dream—I know  
The time is fleet that holds this charm for me;  
The years that deck the troubled past with flowers  
Arrive too soon with fortune's fateful key.  
Cando. N. Dak.

### HOW TO BE POPULAR.

LULU C. MOHLER.

"WHY, hello, Dick! I was thinking of you and I am glad you drove over this afternoon. What a pretty new gingham dress! Did you get your suit finished—blue, is it?"

"Blues, you got 'em. I really thought you never did."

"Yes, we young people do have pleasant times, and the memory will last us always. We will recall at memory's shrine—Frank, Forrest, Florence, Emma, Bessie and the rest."

"It is true, as you say, to be agreeable in every as—"

sociation does tax our ingenuity and I fancy you feel your limitations is why you are 'blue.'

"How to be popular, though human? Well, that is an issue worthy *profound research*—seriously.

"I have found one good help in being popular—well-beloved (I don't like to think of a popular person), is to be very much alive. Living fully, living cleanly, living *independently*. Oh, just full of bounding life and the good joy of it!

"I adore your queenly way of standing upright. Some lean on another and collapse if they have no support. You are self-sufficient and free and never expect homage, and you get it, because of the subtle independence of you.

"Yes indeed, that idea of yours is good, that we forget our dear little selves, and look out for any one who is not having things pleasant.

"I like, too, a fine reserve, and a frank, warm, cordial, kindly soul.

"Will we never learn that the secret of being well loved and happy, is to be continually busy at some worth-while vocations of mind and hands?

"Good-bye dearie. I shall remember, when we're old, your youth and fair young girlhood, for you are sweet to me."

*Leeton, Missouri.*

#### HOW TWO GIRLS FOUND GOOD HEALTH.

ACHES and pains are all too common. Sometimes they are due to carelessness and thoughtlessness, but many times to ignorance. The *Ladies' Home Journal* tells how thousands of girls have recovered their health. Of these we mention only two experiences of the many which may help some of our readers to solve their problems. The first is a young housekeeper who writes to the *Journal*: "I am a young mother 24 years old, and have three little boys. For a while I suffered from severe headaches. As I could not give up the care of either my family or household duties, I tried my own remedy, which has cured me. After putting my boys to bed for a nap about noon, I take a quick sponge bath with cool, salt water. I take simple head exercises. Then I put on fresh clothes and lie flat on the bed without a pillow, sometimes taking a short nap. I get up feeling fresh for my work and cheerful for the rest of the day."

Another one writes: "My mother died of consumption, leaving me with the housework, a seven-year-old brother, and a three-year-old sister to care for. In two years I was a nervous wreck. I cried nearly all the time. The doctor told me I would die as my mother had. I could not stop work, but I determined to live. My kitchen was dark and small, so I moved my work table out on the back porch, which was large and shaded all day. The pump and drain were here also, I washed all dishes here, putting them through a window when clean to another table to be put away.

I washed vegetables and did everything else on the porch. I moved my sewing machine out and sewed whole afternoons, and every time I thought of it I breathed deeply. I washed and ironed, sewed and darned and did everything but cook on that porch. And I straightened up and took a long breath every few minutes. After each meal I took a teaspoonful of olive oil and a raw egg with a bit of milk to make it go down. Whenever I felt faint or like crying, another egg went down. I took my bedroom window out completely, simply shutting my blinds if it stormed too hard. When autumn came I was well and strong, but I work there yet."

How these girls with their brave overcoming of difficulties bring home to us the fact that good health is for each and every one of us and that we may find it by making faithful use of those remedies with which Nature has blessed us.

#### SELECTED HOUSEHOLD HELPS.

ONIONS should not be eaten after they have lain about peeled and cut, as they absorb any bad odor or infectious condition that may exist.

NEXT time you have a rust spot to deal with try this: Wet the spot in cold water, cover thickly with cream of tartar, and hold over the steam of a boiling tea kettle. The rust will disappear in a few moments.

A NEW and easy method of making a mustard plaster is to take a thin slice of light bread, trim off the crust and then sprinkle the bread thickly with ground mustard. Spread a very thin cloth over the mustard and dampen with vinegar or water, and apply. A piece of bread dampened is also a very good substitute for either a flaxseed or a slippery elm poultice.

GRATED Irish potato scattered freely, then well swept off, is recommended as a fine carpet cleaner, reviving the colors without injury to delicate shades. Or use coarse cornmeal, mixed with fine dry salt, for the same purpose. Sweep it first into the carpet—against the nap—then out of it by sweeping with the nap. The salt freshens the colors and kills the larvae of moth and buffalo bugs. Clean rugs in like manner.

DON'T fail to care properly for your furnace after you have ceased to use it in the spring and the first part of summer. Take one-half bushel of unslacked lime and place in box that will go in the ash pit of your furnace, but before placing be sure to clean furnace thoroughly. Have all ashes cleaned from grate and soot and dirt from radiator; leave lime in furnace until you build fire in the fall. The lime neutralizes all the sediment and preserves the smoke pipe

and sheet iron parts. Twenty-five cents' worth of lime may save a dollar smoke pipe. The smoke pipe will not sweat during the month of August.

#### HOW TO KEEP THE BOYS ON THE FARM.

CYRUS Y. STAUFFER.

IN the first place teach them that they are needed on the farm. Then encourage them by making them partners on the farm or in the business, for farming is a business. Teach them to be content,—not to get

One Way to Keep the Boy on the Farm.

the greed for gold, for that is another reason so many leave the farm. Start to train them young by giving them a patch of ground to raise truck or flowers. If they do waste a little seed or spoil a little at first it will pay in the end. Let the boys have some pigeons to raise squabs or some bantams and chickens for themselves. Give them a chance to beautify the farm and improve it and especially the lawn. Make the farm a place of beauty so that it looks real home-like. Educate the children to be farmers and not doctors, lawyers, teachers, etc. I believe one reason why so many leave the farm is because they are educated in the wrong direction. If there is one course the Brethren schools are lacking in it is an Agricultural course.

#### IF THERE WERE NO BIRDS!

"MABEL has taken the bird's nest off her hat, because she has joined the Audubon Society," said Laura Winn as the children stood talking at recess.

"What's the Audubon Society?" asked Arthur Keene.

"A society to protect the birds, and keep people from killing them off," said Mabel. "It was named for John James Audubon. He was born, May 4, 1780, in Louisiana, near New Orleans. When he was almost a baby he used to lie under the orange trees and watch and listen to the beautiful mocking birds. He was sent to France to be educated; his father was French. But he was always studying birds, and their nests and their eggs and their songs and their ways; and at last he returned to America and became a great naturalist. Nobody in this country knew birds as he did. He went east, west, north and south to study them, and drew hundreds and hundreds of pictures of them. He made people understand better how important birds are to man. The first State Audubon Society was organized in Massachusetts in 1896. It has over six thousand members. In the whole country, there are now forty State Audubon Societies; and there is a national Audubon Society. People are trying to look after the birds."

"Birds are pretty. I like to see them, and hear them sing," said Will Arnold. "But I guess we could get on very well without them, if we had to."

"Oh, oh, oh!" cried Mabel White and Ned Longley and Jimmy Reid. And Jimmy added, "If it wasn't for birds, we couldn't live on the earth; we would be entirely eaten up with caterpillars and worms of all kinds and grubs and flies—my father read it to me. If we want to live and have any comfort and anything to eat, we must take care of the birds."

"But I don't want to do it just for ourselves," said Grace Longley. "I want to do it for the birds; they are lovely, and we are grateful for their beautiful songs; they make me full of joy when I hear them in the spring."

"That's so. Everybody watches for the first robin and the first bluebird. But I don't think little creatures like birds can help us get rid of so very many caterpillars and things," said Arthur Keene.

"Birds don't have to chew their food as we do, Arthur," answered Ned. "They don't have teeth. They have a grinder in their stomach; they give a snap and down things go and get ground up there. They eat enormously. What do you think of forty-three caterpillars that a cuckoo had eaten by six o'clock in the morning? He'd have eaten hundreds by night. Birds eat moths of the canker worm when they're crawling up the trees to lay their eggs, so we get rid of thousands and thousands of canker worm eggs. Birds eat all the flies and bugs they can get; and night-hawks and whip-poor-wills and other night birds eat the moths and insects that fly about in the night."

"I was reading," said Charley Stevens, "that in this country people lose about two million dollars every year from insects destroying fruit and grain. At one

time Pennsylvania offered a bounty on hawks and owls, so the people killed more than one hundred thousand of them—and the next year and a half the State lost four million dollars through mice and bugs and things eating up the grains and fruits."

"Whew!" said Arthur. "Then birds are of some use."

"And they eat up lots of weed seeds, and harmful seeds, like the poison sumach and other berries we want to get rid of. And my uncle says," said Mabel White, "that some kinds are scavengers, too; they clear up decayed things that would injure people by lying about. Once the people of Yucatan killed off thousands of herons and other birds that live on or near the shore; and just after that a great many people on the coast died because there were no birds to keep the beaches clear of dead fish and other decayed things which cause disease."

"But birds eat strawberries and cherries and other kinds of fruit," said Arthur. "That's naughty of them."

"Why?" returned Laura Winn. "They do so much for us, why shouldn't we give them a taste of something good of ours? Somebody says it is like paying taxes and insurance on our houses and lands; and it's not half as much as the protection the birds give us back."

"But see how we treat them!" cried Mabel. "Just think of killing dear little mother birds sitting on their eggs and waiting to hear the little ones chirp, so we can have their breasts to wear on our hats—isn't it dreadful?"

"Yes, it is cruel and wicked!" cried the children.

"But we don't kill them ourselves," added Dora.

"We buy them," said Grace; "and so people kill them to make money. The Audubon Societies are getting laws made to protect birds, and punish people for killing them against the law."

"We don't have to kill the ostriches, do we?" asked Laura.

"No, indeed!" said Jimmy. "But all wings and breasts and egrets cost the lives of the poor birds. I wish we all belonged to the Audubon Society."

"Why not?" cried Charley Stevens. "I'll ask my father to let me join it."

"A naturalist was telling me," said Will Arnold, "that they have found out about thirteen thousand kinds of birds. He said birds are like people in many ways; they love and hate; some are brave, and some cowards; some are dear modest little things, others vain as a peacock, as we say; some are generous, some selfish; and they are curious, and show memory and reason."

"I know that the birds are divided into great groups or families," said Mabel. "We have families of thrushes and warblers, of wrens and swallows, of

tanagers, finches, buntings and sparrows, of black-birds and orioles, of crows, fly catchers, swifts, humming-birds and woodpeckers. Some birds stay all the year round, living in the woods in winter; others go south every fall and come back in the spring; and some birds come down to us from the cold north, and go back again. I can't remember all the families."

"I can't remember any," said Dora. "But I know the song-sparrow sings, '*Maids, maids, maids, put your kettle-ttle on*'; and the bluebird sings softly, '*Dear, dear, think of it! Think of it!*' and the Phoebe says, '*Pewit, phæbe-a*'; and the wood-pewee says, '*Pewee, pewee peer*'; and the meadow-lark sings, '*Spring o' the year! Spring o' the year!*' and the vireo sings, '*Sweet, sweet, sweeter*'—that's all I've learned."

"You've done best of all," said Grace. "And now, if we can't all join the Audubon Society, we can have a society of our own, to protect the birds and learn more about them."

"My father says May is the best month of the year to begin to study the birds," said Ned. "And do let us each learn at least one bird's note before the bird-topic day comes in school!"—*Frances Campbell Sparhawk, in Little Folks.*

## For SUNDAY READING

### PEACE—A PRAYER.

RICHARD BRAUNSTEIN.

Peace—O for that which cometh from above,  
That owns no fellowship with naught on earth!  
Brighter than sunshine—subtler than air—  
More graceful, more deep, more grateful than the  
forest shade—

Purer and milder than the bending sky!  
The peace ineffable—that passeth thought!  
My soul doth sigh for it. Life's pageants vain,  
The phantom joys that float on starry wings  
Around youth's path, and strew their many flowers—  
She has beheld—and scorned their tributes all:—  
The multitudinous voices, wild and loud  
As chafing ocean wherewith Folly calls  
She would not hear. My spirit craveth peace.  
The shrouded day on earth is waning fast—  
She casts her earthly help and hope away!  
Father of life! bestow that better life!  
Thou who didst with woe purchase joy for man.  
Oh, write thy law of meekness on my heart!  
Thou, from whose brooding wings shot living life  
Into the mass of chaos on my soul,  
Let shine the light it needs, but will not see!  
Then—o'er the path where now I weeping walk,  
Shall beam the glory of its distant goal!  
Then from the desert into pastures green  
By the good Shepherd led, the weary soul  
Shall drink of fountains by the tree of life,  
Where peace hath planted her immortal grove.

## GIFTS OF FLOWERS.

GRACE LONGANECKER.

FLOWERS, one of the wonderful parts of God's creation, are very significant.

Who can look upon the lily-of-the-valley without thinking of its Creator, called the same?

Flowers are beneficial to all, in that they promote pure and lofty thoughts. But it is only in life that a person is made better by being presented with a wreath of fragrant carnations.

We all love to see flowers at all times, and try to unfold their mystery, but when showered upon the dead so lavishly, we sometimes wonder if the dead at all realize it or if they had not been wonderfully benefited in life, had they only received a bunch of roses. Saved from so early a death, perhaps. Who knows?

It all depends, then, upon the motive in giving flowers, as to when they should be given, whether in life or after death. If they are to benefit those to whom given or show love or respect, we should not wait until life here is ended and the dead know nothing of it.

Better a single gem to cheer us on our pathway, than all the lilies, roses, carnations and ferns, after we have reached our journey's end.

Hartville, Ohio.

## BREAD ON THE WATERS.

A LADY in Scotland, whose husband had left her a competence, had two profligate sons who wasted her substance with riotous living. When she saw that her property was being squandered, she determined to make an offering to the Lord. She took twenty pounds and gave it to the London Missionary Society. Her sons were very angry at this and told her she might as well cast the money into the sea. "I will cast it into the sea," she replied, "and it shall be my bread upon the waters."

The sons having spent all they could obtain, enlisted in a regiment and were sent to India. Their positions were far apart, but God so ordered in His providence that both were stationed near good missionaries. The elder one was led to repent of his sins, and embrace Christ. He died shortly afterward.

Meanwhile the widowed mother was praying for her boys. One evening as she was taking down the family Bible to read, the door softly opened and the younger son appeared to greet his aged mother. He told her he had turned to God and Christ had blotted out all his sins.

Then he narrated his past history in connection with the influence the missionaries of the cross had had on his own mind, while his mother, with tears of overflowing gratitude, exclaimed "Oh, my twenty pounds! I have cast my bread upon the waters and now I have found it after many days."—*Gospel in All Lands.*

## CHURCH GAINS IN THE PAST YEAR.

ACCORDING to a table of statistics made out by Dr. H. K. Carroll in the *New York Christian Advocate* during 1907 the net gain of all the religious denominations in the United States in the way of ministers was 2,301, and in the way of churches was 4,214, while the gain in communicants was 627,546. These figures make the gain in the churches more than double what it was in 1906 but is about 2,000 less than the gain in 1905, and the gain in communicants is 300,000 less than it was in that year.

According to the figures given in the paper referred to above the Roman Catholic is far and away the largest denomination, having, according to Dr. Carroll's report, more than 11,000,000 members, but according to Sadlier's Catholic Directory the number is even greater than that, rising to more than 13,800,000 members, 15,000 priests, 8,000 churches, and 4,000 missions. In order that more accurate statistics may be secured of this denomination a careful census is now in progress, directed by the bishop of St. Louis.

The Methodist Episcopal church stands second with something over 6,600,000 communicants, the gain for the year in all branches being more than 101,000. The Baptists of all bodies are given about 5,200,000 with a gain of 103,000 during the past year. The Presbyterians are rated as having over 1,800,000 communicants, an increase of 49,000. The Lutherans number more than 2,000,000 having gained 65,000 while the Disciples of Christ have 1,200,000 a gain of 20,000 having been made. These figures are approximates only, and hold possibilities for errors. An interesting development during the past year in the Greek-Catholic church is a negro priest consecrated by the Greek patriarch of Constantinople. His work is done among his own people in Philadelphia. The number of Jews in the United States is estimated at 1,700,000. There are 314 Chinese Buddhist temples in this country, and 9 Japanese Buddhist and Shintoist temples. The Chinese temples have more than 6,000 communicants.—*Selected.*

## BIBLE STUDY.

THE Bible will richly repay study; but only if the conditions are observed which common sense dictates. It has no power of working like a charm, so that a chapter read in a couple of minutes by a preoccupied mind cannot do any good. The mind must rest on it and give itself time to receive impressions. It requires the whole force of our thinking and the whole force of our feeling.—*Dr. Stalker.*

RUNNING in old ruts may be more risky than blazing new trails.

Good cheer puts love's gifts into caskets of gold.

# Echoes from Everywhere

Dr. Fridtjof Nansen, the great arctic explorer, has resigned his post as Norwegian Minister to Great Britain, the resignation not to take effect until after King Edward's forthcoming visit to Christiania.

With a surprising lack of tact, William Waldorf Astor, one-time American, now would-be Englishman, has presented to an English museum the flag of Lawrence's ship, the Chesapeake. The flag was sold recently at auction in Great Britain.

The Russian government has not only thus far refused to grant the petition for the release of Nicholas Tschai-kosky, the great Russian liberal, but refuses to allow him to give bail. It keeps him immured in the fortress of Sts. Peter and Paul.

The Brazilian state of Sao Paulo is suffering from an over production of coffe, and a bureau has been organized to work up a larger market abroad. Efforts will be made especially to get the English people to drinking more coffe, in place of their traditional tea.

Shanghai, May 10.—The Shanghai municipal council, which has control of the settlements in Shanghai in which the foreigners reside, has decided "that the number of licensed opium-houses be reduced by one-quarter from July 1, 1908, or from such earlier date and in such manner as may appear advisable in the council."

The aggregate Internal Revenue Receipts of the United States Government from the liquor traffic during the month of March shows 500 per cent decrease as compared with the shrinkage for January of this year and more than double the decrease registered for the preceding month of February.

M. Armengand, a French engineer and scientist, prophesies that before many years, men will be able to see across the Atlantic. For many years he has been experimenting with the telepectroscope or telephote, an apparatus similar to that used for the telegraphic transmission of photographs. His method was inspired by the development of the cinematograph.

Three Austrian Jews, admitted to the Easter service in the Sistine chapel, thru the influence of the Austrian Ambassador, went to the altar rail when the Host was administered by the Pope. When the consecrated wafer was unexpectedly placed in their mouths the Jews spat it out. Thus to spit out what Catholics believe to be the very body of Christ was the worst sort of sacrilege. If an Italian had committed such a deed in an ordinary church he could have been imprisoned for it. The Vatican, however, is considered to have extra territorial rights and not to be within the Italian law. The Jews hastily left Rome.

The visit of the American fleet to China has been practically given up. Instead of the sixteen vessels stopping at Chefoo, as had been planned, eight vessels only will call at Amoy for twenty-four hours. The change in plan is regarded as connected with the Manchurian situation. The Chinese would have been likely to interpret the visit as meaning that America gave her support in controversy with Japan over Manchurian matters.

It is stated that on the lists of stockholders of breweries in England are to be found the names of 1,154 clergymen, 940 of whom belong to the Episcopal church. A minister in this country known to be a brewery stockholder would be a very suspicious character, with little standing in any evangelical church. The relatively slow progress of prohibition in the mother country is explained, in part, by the above statement. But even there progress must and will be made.

Paris, May 10.—Jacob H. Schiff in an interview recently declared that the prosperity of European markets is not likely to progress until the American market becomes normal. The prediction of the American financier has been realized more quickly than could have been expected, for at the first sign of improvement in New York, and even though it is asserted that that improvement is purely fictitious, the Paris bourse has shown indications of greater firmness and activity.

One of Vienna's municipal possessions is an undertaking establishment. Nor is Vienna quite unique in this respect. In Switzerland there are four public crematories. At Basle or Zurich a citizen of the town can be cremated with no charge, at St. Gall for \$5, and at Geneva for \$10. For citizens of other cantons from \$12 to \$20 is charged. Cremation is a sensible way of disposing of the body, and in this case municipal ownership works well in improving the customs of the country.

The Judiciary Committee of the House of Representatives has decided that the bills for the purchase of the Appalachian and White Mountain forests are unconstitutional on the ground that the Federal Government has no power to acquire lands within a State solely for forest reserves. But the Committee go on to say that under its constitutional power over navigation Congress may purchase lands and forest reserves in a State, provided it is clear that such reserves have a "direct and substantial connection with the conservation and improvement of the navigability of a river, actually navigable either in whole or in part, and any appropriation made therefor is limited to that purpose." The present bills are accordingly thrown out, but new bills will be introduced presently which will be made constitutional. We hope before this session is over the Appalachian and White Mountain reserves may be actual facts.

Washington, May 12.—The Senate committee on finance today voted unanimously to report the bill already passed by the House providing for the permanent restoration of the words "In God We Trust" to gold and silver coins of the United States. The motto was taken off the coins by order of the President.

Officials of the Chicago Juvenile Court have figured that with a continued decrease in the number of cases presented at the rate of decrease in the last three years the court will have worked itself out of existence within the next six years. The average decrease has been 465 cases annually. The maximum heard was 4,050, in 1905. There was a decrease of 256 in 1906, and further decrease of 528 last year. In 1908 to April 1 the number heard has been 885, and if that rate continues the total for the year will be 2,655, a further decrease of 611 from last year. Chief Probation Officer Thurston said he would be glad to know that the institution had worked itself out of existence if assured that it was the result of the efficiency of its officers.

If Governor Haskell and the law can enforce it, Oklahoma certainly will be a prohibition State. The Attorney-General of the State has brought suit against certain St. Louis, Dallas, Guthrie and Fort Worth newspapers, together with numerous Chicago, Dallas and other wholesale liquor houses, brewing companies and distilling companies and local news agents to restrain the newspapers from publishing advertisements for the sale of intoxicating liquors in the State, the liquor houses from soliciting business in the State, and restraining the news dealers from selling or placing of newspapers or magazines containing these advertisements in view of the public. The Oklahomans will be able to forget there is such a thing as whiskey in the world.

San Francisco, May 12.—The Pacific Union Club of San Francisco was given judgment today against the Norwich Union for \$10,000, the Alliance Assurance for \$7,500 and the Commercial Union Assurance for \$7,250 on claims growing out of the great fire. The companies refused to pay on the ground that the earthquake caused the destruction of the water mains. The court held that the breaking of the water mains was not a defense where there is an earthquake clause in the policy. Fourteen suits aggregating \$21,000 were decided today against Rhine and Moselle. The San Francisco Breweries, Limited, has attached the property on California street belonging to the Alliance Assurance to satisfy a judgment of \$21,000 obtained against the company.

The great Singer Building, some 610 feet high, was formally opened in New York recently. The building is really and truly fireproof. In all its forty-two stories there is not used, as building material, so much as a cubic inch of wood. The doors, though they look and actually feel like well-dressed mahogany, are really hollow pressed steel on which a finishing surface is baked, colored, grained and baked again, then rubbed until the deception to the senses of sight and touch is remarkable. The dividing partitions,—even the window frames, are of steel. The floors throughout are cement covered with what is called "crown flooring," a preparation laid on in liquid form, which becomes as hard as cement, but feels like linoleum.

The American Bible Society has received from Mrs. Russell Sage an offer to contribute \$500,000 toward a permanent endowment for the society on condition that an additional \$500,000 shall be contributed for the same purpose before the end of the present year. The reports of the organization for the year 1907 show that during the year the society distributed 1,800,000 Bibles, Testaments and Scripture portions. These were printed in about one hundred different languages and were circulated in all parts of the globe.

Lisbon, Portugal, May 4.—The Government has finished its inquiry into the plot that culminated in the assassination last February of King Carlos and the Crown Prince, but so many persons of position are either suspected or implicated that it has decided not to prosecute anybody. To keep up appearances King Manuel will proclaim general political amnesty when he takes his oath of office, covering offense up to January 30. Though the King has expressed willingness to repay to the Treasury the money advanced to his father, the Cabinet has decided to ask the Cortes to cancel these debts.

Preservation of the thoroughfares in the Yellowstone National Park is a subject to which the army engineers in charge are giving a good deal of attention. It is a considerable problem, for the reason that the work of sprinkling in order to prevent disintegration is an expensive task, the cost now being about \$200,000 for sprinkling perhaps not more than 100 miles of road. There has been some talk of using oil, but this necessarily is expensive, and there is considerable doubt of this method of treating the roads because of their peculiar character, and also because of the long duration of freezing weather, the effect of which on oil has not been determined.

On April 7 the Swiss Congress by a vote of 82 to 53 in the lower house and 24 to 12 in the upper house accepted the initiative of the Swiss people which calls for a national referendum on the question of the complete prohibition of the manufacture, sale, transportation, exportation and importation of the liquor called absinthe or any imitations of the same. The initiative was signed by 167,814 voters, which is the greatest number ever obtained on a petition since the adoption of the initiative and referendum in Switzerland. A lively campaign has immediately been launched by both friends and enemies of the measure. The prohibitory movement is getting a foothold in Europe.

John Arbuckle, the New York coffee and sugar king who maintains a boat for the poor in New York harbor, has announced a plan whereby crippled women may earn a living on it. In a large room on one of the upper decks he had specially constructed sewing machines, adapted to the use of cripples, so that even those who have lost the use of one or both legs may earn from \$7 to \$9 a week sewing the bags used in the coffee and sugar business. Tests show that with these machines a cripple can earn as much as any one, so that they need not feel this is a charity. All the comforts of a hospital, baths fitted up under the eye of a doctor, so as to be suited to a cripple's needs, can be enjoyed on the boat and trained nurses will be in charge. Mr. Arbuckle believes he shall be able to show cripples that even those with no legs and but one stump of an arm, can yet support themselves.

## CREAM OF MAGAZINES

### THE GREAT KINSHIP.

We make too much of our human relations and not enough of our others. Every man is really more nearly related to the heavens and the earth than he is to any other man, but very few of them know it. We have not discovered the world, but only ourselves in it. We are the poor pioneers of love and life who have missed the right frontier. We are lost out of the great tribe of nature where the trees were our elder brothers and the flowers were little sisters of the soul. This accounts for our morbid craving for human companionship. We have lost the peace of mind that comes from another sort of communion—the easy, silent fellowship of green pastures and still waters. No man is lonely who can think and love his way into a forest or a field. It is only the foolish, with but a partial sense of life and its relations, who find the solitudes less friendly than the friendliest friend. Blood and mortality are not the only marks of life and kinship. The Power which made some of us trees and some of us men never intended that the soul of the man should be so far divorced from the heart of the oak—not that the tree is immortal, or sentient, but it is there, so much alive, so beneficent and so intelligible, which is more than can be said of a human comrade. No man knows his friend, but the poorest and meanest can be sure of his forest brothers.

Little children have this tribal telepathy with nature. Give a child his will and way from the first, into the greater world beyond the house-door of the family kinship, and he will easily forget them. He will take up instinctively with the bees and flowers. He will form tender intimacies with little things in the grass. He will be a lover of the winds, a son of the skies. He will become silent, awkward, reserved to human beings, and ingeniously open hearted with the hills. His silence there will be frankness; his reserve sympathy. And he will become what we call "wild." But really he is not wild, merely right with nature, and far more intelligent concerning it than if he had been brought up to it from the wisest books ever written about it.

A man is more easily misled by his mind than by his instinct, because, over and above all his other instincts there is another, a higher one, that warns him against them. But the mind has no such fortification. Let reason get the start of us and it can lead us farther in the wrong direction than any faculty we have. So we are misled this way and that about how to live by bad reasons as well as by bad instincts.

Recently a young, restless fever-brained man from the city remarked with disgust the longevity of the inhabitants of a remote neighborhood in the country where he was spending his vacation. The sight of old, soil-nurtured, sun-ripened octogenarians sitting outside their cottage doors along the green roadsides annoyed him as it annoys some men to see so much water-power lost at Niagara. "The reason they live so long," he exclaimed, petulantly, "is because they do not live, they merely exist.

They do no business, they only work. They have no enterprise, and they do not think!"

This is a common fallacy of the modern mind, to believe that much experience, ferocious energy and restless wits make a full life. These things really sterilize life of its best elements. To live best is to escape much experience, to have a peaceful, living energy, and to be in harmony with one's surroundings. This is impossible, except where nature predominates, where there is at least one field, a hill and a forest between the man and his city. Within the city itself he cannot have peace, but he must have fear and ambition, and energy over and above his forced humanitarian duties. For these are the qualities men develop in one another.

There are other imperative reasons for our return to the bosom of the great family. We have associated with one another so exclusively that the time has come when we are more or less unbearable to each other. We worry our mankind, priests, doctors, philanthropists, too much with troubles that would dissolve if we lived more in the fields and less in society. It is as foolish to be too much with men as it is to be too much alone in the desert. The hermit is the other extreme from the worldly man. And both have made the same failure of life.—The Independent.

### SCIENCE IN FARMING.

Scientific agriculture is young. It has had to wait until machinery prepared the way, by giving the farmers time to think and money to spend. The first scientist who took notice of farming was the Frenchman Lavoisier. He found out the composition of water, in 1783, and was in the midst of many discoveries, when a Paris mob hustled him to the guillotine. The famous Liebig next appeared and founded the first agricultural experiment station. Then came Berthelot, the father of synthetic chemistry, with his sensational announcement, "The soil is alive."

Today the new farmer finds himself touched by science on all sides. He knows that there are more living things in one pinch of rich soil than there are people on the whole globe. He knows that he can take a half-dozen handfuls of earth from different parts of his farm, mix them together, send one thimbleful to a chemist, and find out exactly the kind of crop that will give him the best harvest. And more, now that science has given him a peep into nature's factory, he can even feel a sense of kinship between himself and his acres, because he knows that the same elements that redden his blood are painting the green hues on his fields and forests.

There are now 15,000 new farmers who have graduated from agricultural colleges; and since the late Prof. W. O. Atwater opened the first American experiment station in 1875, fifty others have sprung into vigorous life. There is also at Washington an Agricultural Department, which has become the greatest aggregation of farm-scientists in the world. To main-

tain this department Uncle Sam pays grudgingly \$11,000,000 a year. He pays much more than this to give food and blankets to a horde of lazy Indians, or for the building of two or three warships. But it is at least more than is being spent on the new farmer in any other country.

Step by step farming is becoming a sure and scientific profession. The risks and uncertainties that formerly tossed the farmer back and forth between hope and despair are being mastered. The Weather Bureau, which sent half a million warnings last year to the farmers, has already become so skillful that six-sevenths of its predictions come true. In Kansas wheat-growing has become so sure that there has been no failure for thirteen years. And in the vast Southwest the trick of irrigation is changing the man-killing desert into a farmers' paradise, where there is nothing so punctual as the crops.—From "The New American Farmer," by Herbert N. Casson, in the American Review of Reviews for May.

#### STATE'S EVIDENCE OF A YELLOW JOURNALIST.

The way many present-day newspapers are made has been set forth by a recent writer with a cynical disregard of consequences affecting public faith in the newspaper or the publisher's feeling in the face of detection. The book, entitled, "The Career of a Journalist," by William Salisbury, is described by the New York Evening Post as "a vulgarly written account of vulgar experiences." Yet this journal is forced to admit, to the disadvantage of its genus, that the book provokes "disquieting reflections on those who look upon our newspapers as an important influence in shaping the tastes and opinions of American citizens." The veraciousness of the writer's confessions is substantiated, observes The Post, "by the tone of the newspapers to which he says he contributed." But in reading his specific charges it should be borne in mind that the writer confesses that he is perfectly capable of distorting the truth to make a good story. The Post thus takes up the writer's story of newspaper traits:

"The first is an indifference to accuracy—not merely an indifference, but a positive preference for inaccuracy when that will make a 'story' more sensational. No observer of our 'yellow' papers (and of many others which would angrily resent that name) can suppose that the consistent and continuous distortions of simple facts, the 'corroborative detail, intended to give verisimilitude to an otherwise bald and unconvincing narrative,' are due to casual caprice or the misdirected zeal of individual reporters. They are part of a settled policy. On this subject a city editor or managing editor does not need to issue explicit orders; it is enough to commend and promote the reporter who shows a talent for ornamentation and to discharge the man who sticks to the bare truth. For example, Mr. Salisbury has this to say about his labors in Omaha:

"I resorted to making news. I had an anticigaret ordinance introduced, as I had done in Kansas City, and before it became a law I wrote a story about an imaginary mass-meeting of newsboys to protest against it as an invasion of their rights. At another time I described the visit to the Mayor's office of a woman and a little girl, who sought the Mayor's aid for something. The child, I said, sang pathetic songs until Mayor Moore shed a tear and granted their request. The Mayor must have been surprised when he read this, as the whole thing was news to him. But the next day his mulatto secretary told me the story had been pasted in the official scrap-book. "It's

good stuff for the voters," said the secretary. "It'll make 'em think the Mayor's a kindhearted man." Strokes of genius like this brought a promotion."

Such embellishments of commonplace facts were nothing, however, to the methods of presentation obtaining on the Chicago American. Here, observes The Post, "Mr. Salisbury really learned the trade." We quote with the New York paper's comment the account of the writer's first assignment, which was the sinking of a tug-boat. Thus:

"I didn't recognize my story at first, in that evening's paper, it had so many features undreamed of by me. I was told that one of the 'prize dope-slingers' in the office had rewritten it. The rescue of a cat, the boat's mascot, at the risk of all the sailors' lives, was described with much convincing detail. This made me feel small. I had thought I possessed a pretty fair imagination, but I realized that I had much to learn if I were to succeed in yellow journalism."

"He learned it and was himself made a 'prize dope-slinger.'"

There is yet a more "menacing" feature of yellow journalism than mere sensationalism revealed by the present confession. It is "the suppression of matters of public moment out of deference to advertisers or other important 'interests.'" The Post goes on with quotation and comment:

"In Kansas City, Mr. Salisbury tells us:

"There were things that I couldn't write about at all, and other things that I had to write as the city editor told me. . . . These included street-railway and gas and paving and telephone, and other corporation measures, and antidepartment-store bills."

"In Council Bluffs the papers dared not 'agitate against this gambling. . . . It might kill the town. The gambling-dens pay such a big share of the revenues that the leading citizens are willing to let them run.' On the Omaha Bee Mr. Salisbury 'had always to be careful not to offend . . . the street-car, gas, telephone, and other corporations which 'Mr. Rosewater didn't dislike.' In the office of the Chicago Chronicle there was 'a list of sixteen corporations on the desk of the city editor. These were all Mr. Walsh's corporations . . . about which nothing unfavorable was ever to appear in The Chronicle.' Another reporter says bitterly: 'Not one of us could hold a place a minute after declining to write what the sordid business policy of our papers might dictate.' And Mr. Salisbury himself concludes:

"And so it was the advertiser, spending his tens of millions annually, who was my real head-master all the time. It is the big advertiser (and there is more than one kind of advertising) who is the golden-sceptered king of American journalism, the king who can do no wrong."

"To dismiss these charges because they come from a 'yellow' reporter who has turned state's evidence is impossible. Every one of experience in journalism, every newspaper man who has felt the pressure of the advertiser, knows that the vast majority of papers in this country are not and cannot be made independent of the counting-room. They represent a huge investment, on which dividends must be paid; and the only sure way to pay dividends is to truckle to both subscriber and advertiser. Nor will any other way be possible so long as people prefer, and advertisers find their chief profit in patronizing, the press that is dirty and disreputable. We shall be cursed with sensational and venal journalism until advertisers and subscribers unite in destroying it."—The Literary Digest.

## AN ISLAND IN THE AIR.

THREE miles south of the Mesa Encantada, in Mexico, is a splendid specimen of fantastic erosion—an "island" in the air, a rock with overhanging sides nearly 400 feet high, seventy acres in area on the fairly level top, indented with countless great bays, notched with dizzy chasms. The greater part of the island overhangs the sea like a huge mushroom, and on the top stands a town which for artistic charm, ethnological interest and romantic history has no peer.

This little town of Ancoma is one of the most perfect types of the prehistoric Pueblo architecture. Most of the houses remain of the type invented when every house must be a fort. One climbed a ladder to his first roof and pulled up the ladder at night, living on the second and third floors and using the ground floor as a cellar. Against enemies armed only with bows and arrows this was a fair defense. Comfort had to be sacrificed to safety. Nothing except the eagle sought such inaccessible eyries as these victims of their own civilization.

Because they were farmers instead of freebooters, because they had homes instead of being vagrants, they were easy to find, and they were the prey of a hundred nomad tribes. With inconceivable labor this island town in the air was built and fortified. It was reached only by a mere trail of toe holes up the stem of the "mushroom." The age of the island is not known, except that it was already old in 1540, when the first explorer visited it and wrote an account of its wonders.

## OUR LOVE OF TITLES.

As a nation, there is no doubt but that we are democratic in our instincts and republican in our institutions. Yet it must seem strange to foreigners who come to our shores to marry our title-loving heiresses to see the amount of attention and open-mouthed admiration which is literally poured upon them by the descendants of men and women who fought to free themselves from the tyranny of crowns and titles.

At a recent wedding in New York, between a noted heiress and the possessor of an unimportant title in a fourth-rate European country, a mob of fifty thousand persons disputed the ground with an army of policemen in the effort to see this "real, live nobleman." And this crowd was composed largely of women, many of them very smartly dressed. Let us not be too hasty in condemning the heiresses of our country in seeking titles, when the middle classes, the veritable backbone of our nation, show such an eagerness to view people whom, but for unimportant titles, they would not cross the street to meet.

"OUR own lives are robbed of sweetness by bitter thoughts of others."

## BETWEEN WHILES.

"It's no wonder he has money," said a banker. "He is the most suspicious fellow I ever heard of. He reminds me of a farmer I used to know. This farmer, whenever he bought a flock of sheep, examined each sheep closely to make sure that its fleece was all wool."

If some men would act at the lunch counter like they act when eating at home, they would be fired bodily by an enraged restaurant keeper.

## He Understood.

"I have often marveled at your brilliancy, your aptness at repartee, your"—

"If it's more than five dollars, old man, I can't do a thing for you. I'm nearly broke myself."—Houston Post.

"What is that nickname you have given your boy?"

"'Flyin' Machine,'" answered Farmer Corning. "You see, he's very interesting an' promising, but he won't work."

"You are a chemist and druggist, are you?"

"I am."

"Been in business a number of years?"

"I have."

"Understand your trade thoroughly?"

"I do."

"Registered?"

"Yes, sir."

"That is your certificate hanging over there?"

"It is."

"Well, give me twopennyworth of tooth powder."

A certain young preacher went down from Princeton to Philadelphia to preach. He was one of those extremely flowery preachers who sometimes dazzle rhetorically the congregation, and the elders of the church were besieged to have him down again. They at length consented; but the secretary had forgotten his name, and he wrote to one of the seminary professors, saying, "Please send us that floweret, streamlet, rivulet, starlight man, to preach for us next Sabbath. We have forgotten his name, but we have no doubt you will be able to recognize him." He was recognized. He was sent. He became minister of the church.—Home Herald.

Conductor—How old are you, little girl?

Little Girl—You will have to ask ma. She always takes charge of my age on the railway!

## WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE.—Mill building, 40 H. P. engine, meal and feed machinery, all new. Good wheat territory. Ready for flour machinery. Brethren preferred. Address First National Bank, Mulberry Grove, Ill.

# Of Course You Know of the **MIAMI RANCH**

**Miami -- Via Springer, New Mexico**

**You Owe It to Yourself to Come and See Before Purchasing Elsewhere Because**

1. Our climate is healthful.
2. Our soil is unsurpassed.
3. **Miami Ranch** is soul-inspiring in natural beauty.
4. Our water supply is abundant and chemically pure.
5. Our gigantic irrigation plant is practically completed and is built to stand for ages.
6. We are already storing a supply of pure mountain water in our mammoth reservoir for this season's irrigation.
7. Thirty families of permanent settlers imbued with purpose and with ability to accomplish are already located upon their farms.
8. A postoffice and general store are in full operation in our new town—**MIAMI**.
9. Church and school privileges are already provided for.
10. Sale of intoxicating liquor is forever prohibited upon the ranch.
11. **Miami Ranch** is peculiarly adapted to fruit culture and will produce abundantly all crops adapted to the temperate zone.
12. Our lands, which are now selling at from 35 to 70 dollars per acre, will double in value within one year.

**Cheap excursions the first and third Tuesdays of each month to Miami Ranch.**

**Only \$30.00 for the round trip from Chicago.**

## 6 PER CENT NET

### ON NORTH DAKOTA FARM LOANS

All loans are first mortgage loans. No loan is made exceeding 50 per cent of the actual value of the property. Title in all loans is passed on by reliable Attorney and no loan sent out unless title is perfect. Interest is collected and remitted each year free of charge.

Write for reference as to my reliability. I will refer you to men that you know either personally or by reputation.

**MICHAEL BLOCHER, Perth, N. Dak.**

## In each number of THE INSTITUTE TIE

Dr. R. A. Torrey  
Answers Practical and Perplexing Questions, similar to these recently published:

"Some teach that a believer is sanctified instantaneously; others declare that sanctification is a gradual process, perfected in heaven only. What does the Bible teach as to this?"

"Is it ever right to ask unconverted though moral people to teach a Sunday-school class or do other definite Christian work?"

"How would you prove the existence of God to an inquirer?"

"What is the Scriptural means of raising money for church or other Christian uses?"

"Kindly explain Acts 13: 48; 'And as many as were ordained to eternal life believed.' Are some born to be lost?"

Another department **Dr. Torrey** maintains is: **STUDIES IN THE LIFE AND TEACHINGS OF OUR LORD.**

**Dr. Jas. M. Gray** conducts regularly his Bible course, **THE LAYMAN'S COMMENTARY ON THE OLD AND NEW TESTAMENTS.** He began the **BOOK OF EXODUS** with the April issue.

### Other Regular Departments.

Editorial Notes, Contributed Articles, Bible Book Studies, Methods of Christian Work, etc., For Sermon and Scrap Book, Anecdotes, Outlines, World News, Notes and Suggestions, The Evangelistic Field, Book Notices.

Monthly, \$1.00 a Year. Specimen Copy Free.

It is expected that **THE TIE** will report the addresses of several Bible conferences during the coming summer.

**THE INSTITUTE TIE,**  
80 Institute Place, Chicago.

# Facts Regarding Imperial Valley

Some people in trying to induce their friends to settle in the country where they themselves are located, frequently send them advertising matter that is gotten up by unscrupulous land agents that deviates from the truth. Their friends come and buy property and soon find out that the facts do not correspond with the advertisements sent them. The result is they soon become discouraged and sell out at a sacrifice, and go back where they came from, worsted financially and in some instances say worse things of the country than they should, and thus bring reproach on a good country (though not as good as the advertisement represented it to be). The undersigned has known this to happen more than once, and for this reason has decided to tell his friends about the Imperial Valley in his own words, so that he alone shall be responsible, and so that the wonderful Imperial Valley may never be made a reproach and a by-word.

Imperial Valley is situated in San Diego County, California, 183 miles east of Los Angeles on the Imperial branch of the Southern Pacific railroad. The soil is an alluvial deposit and all crops are grown by irrigation, with water from the Colorado River. The main irrigation canal is 80 feet wide on the bottom and 100 feet wide on the top, and 10 feet deep. The soil is adapted to the growth of wheat, barley, alfalfa and nearly all kinds of fruit. Alfalfa having plenty of water can be cut eight times per season, yielding as high as ten tons of nice hay per acre which sells at present from \$8.00 to \$11.00 per ton. Barley can be sown for winter pasture in alfalfa stubble after the last crop of hay is harvested. Alfalfa can be cut every three weeks if the hay is wanted for dairy cows, or every four or five weeks if wanted for horses. I have known of alfalfa yielding \$40.00 worth of seed per acre and my own yielded \$20.00 per acre with the first season's sowing. Dairying and hog raising are very profitable. Butter sells from 20 cents to 45 cents per pound; hogs, 7½ cents on foot; also beef, cattle and horses do excellently. One colt weighed 960 pounds at less than one year old. One acre of alfalfa will keep from 2 to 3 head of dairy cows or horses and from ten to fifteen head of hogs. Oranges, lemons, dates, figs, apricots, grapes and berries do well. A single grape vine has yielded 30 pounds of grapes 18 months from setting. Grapes, apricot and cantaloupe growing is very profitable as they will ripen here from three to four weeks earlier than other places, and be placed on the eastern market before they are ripe in other localities. One man at Coachella was offered \$600.00 cash for the grapes on a single acre of vines and refused the offer and sold at retail for \$1,400.00. Cantaloupes will net the growers from \$50.00 to \$300.00 per acre. I have lived in the valley as long as any one, being one of the first settlers, and my experience and observation has taught me that you can grow almost anything here you plant, including vegetables, if planted in the proper seasons and properly cared for. The selling price of land at present is from \$40.00 to \$100.00 per acre, owing to location. President Roosevelt says that when it is thoroughly developed it will be worth from \$500.00 to \$1500.00 per acre.

Reader, when you shiver around your fireside the coming winter, just think of the Imperial Valley where you can go in your shirt sleeves nearly every day in the year. And on the 10th day of this month (May, 1907), while there was a snow storm raging in many places in the eastern states, we were making hay and picking and eating fruit in the Imperial Valley.

For further information, address

Our Price, per set of 7 volumes, f. o. b., Elgin,.... 3.50

Will send, express prepaid, for 75 cents extra.

## Mr. World and Miss Churchmember

By W. S. Harris.

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel,

till finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

Our Price, Prepaid .....\$ .75

## The Life of Christ

By E. S. Young.

A harmony of the four Gospels. Contains a systematic arrangement of the Savior's life and teaching. Nine periods. One hundred and sixty events from birth to ascension. Nine maps on which events are located and journeys shown. Scriptures on the same subject found in the different Gospels are placed together on the same page under the proper subject. Well illustrated. 348 pages.

Bound in cloth, .....\$1.50

# BRETHREN PUBLISHING HOUSE

Elgin, Illinois

# ALBERTA

## ¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

MINNEAPOLIS, MINN.

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused Annual Meeting to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

Send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
100 Membership Cards.  
This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.  
Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
200 Membership Cards.  
This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.  
Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

✽ ✽

### TOURIST SLEEPING CARS.

A striking feature of the Union Pacific passenger trains is the tourist service. The tourist sleepers are identical with the standard sleepers, with the exception that their furnishings are not on so grand a scale, but the accommodations are equally good and are sold at HALF THE PRICE of the standard. The seats are upholstered, and at night the berths are hung with heavy curtains. Each car is accompanied by a uniformed porter whose duties are the same as those upon the Pullman Palace Sleepers.

### DINING CARS.

Union Pacific dining cars are operated on all through trains. These cars are all new in style and models of beauty and elegance.

### DINING ROOMS AND LUNCH COUNTERS.

Dining Rooms and Lunch Counters are located at convenient points along the line, and all through trains which do not carry dining cars are scheduled to stop at these points. Well prepared meals of the best quality are properly served at popular prices. Full time is allowed for meals.

# Here's What We Promised a Couple of Weeks Ago

Macdoel, Calif., May 4, 1908.

Mr. E. M. Cobb, Elgin, Ill.,

Dear Bro:—

According to your request, I am furnishing you herewith a PARTIAL LIST of the names of the settlers in Butte Valley who have made some remarkable improvements on their property in the short time they have been there. Under separate cover I am sending you 46 photographs showing these improvements. Bro. Isaiah Wheeler and myself drove to the homes of these happy and contented settlers and took these photographs with our own camera, and the pictures speak for themselves.

Please note that I say a partial list, for there are many who have cleared quite large tracts whom we did not get to visit in the short time we were there. Here are the autographic signatures of these people with their own statements in their own handwriting as to the acres cleared and as to the improvements they have placed on their land outside of the clearing. Please make a copy of this and send the original copy to my files for reference.

Fraternally yours,

Geo. L. McDonaugh.

# ANNUAL REPORT

## OF CONFERENCE OF 1908

HELD AT  
**DES MOINES, IOWA**

As usual we are arranging to publish a complete Report of the proceedings of the Conference in book form with manila cover.

### Bicentennial

On account of this year being the Two-Hundredth year since the Brethren church began in Germany, it will make this meeting of unusual interest and importance in the history of the church. For this reason alone, thousands will want the Report this year to commemorate that event.

### Important Business.

Much important business will be transacted at this meeting that will be far-reaching in its effect.

### Send Your Order Now

Send us your advance order now, or hand it to our local agent of your congregation, so you will get a copy as soon as the Report is published.

We expect to push the publication of this Report and will endeavor to have same ready for mailing, the week following the meeting.

Price prepaid, per copy, .....25 cents

**BRETHREN PUBLISHING HOUSE**  
**Elgin, Ill.**

# Esperanto

is rapidly gaining ground as an international language and now has thousands of enthusiastic supporters in almost every nation on both Hemispheres. We have therefore arranged a clubbing proposition with "Amerika Esperantisto" which is the most popular Monthly Magazine devoted to the propagation of the language.

### Here is Our Offer

The Inglenook one year, .....\$1.00  
"Amerika Esperantisto" one year and paper-bound copy of Esperanto Grammar, ..... 1.50

**\$2.50**

If you order both, at once, only, .....\$1.25

Cloth-bound book, without 'Nook, prepaid, \$1.00

**BRETHREN PUBLISHING HOUSE,**  
**Elgin, Illinois.**

# JERRY McAULEY An Apostle to the Lost

Edited by R. M. Offord

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser of human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them, is to find the clew to his power. Here is one of them. "I have nothing to be proud of; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

### Kindle the Flame in Other Hearts

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

### Every Church Worker

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

## Ropp's New Commercial Calculator and Short Cut Arithmetic The Standard for Store, Farm, Bank or Factory,

5 1/4 x 2 3/4 in.

Is from beginning to end a greatly improved, enlarged and thoroughly revised publication.

It contains an entirely new system of unique Tables, Short-Cuts and up-to-date Methods.

It is unquestionably the most complete, useful and comprehensive Calculator ever published.

It has more than twice the matter, scope and capacity of Ropp's former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

It is the most convenient and practical Labor-saving work ever used in the business world.

It will make every one independent, sure and self-reliant in all practical calculations.

It will prevent mistakes, relieve the mind, save time and labor, and often loss and trouble.

Its Tables are adapted to all the trades and occupations in the city and country, and

### Show the Answer as Quickly as a Watch Shows the Time.

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.

It will make the study and use of Figures easy and interesting for young and old.

It will enable every progressive mind to become an expert, sure and rapid calculator.

It will prove a boon to all whose education in arithmetic has been limited or neglected.

#### 48 Cuts Illustrate the Elements of Mechanics and Mensuration

It defines about 70 points in "Commercial Law" which every man and woman should know.

It is the result of devising, and improving system after system; of spending thousands of dollars in experimenting; of making millions of miscellaneous calculations, and of doing some vigorous thinking during 38 years, by an analytic, practical and persevering mind.

### It is Especially Designed for

Farmers, Mechanics, Business and Professional men,

#### Office Edition (9 1/2 x 5 1/4 in.)

Cloth binding, gold stamp, large type, .....\$1.00

#### Pocket Edition (6 1/2 x 3 3/4)

Cloth, with pocket, flap and silicate slate, ..... .50

Leather, with pocket, flap and silicate slate, gilt edge, ..... 1.00

#### Vest Pocket Edition (5 1/4 x 2 3/4)

Cloth, round corners, red edges, ..... .35

Leather, gold stamp, burnished edges, ..... .50

## How the Healing Art Developed

J. F. Studebaker M. D.

### In Five Parts.—Part One.

BEFORE the time of written history, when man was in a primitive and rude state, when there was nothing to engage his mind but the awe-inspiring and twinkling heavens above and the multiplicity of Nature's treasures beneath—the immense wealth of beautiful foliage, the myriads of sunbeam-kissed flowers, the amazingly strange and various species of animals, the tinkling and fresh-toned brooks never heard before, the rich, green and majestic hillsides, the great and massive palisade of mountains fortified against the sky beyond the foot-hills—he, enveloped by pure, invigorating, buoyant air and delighted with the flowing measures of music of unfamiliar songsters, was perfect in physique, and free from the debilitating influences of disease.

His life was simple. He had no books to read and to guide him. His guide was in what he saw about him. Being a farmer or shepherd, he intuitively watched the movements of the most conspicuous stars and planets, the mysterious and partly shadowed ball of fire at night, and noticed the sun appearing and disappearing at regular intervals. All things about him were new and concealed truths. They were wonderful because of their strangeness. He knew no philosophy. He delved into no science. Spontaneously he fashioned his affairs according to the order of creation. The day with its brilliant dawn, the glittering diamond dewdrops, the responsive awakening of plant life, the instinctive activity of the animal kingdom—these all inspired him to partake of the movable energy about him, to be directed by his own limited intelligence. The night with its inactivity and quietude suggested rest. Through his acute senses of sight and taste he selected the proper plants and animals for his sustenance and prepared them in a plain and original way, free from all the fancies of the modern culinary art.

Man in the aboriginal condition of existence, and the lower animals, when attacked by disease from dis-

obedience of the well-defined laws of nature or afflicted with some wound from an accident or an assault, impulsively sought a place of solitude and rest, refrained from or modified the character and amount of food taken, and in certain cases instinctively selected an herb possessing healing properties. Their treatment was almost entirely hygienic.

The earliest records of hygiene are in the Bible, in the book of Leviticus, which is mostly occupied in giving an exposition of rules governing the safety of public health, many of which are observed today by the most highly civilized nations. The exigencies of those times required only simple measures of healing. Plain diet, good water, moderate exercise in pure air and bright sunlight, and regular sleep were the only protection necessary against the ravages of disease until there were changes in the habits of life and the methods of thought of the people. Then more complex means of treatment were sought. Experiences and superstitions led savage tribes into certain customs. The Persians, unlike all other peoples, had unrelenting faith in charms, spells, amulets, which, they believed, under the influence of certain planets possessed great medical powers and were capable of controlling men's fortunes in the future. They observed the flight of birds. It was said that the water in which the talisman, a pebble set in coin, was dipped, acted as a means to control local bleeding and as an agent to combat fever, as in the case of the Talisman of Scott's famous novel curing Richard III during his renowned crusade to the Holy Land.

Being stimulated to thought by the demands of the peculiar conditions of the country for a greater development of its resources, the rich and fertile valleys of the Nile, the Egyptians crudely studied science, including mathematics and the arts. They were the first to study "the art of ingenuity and politeness." Luxury followed in orderly sequence; this was such a great change from the simplicity of life of the Adamic period that measures of health as then known

and if recognized were not sufficient to abate the progress of the new disturbances of the body, originating in consequence of laziness and free indulgence in frivolity and gratification of unhealthy pleasures. The constantly new demands for more extensive treatment brought the science of medicine to some degree of perfection, comparatively high for that time. In the earliest era of medicine of the Egyptians, the patient was placed in a public place where all might view the afflicted one, as was also the custom among the Babylonians, and those who had previously suffered with a similar disease told what relieving measures were employed. All this was recorded on papyrus. As some were persistent in the study of these records and the patients they represented, there came to be specialists as early as 1400 B. C., the eye and ear doctors, the physician and the surgeon, the bone-setters of that period (and probably many bones were broken during the erection of the pyramids).

They were all considered priests and were under the supervision of the temple. Most of them lived on the east side of the Nile in Thebes, each one with his family, on his own land. When some one was taken ill, a messenger was sent to the priestly college and not to the doctor's home, to give a description of the condition of the sick one. After the summary of the patient was made up, the principal priest of the sanctuary selected the suitable man, a master of the particular knowledge which pertained to his specialty, to go to the bedside to study the patient and the disease and to outline a course of treatment. He then returned to the temple where all was recorded, what he found and what had been done.

#### ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

##### XIV. John Neal.

JOHN NEAL was born October 25, 1793, at Falmouth (Portland), Maine, and was of Scotch descent. He was a member of the Society of Friends till he was disfellowshipped in 1818, for being unable to live up to the rule of "living peaceably with all men." At twelve years of age he was a shop-boy. Afterwards he taught drawing and penmanship in several Maine towns. Then he was a drygoods jobber in Boston, New York and Baltimore, but was unsuccessful. In the latter place he was in partnership with another future literary celebrity, John Pierpont. In 1816 he began the study of law and crowded the usual seven-years' course into one. In 1817 he decided to enter the literary field as a more direct means of support, and published a novel called "Keep Cool." He was nick-named "Jehu O'Cataraht," from the name affixed to the poem, "The Battle of Niagara," from his incessant literary activity.

He published a book of poems in 1818 and a five-

act tragedy, "Otho," in 1819. In 1822 he published four novels, written in from twenty-seven to thirty-nine days each. "Seventy-Six," "Logan," "Randolph," and "Errata." In 1824 he went to England and contributed to *Blackwood's* and other magazines and reviews and secured the friendship of Jeremy Bentham, the critical poetical reform writer.

After his return from England he settled in his native town and practiced law, wrote novels, poems, plays, edited newspapers, lectured, and in leisure hours taught boxing, fencing, and gymnastics. He wrote enormously, yet it is doubtful if anything in particular will be lasting. Among his poems may be mentioned "Goldan, the Maniac Harper," and of his novels, "Brother Jonathan," "The Down-Easters," "Rachel Dyer," "True Womanhood." In 1870 he published a sort of autobiography, "Wandering Recollections of a Somewhat Busy Life." He died June 20, 1876.

He wrote too hastily and at times rather incoherently, caring nothing, seemingly, for the "classical English" style, and did not prune and tone anything after it was written it seems, and for that reason, in spite of the fire, genius and intense nationality that show through all his works, and particularly in his poetry, he did not achieve permanent renown.

Worthy of mention: Simon Newcomb, science; J. C. Neal, humorous; M. A. Newell, education; Mrs. R. S. Nichols, poems; M. M. Noah, travels and translations; Sidney Norton, science; J. O. Noyes, Roumania and Gypsies; Eliphalet Nott, temperance.

Bryan, Ohio.

#### GERMANY'S FOOD SUPPLY.

THE food supply of the rural districts of Germany is steadily deteriorating in comparison with that of cities. The change is attributed in large part to the increasing tendency to send grain, cattle, and dairy products to the city for sale, instead of consuming them on the farm. The production of grain has increased little in several decades, during which the cities have grown rapidly. Between 1890 and 1900 the number of milch cows increased less than 7 per cent, while the consumption of milk in cities increased 78 per cent. The average annual consumption of milk per capita in a number of cities increased from 102 quarts in 1896 to 126 quarts in 1903, but in the country the average annual consumption per capita decreased from 126 quarts in 1890 to 59 quarts in 1900! As with milk so it is with other farm products. The German peasant lives no longer on grain, milk, cheese, butter, eggs, fruit, and vegetables, but subsists chiefly on potatoes, coffee, and beer. This change in the rural dietary necessarily produces evil consequences, which are but too plainly evident in the statistics of infant mortality and the records of the recruiting officers.—*Scientific American*.

## Around the World Without a Cent

H. M. Spickler

### Chapter IV.

My money ran down to eighteen cents. That was less than I could get supper, and bed and breakfast on. Things looked desperate. A little before noon I mounted and rode towards the country,—rode in any direction the wheel wanted to go.

Ten miles from London Bridge I passed along a most beautiful farm where the road wound about over the hills and gave me glimpses of groups of men, here and there, over the farm. On my right was a hay field of five or more acres where a dozen big men lazily tumbled about the heavy grass that it might dry more easily in what little sun this part of England can well expect.

I rode into the farmyard. The foreman told me he had plenty of men, and although he was turning off a good many every day, he would try me. The farm was of three hundred acres, every acre worth a thousand dollars, and on this farm some two hundred men and women were working,—in the busy berry season.

Expecting to be invited into one of the houses standing about, I stood around,—just stood around, and waited. But no one asked me to come and eat. At one o'clock the whistle of the brickyard near by blew the hour for going to work again. The men began to file down the road from their rented homes and some of these entered the hay field. I was told to follow them, with not even a toothpick to make believe I had eaten. Thinking I would need prodding up, the leaders went ahead, turning the grass over, I following, doing the same, while behind me came several others, who now and then said, "Hurry up,

there!" All I could do was to keep up to those ahead of me, and this I did with little or no effort, even on an empty stomach. Soon they found that an American is made of different stuff from the average farm hand near London. I was put in the lead. But now they called to me to go slower. I was working faster than there was any need of, they declared.

Several times during the afternoon the farmer came out to see us work. How he watched me. I half expected he would discharge me, he looked so long and straight at me. I was doing my best, and I had made

up my mind that if any one held the job, it would not be the American who would have to go.

No sooner did the boss leave the field, or get a few rods away, than the men began to slow up; some of them leaned on their forks, and when he passed out of sight, they all threw themselves down upon the sweet English, half-cured hay, told yarns and smoked their pipes.

My objections were

ill received, and prudence warned me to be careful, for I was a new man in a new country.

At five thirty when the whistle blew for laborers to leave off, the men were all lying down in the far corner of the field, some of them reading, others smoking, several sound asleep. One of the older men whom I had mistaken for the farmer when I came to hire out, was lying in a depression that must have been once a cellar. Here he had thrown himself upon a swath of hay, and not hearing the loud whistle, he slept on, unheeding and unheeded.

To quit at five thirty was strangely amusing to me, especially after having loafed along like those men

Group of the Merry Berry-pickers.

made me loaf. I passed into the yard and began to look for signs of my dinner and supper in one meal. I learned that every farm hand boarded and lodged himself. I asked the farmer if I could not get board and lodging with him. He failed to grasp my meaning. He thought I was only joking. I showed him my introduction letters, thinking that when he knew I had studied for the ministry and that I was a gold-medal graduate of a college, his comfortable home would open wide its doors to such a guest!

The most he did was to invite me to take a seat on his *doorstep* where he had brought me by the servant girl a plate of strawberries, some bread and a glass of good milk. So that was about all I had to eat that day. I felt sure that he would open his heart and home to me for lodging that night. But night came, and the men had all gone home,—all except the man who locked the stables and granaries and looked after such things as needed close attention, new farm hands, etc. From him I learned that I could sleep in the horse-stable,—that the farmer had told him to *allow* me to sleep there, if I liked. For the first time in my life I slept that night in the horse-stable, in an empty stall, between two big English draft horses.

Toward morning I awoke at the call of the foreman who said he would get me up at three o'clock so I might join the merry strawberry pickers and earn some extra money before the farm hands were required to be in their places on the farm.

I had slept in my clothing without even loosening a shoe-lace or my collar. But I felt splendid,—sleeping in an old English horse-stable, and waking at three in the morning to pick strawberries!

Down the dark roadway I followed some men and women and little children who led me almost a mile along the winding lanes and in through the fragrant fields, the dew on the grass being like a river. As the dawn came I perceived that the women carried two to four gallon baskets and had their heads wrapped with calico.

By the time we reached the forty acres of strawberries I was fully awake, and then the glory of England's country life came bursting into my soul by an overpowering revelation of freshness, beauty and health. A gray mist hung over the fields. It was a June morning, such as I had never seen before. An army of birds sang everywhere,—strange singing birds that proved to be skylarks.

Of course I was hungry for the berries. If I ate one, I ate a gallon! They were the largest and juiciest and sweetest berries I ever saw, and I ate only the largest ones, and without injury to the farmer. For as most of them were large, and as many of them could not be marketed, it was quite right to help oneself to that which while benefiting himself would not impoverish another.

For all that we picked before five o'clock we were

paid several pennies extra per peck. The first morning I could not keep up with the pickers, for each of us had a row. But I was not minding that very much, with the skylarks, so famed in story and in song, singing all about me. I noticed that the bird has a peculiar, attractive flight. At first you see it hovering a little distance from the bushes, singing rapidly, then, with wings whirring faster and faster, it rises and rises, straight toward the zenith, passing often entirely out of sight, singing as it goes. The air was filled with these birds and their morning song, so strangely new to my senses, filled my soul with wild melody that knew no weariness.

I was in England, turned loose in forty acres of most luscious strawberries, with winding roads about me, and English skylarks to praise my Maker, with me. It was like paradise after a flounder through hades.

### CANVASSING EXPERIENCES.

EMMA HORNING.

A GROUP of college boys and girls decided to attempt making their next year's expenses by canvassing stereoscopic views during the summer. As soon as school was out in the spring we started for the "Rockies"—six boys and five girls. We had a jolly time like only college boys and girls know how to have. The most exciting occurrence was when we took the sleeper one night. We left our bonnets and some of our views in the next car where we had spent the day. When we awoke the next morning, to our great surprise the car was gone and we were without wraps and views. At the next stop the boys telegraphed to Salt Lake City to hold the car till we arrived. Of course we had to leave the train with nothing on our heads and it was not the fashion then, but in a little while the boys found the lost articles.

Our enthusiasm was great, our plans good and our hopes high. We hoped to make all the money we needed before school opened, then all meet at Yellowstone Park and spend a week there before returning. Our fervor was dampened somewhat when we arrived at Pocatella, Idaho, for here we were all to separate, two by two, and go to our different fields of work. We had a picture taken of the group, promised to write to each other often to keep the blues away, then took the trains, some going to eastern Idaho, others to western Idaho and Washington and the rest to Montana. My chum (now Mrs. F. H. Crumpacker) and I had eastern Idaho, in the Snake River Valley for our territory to work. Here we spent three months of experience, worth more than any year we spent in school. This valley is surrounded by great mountains except where it opens on the west. The east end finds its limits in Yellowstone Park, where the river rises. In the south range of mountains are

the famous Teton Peaks, the most imposing peaks of the Rockies, where the snow always rests. They consist of three peaks, the center one rising the highest. They are composed of one mass of solid granite. So precipitous are the sides that but two persons have ever reached the summit. They were college boys from the East who were eager to do some famous deed. This is how the summit was gained. Holes were bored in the rock in which spikes were placed and ropes fastened to these to form a ladder. This was ascended and a steel flag placed on the top.

The bed of the valley is black lava rock through which the Snake River cuts its way. The current is swift and the many whirlpools make it dangerous. Its water is used to irrigate this fertile valley.

Most of the people here are Mormons who moved in from Utah. Many of them are new settlers and most of their houses were built of logs or adobe. They were very kind to us and we could not have been treated better by any class of people than we were by these Mormons. We visited their churches and Sunday schools and enjoyed them very much. They take the communion every Sunday but use water instead of wine.

Among new settlers we could not expect large orders and many times they did not have the money when we returned but they were much delighted with the views. There not being many towns, we had to spend much of our time in the country. We hired a horse and buggy at from \$1.25 to \$2.00 per day, and board was \$5.00 per week. We visited nearly every home from one end of the valley to the other, having many interesting experiences. Once we came to a large irrigation ditch and seeing others had gone through we attempted the same. In an instant the horse went out of sight and the next moment appeared on the other side. We were still in the buggy for it floated but we were pretty wet and our views also. We stopped at the next house and dried our clothing, but we were more careful next time we came to a large ditch.

Another time my chum was crossing a ditch on a plank. When she reached the middle it broke and she went into the water above her waist. We were ten miles from town where we boarded and it was a cold day (it snowed a little July 3), but she wrapped up as best she could in a laprobe and buggy curtain and drove back to town and the next day she was no worse for it.

We finished this point and begged the company to let us have a good town to work. At last they said we might have Idaho Falls. We came there in high spirits but to our dismay two agents had just been there ahead of us and taken the town, so we hired a horse and buggy and went to the country again but, experience was worth all we endured.

*Fruita, Colo.*

alas, they had been there also. Only one direction did we find they had not been and there we did well. During this time I had lost my pocketbook and we had sent most of our money to the company. What few orders we did get brought us no money until we could deliver. If any girls were blue we were; no money, everybody strangers and nothing to do. We lived on one meal a day and crackers between. We were about ready to look for a place to work in a hotel.

At last we decided to try Teton Basin about sixty miles away, up in the mountains at the foot of Teton Peaks. In this little basin, surrounded by lofty mountains, is a couple little towns and a number of settlers. Having saved enough money to get back to the place we left where we were well known, we returned, borrowed ten dollars and a horse of a livery man and started on our trip to the mountains. The first day we hoped to reach the half-way house or little log hotel in a deep gulch, the only house for many miles across the desert. Towards evening our horse began to give out. Nothing could induce him to move faster than a very slow walk. Night came on, once we lost the road, once the wheel got in a rut which the horse could not pull it out of. We lifted the wheel out and went on. The road seemed so long that we felt sure we must have taken the wrong road, the one which led up to the pineries. The night was cold and we were quite chilled. We had walked a good deal but were now tired, so we wrapped ourselves up as best we could and decided to sit still and let the horse plod along and see what he would come to. At last we saw a light but could not imagine what it could be. To our delight we found that it was a camp fire just above the gulch where the hotel was. We wakened the people, for it was late at night, and soon found comfortable places to sleep. After the horse was properly rested we continued our trip and put our horse in the pasture, and hired another horse for our work up there. We did well there for no agent had ventured that far before, and it was grand to be in the shadow of those mighty peaks.

On the way back to the valley the horse became tired again and fell down and broke the shaft. After tying them up as best we could with the halter rope we continued, but the dust was so deep on the desert and the wind so strong we had to keep our eyes shut most of the time. You would have had a hard time to recognize us, I am sure, when we reached our destination.

These were but a few of our experiences from which we learned many good lessons. One lesson was forced upon us, it was that of being pleasant under the most trying circumstances, and accommodating ourselves to all kinds of dispositions.

Although we did not get our trip through Yellowstone Park and some did not get back to school till late and still others did not come back that fall, our

## The Cuban Ox-Cart

Grant Mahan

It is an unwieldy vehicle. The wheels are from six to eight feet high and are very strong. From one to half a dozen yoke of oxen are fastened to each one when in use, depending on the load to be drawn and the road to be gone over. And the Cuban way of yoking oxen is quite different from the American. Here the yokes are fastened to the head just back

the load seems almost to crush the one yoke to the earth, and again almost to lift their front feet from the earth. And then when the logs are unloaded, frequently a yoke of oxen is hitched to the back end of the log and it is dragged off. When the end reaches the back part of the cart it bears down heavily. We have seen the oxen lifted up by the yoke which is

fastened to their horns. If it were by a bow around the neck there might be serious results.

The ox-carts are used for hauling the sugar cane from the fields to the mills or to the railroad. It looks as if the latter might soon be the

Hauling Timber.

of the horns. The animals cannot pull as much when yoked this way, but there is a reason for not placing the bow under the neck as we are accustomed to see it.

One very common use of the ox-teams is for hauling logs from the woods to the mill. The high wheels can be used to good advantage in the roads through the timber, for the Cubans do not cut their stumps low, not even when you tell them to and pay them by the day for doing it. The ordinary wagon gets hung up every once in a while when traveling over a road made for an ox-cart, and the man with his team of mules finds it expedient to go over the road ahead of his team, using his ax very frequently. Usually the logs are loaded on the cart, as shown in the illustration, but sometimes they are swung underneath the axle, the one end dragging. And it is surprising how large a load can be placed on the two-wheeled vehicle. It is these carts that cut such deep ruts in the roads that a wagon cannot get through.

A short piece of timber dangles from the front end of the cart and another from the rear. These are supposed to keep the load from pressing down too heavily or lifting up too much on the yoke of oxen at the tongue as the load pitches up and down. But the timbers are not always hanging straight down, and often

main use for them. Yet we doubt whether they will long hold their own against more modern and convenient vehicles. However, that is for the future to decide, and we may be much mistaken in thinking that the days of the ox-cart are numbered; for the Cubans are in some ways very conservative, though the things conserved are not always such as com-

Sugar Plantation, the Ox-carts Loaded with Cane.

mend themselves to us.

The driver of the oxen is at times very cruel, and one cannot help wishing that the oxen could in some way give him a taste of the goad with which he beats and prods them so unmercifully. He probably thinks he has a good reason, though it is seldom opponent.

Generally he has put on a load that is much too heavy, and then he beats the animals because they cannot move along with it as he thinks they should. Most of the time the oxen are fed nothing, but are turned out to eat grass. It would not be strange if they sometimes rebelled. But we would not have any one think that all of the ox-drivers are cruel. Some seem to take a real interest in their oxen, caring for them and talking to them instead of beating them.

The ox-carts are one of the institutions of this island. We don't know how long they have been here, and it does not matter. They have been and still are of great service to those using them, and that is a sufficient excuse for their existence. Perhaps it is more than can be said of some people. To be of service in one's day is the main thing; the rest is of no importance; for when all is said that can be said, there is nothing else that counts for as much as service.

*Omaja, Cuba.*

#### IN MEMORIAM.

Let us remember our dead; but not with the weakness of weeping,

Lest the courage and cheer that were theirs put our grieving to shame.

Were they the victors or vanquished? No matter, they ever were keeping

Face forward, keen eye on the foe, in their hearts a clear flame.

Only all-dominant Death gave pause to these spirits of daring;

At his signal they halted, ground arms, and lay down to their rest.

Here are wreaths for your graves, O beloved. For us, we must onward be faring,

Must strive as you strove, and must give, as you gave, of our best.

—Geraldine Meyrick in May Lippincott's.

#### THE BELTED KINGFISHER.

MRS. M. E. S. CHARLES.

My acquaintance with the Belted Kingfisher began while I was a small child. A bluff followed the course of a small stream, and in one of the most inaccessible places a pair of Kingfishers built their nest and reared their young. When they first came in the spring, without any drill or auger except their large ungainly bills, they burrowed back three or four feet into the side of the bluff. At the end of the tunnel the opening was somewhat enlarged. There, without any nesting material aside from the bare ground, the mother bird laid her six or seven pure white eggs, while the father assisted in the incubation.

At another time a Kingfisher's nest was found in a high bank, where the water had washed out deep gullies. After a spring freshet it was noticed that there had been a landslide on a small scale. Half way to the top on a narrow ledge, lay the eggs exposed and

some of them broken by the caving in of the bank. The birds, however, did not appear discouraged but soon set about excavating for a second nest in another part of the bank. In the first nest there were many fish bones showing that they had used the nest for a diningroom as well as a prospective nursery.

Chapman says that of the one hundred and eighty known Kingfishers, only eight are inhabitants of the western hemisphere, and these species are mostly tropical, and but one of the eight reaches this part of the United States. The headquarters of the family seems to be in the East Indies. The Kingfisher is familiar by voice and appearance to every one who lives near a river or pond, altho he is only a summer resident with us.

He comes in April when the ice no longer covers his hunting grounds, and remains until November; or, if the season be exceedingly mild, he sometimes stays for the winter fishing. One has been reported in this vicinity the past winter.

When the fisherman shoulders his rod and makes for the nearest body of water to try his luck, he usually finds this other fisher who is branded a fish thief because his food consists almost entirely of fish. He is accounted a fair mark for every man with a gun, and, were it not for his discretion in judging distances and knowing just when to fly, he would long have disappeared from the haunts of man. "We might now be a few fish richer but would they repay us for the loss of this genius of the wooded shores?"

The male Kingfisher is slate-blue above and white below, with a slaty-blue band on the breast which gives it the name of Belted Kingfisher. The female has chestnut-colored sides and breast band, the latter sometimes in addition to the slate-blue band. The bill is straight, deeply cleft and with smooth edges. The tail is commonly much shorter than the wings. To assist them in holding their prey when caught, nature has provided them with peculiar feet, called syndactylous feet, that is, having the digits somewhat united.

These birds are usually seen in pairs, and altho but one pair is seen at a time, persons not acquainted with their habits are frequently led to believe that quite a number exist in a particular locality when this is not the case.

When they first arrive in the spring they preëempt a stretch of some five or six miles along a water course and never allow others to encroach on their domain. Let the fisherman make himself comfortable in some shady place, and he no more than has had time to cast his line when he finds his partner, the Kingfisher, perched away up on some overhanging branch, from which he darts down into the water with the rapidity of lightning after a fish, uttering his harsh, rattling notes.

His mode of catching fish so near the man soon drives the larger fish away. Disgusted with his bad

luck, the fisherman changes his location. A new place is soon found. There is the same experience, and this makes many believe there must be quite a number of the birds, when in reality it is the same bird he started with. This habit of following a person for miles is very annoying to the man with the rod, and he is frequently compelled to leave the stream to the birds, who are better versed than he in the art of catching fish.

The Kingfisher has the whole of North America for his feeding grounds. He spends the winters from southern United States southward, and we ought to be glad that he gives us a chance to make his acquaintance as he migrates from one part of the country to another.

### THE TRUE PATRIOT.

ROBERT CLARK.

THE love of country that we call patriotism springs from a desire for life, liberty and happiness. In the lower stages of thought, patriotism embodies merely the love of country, but in its deepest significance it embraces a universal love of humanity. A man narrows his mind when he looks upon patriotism as something less than universal. The greatest and noblest men of the world rise into regions where national differences are forgotten. The true patriot looks to higher laws and deeper truths which when pursued make the whole world his fellow-citizens and kinsmen. In searching after truth and virtue all national differences disappear, and that patriotism which belongs to all countries and to all ages may stand forth in its proper light. He alone is a true patriot who is willing to suffer obscurity and the loss of money and friends rather than to betray the cause of true justice for humanity.

Patriotism as understood by the ancients was but a partial virtue, and though intense, it was narrow. In Jerusalem, in Athens, and in Rome the city was the fatherland. It was the temple, the Acropolis or the Tiber's tawny waves that caused the exiles to long for their homes. Their passionate desire for their country was inseparable from a hatred of foreign countries. Thus the captive was treated with pitiless cruelty and the slave was degraded.

We are separated from those ancients not only by a long lapse of time but a different spirit with which we regard patriotism. To us the man is more than the citizen and humanity is more sacred than nationality. They regarded the state as being the highest circle in which man could move. Thus their sympathies were narrowed and partial. It seemed impossible for them to realize that all men are of one blood and that when one suffers, wrong is done to all. Nationality has ceased to limit us and the oppression and misfortune of a people far remote affect us as a misfortune of ourselves and the cry of distress is quickly

relieved by our means and assistance. Noble thoughts and heroic deeds, wherever and by whoever, spoken or done, fill us with enthusiasm and gratitude.

Many causes of which Christianity is the most important have led us to believe and appreciate these wider views. For in looking to one heavenly Father we are drawn closer in bonds of fellowship and love for all mankind. Science which deals with laws that are universal helps us to promote this feeling for universality. Our modern machinery, such as the telegraph and the printing press, brings the ends of the world together, facilitating international intercourse, thus weakening prejudice and hatred. The commercial interdependence of nations has a like dependence. No great movement can long remain in the nation where it originates; for so closely are the nations bound together and so closely are their interests allied that the great questions of labor, politics and education are discussed in every civilized country. The study of literature and history are great factors in promulgating this sense of wider and higher patriotism. In studying the works of great artists, philosophers, or historians, the question is seldom asked, "Of what country is he a citizen?" It is enough to know that he has a truth to reveal. And in our search for the true and beautiful, national differences disappear and we see ourselves in the true light as citizens of the world. Thus we are drawn closer in one common purpose and we regard foreign neighbors as our kinsmen.

A good patriot is above all a good man; true to himself and true to his fellow-men. If false to himself he is false to all. If he does not love his parents, his children or his neighbors, how can he love his country? If he degrades humanity by drunkenness and dishonesty, how can he be a factor in correcting evils and abuses that threaten the national life and prosperity? He may be influential, well educated or a party leader, but if he is not a true man he adds nothing to the nation's welfare or cannot be a true lover of his country. The man who tills the soil or mines the coal is as true a patriot as he who holds the highest office of the land. One could not exist without the other. Poverty and wealth do not determine the patriot. It lies in the true worth of the man himself. He who strives to better humanity and uphold justice is the man who adds strength to the nation's foundation. Thus speaking of noble and patriotic men, we might cite the names of Lincoln, McKinley, Roosevelt and others but on the other hand can we not say in this connection as the poet,

"Full many a flower is born to blush unseen,  
And waste its sweetness on the desert air?"

So many a man is the true patriot though he does not rise to positions of honor and fame.

Could we then say that the American is not a true patriot? At the present moment, if simple truth could

be uttered without the suspicion of conceit, the American more nearly represents this sentiment than any other people. Here the national feeling is more; here all nationalities mingle more than in any other country; no other is so attractive; no other affords such opportunities for industry in every line of endeavor; no other insures such civil and religious liberties. Here more than elsewhere a man feels a higher love than the love of country. He looks deeper and believes he serves his country rightly when he adds strength to the eternal principles upon which it is based. The American's loyalty to his country is above all his loyalty to truth, justice and humanity. He feels that its institutions cannot long endure unless they are supported by the moral principles which it represents. Life is more than circumstance and man more than his environment. The American patriot more than others seeks ground for his love of country in a higher sphere. For him virtue, justice and humanity are more essential. His country is a democracy, yet it is not an end in itself but a means by which he attains a nobler, broader and wiser manhood.

He looks back upon the brave history of a little more than a century and sees a national development unparalleled in the history of the world. He beholds it stretching from ocean to ocean, over the frozen seas of the north to the balmy waters of the south. He beholds a united and prosperous nation with a consciousness of its power and prosperity. He is bound to her history and the traditions of her people. He honors the sacred grounds where lie the nation's martyrs, patriots and sages. Yet in this short time evils have crept into our national life that are endangering its sacred institutions and testing the highest skill and integrity of its greatest men. The church and society are facing problems as difficult as those of Rome and Athens. Dishonesty and graft have fastened themselves on our commercial institutions.

Up to the present time the patriot has been the man who was willing to give his life that our national existence might endure, but now as our nation is planted upon the strong foundation, the true patriot is he who is willing to strive to add strength to that foundation by honest living, by upholding the principles of right and justice, by spreading peace and happiness to those about him. While we have a country which is the envy and pride of the world, the American patriot is willing to share his opportunities with his less fortunate brother across the sea. They are waiting and praying when American authority and American principles shall rule the world. It is these problems that will tax the highest skill of our statesmen and thinkers.

We have done a noble work; we have formed a mighty nation. The next steps should be cautious lest in our desire to help our brother we weaken our own foundation. In extending a helping hand to

those unfortunate isles, we are weakening our strength by extending our possessions over vast areas. To hold them is to construct a powerful navy, which is contrary to the sacred principles of American liberty. England was driven into imperialism because of the narrow confines of her own country, but our country is broad, compact and capable of supporting a population many times that of the present. Here at our own door is the task God has given us. It is the developing of our life, the ennobling of our minds, the educating of ourselves in liberty and truth.

Though environment, nationality and morality are all worthy ends, the highest and most noble is the individual himself. He is a man only when he has been a protector in all that is highest and noblest and best in life, thus placing himself above nature and the laws that govern him. A patriot will strengthen and uphold those institutions that make noble citizens—the home, the church and society. He who loves not the life of the home cannot uphold the sacred principles of nationality. The child who breathes the impure atmosphere of a degraded home will never breathe the true atmosphere of freedom. We might say that patriotism like charity begins at home. For that which slumbers in the breast of fathers and mothers will burst forth in the hearts of their children. It is sound philosophy to say that the mothers and the home make the patriot. They are the pillars of the nation's foundation. Burns utters a moral truth in his "Cotter's Saturday Night" when he says, "It is from such homes as these our nation's heroes rise."

The end of all worthy struggles is to establish morality as the basis of individual life. Morality is founded only in the true religion. It is in vain that we build our churches and schools if our lives are impure and our religion is insincere. Only where truth, justice and love are the motives can any undertaking result in permanent good.

The scroll of the nineteenth century is rolled and sealed. As the scroll of the twentieth century begins, America's prospects were never brighter. Around us are the graves of the noble dead. History records the deeds of our heroes, patriots and sages. Before us is a nation waiting our contribution to its welfare. Are we equal to that sacred trust? Let us answer this question by striving to better our nation by bettering our lives, by helping to correct its evils, by educating our children to a wider concept, and by a unity of purpose. With this end in view, the star that rose so brightly over the new-born nation, that rose to greet the dawn of a nobler and better era, will not throw its parting rays on the ruins of a nation stained with blood.

*Mt. Morris, Ill.*

"A MAN often finds himself when he looks misfortune in the face."

### THE CRY OF THE DREAMER.

I am tired of planning and toiling  
In the crowded hives of men;  
Heart weary of building and spoiling,  
And spoiling and building again.  
And I long for the dear old river,  
Where I dreamed my youth away,  
For a dreamer lives forever,  
And a toiler dies in a day.

I am sick of the showy seeming  
Of a life that is half a lie,  
Of the faces lined with scheming  
In the throng that hurries by;  
From the sleepless thoughts' endeavor  
I would go where the children play,  
For a dreamer lives forever,  
And a thinker dies in a day.

I can feel no pride, but pity  
For the burdens the rich endure;  
There is nothing sweet in the city  
But the patient lives of the poor,  
Oh, the little hands too skillful  
And the child-mind choked with weeds,  
The daughter's heart grown willful  
And the father's heart that bleeds!

No, no! From the street's rude bustle,  
From trophies of mart and stage,  
I would fly to the woods' low rustle  
And the meadow's kindly page.  
Let me dream as of old by the river  
And be loved for the dream away,  
For a dreamer lives forever,  
And a toiler dies in a day.

—John Boyle O'Reilly.

## CURRENT COMMENTS

The newspapers announce that President Roosevelt has settled the bothersome question as to what we shall do with him after March 4, 1909, by deciding to take himself out of the country for two years. A good part of the two years he is likely to spend in hunting big game, very possibly going to Africa first. If the President carries out this plan it would prevent all possibility of the talk that Taft—if Taft is our next President—was merely Roosevelt's functionary. It has the further advantage that Roosevelt likes to hunt.

A man named Charles Coster, member of a New York Stock Exchange firm, committed suicide the other day in New York. Following his death it transpired that he had lost some \$1,500,000 by stock exchange speculation. He had been selling "short"; that is, he had been selling stock he did not own, expecting later to buy it at a lower price than the one for which he sold it. Last October he was said to be \$1,000,000 to the good through his policy. In other words he had secured \$1,000,000 in payment for what service to the community? Why do we quietly accept the continuance of methods which make it possible for men to get something for nothing? Do we think it is better so than that men should do something useful for the living they obtain from the community?

Philadelphia is planning a great historical pageant for October 9, to commemorate the 225 anniversary of the founding by William Penn of the government of the city. The first of the floats will show the Indians, the Swedes, and the Dutch, who occupied the present site of Philadelphia prior to the arrival of Penn in 1682. Then following will come floats representing the landing of Penn, his famous treaty with the Indians, the early life, customs, and manners of the colonists, the beginning of the Revolutionary period, the city during the Revolutionary times, Thomas Jefferson writing the Declaration of Independence and the proclaiming of liberty throughout the land by the Liberty Bell at the State House in 1776. In a similar way the rest of the forty floats will show the later history of the city. The cost of the pageant is estimated at \$50,000. If Philadelphians are correct, this will be the first pageant of the sort in this country.

### Preserving Eggs.

A comparative test of the American plan of freezing eggs to preserve them with the method of treating with lime has been made by a scientific French experimenter. The refrigeration process is pronounced hygienically superior. At low temperature, even when continued several months, there is no perceptible change in the taste or properties of the egg, the yolk retains its position instead of falling to the lower end as in lime preservation, and the only change in appearance is a little greater wateriness. It is necessary, however, to keep the temperature about two degrees F. below freezing point, with the hygrometer as near 78 degrees as possible.

### An Important Meeting.

May 13 witnessed the opening of a convention the good influence of which is bound to be felt throughout the country for many years to come. The convention was composed of the President, Cabinet, and other leading officials of the government, the governors of the States and a number of men prominent in business. It was the first convention of the kind, or rather, of its make-up. The idea of such a convention was first suggested by Gifford Pinchot, the man who has done so much for the preservation of our forests, the object being not only the discussion of ways and means looking to the preservation of our forests, but the conservation of all our natural resources. "The dominant note of the assemblage was vigorous, constructive, achieving Americanism. The spirit which rides over all party lines and disregards all petty prejudices. The spirit which shows how close together, shoulder to shoulder, stand the men of all sections. The spirit which recognizes there are difficulties in the way, such as property rights and state rights, but which is determined these shall be overcome to the end that forests and streams and soils and all other resources shall receive all the protection which the aroused scientific foresight and energy of the people can provide." It is planned to make the organization a permanent one, and other questions, such as those on which mere uniform laws among the States would bring about better results, may receive attention.

### The Naval Building Program.

After a very hot debate in which Senator Beveridge, of Indiana, was the leading advocate of following the President's wish that Congress authorize four battleships this year, the Senate followed the example of the House by authorizing only two. Senator Allison, chairman of

the Appropriation Committee, and Senator Hale, chairman of, the Naval Committee, committed the Senate, so far as they could, to the policy of building two battleships a year for the next ten years. Senator Allison's remark ran: "I think, under the present conditions, we should appropriate for two battleships a year until the Navy is sufficient for our needs. I want it known to the nation and to the world that we have now entered upon a program of steady and comprehensive naval construction. But the present question is not momentous. It resolves itself into a problem of whether we shall vote for four ships now or two now and two more seven months hence." The new battleships are to cost \$6,000,000 apiece, and to be of the Delaware (the so-called Dreadnought) type, of twenty thousand tons displacement. The Senate appropriated \$7,000,000 toward the ships, so that work on them can be begun very soon, since the plans of the Delaware can be used for them with a few changes. A building program of two battleships a year means that the United States in all probability will maintain its place as the second naval power. We have, at present, twenty-five battleships, with four well under way. Consequently at the end of ten years we should have forty-nine, the oldest built in 1895. Germany now has twenty-three effective battleships with five under construction. The German building program contemplates the construction of seventeen battleships in the next ten years, but enough battleships will be retired in the meantime to make the effective fleet consist of only thirty-eight battleships in 1918.

#### Awakening of Mohammedan Women.

A parliament in Persia still seems an anomaly. But bits of evidence crop up every now and then among Mohammedan countries going to show that even the followers of the Prophet are imbibing new ideas. The Mohammedan women of Orenburg, in Eastern Russia, have drawn up the following remarkable appeal to the Mussulman Deputies in the Duma: Although our holy religion made us free, we are oppressed by our ignorant despots of husbands and like slaves we are compelled to submit to their caprices. The Chariat prescribes that women have the right to study, to travel, to pray in the mosques, to make pilgrimages to Mecca, to engage in all branches of trade, to sign bills of exchange and to be sisters of charity. Mussulman women exercise this right in Arabia and other countries, where they have founded various societies, built mosques and organized charitable institutions. Many have written books, and among them are several famous authors and poets. Our Prophet's wife accompanied him to the wars and studied science and foreign writers. Now our husbands prevent us even from studying our own religion. We are not allowed to read religious books. Our Imam savants, who are proud of their designation, are conniving with Black Hundred journalists against our emancipation. They wish us to remain forever in ignorance. Our husbands deprive us of liberty and keep us confined within four walls. They take unto themselves women who please them and have many wives. As for us, we are condemned to live in a state of continual oppression and in the majority of cases to die a premature death from pulmonary or other causes. The Chariat gives us many rights, and husbands may not look upon strange women with eyes of covetousness. Yet the majority of them lead a dissolute life and amuse themselves in restaurants, hotels, and other places of entertainment. We realize that we, although Mussulman women, are also human beings. Mussulman deputies, it is your

duty to demand all rights for Mussulman women. You must obtain laws which will safeguard us from the arbitrariness of our husband despots, from oppression and martyrdom—yes, martyrdom. We are the mothers of the people, the companions of men; the education and progress of the people lies in our hands. If men do not change their attitude toward us, let them know that the day will come when they, too, will be slaves, and the whole Mussulman race will perish.

#### Sir Henry Campbell-Bannerman.

The funeral of Sir Henry Campbell-Bannerman in Westminster Abbey last week testified to the universal love the late Premier had won in Great Britain. Sir Henry was the son of Sir James Campbell, a Tory Scotch merchant. From his father and his uncle, in accordance with whose will he added Bannerman to his name, he had inherited ample means, so that he had been enabled to devote all his life to public service since he was elected to Parliament nearly forty years ago. His first Cabinet service was as Secretary of State for War in Wm. Gladstone's short-lived administration of 1886. He served again in the Gladstone-Rosebery Government of 1892-95. Lord Rosebery resigned the leadership of the Liberal party in 1896, and his successor in that post, Sir William Harcourt, resigned in 1898. "C. B.," as he was called, was made leader by the Liberals in February, 1899. It was at this time that Sir Henry showed what was in him. Few leaders have been confronted with such difficulties as he encountered. Faced by brilliant debaters, he was embarrassed by discordant colleagues at a time when popular opinion ran strongly against him. Differences among the leading Liberals with reference to the Sudan were followed by more acute and dangerous differences as to the war in South Africa. Sir Henry, while supporting the Government in all proper measures for carrying on the war, denounced the policy which led to it, and stigmatized some of the methods by which it was conducted as "methods of barbarism." He was called Separatist, Pro-Boer, Little Englander, traitor. A Liberal League of Imperialists, in which several of his colleagues were conspicuous, weakened his authority. Yet he clung to his opinions, he maintained his post, he preached the old Gladstone doctrines, and he never quailed before the powerful statesmen whom he faced. He was described by Lord Courtney as "one of that class of men who are said to excite the pity of God—a good man struggling with adversity." But at last adversity vanished and in its place came prosperity, full and glowing. He became Prime Minister in 1905. The immense majority which he secured at the General Election in January, 1906, firmly settled him in his seat, but did not render him in the least arrogant or dictatorial. He accepted his success with a sort of gratified surprise. The Liberals followed him more faithfully than they did Mr. Gladstone. Love may seem out of place in the political vocabulary, but if any party ever loved a leader, the Liberals loved Sir Henry Campbell-Bannerman. Even his opponents liked him personally. Sir Henry showed what common sense can do for a man. He was not brilliant, nor original, nor commanding. But he was straightforward and honest, hating humbug. One of his most precious qualities was tact. He saved his party from disruption in opposition, and he preserved it in power.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## MEMORIAL DAY.

AGAIN we are approaching the day which in most of our States has been set aside as a legal holiday to be marked by exercises in memory of the many lives that have been laid down to establish and perpetuate this nation. While the day has lost none of its original significance, the memorial idea has broadened and now we take it as a fitting time to remember all our dead with some tribute of love.

The idea is a beautiful one. It is true, it has been abused, as many good things have, but it does not follow that it should be abandoned altogether because of such abuse. Many sensible and reasonable things have been said against the extravagant display of flowers at funerals, which in lavishness are often out of all proportion to the giver's interest in the deceased. But because of this inconsistency it is not necessary that we should go to the other extreme of depriving ourselves of the good that may be derived from an even-minded observance of the custom.

For this is the idea after all. It is for our own good that we remember our friends with these beautiful tokens. The argument that we should give our flowers to our friends while they are living does not cover the question altogether. Giving flowers under the one circumstance does not argue that they are to be, or will be, withheld under the other. And no one expects the resulting influences to be the same. Giving flowers to the living brings a blessing to both the giver and recipient, if given in the right way. Laying a flower on the grave of the dead, brings a blessing to the giver only, but it is of such a nature that it would be difficult to find a substitute.

Two thoughts should have a large place in our hearts on Memorial Day. First, the inestimable cost of many of the national blessings of this glorious land. Second, the certainty of death,—the need of working, while we have the opportunity. We may honor those

who stood for the right in the past, but we cannot rest on their honors. Brave men and women are needed still to combat the forces of evil.

## AN ALARM CRY.

YES, the whiskey interests are becoming alarmed. But it is such a very inconsistent sort of alarm, though one need not wonder so much at the inconsistency, since that is a characteristic of the business, however one may look at it.

Recently we received a marked copy of the *Globe-Democrat*, calling our attention to a long list of the signatures of St. Louis business men to an appeal in behalf of the liquor interests. Their plea is for regulation,—the plan which we have been trying, lo, these many years, and which in every case has proved such a miserable failure.

They dwell mainly on that threadbare argument of the increase of taxes resulting from the loss of license money. They say, "As tax-payers we are mindful of the tremendous contribution, running into many millions, that is made by this industry to the support of our State. We know what it would mean to have this contribution drawn from other sources." But how do they know? Surely not from experience, neither from any logical course of reasoning. Where will be the need of a "tremendous contribution" when almshouses, jails, penitentiaries, orphanages and asylums cease to be filled by the products of the liquor business?

In the event of Prohibition winning, the appeal further calls our attention to the confiscation of tangible property which would not fall below a certain sum, and adds that the destruction of good will would reach even a larger figure. *Who talks about good will?* And whose good will is thus so highly estimated? Have they not all these years neglected to estimate the value of the good will of little children, and wives, and mothers, and all good, peace-loving, law-abiding people? Oh, consistency, where art thou!

And what is the conclusive argument of this appeal? The reader has heard it before,—Prohibition is a failure, it doesn't prohibit. Some have added that more liquor is used in prohibition territory than where the saloon is recognized. Now what is to be said of such a statement? Evidently the brewers are on the wrong side of the question. To be reasonable, they should be working with the anti-saloon people. Really, the liquor interests have not advanced an argument on this question that could not be turned, with twice the effect, against them. Why? Because the business is bad from beginning to end.

## OUR FAMILY.

OUR family has grown considerably since the first of the month. We are glad to welcome those who

have lately come among us, and we trust that they will have no cause to regret their decision to join us. In some families, the advantages and favors for each one decrease with the family's growth, but the opposite is true in the INGLENOOK family. The benefits to which the earlier members have been accustomed are theirs still, no matter how many come in later. And besides, they are likely to receive even greater benefits because of the additions. So it is to the advantage of each member to endeavor to add to our number.

A clean, uplifting, instructive magazine is our aim, and any one who lends a hand in the disseminating of such literature, may be classed among humanity's benefactors.

#### ANSWERS REQUESTED.

1. UPON what occasion did William M. Evarts, the great lawyer, receive \$250,000 for saying "Yes"?
2. Name some famous statesmen and preachers who were very rapid speakers, giving a few facts about their speaking.
3. What European countries have abolished capital punishment? The civil oath?
4. Was Lincoln the only total abstainer among our presidents?
5. Were Franklin and Jefferson Free-Thinkers?

#### LESSON IN ESPERANTO.—No. 4.

HAVE you mastered each lesson? If not, we hope that you will soon. Much depends on the first few lessons. Save each lesson given in the NOOK as you will need them for reference. As the lessons progress, with each lesson will be given new words. In this lesson will be given the names of articles in and around the house. A partial list was given in Lesson II.

#### EXERCISE 8.

|                     |                          |
|---------------------|--------------------------|
| Lito,—bed.          | Frukto,—fruit.           |
| Kapo,—head.         | Kandelo,—candle.         |
| Kapkuseño,—pillow.  | Biblio,—bible.           |
| Tranĉilo,—knife.    | Kuko,—cake.              |
| Forko,—fork.        | Muso,—mouse.             |
| Kulero,—spoon.      | Salo,—salt.              |
| Floro,—flower.      | Pipro,—pepper.           |
| Rozo,—rose.         | Mangŝambro,—dining room. |
| Terpomo,—potato.    | Plado,—dish.             |
| Sukero,—sugar.      | Viŝilo,—towel.           |
| Kremo,—cream.       | Matraco,—mattress.       |
| Papero,—paper.      | Dormejo,—sleeping room.  |
| Kafo,—coffee.       | Planko,—floor.           |
| Akvo,—water.        | Plafano,—ceiling.        |
| Kombilo,—comb.      | Slosilo,—key.            |
| Ĵurnalo,—newspaper. | Parolejo,—parlor.        |
| Vespero,—evening.   | Kuirejo,—kitchen.        |
| Plumo,—pen.         |                          |

A good drill on the above vocabulary is to have some one call out the words to you as they are in English, and you write them in Esperanto.

*Interrogation.* Ĉu denotes an interrogation, as: Ĉu li legas? Does he read?

It is also used in indirect questions, when it means "whether." Ĉu vi kantas? Will you sing?

There are nine interrogatory words beginning with "k": kia, kial, kiam, kie, kiel, kies, kio, kiom, kiu. —meaning respectively what kind of, why, when, where, how, whose, what (thing), how much, who or which. They are used the same as their English equivalents.

*Direction.* In answers to questions beginning with "Kien," "where" (meaning direction), the word or words must have the termination of the accusative or objective, as Kien li iras? Where does he go? (Where is he going?) Li iras ĝardenon—Londonon. He goes (or is going) to a garden—to London.

*Negation.* Double negatives must not be used. Li nenion vidis. He saw nothing. Ŝi nenium vidis en la ĝardeno. She saw no one in the garden.

#### VOCABULARY FOR EXERCISE 9.

|                  |                              |
|------------------|------------------------------|
| Bona,—good.      | Dolaro,—dollar.              |
| Mateno,—morning. | Bezoni,—to want.             |
| Mono,—money.     | Lampo,—lamp.                 |
| Cendo,—cent.     | Senviva,—without life, dead. |
| Pomo,—apple.     | Amiko,—friend.               |
| Kampo,—field.    | Aĉeti,—to buy.               |

#### EXERCISE 9.

Kie vi estas. Mi estas en la domo. Bonan matenon. Ĉu vi estas sana? Mi estas sana. Ĉu vi havas monon? Mi havas kvar cendojn. Ĉu vi volas pomo? Jes, mi volas ses pomojn. Kiu estas en la domo? Mia fratino estas en la domo kaj mia frato estas en la kampo. Kiom kostas tiu ĉi tapiŝeto? Ĝi kostas dudek-kvar dolarojn. Kion vi bezonas? Mi bezonas du lampojn.

Cu vi havas patrinon? Mi ne havas patrinon. Mia patrino estas sen viva. Cu vi havas patron? Jes, mi havas patron. Mi havas unu fratino kaj kvin fratojn. Mia familio estas malsana. La onklo estas malriĉa. Bonaj libroj estas bonajn amikojn. Mi aĉetos teon, kafon, kremon, kaj sukeron. Kion vi volas?

#### EXERCISE 10. COMPOSITION.

My brother reads the blue book. I know you. The girl sang. The door is high. The sisters will find their books. The mirror shines. She drinks tea. I see your chair in the room. The woman rested (waited) on the couch. He stands on the rug. The mother loves a good girl. I see and hear him. We ate four apples. He will speak. Three men wept. I hear you. She will drink coffee.

ALLAN EISENBISE.

16 S. State St., Elgin, Ill.

### THE POWER OF A LOOK.

The morning was drear, the air was chill,  
The sky was gray and clouded—  
The darkness which seemed the world to fill  
My very soul enshrouded,  
While heavier grew the weight of dread  
At thought of the song, hard day ahead.

'Twas only a look from true, brave eyes,  
Not e'en a word was spoken;  
But oh, in a look what power there lies!—  
The dreary spell was broken;  
The sky was still dark, the day was long,  
But light was my heart, and filled with song.

No more than a look! You think 'twas vain,  
Too small a thing for giving?  
Ah, no! for it made hope rise again  
And life more worth the living;  
While even the mem'ry lingers still  
And oft doth my heart with courage fill.

A look!—yet, before that deep soul-light  
My spirit ceased complaining;  
It told me that all that is, is right,  
Since God o'er all is reigning;  
And so, although ne'er a word was said,  
It lightened with hope the days ahead.

Not need of word sermons, good and wise,  
The world today is feeling,  
So much as of true and loving eyes,  
God's heaven-born light revealing—  
For oh! just a look that's kind, that's brave,  
A soul from despair may oft times save.

—Pearl Waggoner.

### AMUSING THE CHILDREN.

MRS. ETHA E. BEISEL.

WITH the children pleasantly entertained on a stormy day, there is a minimum amount of work for mother and a minimum amount of quarreling among the children, and the mischief done by idle childish fingers is considerably lessened.

But do not give the children material with the injunction to make something without a suggestion as to what they shall make. First, suggest something and later on you will see the child working out his own ideas. When he has accomplished something, unstinted praise will show him that his efforts have been appreciated and create more enthusiasm for the play.

As to the materials:

Fill an ordinary baking pan full of sand and suggest that they make miniature farms for themselves.

Toothpicks, or burned matches will represent the even and straight fence. Then let them plot out their gardens, stake out their houses and add whatever improvements they choose, but insist that they do the work neatly and not in a haphazard, careless manner.

Or give the children a scrapbook and some paste. (an old book with a few leaves cut out at intervals will answer the purpose.) Then give them the old catalogues and a pair of scissors and let them furnish a house in this manner. First let them cut out a house and paste it in the book. Then have them cut out the various articles of furniture and rugs from the catalogue and proceed to furnish the rooms to suit their individual tastes, each room occupying a separate page. Much enjoyment can be derived from this.

Another absorbing occupation is the making of paper chairs. Bright colored paper can be used and many different colors effectively joined together. Cut the strips about four inches long and one-half inch wide. Use a piece of stick to apply the paste and then carefully lap the end of one over the end of another and so on. The children will enjoy cutting paper for this. Little cotton rags should be supplied with which to wipe off any excess of paste.

With peanuts and chewing gum cunning little dolls can be made. This generally creates much hilarity among the little ones on account of the ludicrous appearance of the dolls after their noses, eyes, ears and mouths have been marked off with a pencil.

Again peas are an attractive material. Soak a handful or so of peas in water for a day, then drain and dry by wrapping them into a cotton cloth and leaving a few minutes. Have them take a needle and thread and see what a nice long necklace or watch-chain they can make. Or with toothpicks, furniture can be constructed, by pushing them into the peas and laying them aside to harden.

These are simple suggestions which are likely to appeal to the average busy mother with no time for the elaborate. When the children are thru playing, teach them to clean up all the scraps and leave things in a tidy condition. Use unrestricted praise as it stimulates their desire to accomplish something; if an object be but poorly done do not criticise and destroy it, as it has meant real effort to them and later on when they have learned to do better they will of their own accord destroy their crude and worthless articles.

### SINGING IN THE HOME.

THERE is perhaps no more pleasant occupation in the family circle than sacred song. Many a home where there is little of beauty, of ease, or luxury, is made pleasant by "thanksgiving and the voice of melody." If there be joy in the heart and music on the tongue, many rough places in life are smoothed and made plain, many dark spots are brightened and made cheerful.

Those families who know nothing of sacred song miss one of the purest pleasures that fall to the lot of mortals. Family prayer is a duty and privilege, but family praise is none the less so, and there is nothing that binds hearts more closely to the home than those "songs which mother sang," and old tunes in which the voices of parents and brothers and sisters join, form a bond of union which unites hearts when mountains rise and oceans roll between them. Sometimes the wayward son, wandering in a far-off land, hears the song his mother sang and is charmed by its music to know and serve his mother's God.

Careful and melodious singing in the home fits persons for singing elsewhere, especially if persons are taught to sing correctly, gently and tenderly, and without instrumental accompaniment. Then the hymns learned by the young linger long in memory, a precious heritage against the days of darkness and of sorrow.

Let parents set the example of song, and children will be sure to follow. Take time now and then, and enjoy an evening of sacred song. Let the voice of rejoicing be heard in the tabernacle of the righteous, and prayer and praise ascend to the throne of God. Let each child have his hymn-book, and he will learn to prize it next to the Bible, and will from it gather many precious truths which will go with him to life's latest hour. Whoso offereth praise glorifieth God. Let us have more praising and less murmuring, more song and fewer complaints. Instead of fretting because of evildoers, let us pray; instead of repining at our lot, let us leave our burden at the cross, "and bear a song away."—*Exchange*.

### THE BADGE OF CRUELTY.

Is it not possible to persuade the women of Boston—the city we are proud to consider a centre of refinement, reason and intelligence—to take a decided stand in the matter of the slaughter of birds, and protect them by refusing to wear them? We are fostering a grievous wrong out of pure thoughtlessness. A bit of ribbon, or a bunch of flowers, or any of the endless variety of materials used by the milliner would answer every purpose of decoration, without involving the sacrifice of bright and beautiful lives.

But women do not know what they are doing when they buy and wear birds and feathers, or they never

would do it. How should people brought up in cities know anything of the sacred lives of birds? What woman, whose head is bristling with their feathers, knows, for instance, the hymn of the song sparrow, the sweet jargon of the blackbirds, the fairy fluting of the oriole, the lonely, lovely wooing call of the sand-piper, the cheerful challenge of the chickadee, the wild, clear whistle of the curlew, the twittering of the swallows as they go careening in wide curves through summer air, filling earth and heaven with tones of pure gladness, each bird a marvel of grace, beauty and joy? God gave us these exquisite creatures for delight and solace, and we suffer them to be slain by thousands for our "adornment."

When I take note of the headgear of my sex a kind of despair overwhelms me. I go mourning at heart in an endless funeral procession of slaughtered birds, many of whom are like dear friends to me. From infancy I have lived among them, have watched them with the most profound reverence and love, respected their rights, adored their beauty and their song, and I could no more injure a bird than I could hurt a child. No woman would if she knew it. The family life of most birds is a lesson to men and women. But how few people have had the privilege of watching that sweet life, of knowing how precious and sacred it is, how the little beings guard their nests with almost human wisdom, and cherish their young with faithful, careful, self-sacrificing love. If women only knew these things, there is not one in the length and breadth of the land, I am happy to believe, who would be cruel enough to encourage this massacre of the innocents by wearing any precious rifled plume of theirs upon her person.—*Celia Thaxter, in Our Dumb Animals*.

### WHOLE WHEAT BREAD.

BREAD made of whole wheat may look as nice and be as light and soft as the white bread, if made and baked properly, and it has a much sweeter, better flavor. If the following directions are carefully followed, it will insure success: Proportion your yeast and water as for any light bread; place in a suitable sized vessel to stir, add salt and a small piece of fresh lard or butter; have sifted and ready a pan of whole wheat flour, also a pan of white flour. Now add to your mixture two double handfuls of the whole wheat and one of the white flour, and stir the batter; continue adding flour so and stirring, until your dough is stiff enough to finish kneading with the hands. The proportion of flour is two-thirds whole wheat and one-third white. The use of the white flour makes the bread lighter than all whole wheat. Do not mix too stiff or the bread will be dry. Let rise over night, work down early next morning, let get light again, then mold into loaves, place in pans, and when light, bake in a rather hot oven until well done. The loaves

should not be very large, and should be baked in separate pans. Do not cut the bread while hot.—*Good Housekeeping*.

#### WHEN THINGS GO WRONG.

I do not plead for special gifts  
Wherewith to gain the ends I seek;  
I ask not for the luck that lifts  
The proud above the humble weak;  
But one great attribute I crave  
To aid me as I press along;  
It is that I may still be brave  
When things go wrong

I do not plead for favors which  
My fellow toiler may not share;  
Let him who wishes to be rich  
Make wealth the burden of his prayer;  
Whatever comes, however ill  
The winds may blow, I'll get along  
If I may keep my courage still  
When things go wrong.

S. E. Kiser, in Chicago Record-Herald.

#### A WISE RESOLVE.

It was a wise mother who said, "I mean to keep young with my children." She gave the recipe by which this can be done: Live in the present, not in the past; be always interested in whatever the children are interested in, so that they are always sure of finding a proper understanding when they come to mother with their perplexities. Living too continually in the past, comparing things done today with the way they were done yesterday, and insisting that former days were better than the present, will inevitably make it difficult to feel in full sympathy with the youth of today. The resolve to keep young with the children may mean at first some self-denial; but the reward that will come in a sweeter, more sympathetic intimacy with the children will repay many times the self-denial.—*Selected*.

#### THE NEED OF FRESH AIR.

BACK of ventilation in the home is the source of half the ills that beset the average American family. Deprived of the necessary amount of oxygen to supply the demands of the circulatory system, brain fag, weakened nerves, and impoverished tissues make the human body susceptible to disease of body and soul.

See that a current of fresh air enters an occupied room, and when it is to be unoccupied for a time, see that occasion has been taken to change the air more completely by raising the windows, if only for a few moments. Raising the lower sash alone does not cause a quick change in the atmosphere. A window must at the same time be lowered from the top to allow the escape of the impure air which has become warm and lighter during its imprisonment and is forced to the top of the room and out by the inrush below of the colder, heavier air.—*Exchange*.

#### AGRICULTURE IN THE COMMON SCHOOLS ABROAD.

AGRICULTURAL education in our schools is gaining in favor; but the United States is no pioneer in the movement. The idea has been put into practical operation by many of the most progressive foreign governments, and to its influence is attributed, in a large measure, the excellent farming and gardening ability of many of the immigrants who come to our shores.

In France, a feature of all the normal schools is the school-gardens and nurseries of fruit trees. There is a course of agriculture in the normal school for men, and of horticulture for women, and the instruction received by teachers in the normal school is applied in the school-gardens, especially throughout the country. The system was begun in 1882.

In Russia, small farms and gardens are being attached to the people's or elementary schools in many villages. As a rule, the community gives the land free. In one province in southern Russia, over three hundred of the five hundred odd schools possess small model gardens, divided into sections of grain, vegetables, fruits, and trees important in silk culture. In 1905, these schools collectively cultivated four hundred and five acres, including vineyards, and possessed over twenty thousand fruit trees and over fifteen hundred bee hives.

In Switzerland, there have been school-gardens for twenty-five years, both in connection with normal and elementary schools. The Swiss government encourages them by awarding prizes for the best results.

In little Belgium, the study of horticulture in the schools is compulsory. A royal decree of 1897, lays especial stress on the cultivation of vegetables; the consequence is that almost every young Belgian is a gardener. All public elementary schools in Belgium have gardens, and the government grants annually six thousand francs as prizes among the pupils who have excelled in this department of study.

Sweden takes the lead in the matter of school-gardens abroad, having established them in 1869. In 1900, there were over five thousand in existence. At the present time great attention is also being given to instruction in manual training.

In Austria there is a widely extended system of school-gardens, which has greatly stimulated fruit culture, especially in Bohemia, through their influence.

In Germany, while the matter has not been regulated by law, for nearly thirty years certain portions of the empire have had school-gardens, and the German teachers give practical lessons to their pupils in horticulture and plant growing. Many German cities have gardens connected with their elementary schools, while they are a common feature of the high schools throughout the empire.

Even little Nova Scotia has a farm set apart for school-gardens.—*The American Cultivator*.

## The Children's Corner

---

GERARD.

JENNIE TAYLOR.

DECORATION Day dawned clear and bright. The grass wet with morning dew, shone with the pearly drops as though the tears of a nation lay trembling there. The warm breeze was laden with the odor of flowers. Every bush and tree and shrub had so readily responded to sunshine and shower that great masses of fresh May blossoms were waiting to be gathered and sent on their sad sweet mission.

Early that day the work of decorating began and by the hour of noon all the village was ready for the afternoon program.

Flags everywhere. The beautiful stars and stripes, from the rows of tiny ones adorning the fronts of buildings to the great ensign above the main thoroughfare, there were flags of all sizes. Some were old and worn, some bright and new, but all were loved and honored as the emblem of freedom.

\* \* \* \* \*

Davy and Madge moved along in the procession with their hands full of peonies and snowballs.

"How far is it Davy?" asked Madge.

"O just a little way. Perhaps we can get to ride, too," replied the boy.

"Will they let us do this ourselves, Davy?" asked Madge, glancing at the flowers.

"O I think so."

Now, the one thing that Davy and his sister had hoped to do was to place their floral tributes upon the mounds in the village cemetery, themselves. When they reached the end of the march they heard a voice close to them. Davy looked around to see who was talking. It proved to be a man whom they both knew.

"I wonder if any one would like to ride out with us?" Davy heard him say.

"We want to go, don't we, Madge?"

"Yes."

"Please Mr. Martin, may we go with you?" ventured Davy.

"Why, David, is that you? Just climb up in that empty seat, both of you. That will be all right. I wonder if we cannot get some one to take care of those flowers for you?"

Davy looked at Madge and Madge looked at Davy. Just then some ladies came and took places in the carriage.

"Oh, what pretty flowers! Don't you want us to put them with ours in that basket yonder, and send them over on the wagon?" asked one of the ladies.

Madge nodded her consent. Davy answered, "If you please," and the peonies and snowballs were sent away in the basket. The gentleman then drove on and

the boy and girl forgot their errand in the enjoyment of the ride till they came to the big iron gate beyond which the great, dark evergreens seemed ever to sing or sigh.

There they saw the people going about with baskets, scattering the buds and blossoms over the graves. Here and there fluttered a small flag that marked the spot where a soldier had been buried.

"Here, dearies, are your offerings," said one of the ladies, as she handed to the children their pink and white treasures.

Soon Davy and Madge had finished their work and were walking about watching the work of others, when suddenly Madge pulled at her brother's sleeve. "Davy, oh, Davy!"

"What?" asked Davy in surprise.

"Who is that?"

"Where?"

"Down there."

Davy looked in the direction indicated. There near a clump of rough grass and brambles was a boy no larger than Davy. He was poorly clothed and his face showed traces of tears.

"Who is it, Davy?"

"Oh, that is Jed."

"And who is Jed, Davy? Do you know him and is he a good boy?" asked Madge, thinking Davy must surely know.

"Oh, his right name is Gerard, but the boys all call him Jed. He's a pretty good sort. I guess he has no flowers for his father's grave. He's too poor to afford any, I guess."

"Hush, Davy," said Madge softly. "He must not hear us. Let's go over and ask him."

"Hello, Jed."

"Hello," said the boy looking up and seeing Davy.

"Was your father a soldier, Jed?"

"No."

"Where are your decorations, boy?"

"I haven't any," said Jed, glancing toward the neglected grave and beginning to cry again.

Davy and Madge saw there were neither flowers nor flag. Through the rough grass they could see a small block of white marble.

"Mother and I have to work hard all the time and we could not raise any flowers."

"I know where there are some," whispered Madge to Davy.

"So do I," answered Davy.

Madge was thinking of some pale-tinted tea-roses in a corner of the lawn at home and Davy remembered the flaming tulips in the garden.

"Let's go home and get some for Jed, Davy. Mamma won't care."

"Well, let's ask Jed to go along."

"All right," said Madge.

Turning to Gerard, Davy said, "If you will go with us we can get some for you."

The boy was almost afraid to go, but without saying anything more he arose and went with them.

They knew a short way across to the village and were soon trudging back with the pale tea-roses and the crimson tulips. Other kind people came and helped, and in a short time Gerard's father, too, was well remembered. The grass and brambles were torn away and the grave was wreathed with beautiful blossoms.

"Where is your mother, Jed?" somebody asked.

"She's home. She's sick," answered the boy.

The people were beginning to go away then as the afternoon was drawing to its close; but a few remained in groups talking. And some lingered about the grounds, reading the words carved upon the stones.

At last the big iron gate was closed and even the most leisurely were wending their homeward way.

When the sun was going down behind the western slope, the tired children were strolling toward the town. Among them was Gerard from whose troubled heart much of the sadness had gone.

*Tipton, Iowa.*

## For SUNDAY READING

### "THERE IS PARDON FOR ALL WHO BELIEVE."

JACOB D. REISH.

There is pardon for all who believe  
On their crucified Savior and Friend,  
And who all his commandments receive  
And obey; all such he'll defend.

There is pardon for all who believe,  
For their sins tho' they're many and great;  
Christ will them of their burdens relieve,  
And give them an eternal estate.

There is pardon for all who believe,  
On the Blessed Redeemer of man.  
He has promised he never will leave  
Those accepting his salvation plan.

There is pardon for all who believe  
And are washed in the blood of their king;  
Great reward in the end they achieve,  
Who thro' life to their Savior do cling.

There is pardon for all who believe;  
Sinner, come and accept him today.  
The old Satan still tries to deceive,  
Cast him off and your Savior obey.

Denbigh, N. Dak.

No man can walk straight by watching his neighbors.

## THE HOUSE OF THE LORD.

WEALTHY A. BURKHOLDER.

"I was glad when they said unto me, Let us Go into the house of the Lord."

THE psalmist David was a man of praise and prayer. In his troubles as well as in the days of prosperity and sunshine he was ready and willing to look to God as a source of great strength and to acknowledge him as his shield, protection and help. He loved the companionship of those who frequented the house of worship—those who worshiped in God's own appointed way.

When speaking of the sweet communion of saints he breaks forth in this beautiful language, "Behold how good and how pleasant it is for brethren to dwell together in unity."

While he was a man who was ready and willing to praise God, he was at times cast down and despondent, and speaks of his enemies who hindered him in his work. In one place he says, "When my spirit was overwhelmed within me, then thou knewest my path." The thought is, when the way was too dark for human minds to fathom. When he was groping in darkness, then he looked upward to his God, and trusted in his wisdom and knowledge to lead him into the light of joy and peace. "I poured out my complaint before him, I showed before him my trouble."

We sometimes sing,

"I must tell Jesus all of my trials,  
I cannot bear these burdens alone;  
In my distress he kindly will help me,  
He ever loves and cares for his own."

This is just what the Psalmist did in the long ago and yet after ages have rolled by we find that the children of God have the same privilege today, and he is just as willing and anxious to hear our complaints as he was in that day. "Call upon me in the day of trouble and I will deliver thee."

The house of the Lord was dear unto the sweet singer of Israel, and it should be a hallowed place to those who profess to love the Lord. One of the common sin of the times is the disregard to the command of the Lord, "Neglect not the assembling of yourselves together as the manner of some is." It is so much neglected, and by those, too, who have no lawful excuse—have strength and conveyance to get to the house of worship. On account of this there is not the interest and power that there should be in our services.

*Newburg, Pa.*

## A SERMON FROM A KING.

A PROCLAMATION issued a few weeks ago by King Olathe of Sweden, in which His Majesty calls on the Swedish people to unite for the advancement of their faith, has excited wide comment in Europe. One

journal in Germany pronounces it the best sermon that has been preached to Protestant Europe since the days of Luther. A short excerpt will serve to show the tone and substance of the document.

"In spite of much enmity shown toward the Gospel of Christ, we see it, even in our times, bring about blessed effects, both in Christendom and in the heathen world. As living seeds are borne over the sea and germinate on foreign shores, so does the Gospel of Christ come to the heathen lands. Since we also assist in this work, may it be done with such truth and love as will show that we deeply desire to present to our fellow-men in far-off countries a gift which has for ourselves a priceless value. The zeal of many to make the Fatherland precious to the Swedish people is rich in promise; but still more promising will it be if we as well, and before all else, have one and the same precious faith, one hope, one Savior, and one God who is the Father of us all."

It is one of the good signs of the times that men in authority in our own country, no less than in others, are becoming more and more anxious to let it be known that they are Christians. The consistent faith of a great man as shown in his life and public utterances is a greater force for righteousness than many sermons.—*Home Herald*.

#### THE "POOR WHITES" OF THE SOUTH.

THE "poor white" problem is a neighbor to the negro problem. In some sections they are more than neighbors; they overlap and get tangled and he who would untangle the snarls of either must deal with both.

There are different classes of "poor whites." The mountainous districts of the Virginias, Tennessee, Georgia and Alabama furnish one type.

In the cotton mill districts of the South we find a class of "poor whites" whose surroundings are different from those of the mountainous regions. Many of them are a helpless, shiftless, ignorant sort. Their slavery is almost as degrading as was that of their black neighbors a half century ago.

It is not, however, a slavery of bondage or involuntary servitude, but rather a slavery to ignorance, vice and sin. Their faces give evidence of the submerged condition of their minds. They chew, smoke and drink anything they can get. The homes they live in, the clothes they wear and the vehicles they ride in are, to use a southern expression, "sad" or "sorry." Their poverty is hereditary, the hopelessness of it is appalling. What would they think if they would perchance read this article? I am not afraid of that, as the class I am describing can't read. Some of those who can read, however, would come under the same head in most particulars. Long years of service in cotton mills and the lack of opportunities for attend-

ing any school of any sort have crushed the life and ambition out of the boys and girls that come from these homes, cancelled their hopes with despair and started them on their journey through life with awful odds against them.

As I study this problem alongside of the negro problem, I am forced to the conclusion that the better class of white people in the South have the right idea when they insist that much of the northern philanthropy directed toward the education of the negro could be used to better advantage in looking after the welfare of their white brethren.

We must admit the need of the latter, no matter what position we take on the former. Every morning, here in the city of Anniston, hundreds of white boys and girls who ought to be in school, go to work in the cotton mills early in the morning and stay there all day. An hour or two later hundreds of negro children come along the same streets with their books, on their way to the public school. That looks to me like solving the race question backwards. Of course, the better class of white children all go to school, but it is the "poor whites" who are under consideration. The whites have the (dis)advantage over the negro when seeking employment in cotton mills or factories, which explains why so few of the poorer classes go to school.

The New South is grappling with these conditions and a compulsory education law may be passed in the near future, which will help to straighten out some of these inequalities. I talked with a father who had two boys under fourteen years of age working in a factory. I said to him, his boys ought to be in school. He said, "I know it, but it seems we just could not get along if they did not help to earn a living for the family." This man has a large family and has had much sickness and expense and I have no doubt that what he said was true, but what a handicap it puts on the boys! This condition applies to many homes.

It would be hard to suggest a remedy for some of the conditions that exist, such as widows, who are dependent upon their children for support, or cases where one or both parents have poor health, and where it seems that there is no alternative but that the children must toil in the cotton mills and factories and be the breadwinners for the family. This toil alone is no disgrace and no doubt many of the young toilers will later in life be able to take care of themselves better than the children of some of the wealthier classes who are spoiled by over-indulgence. The sad part of the picture is that the moral, intellectual and spiritual sides of their lives are neglected and the One who could save has no abiding-place in their hearts and homes.—*Gospel Herald*.

ETERNAL vigilance is the price of liberty

# Echoes from Everywhere

Gov. J. Y. Sanders, of Louisiana, in his recent inaugural message to the legislature, recommends the absolute suppression of race-track gambling, and local option, combined with high license, to regulate the liquor traffic.

St. Louis, May 18.—A decision of Justice Day in the United States Supreme Court today favorable to the city of St. Louis in the suit by the United Railways Company, to prevent the collection of a tax of one-tenth of a cent on each passenger carried, will bring \$1,000,000 into the city treasury in back taxes and \$250,000 a year hereafter.

The Railway Age states that 5,730 miles of new track was laid in the United States in 1907, being 8 per cent less than in the previous year. The States in which largest mileage was laid were, Louisiana, 422 miles; South Dakota, 385 miles; Florida, 341 miles; Texas, 314 miles; and Washington, 311 miles.

Another destructive tornado visited parts of the South May 13. Louisiana was the greatest sufferer, thirty persons being killed and many more injured in the district swept by it which was a mile wide and fifty miles long. The towns of Gilliam, Bolinger and Elmore were were in the path of the tornado and all suffered in loss of life and property.

London, May 13.—Addressing a trade conference in London tonight, John Henniker Heaton, M. P., "The Father of the Imperial Penny Postage," in advocating a penny telegraphic rate between Great Britain and the continent of Europe, said that it was common knowledge that penny postage with the United States would shortly be adopted.

At Vienna the 60th anniversary of the reign of Emperor Francis Joseph was celebrated with splendid ceremony in which Emperor William of Germany and many rulers of German states took part, together with great throngs of the people. Congratulations from the pope and from rulers of nations were received. The German and Austrian monarchs exchanged cordial greetings.

Effects of the industrial depression have been disclosed in the bureau of self-help of Yale university by the considerably decreased number of applications from persons seeking the work of students during the summer vacation. There has also been an increase in the number of applications from the senior class of the scientific school for places as teachers.

The steamer Kron Prinz Wilhelm, which sailed for Cherbourg and Bremen May 19, carried \$8,350,000 in gold. Of this amount \$4,500,000 will go to Germany and the remainder to France. The shipment is made by New York banks, and is about as large a shipment of gold as the marine underwriters care to insure by a single vessel. All this gold goes out in the form of bars.

A remarkable phosphorescent larva seemingly that of some beetle, exists in British Guiana, where it is known as the "macadoub." Exhibiting a dead specimen at a recent meeting of the Linnæan Society of London, C. W. Anderson stated that the live animal has a ruby light in its head, with a double row of phosphorescent spots along the body, two on each segment. The lights instead of being intermittent, shine continuously.

Portraits will have no place in the decorations of the Coliseum during the Republican national convention in Chicago next month, and for the first time in the history of the party the delegates will transact their business within walls unadorned by lithographs and paintings of presidential candidates and other Republican notables. The second rule on the list is that no liquors shall be sold, served or brought into the hall, either at the committee meetings or during convention week.

Washington, May 15.—The passage by Congress of an act restoring to United States coins the words, "In God We Trust," has been anticipated to some extent by the Treasury Department, and although the act does not go into effect for thirty days the mint at Philadelphia already has made the necessary changes in the dies so that if required, it could at once begin to turn out the new coins. It is stated that within thirty days' limitation, the mints at San Francisco, Denver and New Orleans will be similarly equipped.

Composers and authors whose works are now being reproduced by the phonographs, pianolas, and other devices are still demanding that Congress come to their aid and protect them by means of a copyright law. The house of representatives committee on patents a few days ago had another lively discussion of this subject, but so far all efforts to gain protection have failed. The indications are that the authors and composers who are asking for relief through the passage of an amended copyright law will have to wait until the next session of Congress.

Lake Mohonk, N. Y., May 17.—The fourteenth annual meeting of the Lake Mohonk conference on international arbitration will begin here on Wednesday next, continuing throughout Thursday and Friday. One of the principal features of the conference will be discussions of the work of the second Hague conference. The presiding officer at this year's conference is again to be John W. Foster, former secretary of state. The discussions are expected to emphasize the view of the leaders of the conference that the second Hague conference was of most substantial service to the world and to humanity. It is announced that Charles De Witt Pugsley, a son of ex-Congressman C. N. Pugsley of New York, has offered a prize of \$50 for the best essay by a college student on "International Arbitration."

The bill to check the random slaughter of birds in Great Britain, introduced in the house of lords May 10 by Lord Averburg (Sir John Lubbock), passed its second reading today. It was then referred to a select committee, which is to recommend the best method of carrying out the objects desired and to consider whether or not representations can be made to foreign countries to secure their coöperation to prevent the exporting of plumage to Great Britain.

Secretary of State Root and Kogoro Takahira, ambassador from Japan, have signed at Washington the first arbitration agreement between the United States and Japan, it being similar to those which have been negotiated with other nations as a result of The Hague conference. It provides for a settlement by arbitration of all disputes of a legal nature or as to the interpretation of existing treaties, but leaving questions affecting the independence or honor of the parties to be settled otherwise. The treaty is to run five years.

North Carolina is now the target for National Liquor Dealers' Association literature with which the state is being flooded from Chicago, New York, Milwaukee and other cities. The notorious "Farm Herald," the fake agricultural "Journal," which, gotten up in clever form, has been used in a thousand cases during the last fifteen years to confuse and mislead the voters, is again being used in carload quantities to delude the honest citizens of the "Old North" State. But the Prohibition forces are making a magnificent canvass and expect to carry the State overwhelmingly against the liquor traffic.

As a result of investigations made by the United States Forest Service as to the relation existing between moisture and the strength of wood, it has been found that the relation follows a definite law. The strength of all kinds of wood increases rapidly with proper drying. Air-dried wood protected from the weather, and containing 12 per cent of moisture is, according to species, 1.7 to 2.4 times stronger than when green. It has been found that under normal conditions wood fiber will absorb a definite amount of moisture. Additional water only fills the pores, and this addition has no effect on the strength.

Fort Wayne, Ind., May 13.—The triennial conference of the Missouri synod of the German Lutheran church began here today with a sermon in St. Paul's church by Rev. P. Brand of Pittsburg, before 700 delegates and hundreds of visitors. This afternoon the first business session was held at Concordia College, when Rev. Franz Pieper, president of the synod, made his report on three years' growth of the church. The question of chief importance before the synod is whether instruction in parochial schools and preaching in churches are to be in the German language, as at present, or in English.

Wisconsin print paper manufacturers say that we may come to the using of black paper printed with white ink. The chief points advanced in favor of this proposition are the preservation of forests, the saving of millions of dollars annually in pulp wood, and the reduction in prices of print paper to perhaps one-half the present price. Black paper can be made of old and used newspapers, and in fact, almost any fibrous stock, while white paper requires spruce or hemlock. The proposition may be brought to the attention of Eastern print paper manufacturers and the publishers at the close of the congressional investigation in Washington.

Doubling of the license fees on all saloons where absinthe is sold is planned by the government, and is expected to make up \$2,000,000 of the estimated deficit of \$8,800,000 apparent in the budget for 1909. May 19 M. Calliaux, minister of finance, announced a revenue estimate of \$785,800,000 and expenditure of \$794,600,000. The government also contemplates the collection of a percentage of their industrial profits from the holders of monopolies of water power and a more strict enforcement of the laws on stock transfer taxes and customs duties.

The recently issued annual report of the board of education in New York points out that neurasthenia, or nervous break-down, is the most common disease among the teachers of that city. Since the board of retirement came into existence, nearly three years ago, 345 persons have applied for the benefits of the retirement fund on the plea of service. In most of these cases the length of service was considerably more than 30 years, in many instances more than 40 years, and in several more than half a century. "The principal reason," says the report "was given as 'neurasthenia,' which claimed 124 applicants; then followed heart disease, 31; rheumatism, 30; indigestion, 15, and deafness, 13."

London, May 19.—The half-concealed fizzle of the Franco-English exhibition has excited the king's wrath. Up to date it is an exhibition with practically no exhibits. It opened in rain and furs and feathers that got wet. Many distinguished people from all over the world came here only to be uncomfortable and disappointed. King Edward today sent one of his personal friends down to the exhibition grounds with a message to the manager that was more forcible than polite. Had it come from Mr. Roosevelt instead of the King of England and the Emperor of India, the message would probably have been couched in some such words as "I would like to kick your head off for making us such a laughing stock."

Minneapolis, May 13.—Bishop Anton Christian Bang, primate of the Established Church of Norway, arrived in Minneapolis today, where next Sunday, in an address at the Auditorium, he will deliver to Norwegians in America a personal message from Haakon VII. The bishop does not speak English, but through an interpreter he gave an interview in which he said: "There can be no question that Norwegians have done splendidly in the United States. The Norwegian government views with apprehension the large tide of emigration from the fatherland. But there is a movement to induce Norwegians to return to Norway after they have resided in this country for some time."

The official announcement of the scheme to pension the aged poor in the United Kingdom out of the national treasury, while not unexpected, came from the lips of Premier Asquith in the commons with something of a shock to the public mind, and to forestall criticism he quietly remarked that if this was socialism, it was socialism of a kind that both parties accept. The plan is to allow \$1.25 a week to persons over 70 years old and possessing incomes under \$130 a year. This would not go to those dependent classes already under the public care. Asquith estimates that on this plan the pensioners will not exceed 500,000, and that the total cost will not exceed \$30,000,000. Stringent conditions would be imposed for forfeiture and suspension. It will not go into effect until January 1 next.

## CREAM OF MAGAZINES

### FAILURE OF UNIVERSITIES IN MORAL LEADERSHIP.

The failure of the universities in moral leadership is pointed out by a vigorous writer whose words have frequently been quoted in these pages. He charges that "they have furnished the leaders of the great predatory enterprises, they have furnished the stock-gamblers and market-manipulators, and they have not denied to these social pests academic recognition and fellowship." The writer of these words, the Rev. A. A. Berle, D.D., of Salem, Mass., recalls a recent address of Prof. William James, in which he deplored the possibility that the future historian would be obliged to record that "by the middle of the twentieth century the higher institutions of learning had lost all influence over public opinion in the United States," and that the people at large resorted to "the guidance of certain private literary adventures, commonly designated in the market by the affectionate name of ten-cent magazines." The historian of today, Dr. Berle asserts, in the "Bibliotheca Sacra" (Oberlin, April), "is able to affirm that the premier influence in the American mind is no longer that which springs from the universities and colleges, in spite of the enormous increase of their endowments and students. He is able to say that in the last fifteen years no single cherished American institution has lost much more in the public esteem than the university." The reason for this, it is pointed out, is to be found in "the increasing natural alliance between the malefactors of great wealth so-called and their criminal associates and the universities of almost every name and kind throughout the land, except those under public direction and control." He goes on:

"The almost continuous story of crime among the very wealthy men of the great corporate and other organizations of the country discloses also that these names are also those which figure largely and most frequently in some form of endowment and giving to the great colleges of the land. In this way Harvard, Yale, Princeton, and others, are at this moment using money which is known to have been amassed by thieves robbing in some instances the widows and the orphans. Some of these foundations actually bear the names of the thieves who thus sought to divide the proceeds with alma mater, and who, till they were discovered, were persona grata in all that was loveliest and best in the official university life. These are names we used to see at the official and social assemblages as among the men the university delighted to honor and put forth as the representative product of the college—'sons of the college who had done well,' as a professor of Christian morals felicitously put it on one occasion. Since these 'sons of the college who have done well' have been discovered to be among the most expert and abandoned criminals in the land, has the college hastened to disown her sons who had not only not done well, but ill? No, indeed; she has serenely kept close to her other sons of great wealth who have not yet been discovered, and has deplored 'savage attacks upon

capital' and other frightful depredations against society. To this, however, one very notable and striking exception must be recorded. President Hyde, of Bowdoin, did bring to the attention of the undergraduates at that college the fact that a great criminal and exploiter had been a student there, and warned his young men against a similar career. A wonderful and marvelous exception to the rule."

The alliance of the criminal rich with the universities is not accidental, declares Dr. Berle. "The university itself has become a financial institution with a huge capital and with a huge fund which must be made and kept productive." It is easy to see, he thinks, "how the paramount influence in the university readily becomes a financial influence, and that the habit of deference to expert financial opinion . . . soon becomes the university habit."

When competition becomes stronger, "and the universities enter, as they have entered, upon one of the fiercest contests ever known, namely, for size and endowment and equipment, and millions are needed, to whom shall they go but to the millionaire exponents of high finance?" Such a course has led, as Dr. Berle shows, to such bedfellows as these:

"We have seen that men honored in church and university and academic council have exhibited a character status which differs in no way, except in degree, from that of the common thieves and burglars who fill the common jails. Some of them have had the strength of mind to get themselves out of the world, to the world's betterment. But their beneficiaries—the men who feted and dined and wine and honored them, and ate their dinners, and honored them with degrees—they are still in the universities and they still stand as sponsors for the intellectual leadership of American youth. Can this continue? Obviously not. Nothing but the most absurd discrediting of the simplest abilities of the average man can hope that such an institution can have much influence with the public mind; while, as for 'raising the tone of democracy,' such a suggestion simply fills the air with laughter. Who shall it be that shall raise the tone of democracy—the Harvard Hydes, the Yale Depews, or the Princeton Alexanders?

"The apologist may come forward at this point, and say that the universities have no supernatural means of knowing who is honest and who is dishonest. Certainly not. But it seems they have no better powers of observation and judgment than the common mass of men, either. It is their very specialty which is impeached, namely, to discern the tendencies and influences which are at work among men, and to guide the less illuminated multitude in the pathway of sound discrimination. Professor James says that 'the best claim which a college education can possibly make on your respect, the best thing it can aspire to accomplish for you, is this: that it should help you to know a good man when you see him.' But have the universities shown any particular prescience in this respect? Have they known the good men of high finance

from the bad men? Why then are so many of the most discredited names linked to university foundations and lectureships and other university functions and privileges? If Professor James is right, the universities have failed at the very heart to do the thing which he thinks is the one thing they should enable men to do. But they have not only failed in this, but they have given the high seats of honor to the corruptors and thieves who happened to be rich."—Literary Digest.

#### SUSAN B. ANTHONY'S LIFE WAS DRAMATIC.

Few lives so lend themselves to dramatic narration as Susan B. Anthony's, says the June Delineator. It ranged from tragedy to comedy, with scattered bits of melodrama, she ever in the center of the stage. With her everything was always intensely realistic—not acting.

Miss Anthony had a peculiar faculty of condensing a whole speech into a single sentence. For instance, when she heard men lamenting that the profession of teacher was not respected as much as the other professions: "Do you not see that so long as society says woman has not brains enough to be a doctor, lawyer or minister, but has plenty to be a teacher, every man of you who condescends to teach tacitly admits before all Israel and the sun that he has no more brains than a woman?" And when Horace Greeley said to her at Albany: "You know the ballot and bullet go together; if you vote are you ready to fight?" Instantly she retorted: "Yes, Mr. Greeley, just as you fought in the late war—at the point of a goose quill!" Again, when she was talking on divorce, and the Rev. A. D. Mayo, thinking to annihilate her, said: "You are not married, you have no business to be discussing marriage." "Well, Mr. Mayo," she answered, "you are not a slave; suppose you quit lecturing on slavery!"

#### SENATOR HALE'S PLAIN TALK.

Senator Hale is sane; and when he tells us that 70 per cent of the revenues of our Government are expended on preparation for war he tells what the people should apprehend. The military establishment is being enormously increased, to the prejudice of all other claims and appropriations. The revenues, he tells us, are waning, and we are likely to be confronted with a deficit. The Appropriation Bill covers thousands of items that ought to be paid, but the Appropriation Bill cannot be passed. The River and Harbor Improvement Bill does not happen to be a war measure, and so it cannot have a hearing. Military expenses are increasing so rapidly that the very vital matters involved in running the Government must be put off. Said the Senator:

"When you begin to build a navy you only begin to spend money. You commit the country to repairs and maintenance, making necessary an increasing appropriation, and if you go on at the present rate we shall have, in the course of three or four years, an annual appropriation for the navy of one hundred and fifty millions."

He added that he hoped this enormous, unreasonable and wicked program would not be carried out. He did not believe that we must be saddled with any such expense, in order to make our nation safe in carrying on its peaceful avocations.

"To double the army would require an annual appropriation of two hundred millions, and nothing short of that will satisfy the army."

In other words, the army and the navy have become immensely aggressive and determinative forces at Washing-

ton. We have talked peace at The Hague, but at home we are spending our national revenues on war—imaginary war. Senator Hale voices the will of the whole people that this program of enormous expenditure for brute force display shall not be carried out. We are facing a deficit in our revenues at the same time that the demand for a reduction of the tariff is imperative. Where shall the money come from—indirectly from the people or directly? For from the people it must come sooner or later, in one way or another. Meanwhile, what are we going to do with our postoffice enlargement, postal savings banks and parcels post service? Are they to be cried down because of a possible deficit in postoffice revenues? It will be a startling fact to bring home to the people that this year we have to face a deficit of thirty-eight millions, while last year we had receipts in excess of expenditures to the amount of fifty-two millions. There are now before the Senate bills calling for one hundred millions; what is to be done with them? Some of them may be wisely thrown out of the account, but we know that this amount does not begin to cover the demands that are calling for settlement. No man can safely present himself to the American people for election to the Presidency who advocates doubling our army or navy. We have gone too far already in this direction. It is far more likely that the American navy and the American army will very soon be placed on the peace footing, and be kept there.

The American people are not being drawn away permanently from their moorings; at least, we hope not. We are spending a great deal too much on war taxes and on war pensions—the latter have climbed for the first time to a figure over one hundred and fifty millions. The Civil War debt is not yet paid. Gallatin laid down the principles of sound business when he told us that a national debt was exactly like a private debt—invariably a source of weakness and a menace. The energies of the people should be bent toward measures that constitute a peace footing, the development of industries, and the payment of debts. If we cannot have our national waterways and a doubled army and navy, then by all means let us have the waterways. It is vital to our prosperity and progress. If we cannot find means for carrying on a great forestry movement and a naval display in the Pacific, by all means let us give up the naval display.

Meanwhile, our neighbors are drawing in their forces, and colonial wars are less and less popular. France is trying in every possible way to bring its national budget within the bounds of economy, while Germany refuses to build more cruisers for the Kaiser. Italy is already swamped by its struggle to be a world power, and it is suspected that Japan is playing a good deal of its game with Quaker guns. The whole civilized world is buried under a debris of deficits and war debts. Sanity demands that the temple of Janus be closed, and that the talk of peace for all the world be something more than talk. Fortunately there is not the slightest probability of any great war. Our navies are likely to rot twice over before a ship of war will be needed. We must develop our resources, create an industrial temper, get ready to meet a severe social struggle, and lead the world in establishing a permanent régime of peace. A determinative step in this direction would be worth a good deal more than another Hague Conference—conducted as these conferences have been conducted, without the faiths of the governments behind them.

It is time to find out whether our policy is fundamentally industrial and peaceful, or whether our whole financial

and constructive system bends to a traditional fear of our neighbors. Our foes, at present, are at the worst imaginary. A war with any industrial people is forbidden by the instincts of civilization. Our safety is in not being burdened in peace time with war preparation. Nothing is so expensive as standing armies and floating navies. As President Eliot suggests, we are now spending on naval display alone enough to equip every university in the United States with all the requirements to meet the highest demands of education. Let us study Thomas Jefferson.—The Independent.

### THE FARMER'S PROSPERITY.

If the American farmer went out of business this year he could clean up thirty thousand million dollars. And he would have to sell his farm on credit; for there is not enough money in the whole world to pay him half his price.

Talk of the money-mad trusts! They might have reason to be mad if they owned the farms, instead of their watered stock. When we remember that the American farmer earns enough in seventeen days to buy out Standard Oil, and enough in fifty days to wipe Carnegie and the Steel Trust off the industrial map, the story of the trusts seems like "the short and simple annals of the poor."

One American harvest would buy the Kingdom of Belgium, King and all; two would buy Italy; three would buy Austria-Hungary, and five, at a spot-cash price, would take Russia from the Czar.

Talk of swollen fortunes! With the setting of every sun the money-box of the American farmer bulges with the weight of twenty-four new millions. Only the most athletic imagination can conceive of such a torrent of wealth.

Place your finger on the pulse of your wrist, and count the heartbeats,—one,—two,—three,—four. With every four of those quick throbs, day and night, a thousand dollars clatters into the gold-bin of the American farmer.

How incomprehensible it would seem to Pericles, who saw Greece in her Golden Age, if he could know that the yearly revenue of his country is now no more than one day's pay for the men who till the soil of this infant Republic!

Or, how it would amaze a resurrected Christopher Columbus if he were told that the revenues of Spain and Portugal are not nearly as much as the earnings of the American farmer's hen!

Merely the crumbs that drop from the farmer's table (otherwise known as agricultural exports) have brought him in enough of foreign money since 1892 to enable him, if he wished, to settle the railway problem once for all, by buying every foot of railroad in the United States.

Such is our New Farmer,—a man for whom there is no name in any language. He is as far above the farmer of the story-books as a 1908 touring-car is above a jinrikisha. Instead of being an ignorant hoeman in a barnyard world, he gets the news by daily mail and telephone; and incidentally publishes 700 trade journals of his own. Instead of being a moneyless peasant, he pays the interest on the mortgage with the earnings of a week. Even this is less of an expense than it seems, for he borrows the money from himself, out of his own banks, and spends the bulk of the tax-money around his own properties.

Farming for a business, not for a living,—this is the

motif of the new farmer. He is a commercialist,—a man of the twentieth century. He works as hard as the old farmer did, but in a higher way. He uses the M's,—mind, money, machinery, and muscle; but as little of the latter as possible.

Neither is he a Robinson Crusoe of the soil, as the old farmer was. His hermit days are over; he is a man among men. The railway, the trolley, the automobile, and the top buggy have transformed him into a suburbanite. In fact, his business has become so complex and many-sided that he touches civilization at more points and lives a larger life than if he were one of the atoms of a crowded city.

All American farmers, of course, are not of the new variety. The country, like the city, has its slums. But after having made allowance for exceptions, it is still true that the United States is the native land of the new farmer. He is the most typical human product that this country has produced, and the most important, for, in spite of its egotistical cities, the United States is still a farm-based nation.—From "The New American Farmer," by Herbert N. Casson, in the American Review of Reviews for May.

### BETWEEN WHILES.

#### "Send by Enclosed Girl."

An East Side druggist is preparing a unique scrap-book. It contains the written orders of some customers of foreign birth, and these orders are both curious and amusing. Here are some that are copied from the originals:

"I have a cute pain in my child's diagram. Please give my son something to release it."

"Dear Tochter, ples gif bearer five sense worse of Auntie Toxyn for garle baby's throat and obleage."

"This little baby has eat up its father's parish plaster. Send an anecdote quick as possible by the enclosed girl."

"This child is my little girl. I send you five cents to buy two sitless powders for a groan up adult who is sike."

"You will please give the leetle boi five cents' worth of epecac for to throw up in a five-months-old babe. N. B. The babe has a sore stummick."

"I haf a hot time in my insides and wich I wood like to be extinguished. What is good for to extinguish it? The enclosed money is the price for the extinguisher. Hurry pleas."—New York Press.

"What part of speech is 'woman,' pa?"

"Woman isn't a part of speech, my son. She's the whole speech."

---

## WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

---

**WANTED.**—A COOK. An active, loyal sister, a good cook, for the college. Terms right. Work begins in September. Send reference with your application. Mount Morris College, Mount Morris, Ill.

**FOR SALE.**—Mill building, 40 H. P. engine, meal and feed machinery, all new. Good wheat territory. Ready for flour machinery. Brethren preferred. Address First National Bank, Mulberry Grove, Ill.

# **In Planning Your Trip to ANNUAL CONFERENCE**

## **Next Month Arrange for Joining the EXCURSION TO MIAMI RANCH**

You have been reading and hearing of the mammoth and substantial work of the FARMERS' DEVELOPMENT CO., in developing and colonizing the

### **MIAMI VALLEY, NEW MEXICO**

and now is your chance of a lifetime to see with your own eyes and know from your own observation the wonderful attractiveness of

### **MIAMI VALLEY**

as to CLIMATE, SOIL, WATER, SCENIC BEAUTY, PEOPLE, SCHOOL AND CHURCH PRIVILEGES, and all other essentials to a happy homeland.

The FARMERS' DEVELOPMENT COMPANY is composed of men whom you know.

The directors are Isaac Frantz, D. G. Minnich, I. B. Miller, I. H. Rosenberger, M. N. Mikesell, F. D. Rosenberger, J. Wasson, and J. C. Wine. Geo. W. Colvert is General Sales Agent.

Are you seeking a safe and profitable investment? Are you seeking a home? Then you owe it to yourself to see MIAMI RANCH before deciding upon another location.

The excursion to MIAMI RANCH will be delightful, instructive, and inexpensive. It will leave Des Moines immediately after the close of Annual Meeting.

For further particulars WRITE US and when you get to DES MOINES call at MIAMI RANCH HEADQUARTERS.

# Facts Regarding Imperial Valley

Some people in trying to induce their friends to settle in the country where they themselves are located, frequently send them advertising matter that is gotten up by unscrupulous land agents that deviates from the truth. Their friends come and buy property and soon find out that the facts do not correspond with the advertisements sent them. The result is they soon become discouraged and sell out at a sacrifice, and go back where they came from, worsted financially and in some instances say worse things of the country than they should, and thus bring reproach on a good country (though not as good as the advertisement represented it to be). The undersigned has known this to happen more than once, and for this reason has decided to tell his friends about the Imperial Valley in his own words, so that he alone shall be responsible, and so that the wonderful Imperial Valley may never be made a reproach and a by-word.

Imperial Valley is situated in San Diego County, California, 183 miles east of Los Angeles on the Imperial branch of the Southern Pacific railroad. The soil is an alluvial deposit and all crops are grown by irrigation, with water from the Colorado River. The main irrigation canal is 80 feet wide on the bottom and 100 feet wide on the top, and 10 feet deep. The soil is adapted to the growth of wheat, barley, alfalfa and nearly all kinds of fruit. Alfalfa having plenty of water can be cut eight times per season, yielding as high as ten tons of nice hay per acre which sells at present from \$8.00 to \$11.00 per ton. Barley can be sown for winter pasture in alfalfa stubble after the last crop of hay is harvested. Alfalfa can be cut every three weeks if the hay is wanted for dairy cows, or every four or five weeks if wanted for horses. I have known of alfalfa yielding \$40.00 worth of seed per acre and my own yielded \$20.00 per acre with the first season's sowing. Dairying and hog raising are very profitable. Butter sells from 20 cents to 45 cents per pound; hogs, 7½ cents on foot; also beef, cattle and horses do excellently. One colt weighed 960 pounds at less than one year old. One acre of alfalfa will keep from 2 to 3 head of dairy cows or horses and from ten to fifteen head of hogs. Oranges, lemons, dates, figs, apricots, grapes and berries do well. A single grape vine has yielded 30 pounds of grapes 18 months from setting. Grapes, apricot and cantaloupe growing is very profitable as they will ripen here from three to four weeks earlier than other places, and be placed on the eastern market before they are ripe in other localities. One man at Coachella was offered \$600.00 cash for the grapes on a single acre of vines and refused the offer and sold at retail for \$1,400.00. Cantaloupes will net the growers from \$50.00 to \$300.00 per acre. I have lived in the valley as long as any one, being one of the first settlers, and my experience and observation has taught me that you can grow almost anything here you plant, including vegetables, if planted in the proper seasons and properly cared for. The selling price of land at present is from \$40.00 to \$100.00 per acre, owing to location. President Roosevelt says that when it is thoroughly developed it will be worth from \$500.00 to \$1500.00 per acre.

Reader, when you shiver around your fireside the coming winter, just think of the Imperial Valley where you can go in your shirt sleeves nearly every day in the year. And on the 10th day of this month (May, 1907), while there was a snow storm raging in many places in the eastern states, we were making hay and picking and eating fruit in the Imperial Valley.

Practical Exercises in

## MUSIC READING

for Self Study, Day Schools, Singing Schools, Institutes and Normals, by Geo. B. Holsinger.

### JUST FROM THE PRESS

This book is a valuable one in its line and will fill the demand for a first-class instruction book in music, either for individual study or for class use. The author has had over thirty years' experience in teaching and writing music. He knows just what the student in music needs most, and has it brought together very uniquely in this book. Besides numerous exercises and instructions in music reading, it contains a goodly number of first-class songs and hymns.

Music Lovers and Teachers,

here is a book you have been looking for, and at a price that each can afford to own a copy.

It contains 32 pages and has heavy paper cover. Can furnish both round and shaped note. Be sure and mention which notation you desire. Shaped note sent if notation is not named.

Price prepaid, each .....15 cents

Price per dozen, prepaid ....\$1.50

Special prices in quantity to teachers.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## HIS LIFE

A complete story of the Life of Christ in the words of the Four Gospels, using the text of the American Standard Revised Bible.

In this book we have a complete harmony of the Gospels in a single narrative, giving what each of the four gospel writers has recorded in chronological order.

### SUNDAY SCHOOL SCHOLARS

will do well to secure a copy to be used during the first six months of 1908, since our lessons will be on the Life of Christ.

Price, paper bound, each, ...15 cents

Price per dozen, prepaid, .....\$1.50

Cloth, per copy, .....25 cents

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## Seen Our 20th Century Record System?

A demonstration of same may be seen at our Office on the Annual Meeting grounds, at Des Moines, during the Conference.

If you are interested in increasing your attendance, in getting your scholars to bring Bibles, and to be on time with an offering, come around and investigate. It is in practical use and has proven what it will do for the Sunday school.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## BICENTENNIAL SONG BOOK

We are now publishing an 80-page song book, with good manilla cover, to be used during our Bicentennial meeting, and general Conference, to be held at Des Moines, Iowa, June 3-11. In this song book, we have the very cream of both "The Brethren Hymnal" and "Song Praises," and also a special "Bicentennial Song," written for this occasion.

### Don't Soil Your Hymnal

by taking it to Annual Meeting. These Bicentennial Song Books will be used exclusively during the meeting and may be secured at Brethren Publishing House headquarters, on the meeting grounds for ONLY 10 cents.

### Churches or Mission Points

can be supplied with these song books after the conference.

If interested write for quantity prices.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## Are You Going to Annual Meeting?

If you do go, call around at our headquarters, sometime between sessions and see our line of Bibles, Religious books, Post cards, Wall Motives, etc.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## ASK

For Our Illustrated  
POST CARD

and

## POST CARD ALBUM

Circular which describes a splendid line of these goods. It's free for the asking.

Send us your name and address and we will furnish you with several extra circulars to be handed to your friends.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## ARE YOU INTERESTED

in a first-class

## CHURCH MEMBERSHIP RECORD?

If you are, and expect to attend the Annual Meeting at Des Moines, call at Brethren Publishing House headquarters, on the grounds, and examine the system we are just now introducing.

## CRADLE ROLL SUPPLIES

There is a demand for Cradle Roll Supplies coming from some of our wide-awake Sunday schools, and we are now ready to meet the demand.

Every Superintendent and Teacher ought to be enough interested in this new department to ask for particulars. Drop us a postal asking for our illustrated descriptive circular of these supplies. DO IT NOW.

BRETHREN PUBLISHING HOUSE,  
Elgin, Ill.

## Bible Pictures

A select list of 100 subjects illustrating the International Sunday-school Lessons for 1908.

100 Pictures in black and white, no two alike, neatly boxed. Size 6x8 inches.

Price, 25 pictures, no two alike, 30 cents.

50 pictures, no two alike, 50 cents.  
Per box of 100, no two alike, 90 cents.

BRETHREN PUB. HOUSE,

# CORNWELL & DRAKE

70,000 Acres Improved and Unimproved Irrigated  
Lands in Fresno and Kings Counties

Sales Agents for the Following Well

Known Ranches in Subdivisions

LAGUNA DE TACHE

MILLS COLLEGE

JOHNS

BROWNING

Laton, California, May 12, 1908.

To the Editor of the Inglenook,  
Elgin, Illinois.

Dear Sir: We want to tell the readers of the **Inglenook** something about the experience of the colony that left Belleville, Kansas, early in December, 1902, for Laton, California, to locate on small farms on the **Laguna DeTache Rancho**. The special train over the Union Pacific left Belleville with something like ninety people aboard, and owing to the close schedule arranged by our old friend George L. McDonough, came through on faster time than the regular trains.

Arriving at Laton, after a few days looking the land over and making their selections, the settlers took off their coats and went to work like the old-time pioneers. The first year's work determined the fact that some of them had made poor selections and they felt pretty blue, but the Land Company traded them on better land and the next year they were a pretty contented lot of people. Now take notice right here that all of California is not good; it would be unreasonable to suppose that any particular large body of land out here is all good, and when any land man tells you it is, look out for him and hide your pocketbook. He is after your money and don't care how he gets it.

Everything has gone along reasonably smooth since then. Of course there have been the usual setbacks incident to a new colony, but the ones who came on that memorable special train are practically all here yet and enthusiastic over their present homes and are glad they made the move.

This district is known as the **Kingdom of Kings River**, being located on the north side of **Kings River** which furnishes the **irrigation**, and to protect the country from the high water which comes in June from the melting snow in the mountains, embankments, called levees, are thrown up along the river bank, and while it is not overly serious it is well to protect against it, as the crops in some parts of the tract might be damaged were it not for the levees. But there is no danger to life or stock. It is not the serious kind of overflow known in the eastern valleys. In 1906 the water was higher in the river than the oldest inhabitant had ever known, and even with that there was very little damage done, hardly enough to mention, only a few hundred acres overflowed and most of that was unimproved.

Of course wild reports went out and did a lot of damage to the country. A hundred times more damage was done the country by these reports than by the water. To illustrate the situation: The writer has a tract of land on the south bank of Murphy Creek and west of Laton. The water broke through and flooded about fifteen acres of alfalfa about a foot deep. If the weather had been cool there would have been no damage done, as it was the alfalfa was killed, but when the water drained off I had the land disced and planted to corn and raised more feed than the alfalfa would have produced at its best. Also I raised a lot of potatoes and other summer crops. The same thing happened to a few others. Above is approximately the result and damage from a flood in this country. But a flood doesn't occur once in a dozen years, so we can safely dismiss the subject.

Another report that has gone out is that all of the good land has been sold, nothing left but refuse. Nothing of the kind, and don't you believe it. While it is a fact that land has been selling steadily all this time, there is still unsold a matter of twenty-five thousand acres in the tract that is actually the best land in California for general results.

A part of this land is now on the market and selling rapidly at \$60 per acre on the terms of one fourth cash and the balance in eight yearly payments at 6% interest. The balance of the twenty-five thousand acres is not on the market now but will be sometime this summer.

With the view of interesting your readers in the good land that we still have for sale, and with the hope that another or two more colonies might be started soon, we have recently traveled for several days over the land with several men who came here with the special train nearly six years ago. Such men as C. S. Holsinger, P. R. Wagoner, Alf Eike, John Strole, Robert Holsinger, J. W. Vaughn, C. E. Brabb, "some of them known to the reader no doubt," with the determination of saying nothing through your paper till they came to us and said they could and would recommend the land. This they have done unqualifiedly and have asked us to introduce the proposition in some manner that would result in starting a new settlement.

There is no better opening for a community of small farmers anywhere in the west than we are offering, and those who have looked it over will be glad to tell you that it is all right and safe to settle down on.

What we would like to do is to show this land to intending settlers visiting California this summer, let them make selections against the time it goes on the market, and if several will do this we can arrange to hold several thousand acres for them and their friends who might follow after.

As this is the first time we have appeared in your paper, you would naturally like to know who we are. In explanation will say that last October, the firm of Nares & Saunders, the firm that sold the **Laguna lands** up to that time, and who in years past have done considerable advertising with you, was dissolved. Mr. Nares succeeding to the entire management of the **Laguna and Summit Lake Lands**, and the sales department was reorganized. Messrs. Robert P. Drake and Z. L. Cornwell who had been with Nares & Saunders for a long time, entered into a sales contract with Mr. Nares and went out for themselves under the firm name of **Cornwell & Drake**, having for sale the balance of the land belonging to the **Laguna Lands Limited and Summit Lake Investment Co.**, and intend by careful methods and fair dealing to build up a land business that will be a good one. We will handle land that may be endorsed by our friends, the farmers who are here. No other kind of land will be attempted. If it doesn't suit these folks we won't offer it.

We had hoped that one member of our firm or both of us could spend a part of the summer in the middle west looking up intending settlers but find it impossible on account of the amount of business we are doing, so have arranged to have Mr. Robert Holsinger represent us. Mr. Holsinger lives here, his father, C. S. Holsinger, and brother John both have property here and live on it. He is thoroughly acquainted with what we are offering, has been all over it, has seen it cultivated and in the raw state, has seen the crops growing on the small farms and has seen the cattle feeding on the wild grass which is green and juicy the year around, has seen the irrigation water running in the ditches and applied to the land and is thoroughly posted as to general conditions.

He will be located at **Lacon, Illinois**, for part of the summer where he is visiting at his old home and would be glad to answer any letters or talk it over with intending settlers and it might be to your interest to look him up.

The land is especially adapted for **dairying, corn and fruit and hogs**. The dairy industry alone pays the farmers in this immediate vicinity about a quarter of a million dollars per year. The average price of butter fat for the past year at **Laton Co-operative Creamery** was thirty-one cents, and that creamery is making two thousand five hundred pounds of butter daily and seven other creameries and sweet cream concerns are taking supply from here. That spells success for the small farmer. A worker will surely succeed here as irrigation makes crops a certainty. **No sage brush to be cleared off or expensive pumping plants to be installed before a crop can be made.**

The Land Company has made over a thousand sales aggregating over thirty-five thousand acres to the value of about a million and a half dollars, and while it is a remarkable record it is nevertheless a fact that **no settler has ever been shoved off his land or foreclosure of his contract made.**

We have good people, first-class schools, high-priced markets and the Southern Pacific and Santa Fe roads run through the property, and it is a good country to live in, for the people are healthy and happy. It is the **biggest success in California**, and while we may have grown somewhat tiresome in telling all this, we are excusable from the fact that we are enthusiastic over what we are offering. We are justly so for we have seen this **Kingdom of Kings River** grow from a cattle range in eight or nine years to a community of about five thousand people. **A big, thrifty farming center**, and we have **lots of room for more** and want to hear from you and take up with you the matter of opening up this new land.

If you will write us we will be glad to send you some pamphlets describing in detail this successful country, and if you will watch the columns of the **Inglenook** you will see our statements from time to time for we are going to keep the matter before you till some of you **come here and live.**

Very truly Yours,

Cornwell & Drake,

Laton, Fresno Co., California.

Or **Robert Holsinger**, at present at **Lacon, Illinois**. Or write to any of the gentlemen named in this letter.

# ALBERTA

---

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused **Annual Meeting** to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.  
A complete Index.  
100 Membership Cards.

This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.

Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
200 Membership Cards.

This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.

Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

### TOURIST SLEEPING CARS.

A striking feature of the Union Pacific passenger trains is the tourist service. The tourist sleepers are identical with the standard sleepers, with the exception that their furnishings are not on so grand a scale, but the accommodations are equally good and are sold at **HALF THE PRICE** of the standard. The seats are upholstered, and at night the berths are hung with heavy curtains. Each car is accompanied by a uniformed porter whose duties are the same as those upon the Pullman Palace Sleepers.

### DINING CARS.

Union Pacific dining cars are operated on all through trains. These cars are all new in style and models of beauty and elegance.

### DINING ROOMS AND LUNCH COUNTERS.

Dining Rooms and Lunch Counters are located at convenient points along the line, and all through trains which do not carry dining cars are scheduled to stop at these points. Well prepared meals of the best quality are properly served at popular prices. Full time is allowed for meals.

Be sure to buy your ticket over

# Here's What We Promised **||a||** Couple of Weeks Ago

Macdoel, Calif., May 4, 1908.

Mr. E. M. Cobb, Elgin, Ill.,

Dear Bro:—

According to your request, I am furnishing you herewith a **PARTIAL LIST** of the names of the settlers in Butte Valley who have made some remarkable improvements on their property in the short time they have been there. Under separate cover I am sending you 46 photographs showing these improvements. Bro. Isaiah Wheeler and myself drove to the homes of these happy and contented settlers and took these photographs with our own camera, and the pictures speak for themselves.

Please note that I say a partial list, for there are many who have cleared quite large tracts whom we did not get to visit in the short time we were there. Here are the autographic signatures of these people with their own statements in their own handwriting as to the acres cleared and as to the improvements they have placed on their land outside of the clearing. Please make a copy of this and send the original copy to my files for reference.

Fraternally yours,

Geo. L. McDonaugh.

# A Mother's Stirring Tribute

to a plain old home remedy. Mrs. John E. Jones of Florissant, Mo., is the author of the following letter: "Florissant, Mo., Jan. 19th, Dr. Peter Fahrney & Sons, Chicago, Ill. Dear Sirs: Our baby now eleven months old is taking your Blood Vitalizer with most delightful results. She is teething and has always been troubled with constipation so that we had to give her a physic every day. This finally failed to help, and as she became very feverish and we were afraid spasms might set in, we called our family physician, who prescribed other and stronger medicine. It only put her in agony and for hours we did what we could for her but she grew worse instead of better. The doctor came again and gave her something that just barely moved her bowels. We grew hopeful but soon found that this last medicine failed to work too. The last night of the old year, we watched her with sinking hearts as she was growing rapidly worse. When morning came I begged my husband to let me try the Blood Vitalizer and quit the doctor. The doctor thought the trouble was only teething but I felt there was something more than that, as two years ago we lost a little darling whose symptoms were similar and whose bowels the doctors failed to move.

With anxious hearts we gave her the first teaspoonful of the Blood Vitalizer. In a few minutes she was asleep, and O, how I watched and prayed. In an hour her stomach seemed to be softer. In two hours when she awoke I gave her a second teaspoonful and in an hour she had obtained the relief we sought. I continued to give her the Blood Vitalizer and, O, such passages! I found she had worms very badly and they still continue to pass.

I send this letter to you that other mothers may learn of what we consider to be a God-given remedy for the little ones. Your Blood Vitalizer has certainly by God's blessing saved our darling."

## A MOTHER IN SWITZERLAND WRITES.

Wald, Switzerland, March 9,

Dr. Peter Fahrney & Sons Co.,  
Chicago, Ill.

Gentlemen:—

I desire to take the time to tell you that your Blood Vitalizer has accomplished some wonderful things for myself and daughters. Through long-continued illness my nerves seemed to be totally ruined. I was hardly able to sleep and so run down physically that I had given up hopes of getting well. Last fall, however, I decided to try your Blood Vitalizer and obtained some at the agency here. To my surprise I commenced to pick up at once, my sleep returned and I got stronger day by day.

I also commenced to give it to my daughter (aged 10) whose blood seemed to be weak and vitiated and whose eye-lids were always raw and inflamed. She also had a disagreeable discharge from the nose. All these troubles have disappeared, for which we are deeply thankful.

Sincerely yours,

Mrs. W. E. Rebsamen.

The writer of one of the above letters of testimonial states that her motive in writing is that other mothers may learn of the merits of DR. PETER'S BLOOD VITALIZER. What a characteristic of the true mother's heart! Her feelings go out not only to her own but to other little sufferers. Among the readers of the INGLENOOK there are no doubt many mothers to whom the knowledge of a reliable home remedy, in which absolute confidence can be placed, is worth much. DR. PETER'S BLOOD VITALIZER has very properly been termed the mother's friend. It is the mother in the family that usually bears the brunt and worry of the sickness of a dear one. She is, by her position, the one who is called upon when something is wrong, and hence upon her knowledge of a proper remedy depends the weal and woe of the household.

DR. PETER'S BLOOD VITALIZER, unlike other ready-prepared medicines, is not to be obtained in drugstores. It is supplied to the people direct by local agents appointed in every community by the proprietors, Dr. Peter Fahrney & Sons Co., 112-118 So. Hoyne Ave., Chicago, Ill.

## Dr. Peter Fahrney & Sons Co.

112-118 South Hoyne Avenue

Chicago, Ill.

CONSIDER the above cottage is for you to use FREE to meet your friends in; write your letters, etc., etc., as there will be a good supply of letter paper and envelopes FREE; also tables, chairs and everything to make you feel at home.

## YOU ARE EXPECTED

to feel yourself at home in our cottage from June 1st to June 15th.

There you will find tables, chairs, letter paper and envelopes for you to use FREE.

### BATTLE CREEK SANITARIUM

is Offering Two Special Summer Courses in Domestic Science Based Upon the Principles of Health and Hygiene.

Course A is a practical course especially designed for housekeepers or those interested in home economics. It includes the following studies:

Cookery, Serving, Physical Culture, Home Nursing, Laundering, Sanitation.

Course B is a scientific course and includes the following studies:

Cookery, Anatomy and Physiology, Microscopy and Bacteriology, Biology.

Summer term, June 22 to August 28, 1908.

Students wishing to meet a part of their expenses in work can do so.

One year and two year courses are also given.

Applicants for the summer course should write as soon as possible to

## Your Spare Moments--What to Do With Them

W. C. Frick

TIME and tide wait for no man. Every man's day contains twenty-four hours. Never a man lived but what was given one or more talents to use. Never a man lived but what will be held accountable for the use of his time and talents. He who spends his time in idle talking or story-telling, in lounging on street corners or in saloons is wasting it, yes, worse than wasting it. That man who digs ditches when he has the talent to teach school will doubtless be held accountable for wasting both time and talents.

In every man's day there are a few hours, spare moments, they are commonly called, in which too often nothing definite is planned to be done. This is true both in country and in the city.

In the country summer is the busy season. The farmer and his sons and other help are up at four in the morning and continue work until long after dark. They work hard and long, week in and week out. Finally winter comes. The crops are all stored away, planting and harvesting is all over for a season. Phone and free delivery make necessary only an occasional trip to the city, the chores are done early. There is no haste about any particular work. Winter brings its long evenings with nothing of account to do and the farmer and his sons, looking back over the long summer with its long days and its hard toil, are content to take things easy. We would that he should rest during the winter. But rest is not necessarily idleness. Rest is a change of labor. Because one works hard all summer is no reason he should loaf all winter.

In the city each season brings about an equal amount of work. Each work day as a rule is as long as another, consequently each evening is as long as another. If the city man has nothing definite to employ him after work hours he will spend much time and money in pursuit of fancied pleasures to the detriment of his future career. And this he is given opportunity to do three hundred and sixty-five days in every year.

What, with taking his wife, or his family, to the theater once or twice a week, to the baseball game on Saturday afternoon, laying off from work a half day now and then in order to attend some other function, he has, without any visible return, spent much money and wasted much of his time. Furthermore, probably seventy-five per cent of the population of our great cities spend from one-half to two hours daily on the street-cars going to and from work. One glance reveals to you how much time is wasted on such occasions. Every one is either staring at his neighbor across the car or else delving into the mysteries of the latest murder or scandal as reported at great length in the daily newspaper.

Yet perchance there are some who would add to their wealth by working several hours beyond the time allotted to man. To such let it be said that life is not all money! Ten hours daily is enough for man to give to manual labor and to money-grabbing. You owe it to your Creator, to yourself, and to the world in general to devote the remainder of your day to educating yourself, both intellectually and spiritually.

As has been seen we have divided people into three classes. We will pay no further attention to the last-named class. As each class has its proportion of spare time so are there advantages for improvement in education offered to each. Books of learning are always accessible, and instructive and practical journals can be had at a nominal price. Burn the midnight oil! Become self-educated! Self-education is far better than ignorance, indeed it is not to be compared with ignorance, and a self-educated man is worthy of all praise.

Granted, however, that you desire more systematic work and do not have the means of attending a college, the correspondence schools come to your rescue, and offer you an education in any subject you may desire. Each lesson is a study and an examination in itself and Uncle Sam is the messenger who carries

your work to and from your teacher. Work fast or slow, just as you like, ask as many questions as you like without embarrassment and have your work explained by a thoro and experienced instructor. Perseverance will make you an expert in any chosen line. To the individual who will not trust his future to self-education and who at the same time cannot attend some private or public institution of learning, we would strongly advise correspondence work. Among the highest class correspondence schools are, The International Correspondence Schools, Scranton, Pa., and The National Correspondence Institute, Washington, D. C.

Of course the very best opportunities for improvement of spare moments are afforded in the larger cities. The night public schools are open to such worthy young men and women as are deprived of a common school education because their financial help is necessary to supply the family. To the individual who aspires to a business career, are open the night business colleges. Is one of a mechanical turn of mind, his opportunities are limitless in that field. Study mechanics and become an inventor. Church and Peterson on Mental and Nervous Diseases say that genius is one of the stigmata of degeneracy, that genius is one of the evidences of an abnormal mind. Well and good. Let that not discourage you.

Do you aspire to a profession? Night universities are at your disposal.

To every one then there is given time in abundance. To every one is given advantages by which to improve that time. "But," perhaps you say, "not to every person is given inclination to study." Studying is like everything else one does. It becomes easier by repetition. Begin once to study. Study again. Get the habit. Be determined. (We have dealt in no theories. We want to be practical in what we say.) Education makes a man better. It broadens his field of usefulness. If education was more generally distributed, conditions would be better. And since there is *spare time* in abundance, advantages to improve it without number, and inclination to study so easily cultivated, there is no excuse for ignorance on the part of any one.

This leads us up to that which we desire to discuss in a future article, the greatest achievement of spare-time study, a Night School Education.

#### WHAT FORESTRY HAS DONE.

JOHN H. NOWLAN.

MANY people think forestry is a new study because our government is of late taking an active interest in it. On the contrary it was discussed two thousand years ago, and today is practiced by every civilized country in the world, if we except Turkey and China.

One thing to the advantage of our country is that the principles of forestry are the same the world over. The only question is how best to apply these laws to

fit local needs. No matter what the climate, size, location, or government of a country, all must as a matter of self-preservation come to forestry at last. The most progressive nations have taken to forestry first. In fact, we can take forestry as a rule by which to measure the advancement of a nation.

The countries of Europe and Asia have passed through all the stages of forestry. In their early days forests were extensive and had to be cleared away to provide tillable ground to produce food for the increasing population. With advanced civilization came new demands upon the forests resulting in an increased per capita consumption, which with the increase in population soon created a scarcity of timber.

A single instance will show the importance early attached to forests.

When the Spanish Armada went to invade England one of the special objects to be accomplished was the destruction of the forests of southern England, or the forest of Dean. That would lessen the charcoal supply, thus hinder the smelting of iron, which would cripple the manufacture of arms and lessen the fighting power of England. (Nichols' History of the Forest of Dean.)

The many new uses for wood led to the forests being spared and even protected. Finally the forests came to be recognized as a crop to be harvested and caused to grow again.

While silviculture is young in this country, still there is no need to experiment with it, as we have the experience of other countries for hundreds of years to draw upon. We are only putting into practice known principles.

In looking into the history of forestry, two facts stand out with great vividness. One is that those countries that have given the most attention to the subject are the most prosperous, and have the least waste land. The other is that those countries spending the most upon their forests receive the greatest *net* returns.

Take the case of Germany. Like other European countries she felt the approach of the wood famine one hundred and fifty years ago, and with the thoroughness that is characteristic of that nation set about to remedy the evil. She saw also that her neighbor, France, was having trouble with her mountain streams and foresaw a like fate for herself.

Her forests then were much the same as ours are now. Her plan was to cut no more wood than the forest produces. Note results. In 1830 the yield was 20 cubic feet per acre, and in 1904 it was 65 cubic feet. The net proceeds in 1850 were 28 cents per acre and in 1904 they were \$2.50.

We are using three times as much timber as our forests produce. Last year we spent 9.3 mills per acre and received an income of less than  $\frac{7}{8}$  of a mill.

In France the denudation of the uplands caused disastrous floods, damaging or even completely ruining almost one million acres. The government in 1860 began the task of reforestation with excellent results. About one-half of the mountain torrents are now partially or entirely under control, 31 of which were considered hopeless fifty years ago. Also the shifting sand dunes of Gascony and the dunes and marshes of the Landes have been planted in forest, thus reclaiming over two and one-half million acres. Through the sale of a portion of the reclaimed territory she has more than paid all expenses and has left property valued at about \$110,000,000.

But for the height of success let us turn to the Switzerland page of the world's history. In this little country, perched among the mountain peaks, every foot of available agricultural land is made to produce to its greatest ability. The first forest ordinance of Bern was issued 600 years ago. The city forest of Zurich, known as the Sihlwald, has been managed under a working plan since 1680, and demonstrates the good that may be accomplished by intelligent management extending over a long period. There in spite

of a large annual expenditure the average annual profit is \$12 per acre!

These are the best illustrations. On the other hand China is a glaring example of an apparent attempt to destroy the forests. Hills have been stripped bare and left to the mercy of the floods. The mountains of the northeast have been stripped of everything except a few cedars in the graveyards and around the temples. A dearth of water and the ruin of the soil follow in the train of this wholesale deforestation. On these waste hills the water rushes off in torrents, flooding the valleys, drowning villages and ruining fields; while the amount sinking into the earth is not sufficient to feed the springs. "In a word the Chinese, by forest waste, have brought upon themselves two costly calamities—floods and water famine."

Thus is our lesson and our duty spelled out for us. We have no *moral* right to rob future generations of their inheritance as we are doing by our reckless waste of timber, and I hope and believe the day is not far distant when we will also have no *legal* right.

*Mulberry Grove, Ill.*

## How the Healing Art Developed

J. F. Studebaker, M. D.

### In Five Parts—Part Two.

MUCH of this slowly acquired art of medicine became a part of the development of Athens, for her men were not wholly satisfied with home achievements but traveled to improve themselves commercially and scientifically. The Greeks were not like the militant Romans who were entangled in projects of changing the map of the ancient world, but were intellectual, eager, restless, and ever searching for methods to evolve the truths of science and tirelessly seeking new expressions of art, beauty and culture. Such aspirations led to the evolution of master minds. As a monument to their depth of reasoning power, they established the Alexandrian school with its great library. This school was even more famous than the best centers of learning of the present, for to have been one of its students was considered almost absolute guarantee of patronage by the public. Its teachings of anatomy, the science of the structure of the body, were far advanced to the knowledge of the subject before the founding of this "Mecca of Medicine." Dissections of animals being done frequently, new ideas of form, structure, relations and uses of various organs and members of the body, began to show the limelight of accuracy in this branch. So marked was this feature that after the decline of this Greek city there was no advance in anatomy until about one thousand years later when Vesalius through his anatomic

research made it possible for the development of a surgical science. Students from foreign lands went to Alexandria to become steeped in its wisdom. Returning home, they established other schools through which means those of Italy and France sprung up, these latter fostering through the dark ages a part of the inestimable treasures of that great city in northern Egypt. The monks should have credit for the fragmentary and disconnected manuscripts hid away in monasteries on unapproachable cliffs and trusted to custodians who themselves were ignorant of their priceless value.

The Greeks, as long as they lived a simple and virtuous life were strong and valiant. But when inactivity, voluptuousness and corruptness stole into their national life, they became victims of dissipation and disease. They, too, were compelled to search for new and efficient remedies for the unfamiliar and acquired maladies. Rome, who ruled the world, experienced the same fate and had often to look to her inferiors in military tactics but superiors in science, the Greeks, for relief, as her own physicians were mostly unskilled, inexperienced and unprincipled quacks, preying upon the life and money of the public, their sole business being to extort exorbitant fees upon misrepresentations and gross exaggerations.

Truly the life-complex of a nation plays a great role either in the maintenance of health, the prevention

or the production of disease. This fact has always been evident down to the present. In England, nervous affections are increasing on account of sumptuous living and the rigid demands of her centers of culture and competition. Because the people of the British Isles have great wealth, abundant luxuries, and routine society life, which disorganizes their vital forces, cancer is the most prevalent among them of all nations, as shown by the investigation of the late Dr. Senn of Chicago.

We have seen the necessity for the science and art of medicine, but did the demand alone give it the impetus indispensable to keep it abreast the other sciences and arts? Just as many a nation gained world-wide fame for what was in its Napoleon, Nelson, or Washington, so medicine became more or less prominent through the unrelenting and unconditional efforts of such giant exponents as Hippocrates, Aristotle, Galen, Vesalius, Pare, Jemer, Pasteur, Lister, Hunter and Koch.

Since every art has its own mythology, let us, before taking a retrospect of these men's great deeds, have a glimpse into the mystic realm of antiquity. The mythical being whom the Egyptians called Thoth, whom the Greeks called Hermes and the Italians Mercury, passed among the Egyptians as the inventor of all sciences and arts. The Chinese with their religions, beliefs, manners, laws, language and territory scarcely changed for four thousand years, except in isolated districts, first visited by missionaries in the nineteenth century,—attributed the origin of medicine to one of their emperors named Havaugh who reigned about 2687 B. C. He is supposed to be the author of the work which is still their basis, the principle being entirely confined to the examination of the pulse to determine the nature, duration and gravity of the disease. This superficial investigation had its baneful influence. Because of their profound ignorance of rudimentary anatomy their surgery was of the barbarian type. Without courses of instruction and laws to govern the practice of medicine, quacks, filling the cities, dealt out poison and death with impunity. This is why the Chinamen are now accustomed to pay fees to a physician while being kept well but not during incapacity for work.

It is Greece who brings to us the most interesting remains of medical history of antiquity as she does of the other sciences and arts. Thirty divinities, heroes and heroines, were supposed to have conceived and cultivated some of the branches of the healing art. No matter what his origin may be, Æsculapius was the prominent mythical character in medicine of the ancients, with the possible exception of Hermes among the Egyptians. In his honor they built temples, consecrated priests and established schools. On account of his many triumphs in wresting sick ones from the strong hand of death, Pluto, the god of Hades, so it is

related, being greatly alarmed at the diminished number of daily arrivals, complained to Jupiter, the most powerful of Olympian gods, who then annihilated the audacious healer. In view of this some one has wittily said, "The modern children of Æsculapius abstain from performing" marvels.

The father of Æsculapius was Hercules and he in turn was father of Polidarius (one of Homer's heroes) and of two physicians who distinguished themselves at the siege of Troy 1184 B. C. Omitting ten generations, we come to the first Hippocrates, the grandfather of the "Great Hippocrates" who was no myth but a man. He was born 470 B. C., in stirring times on the Greek Island of Cos in the era of sixty years' development of social and intellectual greatness at Athens—the age of Pericles—which followed the battle of Salamis 480 B. C., when the Greeks pushing west defeated the Persians. He was a contemporary of Socrates, a philosopher, Plato, an idealist, and Herodotus, a historian. In his family there were seven physicians, the profession passing from father to son, medical knowledge being a family secret up to his time. Previously everything relative to medicine was a formless mass, a mixture of speculation, systems, science, and philosophy, there being no reliable or classified records. Its expression was left for the methodic mind of Hippocrates. He was the first to base what he considered facts upon investigation. Having been to foreign courts and lands he was ever ready to instruct those who were inquisitive. Some being unusually talented and doing as their preceptor, Hippocrates, went abroad to renowned courts and famous places, going either by ship or on foot. What a slow but fascinating process of intellectual growth, going leisurely from city to city, a month's journey apart, with a language changing at every villa! News was news for years. The information learned was brought back to the home schools. Hippocrates, outside of his lectures, was busily engaged fighting the plague at Athens and up and down the coast, and of which Pericles died in 429 B. C.

He taught that the body contains four humors: Blood, phlegm, yellow bile and black bile, a right proportion of mixing of which constitutes health and an improper proportion or irregular distribution constitutes disease. This was compatible with his knowledge, but as we shall see later, inconsistent with the modern conception of the causation of disease.

He was always true to his conviction so clearly depicted in the following oath which he took: "I swear by Apollo, the physician, by Æsculapius, by his daughter Hygeia, by Panacea, and by all the gods and goddesses, that according to my ability and judgment I will keep this oath and this stipulation—to reckon him who taught me this Art equally dear to me as my parents, to share my substance with him and relieve his necessities if required; to look upon his offspring

on the same footing as my own brothers, and to teach them this Art if they shall wish to learn it, without fee or stipulation; and that by precept, lecture and every other mode of instruction, I will impart a knowledge of the Art to my own sons, and those of my teachers and to disciples bound by a stipulation and an oath according to the law of medicine and to none others. I will follow that system of regimen which according to my ability and judgment, I consider for the benefit of my patients, and abstain from whatever is deleterious and mischievous. I will give no deadly medicine to anyone if asked or suggest any such counsel. . . . With purity and with holiness, I will pass my life and practice my Art. . . . Into whatever houses I enter I will go into them for the benefit of the sick. . . . Whatever in connection with it I see or hear, in the life of men, which ought not to be spoken of abroad, I will not divulge, as reckoning that all such should be kept secret. While I will continue to keep this oath unviolated may it be granted to me to enjoy life and the practice of the Art, respected by all men, in all times. But should I trespass and violate this oath, may the reverse be my lot." This affirmation exemplifies his admiration for the dignity and integrity of the profession. Since then it always has had its lights brilliant, except during the dark ages. The Arabian, in the *Talisman* said, "The praise of the physician is in the recovery of his patient." Excellent sentiment is expressed by Rhazes (A. D. 850),—the most celebrated of Arabian physicians, an offspring of the Greek school and of high repute for their compilations of past records,—in his counsel to laymen regarding the character of the doctor; "Study most carefully the antecedents of the man to whose care you propose to confide all you have most dear in the world, that is, your life and the lives of your wife and children. If the man is dissipated, is given to frivolous pleasures, cultivates with too much zeal the arts foreign to his profession, still more, if he be addicted to wine and debauchery, refrain from committing into such hands lives so precious."

### THE MIDSUMMER HOLIDAYS.

RICHARD BRAUNSTEIN.

THE days will soon be at hand when the toilers begin to long for green pastures and still waters; when dreams of hillside and valley, waving fields, rustic porches and cooling shadows mingle with the dust and noise, and smoke,—the fret and weariness of city life. The heart of tired humanity grows restless as the heart of nature stirs in tree, shrub and flower, and we are inclined to envy the very apple blossoms blowing on the wind.

Change is such a necessity; the mind as well as the body that has worked too long in a routine grows flaccid, as a string that has been stretched too far, and

rest and benefit come from exertion in a different direction. The fatigue that follows the journey through new scenes, that comes after the long tramp through the woods or the long pull up the river, is what the truthful old lady called "a good tired;" the overstrained muscles relax and rest, the unused ones wake to new life.

The vital virtues of change are so apparent that the wise physician orders it in place of nervine or tonic.

"Go to the seashore," said the doctor to an invalid.

"It is not to be thought of; I cannot afford it."

"Then go into the country—go somewhere. If you positively cannot leave home, move out of this room into one in some other part of the house; make some sort of change."

The world is learning the virtue that lies in a dose of moonlight in Venice, in a draught of Alpine scenery, in a taste of Scottish heather, in a breath of the pine woods, in the breezes that blow off Lake Superior. The semi-invalid, the tired business man, the overworked clerks, the shop girls, the tired mothers of families find any sort of change better (if only an occasional day's outing), than bromides, or bitter waters, or the *complete drug store*. And some portion of pleasure is within the reach of most; and even a seeming extravagance turns out in the end to be the truest economy. A day in the shadow of green trees brings its return in renewed hope and health and courage.

So now the city resident, man, woman, and child, is looking forward to a respite from hot bricks, and hot air, from hand organs, car whistles, smoke and dust. The country houses are putting themselves in order for the summer boarder, for the summer boarder is an institution whose advent brings care into the camp of the country home, and he is sometimes exacting and dreams of impossible things. So he, or more often she, having read the milk-and-honey side of country life, and expecting too much, often wakes from a dream of beauty and luxury and contentment to discoveries unexpected and disappointing.

For there are rainy days and scorching days, and windy days, and the rain wets, and the heat burns, as in the city, and the wind is no respecter of bangs or complexions. Ice is not indigenous to the average farm, and butter follows the great law of its being without fear of the city guests. Vegetables and small fruits seem not as plentiful as expected. The cream will turn and the hens are unmindful of duty in regard to eggs.

The postman does not make three trips a day to the door, and the neighbor who would do a kindness by bringing the mail has a facility for carrying it in his pocket a day or two before delivery, a failing that is shared by his brother of the city.

There is also an occasional fried beef-steak and an over-supply of the "one gravy."

There are sociable mosquitoes and insects that have an affinity for bare arms and bald heads. There may be uncomfortable rooms and an absence of some of the adjuncts of the toilet that are considered indispensable as the breath of life in one's own home. There is the look of dismay and, when these things are mentioned, there is the tyranny of the laws of the house whereby one is made to understand that boarders are taken as an accommodation, not as a necessity.

For the boarding houses in the country are not universal where one may sit on glorified verandas, and look upon the blue of the sky, the spray of the surge, or the crimson of clover meadows with nothing to regret and everything to enjoy.

But these discomforts strike a balance with the pleasures. What a joy it is to breathe air in which there is no taint of factory smoke or sewer gas, but which has blown instead straight over fields of clover blossoms, and growing grain, gathering sweetness all the way; to see the blue sky unobscured by anything less fine than the waving branches of great trees; to be awakened in the morning by the "earliest pipe of half-awakened birds," to lie wondering that the world has suddenly grown still and calm and sweet; to know of your own actual experience that the sun rises in the east; to see with your own eyes the miracle of morn break over the world; to realize how wide are the heavens and the earth.

What a restful joy it is to lie in the hammock and listen to what the winds have to say. What rest and strength is there in a walk through the woods, studying nature in her mysterious, shy, half-revelments; to listen to the birds as they shake "their carols unceasingly." What satisfaction is there to all the instincts of beauty, in the soft distances, in the swiftly shifting shadows, in the rich tints of russet, red and emerald spread out before the eye. What pleasure to ride over the country roads at sunset inhaling the odors, sweet, spicy, resinous, that come from new-mown fields, from wild grapevine and tamarack; to sit under the wing of silence in the dim, odorous twilight, restful and content. If you have cast you lot in the midst of mountain scenery, then what life and light can come to you from their majesty and beauty, you can look to the heights with spiritual vision as well as with eyes of the flesh.

If you "go down to the great sea-mother, mother and lover of men, the sea," what uplifting, what enlargement of the soul can come to you through this visible revelation of creative power, what repose can you win as you sit by the rocky, sandy barriers of the sea and let her weave her wonderful spells about you.

But do not go imagining that all the blessings will fall into your lap without a lookout of your own.

It will be well to remember in packing your vacation trunk that a certain thoughtfulness will conduce to your comfort and your landlady's peace of mind. She will

probably have plenty to do without meeting any unnecessary demands. You can have a hammer and some nails or hooks in your trunk, and a curtain, so that in the usual dearth of closet room you can improvise a closet without calling her from her domain to hear your complaints. Take an alcohol lamp for the hot-water faucet is not generally known in the farm house. I heard a landlady say once that her guests had asked her for everything, from pins to porous plasters. Take table or dresser covers and cushions for your comfort's sake. Take games for the children, and pictures and scrap-books to make rainy days endurable to them. Take something to read for them as well as for yourself, and do not be obliged to roam around the house looking for literature that is not there. And just because you are on a resting tour, don't think you will be justified in reading trash.

Take your oldest clothes, your easiest slippers, your stoutest shoes. Take, also, a calm and thankful spirit, a determination to please, and to be pleased—the best spiritual habiliments are none too good.

And because you go to be recruited from the wearing effects of teas, luncheons, business and lectures, rested from drudgery in the schoolroom, the office, the store, don't turn your back on possible friendships. For over all the blessings of sea and mountain and meadow, of nature's perpetual changing pictures and gracious giving, there is the dearer human nature. And if we come back to our work built up in health and strength of body, so also can we be the richer and larger in the life of heart and soul because of kindly smiles, cordial handclasps, new friendships found and old ones strengthened.

We can give the cheering All Hail to ships that pass by night or by day.

#### ✿ ✿ ✿ BANK NOTES BURNED.

WHEN a Bank of England note returns to the bank it is never reissued, says *Tit-Bits*. It is canceled by having the signature of the chief cashier torn off. A day's signatures thus detached often amount to a weight of twenty pounds, so some idea may be gathered of the enormous quantity of the notes dealt with in a day's business. After the signatures are torn off the notes are pricked off in the register, and sorted into the dates of issue. They are then placed in boxes in the vaults, where they are kept for five years, after which they are burned in a furnace placed in a courtyard. Every morning at seven o'clock this fire is lighted, and the notes which were received at the bank five years previously are consigned to the flames, 420,000 notes being consumed in this manner every week.

Do today's duty; fight today's temptations; and do not weaken and distract yourself by looking forward to things which you cannot see, and could not understand if you saw them.—*Charles Kingsley*.

## Around the World Without a Cent

H. M. Spickler

### Chapter V. In Strawberry June.

When the lark is poising over  
Big red berries bending low,  
And the pickers fill their baskets  
With the finest fruit that grows;  
Then the largest, sweetest berries,  
Melt and fill my yawning mouth,  
With their juicy, crushing sweetness,  
Melting in my hungry mouth.

Now I wade through fields of berries,  
Thick in clusters, rich they lay,  
And the summer air is laden  
With their fragrance all the day.  
For my hunger they are ample,  
For my thirst they wet my throat,  
With their watery nectared sweetness  
Gliding down my thirsty throat.

From the foul soil comes this berry,  
Perfect, pure and full of charm;  
From the grit and sandy earth-loam  
Springs the best thing on the farm.  
If I'd turn by transmigration  
Into other form of life,  
I would be a big strawberry  
Just to live the sweetest life.

WHEN I fell so far behind in picking berries the first morning the English pickers gave me the laugh. I was surprised how fast they could pick and eat at the same time. On the second morning I did better, allowing only the very fastest women pickers to go by me. They didn't laugh so much. The third morning I caught the knack of doing it, and I didn't swallow so many of the berries, either. When I took my place in the row that morning with two hundred other pickers, most of them with years of experience, and many of them experts in speed, some one called out, "Look at the American in his bicycle suit!" This was followed by a derisive laugh.

With all of my powers I bent myself to the work. I fairly tore the bushes to pieces, my hands flew like a whirlwind among them. The leading women saw me trying to keep up to them, and they, too, unwilling that a foreigner should come all the way from Chicago to beat them, picked with lightning rapidity. Now it was a race right along together. Fifteen or twenty of us were in the lead. Five of those soon dropped back. Still ten picked furiously in the early morning

light. I did not look up, but kept my eyes on such an angle that I could see the pickers on my left. I was at the extreme right side of the pickers. When I had filled the first basket, a peck of big berries, I was about a yard in advance of all except one woman, a picker whose speed was recognized by every one in all that country around. I could hear her breathe. I hadn't time to take breath at all. When I saw that the race lay between two of us, one an English *woman*, the other, myself, an American *man*, I set my teeth together like a vise, put my mind into every muscle and nerve-center and joint I had in my body, looked for berries, picked them off, pinched them just right the first grab, reached for others, and for others that I had mapped out, just as a corn husker in a race picks out his ears many hills ahead. There was no laughing now at the American. Five of the ten were still trying to regain what they had lost,—about ten feet behind us. A chance miss in the hills might have brought some of them closer to us, but the English, careful in planting strawberries as in doing anything else, allowed no ground to go to waste. Every row was very much like any other row. One hill was about as big as another. If they crawled ahead it would be only because they either missed the berries and would fail to have filled their baskets or had picked them with so many leaves as to be unmarketable.

My second basket was almost full. Never did the big, red strawberries seem so plentiful. My back ached. I hadn't taken a full breath for twenty minutes. When I next looked toward my rival, she was falling a trifle behind. Back over the patch stretched the pickers, for a quarter of a mile. No one else was now within fifty yards of us. I was *winning*,—surely I was winning! The new strength that came by inspiration, with the flag floating above me in my imagination, gave me a little defter hand. My fingers flew like machinery. The second basket was top-over full. I stood up, took a full breath and looked to my left. *She was ten yards behind me*, and her basket was far from being full! Just imagine how that laughed-at American walked down that strawberry patch that morning!

Emptying them I hurried back, but not so fast as

to give the impression that I was hurrying. When the fourth basket was picked the laughed-at American carried it down to the man who measured out and gave tickets for the pickers. A little later that day two hundred pickers, gathering around the berry wagons as they were loading up for London's early market, declared that I had won, that out of all of those experts, the *American* had been the champion picker.

After that incident I was envied by the good pickers, praised by the leisurely-going ones and ridiculed by none.

And now I will tell of three things about my farm experience that would be incredible if told by any one but Roosevelt, Carrie A. Nation and myself:

1. For one week I slept in a horse stable without removing my clothes.

2. For one week I ate cold meals, consisting of dry bread and strawberries, costing me for the entire week only six cents.

For one week I *drank no water*. My food was dry bread. My drink strawberries, two gallons of them each day. When I was thirsty I ate berries. When I was hungry I ate berries, and I ate so many of them at mealtime that my thirst was nil during the working hours in the forenoon, usually, and in the afternoons I managed to hoe the cabbages or weed the onions on the side of the field next to the berry patch!

Around the World without a cent!

#### Chapter VI.

WE worked in the hay field for a week, when any two of the twelve men employed in it ought to have finished it in two or three days! At the end of the week I was paid a little over seven dollars for five and a half days' work. Out of this I saved more than seven dollars, for my total expense had been six cents!

After the strawberries came the raspberries and the cherries, great big, bulging, sweet English cherries like those growing in Maryland. Part of my duty was to guard the trees from folks climbing into them and robbing them, and to climb into them myself, eat what I liked and take the others to my master, who always praised me for my devoted service. When he had sent others to pick the cherries, he said, they

always ate them. I was a marvel to him. I did really bring some to him.

Not allowing me to room in his own house, the farmer gave me the key to the granary where I made my quarters for the three months I worked on the lovely English farm. I used the upper story which was perfectly dry and tolerably clean. One bin I used for my dining hall, another for my bed-room and a third for the bicycle. In fact I had a fourth which I used as a spare-room for visitors and several times it was employed to lodge my guests,—two boys who came to see me about mealtime and sometimes stopped over night.

My meals were cooked on the furnace-fire in a workshop adjoining, or just outside on a little fireplace rudely made out of bricks and some sheet-iron I found lying about. The King lived in his palace, ten miles away. I lived here, *ten miles away, too*. And I was the happier of the two.

Elijah scarcely had easier-gotten food than I, or more or better. I discovered three varieties of edible mushrooms in the meadow nearest my camp. Hither I went every morning, in August and September, gathering a basket full each time. These I cooked with milk and butter. Mushrooms was a constant staple on the table, twice daily, until I tired of them. In the fields I found volunteer potatoes, onions and

Spickler with Fellow Farm Hands in the Hayfield. The Gyrsy in the Center Poured out the Beer which Mr. Spickler Refused to Drink.

other vegetables growing in waste places. My meat consisted of that which cost absolutely nothing, save at times the sharing of a meal with one who helped to procure it for me. The boys around the farm brought me live frogs, the legs of which I fried in butter and batter of flour. At other times the foreman brought me starlings which he had shot in the oats field. One morning while looking for frogs and mushrooms I found a silver shilling, equal to our silver quarter that some one had dropped while looking for the mushrooms. That bought me enough food from the store to keep me another week, and what I earned was all laid by.

From the late strawberries and raspberries I made several quarts of jam. Some of this I sold to others and they flattered me by telling me that it was better than the jam they bought at the stores.

It is so nice to buy at London stores,—when you

have the money! Or anywhere, when you have the cash. The butcher displayed his meats at the front of the shop, outside, hanging it from the top to the bottom. On the many pieces of bacon were the following notices: "Prime Breakfast," "Mild Cured," "Very Best," "Try Me," "Pull Me Up," "All Right," "How's This?" "Fancy Mixed," "Just What You Want," "Nice and Mild." How any hungry man could stand and read all of these appetizing phrases without buying a hunk of the juicy, English cured bacon, I can't see. I always went away with a piece, and it was hard to wait until I had fried it before sampling it.

One rainy evening my supper consisted of four slices of this bacon, a bowl of mushrooms, some stewed onions, fried potatoes and cottage-loaf bread. A little boy, son of one of the sub-foreman on the farm, dropped in and dined with me, sitting by me on the bench covered with dried bulrushes. When retiring-time came he still hung 'round, and I saw he wanted me to ask him to stay all night. I did so, never suspecting that any evil could possibly come of it. I was lonely, and with him as a guest in my palace, it was easier to sleep. But his father, a rough drinking man, who squandered all of his earnings in saloons, had been to London that day and had come home late, very much intoxicated, beating his wife and making a rough house in every possible way. The children knowing what they were to suffer at his hands, ran away from home, the boy coming to my place for shelter from the rain that poured in a great deluge all evening and far into the night.

We had retired at an early hour, my guest-boy in the spare-bed made of straw, gunny-sacks and rushes. I had fallen into my first sleep. What the boy had fallen into I don't know, but I was awakened by most unearthly yells from the outside of the granary.

"Open up your door, you American!" roared a voice with the articulation of one who had been drinking.

I was only half awake as I staggered in the darkness to the door, overturning the table, a pail of water and throwing down the bicycle. "Some one else seeking shelter," I thought, "where will I put him?"

"Who are you?" I asked in a thin, frightened voice.

"Well, if you don't open up that door, I'll show you who I am. Is my boy up there?"

Whew! I knew there was trouble on hand now. That boy! The one I had prayed for when I knelt in my evening prayer, and for the deed of kindness shown him was patting myself on the back,—that boy had run away from his angry father and I had taken him in.

Camping out in a granary had lost some of its joy.

"Yes," I said, "there's a boy here. I suppose he's yours. He came here in the rain and I asked him to stay all night."

"If you don't get that boy out here in ten seconds I'll maul you until you can't walk." He started up the

rickety steps. One of them was broken but he didn't know it. He hadn't been so used to climbing them in the dark as I. He was coming fast. But he stopped when he struck the fourth step from the top. The railing he had been holding to was also rotten, and when his foot went through the hole the railing gave way, leaving him drop through on a pile of big tiling underneath. I suppose he frothed at the mouth, now, he

Camp Used by Mr. Spickler for Three Months on Gibson Farm. Wash Day.

was so mad. I was scared, about as scared as at any time on my whole trip so far, but when he stumbled through the trap I hadn't fixed for him, it made me laugh. Back to the spare-room of the boy I went. "Johnnie, Willie, Sammy, Patrick,—" I called him, any name but his right one, but he made me no answer, except to cry as if his little heart would break. "That's my dad," he choked out, "he'll kill me, and you, too, for keeping me."

The crazy father was coming up the steps the third time. My, he was coming fast. It seemed as if he would get to the door this time, even if there were three steps missing, as he rushed, hammered and swore, calling me names that would be hard to set up in American type. I was about to lock the door. But it was unnecessary. Down spank on the tiling he went the third time, his mouth jabbering a language I never use. From the amount of racket that followed his fall I knew that he had turned his wrath, now the fury of a volcano, upon the tiling, the lumber of the gran-

ary and anything he could lay hold upon.

I was afterwards blamed for maliciously breaking some valuable tiling, which I denied having done.

I do not think I shall ever feel that my wish for that cruel father was anything but an inspired one. I wished that in his fit of drunker anger his heart had stopped, and that the little boy with too much fear in his life to grow up into usefulness while in the company of such a guardian, might have a chance to achieve his destiny.

When he got hold of the little lad he began to pound him most unmercifully. As I was a foreigner and away from home, unacquainted with the customs, I was not sure whether I should have restrained the father, or not, for the boy might have been a shirker and insubordinate in the home.

Knowing what I know of American customs, any similar incident on American soil would be treated differently by me. I would defend the boy, a guest in my own dwelling, at the cost of my own life.

#### WINNING FAVOR.

MARTHA SHEPARD LIPPINCOTT.

If a man's favor you would win,  
These things always keep in mind:  
True and honest, ever be,  
Let none, falseness in you, find;  
Make no promises you know  
You perhaps, may not fulfill,  
Or it will, then, very soon,  
Your good reputation kill.

He who, lacking, is in truth  
And sincerity, will find  
That the world will, to his faults,  
Not be always seeming blind;  
But will turn away from him,  
Seeking friends that are more true,  
And when he is left alone,  
Then, his course, he'll sadly rue.

Moorestown, New Jersey.

## CURRENT COMMENTS

Taft, Secretary of Peace, is reported to be accomplishing successfully his mission of reconciliation in Panama. As a result of his visit, it is expected that new treaties will be drawn up between Colombia, Panama, and the United States. Panama may consent to relieve Colombia of a fair portion of its national debt, a proposition which seems just enough.

Governor Johnson has a new argument for tariff reform. Says he: "The problem of the future is the government of America by Americans. In the working out of this problem I believe we must obliterate the imaginary line between the United States of America and the Canadian States of America. I can see no reason for the division. I believe that the flag bearing the stars and stripes

must finally float from Bering Sea to the Gulf of Mexico. If the products of the business men of Detroit went free and unhampered into Canada perhaps the flag would follow them into that country." If Governor Johnson had talked after this strain a generation ago he would have met more cordial response from Canada than he will today.

Winston Spencer Churchill, the new President of the Board of Trade in the Asquith ministry, who in accordance with the English system had to seek a new election on his appointment to the Cabinet, and was defeated for reelection some time ago in his old district in Manchester, was successful recently in Dundee. He received the smallest Liberal vote in twenty years, but had 2,709 votes more than the Unionist candidate. Both the Liberal and the Laborite vote fell off over two thousand from the figures of the last election. The Laborite had been expected to be Mr. Churchill's nearest rival. The vote in the election was: Churchill, Liberal 7,079; Baxter, Unionist 4,376; Stuart, Labor 4,014; Prohibitionist candidate, 655.

#### About Microscopes.

The most powerful microscope shows objects about one hundred-thousandth of an inch in size, but the ultra-microscope of Seidentoph and Fsigmondy has revealed particles not more than one five-millionth of an inch in diameter, and Dr. Bechhold declares that with stronger illumination—such as more powerful sunlight on Mount Kilimanjaro in Africa—we could unquestionably see molecules. This German experimenter has been investigating the extremely minute in another way. By impregnating paper and fabrics with gelatine in a vacuum, he has made an ultra-filter, varying its fineness by using different concentrations of jelly, and producing a medium apparatus with maximum pores of less than one-one million two hundred and fifty thousandth of an inch. This just separated from blood the hemoglobin, or red coloring matter, and in the serum albumen. The finest filters extract particles too small to be shown in the ultra-microscope, and smaller than the largest molecules, and it is believed that they will be useful for eliminating disease germs, like those of smallpox, rabies and yellow fever.

#### Woman's Suffrage in Australia.

In New South Wales women had the vote only since August, 1902, and in less than four years they have won reforms which the voteless women of Victoria have asked for for fifteen years, and are still asking for in vain. These reforms deal one and all with the purification of the home. This cannot be insisted upon too often and too earnestly. They deal with the protection of child-life in more than one way; by the establishment of a children's court; by an Habitual Criminal Act; by the licensing of juvenile street vendors; by the prohibition of the sale of intoxicating drinks and indecent literature to the children; by the legitimization of children on the marriage of parents, thus giving them a fairer start in life, and remedying, as far as it lies in the power of the State to do so, the wrong done them by their parents; by the raising of the "age of consent" to seventeen years; and by other reforms which it would take too long to enumerate, but which include the limiting of the hours of child-labor, and an improvement in the conditions under which they work. "The home" is safeguarded, exalted and made more real in every way in which State interference can make such an improvement possible. And the improvement is even greater indirectly than it can be made by direct legislation, because of the ideals aimed at.

### No Currency Legislation.

The one issue, perhaps above all others, on which the country last fall looked to Congress for relief, has been passed over and no relief offered. When the financial storm descended, out of a clear sky, as it were, for there was no cause in nature to which it could be traced, every one fell upon our currency system and predicted that it would receive early consideration at the hands of our lawmakers. A bill, looking to the improvement of the situation, was given attention to the extent that, with some changes, it was passed in the upper branch, but now it is believed by some that many congressmen were never serious in their intentions to give even temporary relief to the situation in this session. The reason given for the failure to enact any law at this time is that the "difference of views between the two houses is too pronounced to permit of any possibility of getting together. The House, it is declared, has shown beyond the shadow of doubt that it will not, under any circumstances, accept the Aldrich idea of a bond-secured currency based on other than government issues. And the Senate, it is declared with equal emphasis, will not accept a measure that will be a recognition of the asset-currency idea and of the clearing house principle of providing circulation. The only crumb of comfort offered the country is a bill providing for a commission which is to report next year." Has the action of these lawmakers (?) left us with any patience?

### A Welcome Legal Decision.

Judge Essex, of the District Court, Pueblo, Colo., recently rendered the following opinion in the case of Maria Cardillo, a professional nurse, charged by the medical trust with practicing medicine in violation of law:

"If the contention of the State is sound, that a professional nurse or other person cannot give anything to alleviate distress or suffering without being liable to be deemed to be engaged in the practice of medicine, then these is not a nurse within the State of Colorado who would not be caught by the law; for even if she handed the sufferer a glass of lemonade she would be declared to have violated the law regulating the practice of medicine, in having alleviated distress and suffering. There is no law in this or any other State that requires the citizen to call a physician. The citizen is at perfect liberty to totally dispense with all medical treatment if he or she chooses. The law never contemplated that the citizen must call in a physician. Were that the law, it would speedily be declared an invasion of the Constitutional rights of the individual. The law was passed to protect the people from the charlatan and quack, in the administration of drugs and medicines."

At the conclusion, the judge ordered the discharge of the defendant, and declared that the giving of common household remedies cannot and must not be construed by the medical trust as administering medicines under the provisions of the law.

### Old-Age Pensions in Great Britain.

In his outline of the budget for the next year, Premier Asquith put before the country the Government's plan for old-age pensions, one of the principal planks of the Liberal program. The provision is for pensions of \$1.25 weekly for all persons more than seventy, who have not an income of more than \$2.50 a week, excepting criminals, lunatics and paupers. The maximum number of pensioners under these provisions is not likely to exceed 500,000 and the cost must not exceed \$30,000,000 in any

one year. Married couples are to have \$1.80 weekly between them. The expense for pensions will be defrayed from the national treasury, not from the local rates. The scheme would not go into operation until January 1, 1909. The plan thoroughly pleases the moderate Liberals, but the Radicals and Socialists are disappointed that it goes no further. They would like to have seen the age limit put at sixty-five, for in the cities few laborers live to be seventy, the average age at death being, in fact, under sixty. Consequently the present bill would chiefly aid rural workers. The Conservatives, of course, criticize the bill, taking the ground that the Liberals are saddling the country with an expense which, as it grows, can only be met by a tariff. Mr. Asquith, in his speech introducing the measure, declared that it was perfectly possible to carry out the scheme without departing a hair's breadth from the present fiscal policy; he would not buy even this boon at the cost of free trade. Both parties are committed to the old-age pension policy. In regard to other matters of British finance, the Government's surplus for the past fiscal year was \$23,630,000. Last year the national debt was reduced \$90,000,000. In the current year the Government plans to reduce it \$75,000,000. The expenses for next year are put at \$764,345,000, the revenue at \$788,850,00.

### The Afghan Trouble.

Twenty thousand Afghan troops have made a raid upon Landi Kotal, at the end of the Khyber Pass, on British territory near the Afghan border. The raiders were repelled and England has a brigade of infantry, a squadron of cavalry, and eight guns, under command of Major General Sir James Millocks ready to force the Amir to give satisfaction. The fighting threatens to be severe. The news from Afghanistan was serious enough to make British consuls in a single day drop a point on the London Exchange, a decline which has not been equaled in any recent political crisis. The origin of the trouble is obscure. By the recent arrangement between Russia and Great Britain in regard to the Middle East, Afghanistan was placed within the British sphere of influence, without any reference to the Amir, who has not yet signed the agreement, although it has been forwarded to him. One explanation of the attack on British territory is that the Amir's brother, Nasirullah Khan, is responsible for it, trying to make trouble for Habibullah Khan, the Amir, as a preliminary to seizing the throne. The brother is said to have recently assumed an air of holiness, even going so far as to put on the robes of a mollah, or priest. That sounds plausible, since one cause of the Amir's unpopularity has been his supposed indifference to the religion of his people. Another explanation is that Habibullah Khan himself is preparing to make war with his old friends, the English, merely to mollify his own people, and to convince them that he is in sympathy with them and their religion. The Afghans are a troublesome, warlike people. Three times they have fought the English, and although the English regard themselves as having defeated the Afghans each time, the Afghans look at it in a different light. "Yes," they say, "we were beaten in two or three battles, but the English had to leave finally," all of which is a fact. The British border penetrates into the mountains somewhat, so that the Mohmands, who are the chief raiders, are half in British and half in Afghan territory. The existing arrangement was made by Sir Henry Mortimer Durand in 1895 against the protest of the Amir, who prophesied that it would lead to trouble.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## HURTING OUR REPUTATIONS.

ALL along we have included in the training of our youth the importance of character-building,—the fundamental nature of one's character and its influence and power when all other things fail. In doing this we have generally held up in opposition to it the superficial nature of one's reputation.

This is all very well for the teaching part, but it would seem that reputation has not lost any of its reputation for importance, for all this teaching, if one is to judge by the care with which it is guarded. Whether this is due to a lack of examples back of the precept, or whether it is simply the cropping out of the instinct of self-preservation, we cannot say.

To be sure, one ought to show a reasonable degree of concern for his reputation. One's influence is so dependent on his reputation that he must give it some thought for that reason alone. But however one's reputation may be endangered, there is no excuse for refusing to take a decided stand for the right when that is the point at issue. The present is the only time we can call our own, and he must be branded a coward and a traitor to duty who fails to take the side of right in the issues of the present for fear he may hurt his influence for some possible future good.

Any of us can call to mind men in the political field who are afraid to express their convictions on certain questions because it would hurt their reputations with certain classes. But we know the cowards of this class are not confined to the political field.

## THE ARTS AND CRAFTS.

FOR a long time the world in general has held to a mistaken idea in regard to the place manual labor should hold in the works of man. So much emphasis has been laid on the importance of mental effort and so much honor given to the one who devoted himself to such tasks that the two kinds of labor have in most

cases been literally divorced, with the result that in practice manual labor has really come to be the part of the menial.

While this arrangement has seemed to have many advantages from a money-making standpoint, it has probably been the greatest influence in giving to productions their common, unattractive appearance and in bringing about the present ill feeling and misunderstanding between the workers in the two lines.

The right way is that in which manual and mental labor are as closely associated in fact as they are in nature,—when their combined efforts stamp the finished product with the mark of individuality. In this way only can we have real art, and in this way only will the work, now looked upon as drudgery, reveal the artistic element. There is a movement at present, called the Arts and Crafts Movement, which has for its object the working out of this idea. It is spreading rapidly and promises to bring about some beneficial changes in the productions of skilled labor. An article in the *Review of Reviews* for May has this to say of the results of the movement:

"The paramount influence of the arts and crafts is toward a refining culture. He who works with the hand or the tool learns to value simplicity and sincerity and to hate tawdry, superfluous and meaningless ornament. The growth of this culture is worth considering.

"We may first remark that reverse to the law of physical evolution, which is from the simple to the complex, is the arts and crafts evolution, which is from the complex to the simple. At the outset the worker wishes to cover his surface with elaborate pictures or ornaments. By degrees he simplifies his pictures into decorations, his ornaments into patterns, and then becomes enamored of beautiful form and correct construction only.

"Educational organization is by no means perfect in every State, but throughout Massachusetts and many of the large western cities a carefully considered curriculum gives training to the children from the primary grades up. In Minneapolis the school children in the very lowest grades model in clay simple vases and bowls, which are afterward fired for them at a cost of but a few cents apiece in a kiln owned by one of the art clubs; and if the child wishes to pay this small amount he may take home his work, which at the club has been dipped in a 'slip' that after firing results in a glaze of soft color tone. The education of the child's taste by this color tone awakens his appreciation of chromatic effects, just as the modeling awakens his appreciation of form; and the vase or bowl made by the child and taken home and kept on the mantelpiece, where it is no doubt discussed by the family and by visitors, becomes an unfailing advocate in favor of the broader culture of the coming American people.

"The arts and crafts taste has influenced the manufacturers, though not to so great an extent in this country as in Germany. One today may buy so-called 'mission furniture' and textiles decorated in simple patterns in the shops, which, while lacking in the true arts and crafts quality of sincerity, are simple in construction, and do much to direct the attention of the public to the charm of the virtue of simplicity in the decorative arts."

### VACATION TIME.

THE swift wings of time have again brought us to that season when the busy toiler seeks a respite from the duties that have demanded his attention all the year. There are numberless ways of spending a vacation, but all do not offer equal benefits to all. First, we should know just what we need in the way of recreation and then we should employ vacation time in a way that will meet that need. In other words, we should put ourselves in the way of being better fitted for our work at the end of our vacation than we were before.

### LESSONS IN ESPERANTO.—No. 5.

*Prepositions.* The complement of prepositions in Esperanto are in the nominative case and not the objective as in English.

Li kuris al ni, he ran to us.

La birdo estas en la arbo, the bird is in the tree.

Every preposition except "je" has a fixed and definite meaning. The pupil, then, should learn the prepositions carefully and use the one which expresses clearly the idea he wishes to express.

If he is undecided as to what preposition to use, if the choice is not definite from the sense of the phrase, then use the preposition "je," as that is the only one in the language whose meaning is not clearly defined. An alternative is given, namely, omit the preposition and use the objective case.

"Ŝi ĝojas je tio," or Ŝi ĝojas tion, she rejoices at (over) that. Li ploras je via malrespekto, or Li ploras vian malrespekton. He weeps at your rudeness.

#### LIST OF THE MOST COMMON PREPOSITIONS.

Al, to, toward (where one goes).

Anstataŭ, instead of.

Antaŭ, in front of, before.

Apud, near.

Ĉe, at.

Ĉirkaŭ, about, around.

Da, of (in reference to weight, quantity or measure).

De, of, from, by.

Dum, during.

Ekster, outside.

El, out of, from among.

En, in.

Ĝis, until, as far as.

Inter, between, among.

Kontraŭ, opposite, against.

Krom, besides, except.

Kun, with.

Laŭ, according to.

Malgraŭ, in spite of.

Per, by means of.

Po, at the rate of.

Por, for, on account of.

Post, behind.

Preter, beside, beyond.

Pri, about, concerning.

Pro, because of.

Sen, without.

Super, over, above.

Sur, on, upon.

Tra, through.

Trans, across, beyond.

### VOCABULARY.

Gardeno, garden.

Iri, to go.

Tiu, that one.

Ĉi, the nearest.

Tiu ĉi, this one.

Morti, to die.

Monato, month.

Sed, but.

Pano, bread.

Freŝa, fresh.

Agrabla, agreeable.

Honora, honor.

Danki, to thank.

Prezenti, to present.

Saluto, salutation.

Sincera, sincere.

Flugi, to fly.

Birdo, bird.

Avo, grandfather.

Nun, now.

### EXERCISE 11.

Du ruĝa pomoj estas sur la tablo. Mi vidas grandan hundon en la ĝardeno. Ŝi estas en la ĉambro kun la onklino. La domo de la onklo estas granda. Ĉu vi trinkos akvon? Kiu estas tie? Mi volas vidi la novajn pentraĵojn. Ĉu vi min konas? Tiu ĉi pano estas freŝa sed tiu estas pli freŝa. Mi ne havas la honoron lin koni. Mi dankas vin, kaj prezentas al vi miajn sincerajn salutojn. Li trovos la duan libron sur la seĝo en la ĉambro. La kanto de la birdo estas agrabla. Mi venas de la avo kaj mi iras nun al la onklino.

### EXERCISE 12.

Composition: Where are you? I am in the house. Good morning. Are you well? I am well. Have you money? I have four cents. Do you wish an apple? Yes, I wish six apples. Who is in the house? My sister is in the house and my brother is in the field. How much does this rug cost? It costs twenty-four dollars. What do you want (need)? I want two lamps. Do you have a mother? I have no mother. My mother is dead. Have you a father? Yes, I have a father. I have one sister and five brothers. My family is sick. The uncle is poor. Good books are good friends. I will buy tea, coffee, cream and sugar. What do you wish (want)?

ALLAN EISENBISE.

16 S. State St., Elgin, Ill.

## FOOD PRINCIPLES

**LENNA FRANCES COOPER, Principal School of Hygiene and Cooking, Battle Creek Sanitarium**

HAVE you ever noticed the difference in the amount of heat produced by different fuels? There is as much difference in "body fuels" or heat-producing foods as there is in the fuels which we use in our stoves. It has been demonstrated beyond a doubt that fats are the greatest heat-producing foods we have, an ounce of fat producing 264 calories or heat units while an ounce of either starch, sugar or protein produces only 116 calories, the fat producing almost two and one-fourth times as much heat as any of the other food principles. This is why the Esquimaux and other people of the far North, intuitively use so much blubber and other fatty foods, though of course it is partly due to necessity since nature has not been so very gracious in supplying any great variety.

This fact should also be borne in mind by the housewife. When the thermometer stands high and it is next to impossible under the most favorable conditions to "keep cool" then surely it is time for the cook to be sparing with this greatest of heat producers.

The summer dietary should be quite different from the winter. Fresh fruits and vegetables should be used freely. Of course, fats should appear to some extent in the summer dietary. They may be used for seasonings, etc., but *avoid frying*. It is no doubt the most unwholesome way of preparing foods.

A most palatable and attractive combination of fats and vegetables is the salad. It is both refreshing and appetizing. Some one has said that the salad ought to appear on the menu three hundred and sixty-five times in the year and I think they are right.

The salad consists of two parts: viz, the body which gives the name to the salad, and the dressing.

The body may consist of fresh or cooked vegetables, fresh fruits or heavier proteid dishes such as eggs, meats, etc.

The dressing usually consists of an acid, either lemon juice or vinegar, a fat and frequently a binding substance such as egg or cornstarch.

Of the acids the lemon juice is to be preferred, as it is a natural acid while the acetic acid of the vinegar is the product of fermentation.

The fat may be either olive oil or butter though there are dressings made without fats. These are usually for the fruit salads.

A heavy salad such as the meat or nut salads with a heavy dressing such as the Raw Mayonnaise should not be served with a heavy meal. They may be served with a light meal but the lighter salads are much more preferable.

### Fruit Salad.

1 medium-sized pineapple, 3 oranges,  
3 bananas.

Pare the fruit and cut in small cubes as nearly as possible and pour over it the following dressing and let stand on ice a half hour or more before serving.

### Golden Dressing (for fruit salads).

2 eggs,  
¼ cup orange, pineapple or other light-colored fruit juice,  
¼ cup sugar,  
¼ cup lemon juice.

Beat the eggs till light, add the fruit juice, lemon juice and sugar. Stir constantly in a double boiler until it thickens. Cool as quickly as possible and when cold pour over the prepared fruits.

### Tomato With Cooked Mayonnaise.

Take nice, plump, ripe tomatoes. Pare from the stem end down around the tomato, remove the stem end, and cut down through the center of the tomato almost to the other side and again crosswise, so that the tomato will open up like the petals of a flower. Place on a lettuce leaf and pour into the center or at one side some of the

### Cooked Mayonnaise Dressing.

2 eggs, ¼ cup olive oil or butter,  
¼ cup lemon juice, ¼ cup water.  
½ teaspoonful salt.

Beat the eggs, add the salt, lemon juice, water and lastly the oil or butter. Cook in a double boiler until it begins to thicken, stirring meanwhile. As soon as it will mask the back of a spoon, remove from the fire at once and place in cold water. Should it cook too long and become curdled, set in cold water at once and beat vigorously with a Dover egg-beater. If the

dressing is desired more acid use less water and more lemon juice.

This makes a nice dressing for almost any vegetable salad.

#### Cabbage Salad.

Select a small, firm head of cabbage and shred very finely. Let stand in very cold water for an hour or more then dry between towels. Mix with the following:

#### Cream Dressing.

|                                                |                           |
|------------------------------------------------|---------------------------|
| 1 cup sour cream,                              | 1 scant tablespoon sugar, |
| $\frac{1}{8}$ - $\frac{1}{4}$ cup lemon juice, | 1 teaspoon salt.          |
| $\frac{1}{4}$ teaspoon celery salt.            |                           |

Beat the cream until smooth then gradually add the lemon juice beating meanwhile, then add the other seasonings.

Sweet cream may be used if sour cream is not obtainable.

### THE HOUSE OF REPOSE.

ADALINE HOHF BEERY.

THIS is an age of nerves. In the days of the stage-coach, people had leisure to breathe, eat three meals, and sleep soundly during the dark-time. But the modern "limited" seems to have scattered its infection into human activities all along the line. There is indigestion, insomnia, impatience, prostration. The only relief is to get out of the swirl.

Go into the front door of your house and sit down in the parlor, in the most comfortable chair. Don't lift up your eyebrows in astonished protest. It's *your* parlor, and you have the best right to enjoy it. Now about the enjoying. The first requisite for a case of fidgets, either of body or mind, is reposeful environment. As you lean back on the cushions, and let your eyes wander about the room, they should not be distracted by a heterogeneous collection of ornaments on the walls, mantels, and tables.

There is a notion abroad that the more decorations you can put in a house, the more beautiful it will be. I have been in parlors where every corner, and the center table, too, was so ornamented that one could scarcely turn around without fear of knocking something over. There were chromos, dried grasses, wax flowers, tiny gilded rolling-pins, fans, conchs, geological specimens, unusual vases, miniature kettles, and china dishes. Each of these things has its place, probably, but such a conglomeration in a parlor is a violation of the law of beauty, as well as the law of rest.

The foundation of beautiful repose in the parlor is the walls. They should be of a quiet color, either solid or with delicate tracery, suggestive of refinement; not brick-red or grass-green, with massive designs and stripes. If there is a time when one feels the dignity of elegance, it is when he is in the parlor; then let the elegance *be* dignified. I want to be sure you do not misapprehend me. "Dignified" means "made

worthy." Worthy to be the company of a soul taking leisure.

Be sparing with the pictures. Hang, not too high, and without tilting, two or three good-sized copies of noted etchings or paintings, if you cannot afford originals. One or two groups of smaller pictures or photographs may be allowed. There are such beautiful half-tones in some of the magazines nowadays, especially outdoor scenes, and one can mount them himself and frame them with passepartout. The effect is refined.

If you have stereoscopes, shells, photograph albums, dishes, and other trinkets that have been given to you, and you would like for people to see, better keep them in a cabinet, with the glass door shut. You will then also have gotten rid of another bug-bear—dust. Do not buy chairs for looks, but for comfort. If you can combine elegance and comfort in the same, so much the better. Have a good, big sofa, with lots of cushions—not your fancy things that daren't be touched, but fat, serviceable fellows that can be banged around to your back's content.

If you are a woman, sitting in the parlor for rest, you will miss it if your eye happens to light on the bric-a-brac on the shelf, and you recall that the dust-cloth has not touched it for three weeks. And the curtains: if you cannot afford such as the merchant's wife has, inside her plate-glass window, a swiss muslin is daintier than a cheap, loud pattern in lace. Let the figures in the carpet correspond to the size of the room. Keep the piano cleared of all but the cover, and a photograph or two. It is better for the tone of the instrument, and for the tone of your nerves.

The keynote of the furnishings should be simplicity. This does not mean shoddiness; they may be as costly as your purse and your conscience will permit. But you will not find the bodies and the homes of the genuine aristocracy over-adorned with tinsel. I like to think of the derivation of the word "aristocrat." It comes from the Greek superlative, "aristos," meaning "best," and "kratos," meaning "strength." The best people are the strength of society, they are the rulers, they set the example. And if they are satisfied with simple refinement, why should the "vulgus," the common people make their parlors a museum? For we are always aping our betters, anyhow.

Let broad daylight stream in at the windows (never mind if the shades are an inch of two above the regular height), and let bushels of fresh air in every day. When you have oxygen to breathe, and growing things to smell, you are more inclined to repose than when you stagnate on carbonic acid gas and the odor of imprisoned upholstery. When you have gone to the expense of putting your nicest things in the parlor, do not shut it up like a dungeon and turn over the enjoyment of it to the mice and the moth.

(Continued Next Week.)

**THE GARDEN SONG.**

JENNIE TAYLOR.

Out in the garden  
 Are lily bells ringing,  
 Up in the tree-top  
 The robin is singing,  
 Under the blue sky  
 The green leaves are swinging  
 Lightly, merrily, gay.

Close to the gray wall  
 The wood-bine is clinging,  
 Out in the sunshine  
 Fresh flowers are springing,  
 Many good things  
 Are the happy days bringing  
 All in their own glad way.

Tipton, Iowa.

**MOTHERS AND DAUGHTERS.**

WE are told that mothers should keep the confidence of their young daughters in order to hold them, and train them away from evil. If it were possible to do so, it is best; it is one of the surest ways in which the mother can guide them into the "straight and narrow path." But it is not always possible. There are mothers and mothers, just as there are daughters and daughters. The girl who confides in mother in all things, asking and accepting her advice, would scarcely go astray, even if she had no mother, for her instinctive leanings toward the moral would keep her close to the line of safety. But the girl who refuses to acknowledge her mother's better judgment is the one who goes down the primrose path, not because of her disregard for her mother's advice, but because her natural tendencies lead her into forbidden ways. Mothers are not all so constituted that their daughters may confide in them, or feel free to do so. Their natures may not be sympathetic; some women repel confidences, even the while they long for the sweet companionship of their young. They have not the tact, or ability to win the confidence, though they may hold the love, and often from the tiniest mistake, or failure to sympathize in just the most tactful way, or the lack of the right expression of that sympathy, the world creeps in between; the rift widens gradually, until they find themselves drifted apart so widely that even love cannot again draw them into companionship. Not all women are fit to be mothers, or, being mothers in the sense of having borne their children, are not fitted by nature to act the higher, tenderer part.—*The Commoner.*

**LITTLE MOTHER HINTS.**

A CHILD should be so thoroughly imbued with the idea of hospitality that it will be a habit, not a something reserved for special occasions.

Food eaten without an appetite usually does more harm than good. If a child refuses food, he should

not be urged; the cause should be found and corrected.

A noted physician has said that up to the fifteenth year a child attending school should have at least nine hours sleep in summer and nine and one-half in winter; and the overtaking of the mind and nervous system of the girl at the age when she enters womanhood should be carefully avoided.

Children who are taught to say "good night" to one another are likely to be better friends during the day. This practice is sometimes omitted, even in families where children are careful to say "good night" to their parents. It has been suggested that if children were taught the meaning of the phrase "Good night to you," they would appreciate its value, and it would come more readily to their lips. "God" and "good" have the same root, and "Good night to you" is "God guard the night to you."—*Selected.*

**FLY POISONS.**

STRONG, green tea, well sweetened, is recommended as fly poison. Also, a tea made of quassia, one pint; brown sugar, four ounces; ground pepper, two ounces. Mix together well and put in small shallow dishes. Set these about the living rooms. These preparations have the advantage of not being poisonous to any creatures except flies.

**MENDING BROKEN CHINA.**

NOT many of our readers may know that broken china or earthen dishes may be permanently mended if the parts are tied securely together with strong wrapping cord as soon as broken or before the spaces have become wet or dust covered, then immersed in a pan of sweet milk and boiled a few hours. The dish may then be removed from the pan, cooled, washed and the broken place will never be noticed.

---

## *The Children's Corner*

---

**A CHILD'S WISH.**

If I were a bird, I'd fly away  
 Where smoke and cinders never stay,  
 Where all the fields are fresh and fair,  
 And clover scent is in the air;

Where robins twitter night and morn,  
 And swallows flutter through the corn,  
 And round the honeysuckle thatch,  
 The rainbow's low enough to catch.

If I were a bird, I'd float and fly  
 Until my grandma's house I'd spy;  
 I'd run along the garden walks,  
 And gather phlox and four-o'clocks;

And sit beneath the cherry trees,  
 Where comes the cooling summer breeze,  
 And eat my luncheon in the shade,  
 With lots of lovely lemonade.

If I were a bird, I'd sing and soar  
 Until I stood at heaven's door,  
 And ask the angels to look down  
 On all the boys and girls in town;  
 And take them from the dust and din,  
 To where the sun peeps kindly in,  
 Through leafy aisles and bowers gay,  
 And love holds happy holiday.

#### A LETTER FROM AFRICA.

*Dear Boys and Girls:—*

CHILDREN always like to hear about other children. They enjoy just as well the stories of children of other lands. These African children never tire of hearing what American children do and say. For this reason I have thot to tell you what I can of these children of Africa. That you may get the most about them I must begin at the first, for who does not love to hear about babies?

They are not black, but of a rich brown chocolate color,—regular chocolate drops. Sometimes you would think they were red, for their mothers love to rub the little bodies all over with fat, then rub on red dirt, hair and all. They say it keeps them warm. As you look at a number of little dark bodies like these sprawling around on the ground, playing games with the grass and stones and tumbling over one another like so many little puppies, you cannot help laughing and saying under your breath, "What delightful little animals." But this is not the truth. The real truth is hidden, for there is present the beginning of a higher life. It is this that make the child life so interesting, for this unexpected nature is ever appearing in the most unexpected way and at the most unexpected moment.

What would you think if you had no birthday occasions? You children look forward many days till it shall be your birthday. These children have but one birthday in a lifetime and of course as that is the first they cannot remember that. These people have no way of reckoning the year, much less the day, so how are they to know? One can sometimes judge the age by the name as often the names are given from some event and should you know the event, you would know the age. We think of our birthdays with joy. Their one is one of sorrow and plenty of it, beginning on the first day, as you shall see. No dainty clothes awaits its arrival, for it needs no clothes for four or five years and then only a blanket. Even the Christian mothers who dress their babies have no clothes waiting for them, for they say, "How do we know that there will be a person arriving?"

In olden times as soon as a baby was born, some dirt was scraped from the father's arm and mixed with special medicines. This was made to smoulder and the baby was "washed" in the smoke. This ceremony was very important, for it was said that then the child

received its "itongo" or ancestral spirit. This medicine, they thought, made its skull strong, made him strong and full of courage. Then a mixture of the powdered whiskers of a leopard, the skin of a lizard, which loves heat, and the claws of a lion and some other things were added. The quality of the animal gave the same quality to the child. Then the baby and the medicine were put under a blanket, the medicine smouldering and the baby breathing the smoke. Some of the mixture was also mixed with the food.

Mother and Son.

The people say that if this custom is neglected on the first day, the child is hindered in success all its life. It will be a silly, lazy person, never free from trouble. They declare that the children of Christian natives are soft, flabby creatures who are unfortunate and helpless all their lives, because they have left this custom.

As soon as this doctoring is over, the little children of the kraal may see the baby. They bring it their toys, which are but homemade, such as cob dolls, clay oxen, pretty stones and sticks, feeling that nothing is too good for the baby. They are as happy as our little American children are over a new baby, each wanting to take a turn at holding it. They admire its dainty toes and fingers and show unbounded delight. Its hair is very soft and the curls are much larger than the tight kinks of later years.

More customs follow which the baby does not like.

A horn of medicine has long been waiting for it, carefully laid up in the hut. The women proceed to make a cut in the skin of both baby and mother. Sometimes the cut is made in the forehead; sometimes on the chest or over the heart, then they rub the medicine in. This drives away evil influences. Then the mother gets strong-smelling wood and burns it in the house. Bad spirits do not like it and go away. They hold the baby over the smoke until it cries. This is the bad spirit leaving the child. They do this daily for several days. The door is closed and the mother sings a sort of chant. This is done every day for several weeks then it is done only once in eight weeks until the child has its second teeth, then they think the child can care for itself.

If the baby is the child of a chief, a great many more ceremonies have to be gone through with. It seems hard but somehow they seem to survive the treatment and grow up a healthy people.

Some tribes kill an ox and have a great feast on the day of the child's birth. You never hear of any unwelcome babies here. Some have the feast on the seventh day when it has a better hold on life. The Zulus have a feast for the eldest son. If the first is a girl, no feast is made, for they say, "Why should we kill an ox for a girl? She is only a weed." At the feast there is a gall bladder ceremony. The father takes the gall bladder and lets a little of it trickle on the baby's right foot, leg, trunk and head. Then lets it trickle on his own right foot and the right foot of his brothers if they are present. This secures the good will of the ancestors.

When the father finishes the ceremony of the bile he gives the meat to the friends and a general feast takes place. When the meat has all been eaten, the doctor takes a great washing medicine and sprinkles all the people, the huts, the cattle and the cattle kraal. Then a sweet-smelling flower is made up into a sort of cake, powdered, and that mixed with water and the people anoint themselves. A sort of rose-water.

Now the baby is ready to appear in public, for all the evil influences surrounding its birth have been driven away. However, no one can go near it except the little children and old women until a charm is hung about its neck. This consists of roots cut nicely and strung on a string. (They make their own string from grass.) Should any danger approach, or a snake bite be given it, the child nibbles at the charm as the first thing to ward off sickness or death.

The names of the people are very interesting. Sometimes they are named after friends, but more often after current events, days of the week, weather, some striking appearance of the child or the character it is or they hope it to be. Should a child be born in wet weather, it is called "Rain" or windy weather it is called "Wind." Perhaps it has been a season when locusts were very destructive, it would be called "Lo-

cust." Should there be a big storm or the overflowing of the river at that time it would be named accordingly. If the husband and wife had been quarreling the child would be named "Thrown away." If great sorrows in the family it would be named "Tear." If friends had slighted them, then, "Forget me." A few other names when translated would mean, "What have I done?" "When I am dead we shall see," "Family quarrel," "Outside," "What have I eaten?" and numberless other names similar. One evangelist's name is "Behind the house" and his wife's is "With a gun." Sometimes they give a child a bad name to ward off a spell which may have come upon the house, as the death of several children in succession. "Tail of a dog" might have the proper effect.

I have not told you all the ceremonies and beliefs concerning the baby. It would take too long, but I will write you one more letter on these little "chocolate drops," as some one has cutely styled them. They are well worth the labor and study put upon them and when you have become better acquainted with them, you will know better how to pray for them, for we want to win them for Jesus and we feel that he meant them too, when he said, "Of such is the kingdom of heaven."

Yours in His glad service,  
NELLIE REED.

*FairView, M. S.*

*Umzumbi Rail, Natal, S. Africa.*

## For SUNDAY READING

### IS IT WORTH WHILE?

MARY C. STONER.

Have you seen the toiling pilgrim,  
Bowling 'neath his load of care,  
With the joy of heaven's pardon  
Uttered forth in words of prayer?

Have you heard the weary sufferer,  
On the couch of cruel pain,  
Sing the song of trust and gladness  
While the trials still remain?

Have you seen the one forsaken  
By his Father, Mother, friend,  
Still upheld by sweet communion  
Firm, unfaltering to the end?

Is there joy to crown life's myst'ry,  
Is there sure and safe defense,  
Does the burdens, pain or sorrow,  
Find a welcome recompense?

Can the faith that views the promise,  
And the love for God who gives,  
Make the heart endure each trial  
For the hope that ever lives?

Ah, above the earthly strivings  
Is the Christian's claim secure,  
For the soul that knows its Savior  
Can each sadness great endure.

For within the soul the message  
Borne to cheer each loyal heart,  
Voices from the holy stillness  
Make each earth-born woe depart.

And beyond these chains and fetters,  
At the Master's feet laid down,  
Is the blessed life of fulness,  
Is the victor's golden crown.

North Manchester, Ind.

### A PERSONAL LETTER.

IRA FRANTZ.

BOSTON, MASS., MAY 3, 1908.

MR. O. B. STRONG,

WHEREVER-YOU-HAPPEN-TO-BE.

*My Dear Sir:*—Tonight, with the help of the Spirit of God, I am writing a few thots for you to consider at some future time when Satan comes to you to beguile you into your besetting sin. Only this morning he came to me and I fell. I have just been guilty of the sin you are now about to commit, and as I write these lines I am experiencing the after-regrets. How I wish I had fought him off! So now listen to me and be reasonable, please.

You know you don't want to yield this time. You know you are always so much happier when you overcome temptation. So I ask you to put forth an effort to overcome this time. Get down on your knees and pray. Fight this battle on your knees. Oh, I know the temptation is strong and under it you think you don't care to be delivered. You don't feel like praying, I know you don't. I have just been there. I know how you feel. But if you don't pray and fight now you will wish you had. You are going to ruin at this rate! If you yield this time you will feel still less like fighting next time. So now you collect that will power of yours and *pray*. If it's hard to do, that's only the more reason why you should do it. Remember the little boy splitting wood who, when he got hold of an especially knotty stick, split it all into kindling just to show himself that he could do it. Now you are tempted, and it's no trifling affair either. I'll admit. But right here is your chance to develop strength and manhood. So ask God to help you.

Mr. Strong, think how utterly inconsistent it is for you to commit this sin. You—a Christian! You—who have died to sin! You sin? Shall a dead man kick out of his coffin? That is just what this old sin of yours is about to do. "We who died to sin, how shall we any longer live therein?" But you would yield to temptation and serve the devil. You, for whom Christ died! For shame!!

Have you forgotten that Christ broke the power of sin in your life so that *you don't need to commit sin unless you want to?* The devil has no more power over you than you let him have. Show him that he has been conquered. You can do it. Fight!

Reflect with me for a moment on a few things that ought to be an incentive to you to stand firm. Think of your friends, Mr. Strong, and how they trust you. There's Charlie, for instance, a noble young fellow, who loves and respects you as though you were as good as himself, which he believes you are. What would he think if he knew of this besetting sin of yours? Then there are your sisters and their friends among whom you are regarded as a noble man. How would you like for them to see the blackness of your heart just now? How would your parents feel if they knew what you really are? And your pastor? Be worthy of the respect you have. Don't be a hypocrite any longer. But above all, Mr. Strong, think of the love and mercy of your God. Think of the temptations, the sufferings and death of your Lord. Stop here and meditate on it awhile. Get your Bible and read the story.

Oh, the mercy of God! He has forgiven you so often. Are you low and mean enough to add another insult to your already long list of them? Will you deliberately smite your loving heavenly Father in the face? That is what sin does. Think of his love for you at this moment and of how it would grieve him to have you yield.

Get your Bible and read the eighth chapter of Romans. Then take a look at your black heart and see what you were about to do. Ask God to forgive you. Get your eyes fixed again on the purpose of your life and press on.

Perhaps it would do you good to take a walk in the fresh air now to revive your spirits and put a little vigor into you again. If you have some other work to do get at that. If you are too tired to exercise get a book and read or study. Or maybe you need to lie down and sleep. Whatever you do, get busy, or Satan will be after you again. God will help you when you do what you can to help yourself.

Now thank the Lord for his deliverance.

You will please carry this letter in your pocket, Mr. Strong, and read it when temptation comes.

Believe me, sir, I am one who is deeply interested in your soul's welfare.

Yourself in a rational state of mind.

O. B. STRONG.

A PERFECT faith would lift us absolutely above fear. It is in the cracks, crannies, and gulfy faults of our belief—the gaps that are not faith—that the snow of apprehension settles, and the ice of unkindness forms.  
—George MacDonald.

# Echoes from Everywhere

Approximately \$5,000,000 is the cost of the coal consumed by the Atlantic battle ship fleet when it will have finished its cruise around the world.

Tuskegee, Booker T. Washington's school, has a brick-yard with an annual capacity of 2,000,000 bricks, an orchard of over 13,000 trees, and over a thousand head of stock.

A remarkable example of the carrying power of a tornado was shown when a number of papers, dated at Gilliam, La., 100 miles south of Waldo, Ark., were picked up on the street at the latter place a short time after the severe wind storm that visited that section a few weeks ago.

Bristol, Tenn., during the first three months of 1907, when its saloons were in operation, had 441 arrests for drunkenness. During the same three months of the year 1908, without saloons and with all the terrors of the "jug" trade, there were but eighty-five arrests for drunkenness.

The beginning of the last week in May witnessed destructive floods in Oklahoma, caused by heavy rains and cloudbursts continuing three days. Parts of some towns were completely inundated. At Tusla it was said the Arkansas River had reached the highest point in fourteen years.

Guthrie, Okla., May 22.—The graduated land tax bill, which by excessive taxation seeks to prevent the owning of more than 640 acres of land by one person in Oklahoma, was finally passed last night and sent to the governor. The income tax bill and the inheritance tax bill are in the governor's hands also.

Canada is bigger than continental United States, exclusive of Alaska, but the population of Canada today is about the same as that of the United States in 1805. Its railway mileage, 27,611 miles, is about that of this country in 1858. By all of which we do not mean to imply that Canada is a hundred or fifty years behind us.

The Polish-Americans of Chicago have dedicated the St. Stanislaus parish school in that city. The institution can accommodate 4,500 pupils. It is of fireproof construction and cost \$450,000. One hundred nuns are in charge of the teaching in this school which is said to be the largest in the world to be connected with a parish.

Twenty-nine immigrants who arrived by steamer from American ports at Port Arthur, Ont., were turned back in accordance with a recent order to the immigration office that only those having \$25 and a ticket to their destination could come into Canada from the United States. Officers of the steamer which brought the men over said that the immigrants had come from foreign countries and therefore had not in reality come from the United States. They were sent back to Duluth, however.

At the seventy-eighth annual conference of the Mormon church held recently in Salt Lake City, President Joseph Smith declared that Mormonism is in sympathy with "the general movement throughout the land looking toward local option and temperance." Other speakers were equally sure that the time had come for the Mormons to push forward along temperance lines.

As the result of observations during his presence at 31 executions by electricity in New York and New Jersey and at five hangings at Philadelphia, Dr. E. A. Spitzka, of the Jefferson Medical college, now has reached the conclusion that hanging is painful and barbarous, whereas the execution by electricity is "humane, decent and scientific."

The twelve locomotive manufacturers in the United States and Canada built 7,362 locomotives in 1907, of which 6,477 were for use at home and 885 were exported. This is an increase of six per cent compared with 1906. These figures do not include locomotives built in shops of the railway companies. There were 330 electric locomotives and 240 compound locomotives built, as against 237 and 292 respectively in 1906.

H. H. Bell, the British commissioner in Uganda, reports that of the 300,000 people living on the shores and islands of Lake Victoria, 200,000 have died of the sleeping sickness, and 20,000 now have the disease. It is now known that the fly which carries the disease, only lives near the banks of water, and a zone of two miles is all which it affects. The remaining people are to be removed beyond its reach. Those having the sickness will be placed in camps, 1,000 in each camp, and cared for in every possible way.

One of the factors which caused the defeat of DeLesseps in his attempt to construct the Panama Canal was the high death rate among his men, and we would fail for the same reason were it not for the efficient work which our American physicians are doing on the isthmus. During the year 1907 there was not a single case of bubonic plague or of yellow fever, only one death from smallpox, and fifty per cent reduction in pneumonia, malaria, dysentery and other grave diseases. The death rate in the canal zone has decreased thirty-one per cent since 1906.

Pittsburg, May 20.—The Carnegie hero fund commission at its regular quarterly meeting today passed upon eighty-five cases investigated since its last meeting, granting a medal or medal and cash in thirty and rejecting fifty-five applications as not coming within the scope of the commission's work. The awards today included fifteen bronze and fifteen silver medals, \$13,950 in immediate cash payments and monthly payments during life to four persons. Since the organization of the commission on April 15, 1904, 172 awards have been made out of a total of 2,432 cases investigated.

The Senate has passed the Southern Appalachian and White Mountain forest reservation bill. The bill appropriates \$5,000,000 for the acquisition of lands on the watersheds of navigable streams in the Southern Appalachian Mountains within Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Alabama, Kentucky, and Tennessee, and in the White Mountains of New Hampshire and Maine. As the house will have to vote on the bill, it will probably not become a law during this session of congress.

The German government is beginning to feel the heavy strain put upon it by the insistent demands of the emperor for a larger and better equipped army and more and bigger ships. It is said now that the government faces the necessity of borrowing \$250,000,000 during the next five years. In view of this situation the kaiser not only will not receive the million or two dollars' raise in his yearly salary for which he is asking, but he is likely, in addition, to have a good deal of trouble in convincing the reichstag that Germany must build more ships.

With little discussion and less publicity, the United States Senate has at this session placed its approval on thirty-seven treaties—more in number if not in importance than had been ratified during the twenty years preceding. In making effective so many agreements with the nations international advancement has been made along three distinct lines. Twelve nations have agreed by treaty with the United States to arbitrate future disputes, which is taken to mean nothing less than that the world has now been established on the plane of arbitration.

Richmond, Va., May 13.—Final sessions of three sections of the national conference on charities and correction were held today. Before the section on criminals there was a discussion on the discipline and training of women in women's prisons and industrial schools. In the division on state supervision an extended discussion was held on the problem presented by the migration of dependents and defectives from one state to another. At a joint session of the division of statistics and of children Miss Jane Addams of Chicago briefly discussed extension and neighborhood work through the medium of public schools.

That greatest representative religious gathering in the country, representing over three million Christians, the Methodist quadrennial conference, has recently concluded its sessions in Baltimore. The bishop's address reported a gain in the membership during the four years of 278,357, a larger gain than has ever been made before in any similar period. The gain in the value of church property was over thirty-two million dollars. The conference took an uncompromising stand on the subject of the restriction and ultimate abolition of the liquor traffic, and forwarded a resolution to Speaker Cannon urging the adoption of the Littlefield bill.

On May 13, several officers of the Signal Corps, with Lieut. Frank P. Lahm as pilot, made an ascent in one of the army balloons from Washington at 1 P. M. and landed at Patuxent, a small place near Baltimore, at 4:10. During the course of the flight, messages were received on board the balloon from the government's wireless station at Annapolis. A special antenna was suspended from the basket, and the latter was also enveloped in a wire netting. So successful was the experiment, that Major Russell believes

that balloons will soon be equipped with wireless apparatus, which will enable them not only to receive messages, but also to send them.

Negotiations are being conducted by the Corn Products Refining Company, the glucose and starch combine, to import corn from Argentina on account of the high prices of corn caused by the corner in the Chicago market. The Corn Products Refining Company, buying 100,000 bushels of corn a day and the advance in the price of the cereal to 79 cents a bushel, has resulted in substantial losses to the company, as it has been unable to make corresponding advances in the various products manufactured from corn. Officials of the company say that they have found they can bring corn from Argentina and land it at New York at a price, 15 cents under the prices obtaining in the Chicago market at present.

There are no signs of industrial depression in the big government building at Seventeenth and Spring Garden streets, Philadelphia, where the government mint is located. The activity is due to the unusual coinage of gold. Since the panic the New York assay office has sent over \$50,000,000 in gold bullion to the Philadelphia mint to be coined. Since the first of the current year the inflow of the glittering metal has been so great that it forced the officials of the mint to add more than forty women adjusters to that department. The mint turns out more than \$800,000 daily, and within the last four months, more than \$70,000,000 has been coined, which exceeds the amount coined all last year by \$20,000,000.

A political organization formed of all the Protestant denominations in the United States is the plan for church union formulated by Rev. Mark A. Matthews of Seattle and by him laid before the general assembly of the Presbyterian church at its session in Kansas City the last week in May. Supreme executive power, according to Mr. Matthews' plan, would be vested in a president and an executive committee. The proposal met with much favor and promises to be one of the most discussed topics at the week's session of the assembly. Mr. Matthews said that he did not propose the establishment of a Protestant popery. The proposed head, according to his plan, is simply to direct concerted action against temporal evils and for temporal good. It is not to be in any sense an intermediate in spiritual matters.

A Chicago scientist has been making an elaborate series of tests with germ-infected water congealed into ice. He placed in the water all sorts of bacilli and let them stay there for about 22 weeks, from time to time melting portions of the ice and examining it to see how the germs were getting along. His conclusion is that all germs are killed after a period of about 22 weeks. It seems that the scientist concludes that the germs starve to death rather than die of exposure to cold. He notes that some forms of bacilli are motile and go after their food while others are not motile and wait for the moving water to bring the food to them. "In the ice," he says, "the liquid is congealed to a mass in which movement is not possible, and no carbo-nitrogenous food can be obtained by the bacilli as the temperature. The chief point to be learned much to do with the reduction in the number of the bacilli as the temperature. The chief point to be learned from this series of tests is that ice, even when cut from water which may contain pathogenic bacilli, is utterly incapable of passing on disease if it is stored for some time before being distributed."

## CREAM OF MAGAZINES

### THE FLEET.

This is the song of the thousand men who are multiplied  
by twelve,  
Sorted and sifted, tested, tried and mised to dig and  
delve.

They come from the hum of the city and shop, they come  
from the farm and field,  
And they plow the acres of ocean now, but, tell me, what  
is their yield?

This is the song of the sixteen ships to buffet the battle  
and gale,  
And in every one we have thrown away a Harvard or a  
Yale.

Behold here the powers of Pittsburg, the mills of Lowell  
and Lynn,  
And the furnaces roar and the boilers seethe, but what do  
their spindles spin?

This is the song of the long, long miles from Hampton to  
the Horn,  
From the Horn away to the Western Bay whence our  
guns are proudly borne.

A flying fleet and a host of hands to carry these rounds  
of shot!

For behold, they have girdled the globe by half, and what  
is the gain they have got?

This is the song of the Wasters—aye, defenders, if you  
please,

Defenders against our fellows, with their wasters, even as  
these,

For we stumble still at the lesson known since even the  
years were young.

That the chief defense of a nation is to guard its own  
hand and tongue.

This is the song of our folly, that we cry out a glad ac-  
claim

At our slaughtering ships, in the shadow of which we  
should bow our heads in shame.

And we crown men brave who on land and wave fear not  
to die, but still,

Still first on the rolls of the world's brave souls are the  
men who fear to kill.

This is the song of our smallness (for the fault is not  
theirs, but ours).

That we chain these slaves to our galley-ships as the  
symbol of our powers,

That we clap applause, that we cry hurrahs, that we vent  
our unthinking breath,

For oh, we are proud, that we flaunt this flesh in the mar-  
kets of dismal death.

—Edmund Vance Cooke, in the Independent.

### CAREERS FOR MILLIONAIRES.

A career for our youthful millionaires calculated to oc-  
cupy their time and so keep them out of mischief, or  
worse, is suggested by Mr. Louis R. Ehrich, the well-

known art dealer. He would have them turn connois-  
seurs in art and give to public institutions the benefit of  
their accumulations of knowledge as well as of wealth.  
Such careers of public service might become, he thinks,  
the outgrowth of a recognition that "noblesse or, if you  
will, *richesse oblige*." Thus might be paralleled that im-  
pulse of class obligation that leads the sons of the English  
nobility "largely to deny themselves of the indulgence of  
leisure and of idle sport in order to devote their lives to  
great questions of state policy or to other fields in which  
the nation can be honorably served." This suggestion,  
communicated to the New York Times (April 19), is an  
extension of a criticism which that paper recently passed  
upon our money class in saying: "Among the rich Amer-  
icans there is not enough intellectual force, artistic appre-  
ciation, or public spirit to compensate the country for  
the bad influence of their misdeeds."

Mr. Ehrich writes:

"With us, as yet, politics do not offer an inviting cae-  
reer, and a cheap demagog will be especially ready to at-  
tack the millionaire. Possibly this is one reason why so  
many American young men of wealth fritter away their  
energies in pursuit of sport. A veteran turfman, recently  
returned from Europe, in a published interview on the sub-  
ject of race-track betting, after expressing his opinion that  
betting was not vital to horse-racing, added this signifi-  
cant paragraph: 'There is one point I would like to make  
in favor of horse-racing. It provides a clean, healthy  
amusement for the young men of the country who have  
money but who have no serious interests.' Is there not,  
as indicated by your editorial, a great economic and moral  
waste if 'no serious interests' can be found to enlist  
the energies and overflowing wealth of these young men?  
Let me offer a suggestion: In Chicago two young men  
who started with ample inherited wealth, Mr. Charles L.  
Hutchinson and Mr. Martin A. Ryerson, have, for years,  
consecrated the bulk of their energies to the upbuilding  
of the Chicago Fine Arts Museum.

"This has been their 'serious interest,' and in conse-  
quence they have rendered the very highest service to  
their community and have reared a noble monument to  
their unselfish public spirit.

"In Baltimore Mr. Henry L. Walters is extending the  
splendid work begun by his father and is completing an  
art gallery which, for generations to come, will be a  
source of culture and of pride to his city and to the whole  
State of Maryland. But by far the greatest American ac-  
complishment in this direction, the full significance of  
which has as yet been strangely missed, is the creation  
and development, in this city, of the Hispanic Museum,  
by Mr. Archer M. Huntington. The originality and bold-  
ness of its conception, its patient and wise execution, the  
variety, quality, and extent of its collections, its contribu-  
tions to the dissemination of Spanish literature and  
scholarship by the republication of rare manuscripts, its  
coöperation in the study of Spanish art by the support of  
a special art journal, these, added to the translations of

Spanish classics by its founder, combine to constitute an achievement which the writer confidently believes to be the finest thing brought to completion by any young man in the world today, and for which, in its combination of art taste and lavish expenditure, one can find a parallel only in the days of the Medicis."

### OUR NATIONAL WEALTH.

In round figures we have 3,000,000 square miles out of the total 50,000,000 square miles of the world's area. We have a population of 86,000,000, or a fraction over 5 per cent of the world's. With an area of 5.9 per cent of the world's, and a population of 5.2 per cent, we are raising annually 43 per cent of the world's total production of wheat, corn, and oats. Of corn alone,—one of the most important cereals known to mankind,—we are producing 78.8 per cent; of tobacco we are raising 31.1 per cent, and of cotton 71.3 per cent. Thus, in agriculture,—the starting point of material progress, since man must first be fed and clothed,—is found an illustration of our position.

This agricultural supremacy is fully matched in minerals and manufacturers. Taking the most recent available figures, which include a few estimates for 1907, and the striking comparison is produced that we made last year over 42 per cent of the world's iron production, or 25,780,000 tons out of a total of 61,000,000 tons. We mined 455,000,000 tons of coal out of a total of 1,220,000,000 tons, or 37.3 per cent of the industrial energy stored in coal, the motive power of material progress. Of petroleum, which lights so large a portion of the earth, illuminating the adobe house in the wilds of the mountain regions of Mexico, the home of the dweller in the Andes, the hut of the mountaineer in the distant regions of the Himalayas, and likewise furnishes what is regarded as the best of lights in the dwellings of wealth and even of royalty, we produced last year 162,600,000 barrels, or 62.5 per cent of the world's total of 260,000,000 barrels.—From "A National Inventory," by Richard H. Edmonds, in the American Review of Reviews for May.

### WHAT THE COUNTRY MEANS TO ME.

The Simple Life does not consist in becoming careless and slouchy, or wearing unbecoming hats, or in alienating the affections of one's spouse by making one's self a drudge. It consists in natural social surroundings, suited to cultivated tastes, where parents and children can live instead of merely making a living.

The simple country life means a material reduction in the cost of living. The home itself can be less pretentious and more commodious. The modern American bungalow gives the maximum of comfort and dignity at the minimum of expense, and is rapidly taking the place of the ordinary suburban or country house.

Esthetically, the country means stretches of field, meadow, and woodland, liquid bird-notes, filmy gossamer webs in the mornings, cooling dews in the evenings, the perfumed breath of the blossoms and fruit, an opportunity to get near to Nature's heart.

From the practical view-point it means to me working in the "rich-blossoming elbowed earth," tilling the soil, producing what one eats, testing the resources of Nature first hand, winning vigor and a clean conscience from natural relations to the soil. It means knowing one's human neighbors and wild ones, as they really are; it

means hours with one's family; well-earned rest; to be a producer as well as consumer and thus fill one's proper relations to mankind.

It means further a new opportunity not only for me, but for those who have never had a chance. They have it now. A new boom is on, the farm-land boom; a new development is beginning, intensive agriculture; a new discovery, the riches of the soil; a new opening, the intelligent use of "the little lands."

Most people think, "I couldn't make anything out of the land," which reminds me of a story: A man had an idea that a fish could be trained to live without water; so he took away the water drop by drop, day by day, till the fish learned to do entirely without it. Then he taught the fish to come when he whistled and to follow him. One day he walked along the road and the fish flopped after him, till they came to a bridge over a river; there was a crack between the planks and the fish fell between them into the water—and was drowned.

So it is with men; our land system has so thoroughly separated us from the earth that people don't know how to use it in the natural way. But if you cannot make a living off the land, you cannot make it anywhere.

It does not demand any more brains than any of the other ways of earning a living, and it is open to a far larger number, to women just as much as to men. "The profit of the earth is for all."

There is more money to be made out of the soil, if you get at it intelligently, than there is in any other endeavor that is open to every one. Any one who knows enough to conduct a shop, or who knows how to make a profit out of employees, or who is a good enough financier to meet the monthly bills, knows enough to make money out of the soil. The same attention to details, the same care of an orchard, or of a vegetable farm, or of a fruit-farm, or of a flower garden will bring far greater profits. Any one who has a little store, or who makes things in a small way, is oppressed with the ever-present danger of being crushed by a trust or forced to the wall by richer or more powerful competitors. What chance has a woman in the city now other than a mere living? What chance has the average clerk? Both grow old trying to keep abreast of their expenses. Many of these people have a natural taste for the land. They love to prune, they love to plant, they love to help Nature perform her marvels. They potter away in their little garden-patches at their homes in the suburbs, and find more real enjoyment in their gardens than in anything else. These are the ones who might make grand success of their lives if they worked the soil.—The Circle

### ATHLETICS, PRO AND CON.

#### The Arguments in Favor.

THE foundation of a building must be well made, else it is idle to put expense on to the superstructure. Similarly, the body must be perfect or it is largely a waste of effort to try to train the intellectual part of us. The old Greeks realized this very clearly, and they paid more attention to developing the physical side than the mental side of their youth. The result was that in a few short generations they brought about the finest culture that the world has ever known. Later, as they allowed themselves to be effeminized, they were overcome by the physically finer, though mentally primitive northern races, and sank into oblivion.

The cities are always replenished from the country districts; this is because the country people have better physiques and in the struggle for existence the enervated urban dwellers cannot compete with the fresh-blooded invaders from the backwoods and farms. If then, the healthy body is primarily essential to the healthy mind, our system of education should start there. We should make sure first that our children are sent out into the world equipped with a large capital of health; they will then make their way without question, whereas the world is already too full of educated anemics. The way to bring the desired condition about is to encourage athletics. We see what wonders President Roosevelt performs. He is a very mystery of endurance to everyone who comes in touch with him. Yet he started out as a weakly boy, and he says that he built himself up by athletic training. Hence he is devoted to athletics in every form. Had his body not been so developed up, certainly he never could have stood up under all the burdens he takes on himself. He is a shining example of what can be done, for where the body is made strong the mind will be so as a natural result.

#### Suggestions on the Other Side.

Athletic training is all right, in its way, if carried out on ideal lines. But the so-called athletics of today, instead of being the well-ordered and rational system the Greeks practised, is only a sort of barbarous scrimmaging and contention which does more harm than good. Think of the deaths or injuries caused by injudicious hard play at football, etc. The casualties noted in the newspapers at the end of every athletic season read like the reports of a battle, and thousands of men go through life maimed and handicapped by some hurt they got in the excitement of some game. In the heat of interest, everyone is apt to overdo and injure himself and others; our sport has no regulation and thus the margin of safety is constantly being exceeded. So injurious in fact is athletics that the doctors have a special name for a disease common among athletes, namely, "athletic heart." The playing of baseball, football, etc., and running, jumping, etc., develops a very strong heart, and when in later years this exercise is stopped, the result is that the heart degenerates and becomes a seat of all sort of troubles. Any doctor will tell you that a part once developed and then disused becomes an invitation to disease. For girls especially, athletics are very dangerous, as they are almost certain to exceed their strength and thereby bring on ills which will last them through life. We all know boys who have such a fondness for athletics that they cannot be persuaded to do a stroke of useful work for love or money. The colleges turn out a lot of loafers who, while they are very keen on athletic records and the athletic pages of the yellow newspapers, are very little good as workers and citi-

zens. Healthy, useful work is the best sort of athletics, and it is this kind of bodily exercise that we should encourage. Easy play among children, and plenty of recreation in the open air should be provided for—but this is not "athletics." What foolishness it is to let a boy exercise on a rowing-machine or run around a track, when he might as well be exercising with a hoe or running on some useful errand. Yet the one is "athletics," as they call it, and the other is only plain, common-sense usefulness to the world. If a census of "who's who" could be taken, it would be found that the men who are doing the most for themselves, their families and the country are not those who were brought up on going to ball games and following prize-fights.—*The Pathfinder*.

#### BETWEEN WHILES.

Teacher (to new pupil).—"What's your name?"

New Pupil.—"T-t-tommy T-t-tinker."

Teacher.—"And do you stutter all the time, Tommy?"

New Pupil.—"N-n-no, m-ma'am; o-only when I t-t-talk."

#### The Wretch.

The Maid.—"Do you believe it's unlucky to get married on a Friday?"

The Abominable Bachelor.—"Certainly. Why should Friday be an exception?"—Black and White.

How dear to our heart is the big silver dollar, whene'er a subscriber presents it to view; the Liberty head without necktie or collar, and all the strange things which to us seem so new; the wide-spreading eagle, the arrows below it, and the stars with the words with the strange things they tell; the coin of our fathers, we're glad that we know it, for some time or other 'twill come in right well; the spread-eagle dollar, the star spangled dollar, the old silver dollar we all love so well.—Western Teacher.

#### Business Enterprise.

A Bladensburg merchant, says the Argonaut, was dozing in his store one day when a little girl with a pitcher appeared in the doorway and asked for a quart of molasses. The storekeeper yawned, stretched himself, half opened his eyes, and then in an injured tone, said, "Ain't there nobody in Bladensburg that sells molasses but me?"

---

## WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

---

WANTED.—A COOK. An active, loyal sister, a good cook, for the college. Terms right. Work begins in September. Send reference with your application. Mount Morris College, Mount Morris, Ill.

FOR SALE.—160 acres, near good school and Brethren church; 20 acres alfalfa, 10 acres other crops, balance pasture adjoining free range. Irrigation for 30 acres. Ideal cattle or sheep ranch. Fine climate. Price \$2,500. \$700 cash, balance easy terms. John Harbert, Manzanola, Colo.

# **In Planning Your Trip to ANNUAL CONFERENCE**

## **Next Month Arrange for Joining the EXCURSION TO MIAMI RANCH**

You have been reading and hearing of the mammoth and substantial work of the FARMERS' DEVELOPMENT CO., in developing and colonizing the

### **MIAMI VALLEY, NEW MEXICO**

and now is your chance of a lifetime to see with your own eyes and know from your own observation the wonderful attractiveness of

### **MIAMI VALLEY**

as to CLIMATE, SOIL, WATER, SCENIC BEAUTY, PEOPLE, SCHOOL AND CHURCH PRIVILEGES, and all other essentials to a happy homeland.

The FARMERS' DEVELOPMENT COMPANY is composed of men whom you know.

The directors are Isaac Frantz, D. G. Minnich, I. B. Miller, I. H. Rosenberger, M. N. Mikesell, F. D. Rosenberger, J. Wasson, and J. C. Wine. Geo. W. Colvert is General Sales Agent.

Are you seeking a safe and profitable investment? Are you seeking a home? Then you owe it to yourself to see MIAMI RANCH before deciding upon another location.

The excursion to MIAMI RANCH will be delightful, instructive, and inexpensive. It will leave Des Moines immediately after the close of Annual Meeting.

For further particulars WRITE US and when you get to DES MOINES call at MIAMI RANCH HEADQUARTERS.

**Springer, New Mexico**

# Facts Regarding Imperial Valley

Some people in trying to induce their friends to settle in the country where they themselves are located, frequently send them advertising matter that is gotten up by unscrupulous land agents that deviates from the truth. Their friends come and buy property and soon find out that the facts do not correspond with the advertisements sent them. The result is they soon become discouraged and sell out at a sacrifice, and go back where they came from, worsted financially and in some instances say worse things of the country than they should, and thus bring reproach on a good country (though not as good as the advertisement represented it to be). The undersigned has known this to happen more than once, and for this reason has decided to tell his friends about the Imperial Valley in his own words, so that he alone shall be responsible, and so that the wonderful Imperial Valley may never be made a reproach and a by-word.

Imperial Valley is situated in San Diego County, California, 183 miles east of Los Angeles on the Imperial branch of the Southern Pacific railroad. The soil is an alluvial deposit and all crops are grown by irrigation, with water from the Colorado River. The main irrigation canal is 80 feet wide on the bottom and 100 feet wide on the top, and 10 feet deep. The soil is adapted to the growth of wheat, barley, alfalfa and nearly all kinds of fruit. Alfalfa having plenty of water can be cut eight times per season, yielding as high as ten tons of nice hay per acre which sells at present from \$8.00 to \$11.00 per ton. Barley can be sown for winter pasture in alfalfa stubble after the last crop of hay is harvested. Alfalfa can be cut every three weeks if the hay is wanted for dairy cows, or every four or five weeks if wanted for horses. I have known of alfalfa yielding \$40.00 worth of seed per acre and my own yielded \$20.00 per acre with the first season's sowing. Dairying and hog raising are very profitable. Butter sells from 20 cents to 45 cents per pound; hogs, 7½ cents on foot; also beef, cattle and horses do excellently. One colt weighed 960 pounds at less than one year old. One acre of alfalfa will keep from 2 to 3 head of dairy cows or horses and from ten to fifteen head of hogs. Oranges, lemons, dates, figs, apricots, grapes and berries do well. A single grape vine has yielded 30 pounds of grapes 18 months from setting. Grapes, apricot and cantaloupe growing is very profitable as they will ripen here from three to four weeks earlier than other places, and be placed on the eastern market before they are ripe in other localities. One man at Coachella was offered \$600.00 cash for the grapes on a single acre of vines and refused the offer and sold at retail for \$1,400.00. Cantaloupes will net the growers from \$50.00 to \$300.00 per acre. I have lived in the valley as long as any one, being one of the first settlers, and my experience and observation has taught me that you can grow almost anything here you plant, including vegetables, if planted in the proper seasons and properly cared for. The selling price of land at present is from \$40.00 to \$100.00 per acre, owing to location. President Roosevelt says that when it is thoroughly developed it will be worth from \$500.00 to \$1500.00 per acre.

Reader, when you shiver around your fireside the coming winter, just think of the Imperial Valley where you can go in your shirt sleeves nearly every day in the year. And on the 10th day of this month (May, 1907), while there was a snow storm raging in many places in the eastern states, we were making hay and picking and eating fruit in the Imperial Valley.

For further information, address

**W. F. GILLETT, - Holtville, California**

As to the reliability of the above, inquire of W. E. Trostle, San Gabriel, Cal., enclosing stamp.

## BRETHREN HYMNAL

A book of 512 pages and containing 742 of the best hymns of the day and is well adapted for Sunday school, prayer-meeting and church service.

## In each number of THE INSTITUTE TIE

Dr. R. A. Torrey  
Answers Practical and Perplexing  
Questions, similar to these  
recently published:

"Some teach that a believer is sanctified instantaneously; others declare that sanctification is a gradual process, perfected in heaven only. What does the Bible teach as to this?"

"Is it ever right to ask unconverted though moral people to teach a Sunday-school class or do other definite Christian work?"

"How would you prove the existence of God to an inquirer?"

"What is the Scriptural means of raising money for church or other Christian uses?"

"Kindly explain Acts 13: 48; 'And as many as were ordained to eternal life believed.' Are some born to be lost?"

Another department **Dr. Torrey** maintains is: **STUDIES IN THE LIFE AND TEACHINGS OF OUR LORD.**

**Dr. Jas. M. Gray** conducts regularly his Bible course, —**THE LAYMAN'S COMMENTARY ON THE OLD AND NEW TESTAMENTS.** He began the **BOOK OF EXODUS** with the April issue.

### Other Regular Departments.

Editorial Notes, Contributed Articles, Bible Book Studies, Methods of Christian Work, etc., For Sermon and Scrap Book, Anecdotes, Outlines, World News, Notes and Suggestions, The Evangelistic Field, Book Notices.

Monthly, \$1.00 a Year. Specimen Copy Free.

It is expected that **THE TIE** will report the addresses of several Bible conferences during the coming summer.

**THE INSTITUTE TIE,**  
80 Institute Place, Chicago.

## LITERARY ACTIVITY —OF— THE BRETHREN OF THE EIGHTEENTH CENTURY

By Prof John S. Flory  
of Virginia

A book with the above title is just now being published, and promises to be one of exceptional interest to all members of the Brethren church. The book contains nearly 400 pages, and is a marvel in book lore. We want to place this book in 20,000 homes of the Brethren within the next six months. In order to do this, we must have at once

### 1000 AGENTS

We want a live, energetic agent in each congregation, who will make a house to house canvass, for we are sure it will bring good results.

### Write for Territory

Apply for territory at once, so you can begin canvassing before the cream has been taken.

### See Us at Annual Meeting

We will have some of these books at Annual Meeting and will be prepared to assign you territory. If you attend, be sure and call at our office on the grounds, and we will arrange to give you territory.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## THE INGLENOOK

### The Spirit's Sword

For all Ministers and Personal Workers.

By Evangelist J. R. Beveridge.

Vest-pocket Size, 2 3/4 x 5 1/2 inches. 1/4 inch thick. 128 pages, 1,200 Scripture references. 133 Subjects. Special Notes.

The  
Greatest Book  
out for  
Christian Workers

#### Synopsis of Contents.

Importance of Personal Work. Personal Experience and Equipment, in the Holy Spirit, the Word of God, Prayer and Faith. Personal Conduct in dealing with Souls. How to approach persons. How to get cases. The Fundamentals of Salvation. Texts for Christians under all conditions of Sin. The Natural and the New Heart. The Way of Life and the Way of Death. Hell.

Answers to nearly every question asked by Sceptics, and all classes of unconverted. False Hopes Swept Away. Guidance for those seeking to find Christ.

The Holy Spirit, Acts to 1 John. The Divine Nature of Christ. The Human Nature of Christ. A Personal Devil. Bible readings on Prayer and Thanksgiving.

Write us about full package for free trial. Nine days treatment for 50 cents, postpaid.

SYRACUSE ELECTRIC TABLET CO.

Syracuse, Indiana. U. S. A.

### Buckeye Pure Home Made APPLE BUTTER

Is pronounced by hundreds of our customers, the best they ever ate. Send for our NEW circular with NEW recipes, NEW testimonials and Special Wholesale price list. Our Motto: Highest class of goods and a square deal guaranteed to all.

Don't forget to write.

C. J. MILLEE & CO., Smithville, Ohio.

### CAP GOODS

Our business has almost doubled itself during the last year. We are sending goods by mail to thousands of permanent, satisfied customers throughout the United States. The reason is simple.

Our Goods are Reliable. Our Variety is Large. Our Prices are Low.

All orders filled promptly, post-paid. Satisfaction guaranteed or your money refunded. Send us a sample order and be convinced. Write us for a booklet of unsolicited testimonials and new line of samples, which will be furnished free. Send at once to

E. E. ARNOLD, Elgin, ILL

### Seen Our 20th Century Record System?

A demonstration of same may be seen at our Office on the Annual Meeting grounds, at Des Moines, during the Conference.

If you are interested in increasing your attendance, in getting your scholars to bring Bibles, and to be on time with an offering, come around and investigate. It is in practical use and has proven what it will do for the Sunday school.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

### BICENTENNIAL SONG BOOK

We are now publishing an 80-page song book, with good manilla cover, to be used during our Bicentennial meeting, and general Conference, to be held at Des Moines, Iowa, June 3-11. In this song book, we have the very cream of both "The Brethren Hymnal" and "Song Praises," and also a special "Bicentennial Song," written for this occasion.

#### Don't Soil Your Hymnal

by taking it to Annual Meeting. These Bicentennial Song Books will be used exclusively during the meeting and may be secured at Brethren Publishing House headquarters, on the meeting grounds for ONLY 10 cents.

#### Churches or Mission Points

can be supplied with these song books after the conference.

If interested write for quantity prices.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

### FREE SAMPLE

Send letter or postal for free SAMPLE HINDOO TOBACCO HABIT CURE

We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

### EUREKA INDESTRUCTIBLE POST

FIELD POST. Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, W. A. DICKEY, North Manchester, Ind.

### Are You Going to Annual Meeting?

If you do go, call around at our headquarters, sometime between sessions and see our line of Bibles, Religious books, Post cards, Wall Mottoes, etc.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

# It Beats The World

The Profits in Fruit Growing in the YAKIMA VALLEY, Washington

Reports for 1907

Of course, the prices of last year were high, but half the amount received is good profit. Here are some of the receipts per acre:

|                         |            |
|-------------------------|------------|
| W. F. F. Sellack, ..... | \$1,122.00 |
| J. Van Peyton, .....    | 1,430.00   |
| E. F. Perry, .....      | 1,536.00   |
| C. S. Huff, .....       | 1,250.00   |
| W. H. Strausze, .....   | 2,133.00   |
| A. H. Henry, .....      | 1,907.00   |
| C. O. Shupe, .....      | 1,830.00   |
| Wm. Miller, .....       | 2,165.00   |
| J. P. Bullen, .....     | 1,818.00   |

Other orchardists made big profits. The largest profits are on peaches, pears, and apples.

Write the men whose names we give and write the banks as to their reliability.

One acre will produce more in net profits than the average wage worker receives in wages for one year, \$500.

A Two-year-old Apricot Tree.

Eight Strawberries to the Box.

Two acres will produce more than the average salary of the average school teacher or preacher in the United States.

Two and one-half acres will produce more than the average family in the United States receives in one year.

Five acres will produce more than 80 acres in any unirrigated region in the United States, where corn, wheat, oats and hay are the principal crops, and more than 160 acres of average land.

Ten acres will produce more than 160 acres of the best unirrigated lands and more than 320 acres of average lands in unirrigated regions.

# ALBERTA

## ¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks; cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

# ANNUAL REPORT

OF CONFERENCE OF 1908

HELD AT

**DES MOINES, IOWA**

As usual we are arranging to publish a complete Report of the proceedings of the Conference in book form with manila cover.

## Bicentennial

On account of this year being the Two-Hundredth year since the Brethren church began in Germany, it will make this meeting of unusual interest and importance in the history of the church. For this reason alone, thousands will want the Report this year to commemorate that event.

## Important Business.

Much important business will be transacted at this meeting that will be far-reaching in its effect.

## Send Your Order Now

Send us your advance order now, or hand it to our local agent of your congregation, so you will get a copy as soon as the Report is published.

We expect to push the publication of this Report and will endeavor to have same ready for mailing, the week following the meeting.

# JERRY McAULEY An Apostle to the Lost

Edited by R. M. Offord

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser of human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them is to find the clew to his power. Here is one of them. "I have nothing to be proud of; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

## Kindle the Flame in Other Hearts

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

## Every Church Worker

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

### TOURIST SLEEPING CARS.

A striking feature of the Union Pacific passenger trains is the tourist service. The tourist sleepers are identical with the standard sleepers, with the exception that their furnishings are not on so grand a scale, but the accommodations are equally good and are sold at **HALF THE PRICE** of the standard. The seats are upholstered, and at night the berths are hung with heavy curtains. Each car is accompanied by a uniformed porter whose duties are the same as those upon the Pullman Palace Sleepers.

### DINING CARS.

Union Pacific dining cars are operated on all through trains. These cars are all new in style and models of beauty and elegance.

### DINING ROOMS AND LUNCH COUNTERS.

Dining Rooms and Lunch Counters are located at convenient points along the line, and all through trains which do not carry dining cars are scheduled to stop at these points. Well prepared meals of the best quality are properly served at popular prices. Full time is allowed for meals.

Be sure to buy your ticket over

# BOOKS! BOOKS! BOOKS!

## Bible History

By Rev. Alfred Edersheim, D. D.

Seven volumes, 12mo.

1. The World before the Flood and History of the Patriarchs.

2. The Exodus and Wanderings in the Wilderness.

3. Israel in Canaan under Joshua and the Judges.

4. Israel under Samuel, Saul and David to the birth of Solomon.

5. Israel and Judah from the birth of Solomon to the reign of Ahab.

6. Israel and Judah from Ahab to the Decline of the Two Kingdoms.

7. Israel and Judah from the Decline of the Two Kingdoms to the Assyrian and Babylonian

Captivity. Containing full Scripture references and subject indexes to the whole series.

Regular Price, per set, .....\$7.00

Our Price, per set of 7 volumes, f. o. b., Elgin,.... 3.50

Will send, express prepaid, for 75 cents extra.

## Mr. World and Miss Churchmember

By W. S. Harris.

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel,

till finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

Our Price, Prepaid .....\$ .75

## A Night-School Education

Walter C. Frick

As I write this article a serious financial panic exists in our country. And only this morning as I neared my place of business I took particular notice of one fact. Many well-appearing men and women, who were fortunate enough to be still in possession of their positions, were hastening to work, while almost an equal number, not so well-appearing, were waiting outside the employment offices for a chance to return to the positions which only a few weeks previous they lost. I compared the faces and appearances of the two classes. To me it was not at all difficult to tell why the present condition of either class was not reversed. One class had prepared themselves for just such a time, not knowing, however, whether such a time would ever occur. The other class had drifted with the tide and doubtless in most cases will continue to drift, in spite of the serious lesson they are now experiencing. Those of the first class doubtless did well the work that each day came to hand to do, but were not content, many of them, to stay where they were and gain promotion by mere attention to business (very often an exceedingly slow and tedious method), but in their odd moments and leisure time studied, and prepared themselves for greater and probably nobler things.

I am reminded of a picture which represents a small group of aged and middle-aged men, probably directors of some institution or business, seated about a table in a private room. Before them stands a young man intent upon explaining to them some important plan or affair. As he proceeds, his superiors strain eyes and ears as if trying to catch the last word of a departing loved one. The picture represents the MAN WHO KNOWS. You know, without further comment or explanation, who in this picture is the MAN WHO KNOWS. It is the *man who knows* who gets along best in this world. Therefore I appeal to you to so labor as to put yourself in this class. Make the proper use of your spare time.

\* \* \* \*

In considering the important subject of night-school education we first wish to ask you which is the more opportune time for mental activity, which time is more conducive to deep thinking, night or day? Night, with comparatively everything at rest, no sound or sight to detract one from his purpose, or day with its myriads of violent stimuli to the brain, hindering it, and often wholly preventing it from becoming deeply concentrated upon any fixed subject? Night is the time which the deepest thinkers choose to delve into deep mental problems. It is night's shades which shut out all external stimuli to the brain and let that wonderful organ have full sway over the thinking process. You need not be told how difficult a task it is to concentrate one's mind when all about is noise and confusion. Primarily at night is the time the night-school student makes his headway. He works when every one else sleeps and when he works, he *works*.

The fellow who has smooth sailing thru life isn't likely to make much of a man out of himself. On just about the same principle the individual who has both time and finances in abundance isn't as a rule likely to make much of a student and, not being a good student, isn't likely to be much of a success in the trade or profession at which he aims. This fact is demonstrated time and again in day colleges, for as a general rule the very best students are those men who "work their way" thru college. Again, the individual who studies for a profession simply because his gaining it is the heart's desire of a fond parent who rarely, if ever, considers his child's natural fitness for the profession, almost invariably makes a failure. Our day schools and colleges are well supplied with just such individuals, the majority of whom give the bulk of their time to athletics, wine and women and who, nevertheless, are sent out into the professional world ill prepared to do the work of the profession they represent. (In speaking thus we have reference to students who attend recognized colleges and are charged the regular

tuition and other expenses. Something which is gotten free is too often not appreciated and we leave free schools entirely out of the question.)

Not so with those individuals whom the night college represents. Each and every one works under more or less difficulty. It is the successful battle against difficulties which makes real men out of us. They are individuals who, in their employment, do not work full time as a rule, or have a business of their own which, in either case, affords much time for study, with often just enough work to relieve the monotony of a student's life.

The possessor of a night-school education can tell you stories of hard manual labor by day, every spare moment, whether in street car, in the noon hour, or at numerous other times, improved by deepest study, of several hours after supper consumed by lectures and recitations at college, and yet a couple hours up to and even past midnight spent in study to put the finishing touches upon his day's work. Nor is this all. Think what it means to his family. Forever away from his home, and deprived of most of its dear pleasures and association with his loved ones in order to prepare himself for professional life and eventually do his share toward making this old world better. No one furnishes him money, he must attend strictly to business, both to keep his position with his employer and to keep abreast with the strict discipline of his college.

Almost invariably the night-school student is of more mature life, has often a business training and a more mature understanding. He *knows* what he is fitted for and consequently does not study amiss. He knows *how* to study and *what* to study. It is evident that he has no time for the chaff in his text-books. He must and knows how to practice the art of selecting the essential points and passing those which are unimportant.

We recognize the fact that a night-school student has fewer hours a day than a day student in which to study. This deficiency is made up by extending the school year a number of months beyond the day term. We realize the fact also that many professional men oppose the night college. In answer we dare say that none such were compelled to get their education by attending a night school, neither were they beset by many difficulties as day-school students. There are also many professional men who, because of their lack of success, are envious of all others who wish to enter their profession thru any but the old established route.

On the other hand, night institutions of learning secure some of the highest class instructors who not only work for the compensation and experience they receive, but labor untiringly to build up the institutions with which they are connected. Many of our best night-school instructors are considered among the best

instructors in the day colleges where they teach. Yet again we realize the fact that the general public is more or less prejudiced against such individuals as possess a night-school education. The great majority of them are so, not because of actual experience, but have been so educated by those of the profession who have had the advantage of day schools. What imitators the most of us are! The most of us are content to allow others to do our thinking for us, and so it comes that those having day-school educations being in the great majority have educated the public to think as they themselves dictate in this matter as well as in many others. An education is an education, regardless of when or in what manner it is gotten.

No one has a particle of right to condemn anyone or anything on mere hearsay. No one has a right to condemn anyone, until, by personal study he has proven him to be a failure. Here again, as we said in the beginning, it's the man who does things that merits the honor and patronage, let him be possessed of an education, secured either by day or by night, so at least give your man a chance to prove his worth to you before passing judgment.

Not all night-educated men are successful in business or profession, but the same is even more true of day-educated individuals. As a proof of our assertion we submit the following table as representing the results of examinations for three successive years in one of the noblest professions, that of the medical profession. These colleges are all located in Chicago and those whose names are printed in black are recognized evening colleges. It will be noticed that the largest schools are omitted because of the great difference in number of students.

Years 1903, 1904 and 1905.

|                                                      | Took<br>examination | Passed | Failed | Per cent<br>failures |

| College of Medicine and Surgery ..                   | 63                  | 39     | 24     | 38.1                 |
| Jenner Medical College .....                         | 54                  | 44     | 10     | 18.5                 |
| Dearborn Medical College .....                       | 47                  | 46     | 1      | 3.4                  |

In conclusion let us again present the following facts: Man is accountable for every minute of his time. It will be hard to account for misspent time. Spare time may be spent profitably in a combination of intellectual and spiritual development, either of which is recreation from physical labor and vice versa.

Knowing these facts then let no one hesitate to start in pursuit of an education as afforded by a good evening college, knowing that it is not merely he who makes a pretense of knowing, but he who *knows* and *does* that gets the patronage of intelligent people.

## Around the World Without a Cent

H. M. Spickler

### Chapter VII.

WAGES in England are usually considered low, but on this farm I received one dollar a day for regular work and as high as \$2.50 for special work. When we hauled in the oats I was paid five dollars for two days' work. Again, when cutting the weeds out of the irrigating ditches over the farm I was paid four cents per rod, and could easily clean up sixty to eighty rods a day, and by working very hard, a hundred rods, which is better than any work I have ever found on an American farm.

When the entire job of cleaning the ditches of the weeds was given over to me, some of the men were disposed to look upon me as a favorite with the foreman. In this they probably were not wholly wrong, for the foreman was a Christian man, a superintendent of a Sunday school, and an ardent for temperance. When I had refused to take the regular allowance for beer in the

field with the other men, the foreman at once honored me for my stand. I was paid higher wages for the same work, was treated more kindly because of my temperance principles, and when the job of mowing the weeds in the long ditches was given out, the foreman was so good as to give it to me.

To do this work I got down into the ditch, walking right along, cutting a few rods on one side, and then turning around and cutting back on the other side, using now one hand, and now another, mowing off the grass and weeds level to the ground, and even, all the way from the top to the bottom, leaving the ditch lying open so that any mold or rotting vegeta-

tion might be killed by the sun and air. Then passing along with a fork, I threw all the grass and weeds out on the bank where it was gathered up later by a man and hauled away in a two-wheeled cart. For physical exercise I never found any work just so charming as this. My shoulders, back and arms were called into vigorous play, and I seldom needed to stoop very much, but just walked along in the deep ravine-like ditch, slashing the green-growing turf, right and left, and leaving behind me a clean-cut surface.

The only thing I feared was a possible snake or ugly lizard, about which I was warned by the Gypsies who worked on the farm and lived in beautiful but queer wagon-homes in the meadow. But I was getting four cents a rod for the work, and often it was the easiest thing in the world to clear up two or three rods in a minute, by working like a machine, with knife flying at its ut-

House of Foreman on Gibson Farm. The Wife and two Daughters Were in the Berry-Picking Race.

most rapidity. I was afraid of the snakes and lizards, but I kept thinking of the "four cents a rod," "four cents a rod," "four cents a rod," and while the money was piling up so easily the fear of the serpents was minimized. The big yellow spiders, that American boys find in the harvest fields, were also here, in this ditch. But as they are apparently harmless, I mowed away, letting them fly wherever they would, careful that none of them dropped on my head or fell down my neck. "Four cents a rod," "four cents a rod," "four cents a rod," I kept saying with that old corn-knife, and without working a full day, or anything like a full day, I could earn from two to three dollars.

And I suppose the only reason I got that job away from the others, or did not share it with any of them, but had it all for myself, was the fact that I had dared to stand for the principle of temperance. It might be, too, that the lazy and trifling hirelings, incompetent and dishonest in their work, could not have been depended upon to do this work as the master wished to have it done.

One afternoon I was chopping away with all my might in a rather heavy, swampy morass of grass, rushes and weeds, when my knife struck something like a solid cushion. It struck it again and again, each time the cushion seemed to move. It acted as if it was alive. I stopped and looked for the object. I had mowed right into a nest of hedgehogs, the first hedgehogs I ever saw in their native haunts. At first the pathetic cries of the little ones in the nest attracted my attention. They might have been kittens or puppies or rabbits, for the sound, while unlike anything I ever heard before, was not so different but that the imagination could associate with it almost any kind of small animal in distress. I looked closely, carefully, rather fearfully, down among the leaves, the grass and bushes. All I saw was a

yellowish ball that seemed to "give in" when I touched it with my chopper. Sometimes when I pushed it hard the ball would slightly unroll. It was some time before I realized the value of my discovery. This ball was the mother, that had rolled up over the nest, to protect not only herself but also her little ones from the danger threatening them. Then I rolled her into my big hat and played with her as with a football,—gently, but she never opened up. The little babies below her did not know what to do when she had rolled up over them, for the sharp quills of her hide were sticking them most unmercifully. It was quite probably the first scare they had ever had, here in their safe retreat from men and dogs, and they had yet to learn, by cruel experience, the use of those ugly, projecting spikes, that were not only all over their mother, but also were beginning to stick through from their own little hides. These quills were several inches long, as sharp as needles, and as strong, sticking out every way over the back and sides, many of them stick-

ing among one another in all directions, affording a perfect armament that no dog could ever master. I wondered whether some of these sharp needles did not turn in sometimes and torture the owner of them. When the hedgehog was all nicely rolled up, no head or tail could be seen. It was just a round ball, the outer covering of which was full of projecting spikes, so formidable and sharp as to make it impossible to take the animal into one's hands.

Its safety was in lying still. Its conquest was by doing nothing, but just keep on lying still. When I tickled its back the hedgehog slightly unrolled, peeped out with its queer little head from among the gray quills, showed for an instant four little legs that were too small to permit it to run fast, or to fight an enemy, then rolled up again and was to all appearances as dead as a rock.

When I told the men that night about my find, one of them said he liked to eat the flesh of hedgehogs and that he might go over later and take some of the little ones for a mess. I begged him not to molest them, however, I regretted that I had made known their habitation to the man who saw in the little curiosities only a few mouthfuls of flesh that any of the excellent vegetables

Horse and Cart Used by Mr. Gibson in Riding around the Farm.

growing about could better have satisfied.

I learned some excellent lessons about this animal with the needle-back. God was kind to it in furnishing it with those weapons, for in no other way would its life be safe. Its small feet, its anti-disposition to fight, its size and its habits of living in nests on the ground rather than below the ground, would all tend to its extinction. The Creator had given it these long, sharp needles in place of horns and hoofs or sharp teeth and strong arms. It was satisfied to use what God had given it, and was not complaining that it could not run away like the snake or hare, or tear the flesh like the wolf or lion. It also knew when to keep quiet. It was the most quiet when there seemed to be the greatest need for it to have been excited, nervous and fidgety. In its silence, its stillness, its calmness, as often in our own, lay its strength, its hope, its life.

## THE VALUE OF THE INDIVIDUAL.

PERRY LINT.

How potent is the social environment in shaping the minds of men we shall find it difficult to realize. At one time and in one country we find one idea prevailing and in another, another. The ideal man in Sparta was the brave soldier; in Athens, the symmetrically developed man; among the monks of the middle ages, the man who had completely renounced the world; among the Jesuits, the man who does not only what his superior directs but who thinks and feels as he does. But the thing of supreme value in this world today is the individual who wisely and rationally lives.

The individual who is of use to his country and to mankind is the one in whom is the feeling of duty to himself, to others and to his God. There is an ideal manhood to which the human race must come and every step towards this end which the individual may take is a step won for humanity.

The one who hopes to aid in the development of mankind must first develop himself. Besides preserving his personality, he is to appropriate to himself in his development whatever materials of growth he can assimilate to his betterment. For life can maintain itself only by growth. The living soul is an organic force and is not stored with the truths of reason when it comes into this world. It inherits certain faculties but the outer world and all truth must be discovered by it. The soul cannot be said to be finished when it is created but in a sense the individual must develop it by finding the materials which are suited for its growth. Man's individuality and true worth is to be acquired by effort and not by gift or chance.

One must realize within himself as much as is possible of the highest good. This particular good which is to be attained in the perfect man is the object of personal desire and should be the object of possession, so far as practicable. This is a treasure which cannot be held by the individual alone; it must be shared and by this sharing human welfare is bettered.

Man must have within him the proper motive; the wants of others should call as loudly to him as his own, and his relation to society should involve duties upon him which the selfish man fails to perform. Social organisms and a nation, such as our own grand free government, are only made possible by the people who live in it in whom the sense of duty and veracity overflows. For this nation to exist, veracity is required in the arm of the day laborer, the hand of the mechanic, the finger of the artist, the pen of the capitalist, the brain of the thinker and the very imagination of the poet. Possessing these things, man can be said to be a man of honor. Not honor as we are accustomed to think of it as a romantic virtue, associated with the memories of chivalry,—the daring and the pride of men whose rights were obtained by artillery

and whose laws were made by their swords,—but one who has a high regard for his own spiritual being, together with a sincere respect for the sacredness of others. Such men will use the good they possess against the evil before them. They are the real leaders of men, the genuine reformers, the makers and builders whose works remain.

At this stage in the history of the world, man has come to clearly realize the fact that, no matter what happens in the physical world, there is a cause for it. If a machine refuses to operate we know there is a cause for it and that a patient and careful study of the facts of the case may enable us to discover the cause and remove it. If a bank is defaulted, if a public office is corrupted, if the trust of the people is betrayed, if a nation sinks to the plane where it fails to be recognized as a world power, we can find the cause for it and that cause lies in the individual, whose weakness of character caused him to surrender to vice.

How can this cause be removed? It cannot be done by attempting to reform those who now hold the responsible positions or by attempting to instil the sense of duty into the breasts of those who rule the people by unjust laws. The remedy must be applied to another generation and that place is in the rising generation. In them must be placed the desire to achieve true greatness and they must feel that they are spinning their own fates, good or evil, never to be undone, for every smallest stroke of virtue or vice leaves its never so little scar. Nothing we ever do is completely cast out or erased, and as every moment in that stately and solemn procession that we call the March of Time goes by never to return, so is the individual being developed into a man who is a benefit to mankind or a menace to society, never to be changed.

We often come in contact with those whose chief aim is, in some way, to do an injustice to their fellow-man. Their efforts tend to destroy all progress made by mankind, they delight in the downfall of others, and glory in the misfortunes of their less fortunate brothers. And yet they hide their life under the cloak of religion. They use their church relations as an instrument in commercial gain; they infringe on the rights of others; in their dealings they are ever ready to take the advantage; they worship money and on account of the abnormal love they use unjust means in securing this idol of their heart and yet on Sunday they enter the pulpit and deliver a sermon which is to admonish the tender lambs of their flock. They fail to realize that, to the true Christian, their preaching is so much wasted energy and forget that their daily actions betray their profession. Altho man be reared in the shadow of a church and adhere strictly to the formalities of that institution and his life is one of pretension, he is looked upon less favorably by his Maker than the one who has never heard the sound

of a church bell and yet is true to his belief and professions. The church and the true man are calling for men who live lives of less pretension and more accomplishment; men whose lives correspond to their profession.

If this government is to be successful it is the individual who is true to himself, who must make it so. This grand old republic which has weathered so nobly the storms of war and peace is now calling for leaders who will govern it as did our forefathers. It was the dream of the drafters of the constitution that each year the people should choose from their number the fittest men to make the laws. This was actually done in the early days but today this is not the case. We

send the men who will serve the corporations, trusts and capitalists and aid them in crushing the American people for their own personal gain. The masses of people in this twentieth century are seeking men who have noble and unselfish purposes; men who will serve the people with principle; men who have convictions and the courage of their convictions.

When these men are found, and not until they are found, treason in the senate will cease; the voices of the attorneys for the controlling interests will become hushed; the interests of those who lie in the direction of just ruling will cease to be unrepresented and this will indeed be a government for the people.

*Mt. Morris, Ill.*

## How the Healing Art Developed

J. F. Studebaker, M. D.

### In Five Parts.—Part Three.

IDEALISM of the profession in modern times is beautifully and carefully worded in the beginning of the first chapter of "Principles of Medical Ethics of the American Medical Association." Physicians should not only be ever ready to obey the calls of the sick and the injured, but should be mindful of the high character of their mission and of the responsibilities they must incur in the discharge of momentous duties. In their ministrations they should never forget that the comfort, the health and the lives of those entrusted to their care depend on skill, attention and fidelity. In deportment they should unite tenderness, cheerfulness and firmness, and thus inspire all sufferers with gratitude, respect and confidence. These observations are the more sacred because, generally, the only tribunal to adjudge penalties for unkindness, carelessness or neglect is their own conscience."

Such honorable aims of the profession today are in a great measure expressive of the ethics of Hippocrates toward the ill. By reason of his unimpeachable integrity, his enviable unselfishness, his philosophic and scientific supremacy, his unprecedented art of healing, and his exceptional advancement of the Old World's surgery, he was lavished with many honors, being called "The Father of Medicine," "The Divine Old Man" and being deified after his death in 361 B. C.

Following Hippocrates was Aristotle, the great naturalist of antiquity, creating the first museum in natural history. He taught the surgeons the value of anatomy, i. e., a knowledge of how the body is made up, and some distinctive principles of induction or argument.

For nearly five hundred years since then, there is no medical man of note, when Galen, unusually versed in the culture of Greece, appears as a student at Alexandria. This great span of scientific inactivity was

due to military triumphs which were making new boundaries of conquest. The Greece of Pericles declined; Alexander conquered the world, wept because there were no more worlds to conquer, and died; his successors made their sovereignty felt in Egypt in the establishment of a Greek politic on the Nile and the founding of the great schools and library at Alexandria; Carthage fell; Rome humbled the world, supplanting a republic for an empire.

Galen was born at Pergamus, a Grecian town, where he practiced for four years and then went to the capital of the world, Rome, where he had very little peace the rest of his life for he was quick tempered, impulsive, uncompromising with his colleagues, making enemies, was intolerant of fools and quacks, the latter of which were the dominant representatives of medicine, the science being then debased in Rome. The ethics of Hippocrates were dead. "The decalogue was broken in every household." Such a place was unfortunate for an honest man of science. He had friends only among those in power, as Sergius, Praetor of Rome, and the virtuous few. But he was undaunting although in constant turmoil. While Hippocrates made his progress by bedside investigation, Galen went further and made demonstrations by dissections of animals and sometimes bodies of the enemy on the battlefield and by experiments upon monkeys. He added much of reality to anatomy and consequently surgery through intelligible research.

Up to the beginning of the Renaissance or Vesalius' time 1514—1563 A. D. there was no progress in medicine, for the Christians of primitive times were bitterly opposed to dissections and considered the medical science profane. The Jews shared with the clergy in the healing art from the ninth to the thirteenth centuries. Their education embraced very little and their knowledge consisted for the most part of a few

symptoms or signs and a few receipts. Books were very rare and exceedingly expensive and capable teachers lacking.

Christianity and medicine suffered alike during the dark ages, particularly gloomy in the tenth century. The Roman Republic was followed by a Roman Aristocracy which had a greater tendency to make the position of medicine permanently inferior for nearly two thousand years, even after the rise of the Church of Rome. The soldier was superior to all. First soldier, and others ranked in order of importance—priest, lawyer, merchant, physician and then after passing over many, the surgeon, ranking as the most humble of craftsmen, the so-called barber surgeon. Christianity and medicine, too, deteriorated before the seventh century under the Turkish sway of ignorance, despotism, anarchy and the inroads of Mohammedanism. All this had a fatal blow upon medicine through the middle ages when there were no hygienic rules of regulation, no skilled physicians, but impenetrable darkness of a damp, musty and dismal age of corruptness, in the canopy of which the stars were starless. People were crowded together within walled cities and narrow streets, without sewerage, without pure water, wholesome food and rarefied air. They were afflicted with plagues, Black Death, and innumerable sicknesses with only one certain outcome—death. All knowledge of medicine was mist and vapor. Excepting the compilations of the Arabs (they added nothing new), and a school of prominent women near Naples, during eleventh, twelfth and thirteenth centuries, the healing art was practically lifeless.

These paved the way for Vesalius of Brussels, a great anatomist, at the dawning of the age of Renovation, which was the springtime of our new world of investigation, observation and inductive reasoning, the shackles of dogmatism, tradition, hypothesis, systems, and authority having been broken. It was certainly a great hustling era to live in, for it was productive of such men as Luther, the reformer, Michelangelo, the sculptor, Raphael, the painter, Copernicus, the astronomer, and Columbus, the navigator. It was during these stirring times that Constantinople fell before the militant Turk, and the wise men fled, taking with them forgotten treasures of Grecian art and science for their western brethren.

For thirteen hundred years, Vesalius was the first to follow the methods and science of Galen with corrections of some errors. Like Hippocrates and Galen, he was a close and profound student in the great universities. He had an intense passion for dissection, realizing the important bearing of it on surgery. At the age of twenty-nine he was given a chair of Anatomy and Surgery at the University of Padua. Six years later he published the work entitled "*Fabrica Humani Corporis*." Like most men in advance of their times, this brought him so much ridicule and contempt

that he, weary of his persecution, accepted the post as physician to Charles V.

About one hundred years earlier than this the art of printing became known. Through this, knowledge became widely disseminated and imperishable. Later hospitals and schools were founded. Better social organizations sprung up. Inventions were made. The compass took away a great deal of the danger of sea voyages, leading to commerce. The telescope and microscope began to solve problems hoary with age. Although the four branches of occult philosophy greatly prevailed—theosophy, to which a man raises himself by prayer; magic, the art of controlling demons; astrology, the art of reading future events by means of the stars, and alchemy, the secret of extracting the essence of substance, e. g., by a philosopher's stone, yet men were looking for something tangible. Realism was taking the place of idealism. This led to more minute and correct study of the uses of different organs and members of the body and on to a closer study of disease, and its location in the body. Surgery began to assume a dignified aspect in the ingenuity of Ambroise Pare, of France, born 1510, who was first an apprentice to a barber-surgeon but rose later to high rank, the greatest surgical authority in Europe, and the most beloved man in France. The soldiers said of him that with Pare among us we shall not die of our wounds. Previously surgery was in the hands of ignorant barbers, bathers, and bone-setters who were the social outcasts of the fifteenth century and considered contemptible, for the holy men held an abhorrence for the shedding of blood. Pare spent forty years to throw light upon the art of surgery.

Passing from him to other great men we find Harvey busy discovering the uses of the heart and circulation; and Paracelsus paving the road to modern chemistry. The eighteenth century was progressive because of such renowned men as Von Holler, Morgagni, and Hunter. To this day Hunter's brilliancy illuminates our science. He established the Hunterian museum at a cost of \$375,000, money accumulated through his own efforts and frugality. He taught that "life is a principle independent of structure most tenaciously held by the least highly-organized beings; that mere composition of matter does not give life, for the dead body has all the composition it ever had; that life is a property we do not understand."

#### IN TOUCH WITH NATURE.

MRS. M. E. S. CHARLES.

"And what is so fair as a day in June?  
Then, if ever, come perfect days."

THE perfect days of June, the deep blue of the sky, the bright new foliage of tree and shrub and plant, the lusty life all about us, is a direct appeal to the housewife and mother to drop her strenuous life for

a time and come into close touch with Nature in her sweetest mood. Perhaps all women are not situated so as to be able to spend much time in recreation, but many could, and would, spend more than they do if they were fully aware of the physical rejuvenation they would experience, to say nothing of the spiritual uplift gained by direct contact if only for a day, with the soothing influences of waving grasses, knee-deep, the rare beauty of the flowers of many tints and shades, and over all the golden glow of the sunshine. Only the heart in tune with Nature knows the delights of a country home, shut in by the "cool, green twilight," of shifting leaves; the vine-covered porch where leaf shadows chase one another over floor and wall making pictures which are never the same for two consecutive seconds.

The odors, too, that come to us in June are delightful, elusive. How strange it is that we can remember them. In our hurry and bustle we do not take time to think it is the perfume that brings back the memory of a certain room, an absent face or the haunts of childhood, but before we are scarcely conscious of the odor, we see the picture before us. Does the scent of clover blossoms greet us? At once we see the fields

of clover on the old home farm, pink with the heads of bloom, each little floret pouring its portion of perfume upon the air. Is it the spicy fragrance of the sweetbrier? Before us is the face of the long-absent playmate with whom we spent many happy hours building air castles. The scent of the old-fashioned grass pinks means bare feet on the soft, cool grass. The delicate perfume of the wild grape brings back the memory of the evening stroll by the brook-side when the all-important question was asked and answered. "The white lilies give out from their perfumed chalices a wealth of sweetness. Instantly the form of a beloved one lies before us robed for the grave.

There are many other June odors that have a place in one's life history, and I feel sorry for those for whom these humble things hold no love, or to whom the June breezes bring no memories of childhood in the great wide country. If we would keep close in touch with the things that remind us of our innocent childhood, we would be better mothers, even if we have to leave off some of the superfluities of life in order to take the recreation that will bring us in touch with these things again.

*Spiceland, Ind.*

## Flowers

### Charlotte Davis

"AND God said, Let the earth bring forth grass, the herbs yielding seed, and the fruit tree yielding fruit after its kind, whose seed is in itself, upon the earth: and it was so." Thus, on the third day of the first week the flowers were born and since that time they have greatly multiplied and have always been a great blessing to the earth.

There are hundreds and hundreds of different kinds of flowers. The principal color of the flowers is most frequently due to showy petals and they display their beautiful colors in order to attract insects, since different insects appear to be especially attracted by different colors.

It is very necessary that flowers be visited by these little insects and birds, for they are the agents by which the pollen is transferred from one flower to another, and thus they fertilize them. Many flowers possess various odors, which also play a great part in attracting insects. Especially is this true of small flowers, like the mignonette, and the night-blooming ones, such as the evening primrose; they are sweet-scented in order to attract night-flying moths. It is interesting to observe that the majority of flowers which bloom at night are white and that they are much more generally sweet-scented than those which bloom during the day.

Most flowers contain nectar upon which many insects partly feed. In a large number of cases the

petals of the flowers show decided stripes or rows of spots of color different from that of most of the petal. These commonly lead toward the nectaries, and it is possible that such markings point out to the insect visitors the way to the nectaries. Following this course, the insect not only secures the nectar which he seeks, but probably leaves pollen on the stigma and becomes dusted with new pollen which he carries to another flower.

Flowers vary in size from the tiniest, dainty forget-me-not to the large gaudy sunflower and they assume various plain and fantastical shapes.

When it comes to discussing the distribution of flowers, it is much easier to tell where they are not found than to mention the many different places where they are found, for as says Longfellow:

"Everywhere about us they are growing,

Some like stars, to tell us Spring is born;  
Others, their blue eyes with tears o'erflowing  
Stand like Ruth amid the golden corn;

In all places, then, and in all seasons,

Flowers expand their light and soul-like wings,  
Teaching us, by most persuasive reasons,  
How akin they are to human things."

They are found in every clime, whether it be hot or cold, light or dark, wet or dry. Every little plant has its own sphere in which to live and be a blessing.

They adorn the meadows and valleys and deck the mountain-tops with their cheerful faces; they cheer the alleys with their presence and add a charm to the rudest peasant's cot; they bend low to the watery edge, clothing richly the banks with their emerald foliage and jewel-like blossoms, and very often float triumphantly on the clear, cool surface; they make happy the sick room with their pleasing odors and are as a ray of sunshine in the grandest mansion of wealth; they are tokens of love and friendship and are often long cherished after the life, color and fragrance are gone; as an author writes;

"A poem every flower is,  
And every leaf a line,  
And with delicious memories  
They fill this heart of mine."

Flowers are a gift of Mother Nature to God; whenever we see them they give us an inspiration. There is nothing that makes a home more attractive and pleasant than flowers, both in the house and in the garden. They do much toward moulding the character of those who love them. Little children who grow up with flowers around them always have noble ambitions. They love and appreciate higher things. Their thoughts are pure, and kindness and gentleness is their motto. Not only in the home is the influence of flowers felt, but all who live near or come in contact with them in any way feel their influence. Few people take time to appreciate them as did Lowell when he said:

"Ah, we owe  
Well more than half life's holiness to these  
Nature's first lowly influences,  
At thought of which the heart's glad door bursts ope,  
In dreariest days, to welcome peace and hope."

Of all the plants, not one has been placed in the world without ample provision for the perpetuation of its species. It is truly wonderful to study the little flower from this angle. Each flower plant is made up of various cells which carry on the different processes of life. A very good comparison of the leaf of a flower plant to a mill has been made as follows: the palisade-cells, or the cells containing the green coloring-matter and the underlying cells of the leaf, are the mill; carbon dioxide and water, taken into the plant thru the roots and stomata, or little pores on the leaf's surface, are the raw material used; the chlorophyll grains, or the green coloring-matter of the palisade-cells, are the milling apparatus; the sunlight is the energy by which the mill is run; the manufactured product is starch; the waste product is oxygen. When we think of this marvelous demonstration of God's handiwork, need we wonder why he said, "Consider the lilies of the field, how they grow; they toil not, neither do they spin: and yet even Solomon in all his glory was not arrayed like one of these"?

Plants have a struggle for existence the same as

animals, and the fittest always survives. The propagation of all flowering plants is brought about thru seeds, bulbs, roots or sprouts. In flower culture then, the best results are obtained: first, by careful selection of the seed, bulb, root or sprout; second, one must know the flower well enough to plant it in the proper soil with the proper temperature and moisture; third, after the plant gets a start, he must know how to care for it. Plants are as different in their choice of homes as are people; just like children in regard to growing, some require much care and attention while others seem to grow stronger and more hardy when uncared for. Like an individual, each has its likes and dislikes and the successful floriculturist acquaints himself with a thorough knowledge of the history of each little flower he attempts to grow. In their struggle for existence they have many strange means of protection; oftentimes the leaves, bulbs or leafstalks possess a bitter or biting taste, or a bad odor, while the leaves and stems of others are made up of hard, string texture which protects them from the herbivorous animals likely to encounter them; some are tough and hardy and grow closely to the earth, others in out-of-the-way places; some are protected by thorns of dead and dry stipules while others are armed with little sharp nettles; some even possess poison and others imitate closely the soil or pebbles of their environment.

Knowing all these things, we learn to love and appreciate the simplest and plainest of these precious gifts more and more. All the little flowers bloom in this world to teach a lesson if we will but learn of them. As we look into their bright faces, they should remind us of our duty toward God and man. What a wonderful world this would be if each individual played his part in the world's drama as well as each dear little flower. Selfishness and discontent, the two greatest sources of evil in the whole world, would vanish, and love, peace and contentment would reign forever and ever.

*Elgin. Ill.*

#### WHERE BABIES SWIM.

"I SPEND my winters in Samoa," said a traveler. "It is always summer there. There the babies swim. Can you imagine a quainter, a more charming sight than a host of babies, none over two years old, laughing and crowing and swimming like fish in pools of clear sea water? You will see this sight in Samoa. Samoan women believe sea baths benefit babies, and in that equable climate they bathe their little ones daily the year around. The youngsters soon learn to swim. They can swim before they can walk. And to see these pretty brown babies swimming in the sea is well worth a 5,000 mile trip to Samoa."—*Philadelphia Bulletin.*

A joy unshared is always short lived.

## SKI TOURNAMENT.

H. M. HARVEY.

TRAVELERS on the North-western Railroad, between Chicago and Duluth, when nearing the town of Cameron, Wisconsin, will invariably notice a peculiar high structure on the west side of the road. The structure is more noticeable because situated on one of the few small hills of that section of country. It is a scaffold reaching from the top of the hill to the height of seventy-five feet clearly outlined against the sky. The questioner will be informed that it is a place to ski jump, or skee, as the dictionary allows it spelled. The average southerner will ask, "Well, what is the ski jump, or a ski?"

The ski is a small board four to eight feet long, of selected material, turned up runner-fashion at one end and worn one on each foot. It is a native of the north,

on its top is built the incline plane ranging from seventy-five to one hundred and twenty-five feet high and sloping down about two hundred feet, ending when three feet from the ground. Down this steep slides the skier like an eagle from a crag and makes a leap from the end of the plane. A thrilling ride I suppose. The skier must calculate well for his leap; if too soon distance is lost at the landing, if too late it means a great spill.

The longest jump here was eighty feet. At Duluth in February at the third Annual National Ski Association Tournament a record of 116 feet was made by John Evenson, that being a breaker of all American records by two feet. Norway heads the world with a record of 137 feet.

While making the jump a good form is supposed to be kept or lack of skill is shown. The arms are used for balancing and as wings to climb up with.

A Record-breaking Jump. From X to X is 80 Feet.

naturalized into the northern part of our country as a sporting implement. In Norway they are worn most largely in business, in the United States in play, there over real snow-covered hills, here over artificial heights.

This sliding place has been erected two years. Similar planes have been built at various points in Minnesota and Wisconsin: Duluth, Red Wing, Coleraine and others. The climate this far north is congenial to the sport, there being plenty of snow. During the winter it is expected at Cameron that there will be three months of sledding without a break, besides the introductory and valedictory flurries. This place is one hundred miles south of Duluth and does not experience so much cold as points farther north.

For the building of a ski plane a hill is selected. The slope of the hill should be about two hundred feet to one hundred foot fall. This slope serves as a landing place for the jumper. Farther up the hill or frequently

The ski is held highest in front in order to offer best facilities for soaring and least resistance to the air. Good form is expected also at the landing. To put one hand on the ground deducts fifteen points, two hands on the ground counts a fall and costs the aeronaut thirty points. From one to twenty points are added for good form throughout the sail. Other interesting feats are attempted, as coming down on one runner, two at once, hand in hand, or turning a somersault in mid air. Amateurs, ranging anywhere from eight up, may be seen on most any hill practicing for these days to come later, the same as their southern comrades may be seen on the street or on the lawn practicing for the baseball match.

The tournaments are largely attended. Prizes are offered. On account of the steepness of the landing place seldom are any injured. The riders dress so as to offer least resistance to the air.

188 Hastings St., Chicago.

## THE PEARL FISHERIES OF THE PERSIAN GULF.

EFFIE V. LONG.

ALMOST half way down the Persian Gulf on the Arabian side is a group of islands known as the Bahrein Islands or the "Pearl Islands of the Gulf." From time immemorial the Persian Gulf has been noted for its pearl fisheries. It was due to the pearl indeed, that these islands were known to the ancients, it was the pearl that gave them their fame and history, and today these islands would have little importance were it not for this one interesting industry. "If Egypt is the gift of the Nile, Bahrein may well be called the gift of the pearl-oyster." "These islands are identified by Sprenger and others with Dedan of the Scriptures (Ezek. 27: 15), and were known to the Romans by the name of Tylos. Pliny writes of the cotton trees, Strabo describes the Phœnician temples that existed on the islands, and Ptolemy speaks of the pearl fisheries. The geographer Juba also tells of a battle fought off the islands between the Romans and the Arabs." It seems that the whole group of islands is engaged in this one occupation and there is no other. "We are all, from the highest to the lowest, slaves of one master,—Pearl; all thought, all conversation, all employment turns on that one subject; everything else is merely by-game and below even secondary consideration." So Palgrave quotes the words of Mohammed bin Thanee, a resident of the Pearl Islands.

The fisheries are in progress from June till October and even longer when hot weather sets in early. Science has brought out the theory that pearls are the result of irritation or disease of the pearl oyster, or, later still is the parasite theory, but the Arabs have a theory of their own. They tell how the monsoon rain-drops find chance lodgment in the mouth of the pearl-oyster, each drop becoming a pearl. "Heaven-born and cradled in the deep blue sea," the pearl is the purest of gems and, in the Arabian's eyes, is the most precious.

Fishing for pearls is an expensive work, but very prolific. In 1896 the total value of pearls exported from Bahrein was \$1,500,000. The islands have about 900 boats engaged in the work and the cost of bringing one boat's share to the surface is about \$1,600. There is also great hardship to be endured in bringing up this treasure. The poor people who risk their lives in the diving, are slaves to rich merchants,—Arabs and Hindoos from Bombay,—who get the profits while the poor natives are compelled to furnish everything and bear the expense. They pay the divers in food and clothing and always keep them in debt to them.

The diver's sole outfit is a nose clasp to keep the water out of the nostrils, ten leather "finger hats" which are twice the length of a thimble and used to protect the fingers in gathering the shells, a stone weight, and a basket. He does not have need of cloth-

ing. The diver stands upon the stone weight with ropes passing from it up between his toes and plunges down, feet first, into the water. There is also another rope attached to the diver and his basket by which he gives the signal to be drawn up again.

The best divers can remain below only two or three minutes at most and when they come up are almost suffocated. Many are brought up really unconscious and often cannot be brought to life. Deafness and suppuration of the ear are common among divers as also rheumatism and neuralgia. Sharks and devil-fish are plentiful and attack the divers, so the poor fellow's life is not an easy one.

Each boat has a sort of figure-head on the prow covered with the skin of a sheep or a goat, which was offered as a sacrifice when the boat was launched for the first time. "This is one of the Semitic traits which appear in various forms all over Arabia—blood-sacrifice—and which Islam has never uprooted." And all of the divers prefer to go out in a boat that has the sign of the blood-covenant with Neptune."

A large boat carries about forty men, less than half of whom are divers, the others being oarsmen and rope-holders. In each boat is a fellow called "the one-who-prays" and his work is to take charge of the rope of any one who stops to pray or eat.

The pearl-oysters are brought up and left on deck over night; next morning they are opened and, the pearls taken out, the shells are also preserved for the mother-of-pearl, though formerly they were thrown away. In one year the value of exported shells from the Gulf amounted to \$28,000. The Arabs wonder what the English do with those empty sea-shells.

On shore the merchants classify the pearls according to weight, size, shape, color and brilliancy. They are white, yellow, green, blue, grey, black and golden, and they range in size from a grain of sand to a hazelnut, being oval, flat, pendant and various shapes. A perfect pearl the size of a hazelnut may be worth a thousand dollars. Pearl merchants carry their wares about tied in bags of turkey-red calico. They have tiny scales to weigh them and a set of sieves to test their size, all refusing to pass through the coarsest sieve being classed as "chief" which are generally very valuable, though their value depends most on weight and perfection of form. The value of the color depends mostly on the purchaser. Orientals generally choose the golden color while Europeans prefer the perfect white. The black ones are not so highly valued.

The pearls are exported to Bombay and from there to all parts of the world. Those who wear pearls for their adornment may well remember that they are indeed valuable and would be classed as "costly array," for not only in their formation but also in their being brought to light above the surface of the water, there is pain to be endured and often lives sacrificed.

*Jalalpor, Surat, India.*

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## THE EASY WAY.

It might be well, in some respects, if we could look into the future and see just what kind of people modern conditions and tendencies will produce in the next generation or two. The revelation might cause us to look into these conditions with a view of making some changes. It is a law of civilization to "stamp improvement on the wings of time," but real improvement must be gauged by final results as well as by those which follow immediately. The present generation has no right to enjoy those things which will prove to be the undoing of the people some generations hence.

We refer in particular to the desire to eliminate from the field of effort real, downright hard difficulties and hindrances; the desire to make everything easy, with no crosses and no obstructions.

The training in the easy way begins with the little child. A popular magazine, devoted to home interests and the training of children, in discussing the subject of the wilful child, suggests the plan of calling his attention from the thing he should not have or do to some other interest, so that he may not know that his wishes are being denied. He is not to know that he is not having his own way. This of course, may save a stormy scene for the time being, but how any child is to derive any moral strength from such a method or acquire any respect for the wishes of his elders it is impossible to see.

And this plan is largely followed today. Devoted parents make every sacrifice possible to smooth the way for their children. The child is encouraged to give himself over to the enervating pleasures of self-indulgence instead of being allowed the strength-producing joys of self-denial.

By the time the child has grown into the man his habits are fixed, and when he enters the social and religious world, the rules and regulations of each must be altered so that they may be agreeable to the traveler on the easy way. A writer in *Great Thoughts* sees the

serious side of the lack of religious discipline. He says: "It seems to me, after an experience of nearly sixty years of life, that nothing will take the place of that discipline, commended by Jeremiah, who said that it is good for a man to bear the yoke in his youth. It is essential for the strongest characters that there should be a period in which they are under rigid discipline of some kind or another. The danger now, it seems to me, is that young people will have the pleasant, agreeable, and benevolent sides of the great problems of life put before them so exclusively that they will miss a certain hardness in the character, which, I think, is essential for the best human action. The very best men should have something of this stiffness in them, and this is just what we are in danger of losing through the decline of an unflinching and dogmatic religion."

And we must lament the prevalence of this tendency in all departments of life. The flabby product of such a course can never take his place in life with the one who has taken full work in the "school of hard knocks." A head-on collision with some obstruction or other, at intervals, is an excellent thing for any of us in the way of developing the bone and nerve and sinew that go to make up a perfect man.

## IN NATURE'S SCHOOLROOM.

Now that the end of our school year has given our students leave to close up their text-books, it does not follow that they should likewise close their minds to all learning. The season offers a multitude of interesting lessons that may be mastered at the cost of little effort. In nature's schoolroom there are numberless opportunities also for securing at first hand proofs of the dry facts which were obtained from text-books. And the facts thus substantiated will no longer seem dry,—will, in truth, give added attraction to those which have not yet been mastered. A mind open to nature's truths will in these three months grow much faster than during the past months when it was held to the written text. At the same time it will take to the coming school year unusual ready grasp and richness of thought.

## GOOD WORDS ABOUT ESPERANTO.

The absolute certainty of the ultimate adoption of Esperanto with a wide field of usefulness as an international language is supported by these facts:

The words are not arbitrarily created, but the great majority are already familiar to Europeans and Americans.

The sounds and pronunciation are international and so simple that two persons of different descent, for example an American and a Russian, having learned the language from books, can readily converse in Esperanto.

Esperanto now has forty monthly magazines and a rapidly growing array of books, including works of all classes.

It has recently been approved by an international delegation representing over 250 of the leading universities of the world.—*American Esperantist*.

### LESSONS IN ESPERANTO. No. 6.

IN Lesson Three the present, past and future forms were given of a verb in the Active Voice. In this lesson more forms of the verb will be given.

"US," final, denotes the conditional mode of verbs.

"Mi legus," I should or would read, etc.

"U," final denotes the imperative mode of verbs.

Skribu, write. Li, ŝi, gi, skribu, let him, her, write.

Ni, ili, skribu, let us, let them write.

"U," is also used for the subjunctive mode, as, ke mi legu, that I may read.

#### COMPOUND TENSES, ACTIVE.

Compound tenses are formed from the active participles, of which there are three in Esperanto.

Present, "ANTA," amANTA—loving.

Past, "INTA," amINTA, love, having loved.

Future, "ONTA," amONTA, about to love.

These forms are all adjectives and take the plural "J" and the acc. when it is required.

Ni estas amantaj, we are loving, etc.

By changing the final "A" to "E" they become adverbs:—amante, lovingly.

By changing the final "A" to "O" they become nouns:—amanto, lover.

The auxiliary verb is "esti" both for the active and passive voices.

Infinitive:—ESTI AMANTA, to be loving; ESTI AMINTA, to have loved; ESTI AMONTA, to be about to love.

Mi estas amANTA—I am loving.

Mi estas amINTA—I have loved.

Mi estas amONTA—I am about to love.

Mi estIS amANTA—I was loving.

Mi estIS amINTA—I had loved.

Mi estIS amONTA—I was about to be loved.

Mi estOS amANTA—I shall be loving.

Mi estOS amINTA—I shall have loved.

Mi estOS amONTA—I should be about to love.

EstU amANTA, be loving.

EstU amONTA, be about to love.

N. B. If the pronoun is plural, be sure to add "J"

#### THE ADVERB.

1. *Derived adverbs* end in "e" as: bone, well. Rapide, rapidly.

They are compared in the same way as adjectives. Ŝi kantas tiel bone kiel Johano, she sings as well as John.

Li kantas pli bone ol vi, he sings better than you.

Vi kantas la plej ĉarme el ĉiuj, you sing the most charmingly of all.

2. *Simple adverbs* are those which have no distinctive termination.

The most important are the following:—

Almenaŭ,—at least.

Ambaŭ,—both.

Ankaŭ,—also.

Apenaŭ,—hardly, scarcely.

Baldaŭ,—soon.

Ĉiam,—always.

Ĉie,—everywhere.

Jam,—already.

Nun,—now.

Nur,—only.

Preskaŭ,—nearly.

Eĉ,—even.

Iel,—somehow.

Neniel,—nohow.

Jam—ne,—no—more.

Jen—jen,—sometimes—

sometimes.

Ĉiujare,—yearly.

Ĉiunonate,—monthly.

Ĉiutage,—daily.

Adverbs as a rule, precede or follow the word to which they refer of quality.

Ne and words used in the comparison of adverbs, such as tre, pli, plej, mapli, etc., *always precede* the word to which they relate or modify.

#### VOCABULARY.

Feliĉa,—happy.

Ĉiuj,—all.

Peti,—to ask, to request.

Flui,—to flow.

Stari,—to stand.

senmove,—motionless.

Lingvo,—language.

Letero,—letter, epistle.

Propono,—proposal.

Servo,—service.

Tuta,—entire.

Mondo,—world.

Serĉi,—to seek.

Kara,—dear.

Peni,—to try.

Sekvi,—to follow.

Respondi,—to reply.

Litero,—letter (alphabet)

Akcepti,—to accept, to receive.

#### EXERCISE, 13.

Nun mi legas, vi legas kaj li legas: ni ĉiuj legas. Se mi estŭs sana, mi estus feliĉa. Petu ŝin, ke ŝi sendu al mi kandelon. Fluanta akvo estas pli pura, ol akvo staranta senmove. En la lingvo, "Esperanto" ni vidas la estontan lingvon de la tuta mondo. Trovinte pomon, mi ĝin manĝis. Mi serĉos la veron. Ĉu vi aŭdas la kantojn de miaj birdoj? Mia kara amiko, mĉ penos sekvi vian ekzemplon. Respondante al via estimata letero ni dankas vin por via propono kaj ni plezure akceptos viajn servojn. Ok estas la kvinono de kvardek.

#### EXERCISE, 14.

Two red apples are on the table. I see a large dog in the garden. She is in the room with the (her) aunt. The house of the uncle is large. Will you drink water? Who is there? I wish to see the new pictures. Do you know me? This bread is fresh, but that is fresher. I do not have the honor to know him. I thank you and present to you my sincere greetings. He will find the second book on the chair in the room. The song of the bird is pleasing. I come from my grandfather and go now to my aunt.

## Teach the Little Ones to Pray

Catharine Beery Van Dyke

WHEN? How? Why? Do these questions come to your mind as this subject lies before you?

A few days ago I met in a public place one of the mothers of our neighborhood. As we waited our turns to be waited upon we fell into conversation. She told me how her little boy, three or four years old, enjoyed looking at the pictures in her *MOTHER'S MAGAZINE*; how he could distinguish that paper from the German papers they received—opening it in preference to them and how she wanted, for his sake, to extend her subscription, and so on. And then further to show his ability to appreciate things at his tender years, she told me how he enjoyed the five-cent shows down town; how he could imitate the actors and dance the little jigs accompanied by his father's playing. As soon as politeness would allow I said: "Does your little boy go to Sunday school?" "In a very decided way she answered "O no! He's too little."

Now if the baby eye and heart can be trained to enjoy and respond to secular things, why can they not as well be trained to recognize and appreciate the simple, beautiful, essential things of God? When, then, should this education begin?

The times and seasons for many of the things relating to the "Oughts" in child training can be, and are determined by that subtle God-given power disclosed as mother instinct.

Unfortunately this instinct is often blunted by prejudice so that mothers often need to have their attention called to certain possibilities in their children, which can be brought out by teaching or suggestion, before they are fully awake to the imperativeness of their position in the case.

We are always glad when we find the real tiny baby showing self-expression in any way. The first look of recognition, the first smile, the first little "coo" and paticake, the first step and the first word. These signs stand for the normal condition of both body and mind.

But we must remember that the baby is made up of *THREE* parts and the spiritual must be fostered as well as others, else the being will not be symmetrical—complete—and consequently, not normal.

Begin, therefore, as early with prayer as you do

with inviting the little hands to meet yours. Place the baby in your lap, bend the little knees, gently hold the little palms together and with your head bowed touching the bowed head of your child, softly speak or whisper a few words of a prayer in it the words, "God," "love" and "Jesus." Repeat this daily and you will be repaid to find the sweet habit of reverence and petition being formed.

With our first babies I began with the popular little verse:

"Now I lay me down to sleep,  
I pray the Lord my soul to keep;  
If I should die before I wake  
I pray the Lord my soul to take."

It was the best I knew then but on analysis I found it to be rather a selfish, awful, frightful, dreadful thing, not conducive to the development of faith in the young mind. Selfish because it does not extend beyond the ego—and that is found in every line. Awful because it speaks of the soul of which the child knows and hears but little. Frightful because of the possibility of death in the night. And dreadful in the thought of being *TAKEN* from loved ones here.

The form I have since used is something like this. "Thank thee, God, for this nice day and for all our kind friends. God bless us every one and help us to love everybody for Jesus' sake.—Amen."

This, or something shorter at the very first, I repeat to them until they are able to talk and to say it for themselves. When they grow older—especially when they enter school life—I have found it appropriate and necessary to insert this petition: "Dear Jesus, help me to keep my body, mind and heart pure and clean for thee."

After awhile they may drop the committed prayer and compose their own. This should be encouraged both by suggestion and by the example they find in the family worship where they should early be invited to pray and sing and read.

Now WHY is this advisable? I have partly answered this question in the beginning—on account of getting a symmetrically developed being—but with such a leading out of the *SPIRITUAL* life from

earliest infancy we can but expect a rich return in after years when our steps become slow, our voices weak but our hearts aglow with the pleasure of having careful, thoughtful, prayerful children about us and, more than this, we will know that the world is richer and better for their lives and the kingdom of heaven on earth is promoted and enhanced by lives thus cultivated.

Religious doubts will find no lodgement in hearts thus trained. Faith in man, faith in heaven, faith in God will be perfected and the life will be free to live and work for others and for God. If the sparrow falleth not but by His notice, be *SURE*, oh, faithful mother, that the simple, earnest prayer of your child—your little child—will be heard and answered by the loving Savior who said: "Suffer little children and forbid them not to come unto me, for of such is the kingdom of heaven."

### IN THE HEART OF A CHILD.

HATTIE PRESTON RIDER.

There's a litter of sand on the kitchen floor,  
Low-heaped in hollow and ridge and dune,  
With a wavering chalk-line along its edge,  
Where a "play" lake's ripples lapse and croon.

Billy-doll bold has plunged straight in,  
Till the waves dash over his calico hips,  
And Emma-doll splashes her dainty feet,  
With a painted laugh on her dimpled lips.

Down close by the "Sanatorium,"  
A wonderful edifice roofed in red,  
Swings little Ruth in her rocking-chair,  
With a serious tilt of her curly head;

For Nelly, bereft of a foot and arm,  
All battered, unkempt, and sad to see,  
In a dingy and frayed-out muslin gown,  
Lies tenderly nursed on her chubby knee.

"Now, Billy! be careful and don't get drowned!  
O Emma-doll! hold your skirt up tight!  
I can't be bothered to fix it now,  
For Nelly-doll's worse; she has kied all night!

"She's a poor sick baby, come out for air;  
So be good chillen and mind me nice;  
They take most troubles and pains, you know,  
With the baby that kies and kies and kies!"

So she softly sways in her tiny chair,  
With a serious glance and a droning song,  
While her dollies stare from their clothes-pin props,  
And her "sick" child slumbers sweet and long.

But the mother-love in her little heart,  
Though strong in its watching as strong can be,  
Gives the tenderest part of its yearning still  
To the poor unfortunate on her knee;

And I think 'tis so in the heart of God,  
That the sad, the burdened, the lonely soul,  
Lies ever nearest its loving throbs,  
While the tides surge on and the tempests roll.  
Elgin, Ill.

In a picture gallery even the best must go to the wall.

### THE HOUSE OF REPOSE.

ADALINE HOHF BEERY.

(Continued from last week.)

A LADY once said to me, "I never had a parlor." She meant that she never had a room set apart for the entertainment of company alone, but the best she had was at the disposal of all her family. And since a parlor is a "conversation place," what more inviting and restful to the whole household than to enter of evenings, with slippered feet, and allow yourselves to be happy—not boisterous—like old-fashioned children? Allow no subjects to be discussed pertaining to the day's work, its plans, or anxieties. Make believe you are guests at a house party, where each is to make himself as agreeable as possible to the others.

In fine, let your parlor be light, sweet-smelling, warm, with the plan of decoration laid out on broad, simple lines, with subdued coloring, and let it be a rendezvous for the tired family. That you may be in harmony with the surroundings, without making a complete change of toilet, the girls may tie on a clean white apron, and the boys slip on a little house coat kept for the occasion. Clothes do have something to do with ones mental state. Do you not have a satisfied feeling when you are conscious that your dress is tidy, well-fitting and becoming? A beautiful parlor, chaste adornment, and pleasant-voiced occupants combine to make a symphony of repose amid the clatter and boom of the mills of toil.

But the parlor is not the only place to seek repose. Some may think it is to be found only in bed. Well, let us go to the dormitory. What have we here? Shades down to the bottom all day, heavy curtains on top, every available space occupied with gimcracks, walls hung with glaring panels of impossible girls with six-inch waists and sixty-inch hats, and the stale odor of last night's breath permeating everything. Repose? Deliver me!

Loop back the curtains. Run the shades to the top. Let down the upper sash a foot. Throw up the lower the same. Carry out everything but the bed and its furnishings, the washstand and toilet set, the bureau and dress accessories, and the necessary chairs. On the pale-tinted walls put a handsome print or two,—a "Madonna," "The Boy Jesus," an orchard in bloom, or some other quiet perspective, having in mind the soothing effect of all the contents of the room. Matt-ing will not annoy with dust like a carpet, or a cheerful rug that can be carried out and shaken is ideal. The washed up floor always leaves a grateful smell.

Leave the windows open as long as the weather will permit. In any season see that outside air has access every night, if you do not like to worry with unaccountable headaches. If your house is heated you will not mind this influx of oxygen. Bad air is harder to heat than fresh air anyhow. Sleep between sheets as much of the time as possible, and turn down the upper

one over the edges of the other covers, so as to protect them from personal exhalations. Comforts are not so easily washed. And how would you like the idea of having a piece of soiled calico rubbing over your face for a year or two—maybe longer?

You need not rest your head on the same spot on the pillow more than two nights. If you turn the pillow end for end, and upside down, you may have four clean places in a week. What a luxury of somnolent cleanliness for the most modest bedchamber! Do not select a little coop on the shady side of the house for a bedroom, but have it as large as you can afford; and sunshine is a marvelous purifier. Have everything contribute to repose as much as possible,—repose of optics, olfactories, brains, muscles, and nerves. And if you have eaten the right kind of a supper, you will rest in such a nook, as much as your habits of life will permit.

When the housewife rises from repose in the dainty room dedicated to sleep, let her not put on an old anxious face as she comes down the stairs and enters the kitchen. The idea of repose should be carried into every room in the house. In the first place, do not begin things with a rush. Take measured steps, reach for dishes and skillets deliberately, and let every motion correspond in dignity to the movements of the heavenly bodies,—“unhasting, unresting.” You are a planet, and your orbit is the circuit of the house. Emerson’s famous saying, “Hitch your wagon to a star,” would be a good motto for the hurrying housekeeper that goes bobbing erratically in her cramped orbit.

Have everything in the kitchen as convenient as possible, so as to save steps. If you are in town, do not begrudge the money it costs to have city water put in the house. Do not pride yourself on having a “big” kitchen. A small one prevents much fatigue. It was said of a noted woman, that she could get a meal and scarcely move from one spot. The modern “kitchen cabinet” is almost ideal in its compact arrangement. But there must be room for a chair or high stool, and on these should be pasted the words, “Never stand when you can sit.” Many things could be done sitting which are done by most women on their feet,—paring potatoes and apples, fixing greens, ironing, and even washing dishes, on a pinch.

(Concluded next week.)

#### SELECTED RECIPES.

Try some onions fried thus: Cut into slices and soak in milk for ten minutes, then dip in flour and drop into boiling fat, deep enough to cover them. When tender, take out with a skimmer and lay on brown paper to absorb the grease. They are excellent to serve with steak or veal cutlets.

Home-made peanut butter: Use freshly-roasted peanuts, shell and skin them, grind in a meat chopper, or pound to a paste in a mortar; add a little fresh olive oil or butter to make the consistency desired. Rub in a little salt, just enough to make it taste right. Pack it closely in jars and keep in a cool, dry place.

Good shortening is made of the flank suet of beef. The easiest way to render it is to cut it in long strips, put through the meat chopper, then set in a granite vessel in the oven to melt. In a few hours it will be reduced to clear oil. The dry scraps can be strained out. It is also excellent for frying, and is much better than lard.

The right way to stew a chicken: Cut it at the joints, and the breast and back into halves, making eleven pieces in all. Put the dark meat in the bottom of the stew pan, the white on top; just cover with boiling water, bring quickly to a boil and cook thus for five minutes, then push back where it will merely simmer and keep there till the meat is tender. If it boils hard it will be tough. A chicken a year old requires an hour to cook, with an additional hour for each added year. When half done add a teaspoonful of salt. When tender lay the pieces on a dish in the order in which they belong, the back underneath, legs and wings each side and breast on top. Then the server knows where to find each piece which he is often embarrassed to do, especially when company expresses a preference. Pour out the water in which it was stewed, and rub together in the pan two tablespoonfuls each of butter and flour. Return the water with some cream or milk, stir until it boils and thickens, add a dash of pepper, and just as you take it from the fire stir in the beaten yolk of an egg to thicken and enrich the gravy.

#### MEASURING THE CHILDREN.

They used to stand on the door-stone gray,  
By the side door, worn and old,  
And we made a pencil mark for each,  
For the brown heads and the gold.  
Low, indeed, was the earliest mark,  
For Bessie could scarcely stand;  
But we held her safe, and marked her height  
With careful and loving hand.

For many a year the game went on,  
We made it a merry match,  
And the one should win who grew the most  
And who first should reach the latch.  
And Harry grew slow, and Nell grew fast,  
And Johnnie grew plump and round,  
And no one could tell which little head  
Would first at the latch be found.

But Harry it was that won at last  
By the very smallest space;  
And Nellie, with all her shining curls,  
Held only the second place;

And Bessie, the oldest little child,  
Was away beyond our sight  
Where we could not tell how fast she grew  
Nor measure again her height.

And all the rest of the children now  
From the farmhouse old have gone;  
Far above the latch now rise the heads  
Of Harry, Nellie and John  
Happy and strong in the world they work,  
For their childhood days are o'er;  
But when they come back they still can see  
The markings beside the door:

—Mary M. Currier.

---

## The Children's Corner

---

### A SYRUP-CAN MOTHER.

DOROTHY DEANE and her little brother Laurence were standing by the window watching for papa. Every night when it was time for him to return home they waited until they saw him come in sight around the corner, and then ran as fast as they could to meet him.

Unless papa was very tired indeed, he always carried one of them home on his shoulder, while the other took hold of his hand, and both tried to tell him of all that they had been doing that day.

"There he comes!" cried Dorothy at last, and the children raced toward the corner as fast as their chubby little legs would carry them.

"Careful now!" said papa warningly, as the two hurrying little figures reached him. "Don't hit against my dinner-pail!"

"What is in it?" asked Dorothy and Laurence in one breath, as they stood on tiptoe, trying to peep inside the cover.

"Guess!" said papa laughingly. "A nickel to the one who guesses right!"

"Candy!" cried Laurence.

"Oranges!" said Dorothy.

Papa shook his head at both these guesses, and at all the others that followed, until they had reached the house.

"Now let mama have a turn," he said, holding the dinner-pail up to her ear.

"Why, it isn't—" mama began, with a look of the greatest surprise.

"Yes, it is!" papa declared. Then he took off the cover and tipped the pail gently over in the middle of the kitchen table, and out came ten of the fluffiest downiest little chickens that any of them had ever seen. Several stepped about timidly, but most of them huddled together near the pail, peeping softly.

"Oh, oh, oh!" cried the children delightedly, jumping up and down in their excitement. "Are they really ours? Where did you get them?"

"They are power-house chickens," papa replied,

smiling at their enthusiasm—"hatched right in the engine-room!"

"What do you mean?" asked mama in astonishment, gazing at the pretty little creatures.

"Just what I say," replied papa, who was an engineer in the big power-house down town; "they were hatched on a shelf in the engine-room."

"You are joking!" mama declared, but papa shook his head at once.

"It was just this way," he explained, hanging up his hat. "Tom Morgan brought me a dozen eggs from his new hennery about three weeks ago. I put them up on the shelf, intending to bring them home that night, but never thought of them again until this morning, when there seemed to be something stirring up there. I looked, and, sure enough, there was a fine litter of chickens; just picking their way out of the shells!"

"But how did it ever happen?" asked mama in a puzzled tone, while Dorothy and Laurence scattered tiny bread-crumbs near the new-comers.

"Because the engine, running night and day, gave the eggs just as much heat as they would have found under a hen's wings," papa replied; "and so they thought that they were put up there to hatch."

"Oh, aren't they darlings!" cried Dorothy, clapping her hands as the chickens began to eat the crumbs. "They are the nicest pets that we ever had in all our lives!"

"The only question in my mind is, how they are to be mothered at night," papa said, patting Dorothy's bright curls as he spoke. "If mama can decide that question for us, I will agree to make a nice home for them."

Mama looked thoughtful for a moment, then told papa that, if he would make the little house, she would soon have a mother ready to put inside it.

While papa was making a nice coop out of a wooden box, mamma found an empty tin can that had once held a gallon of maple syrup. She filled this full of boiling water, screwed the cover on tight, and then wrapped it up in pieces of flannel.

"There," she exclaimed triumphantly, fastening the last strip, "let us see how the chickens like this for a mother!"

Setting the can carefully in the center of the coop, she put the little chickens close by it. Finding it soft and warm, they cuddled up against the flannel cover, and began to chirp as contentedly as if it were a mother hen. Then she pinned a square of flannel to the upper side of the can, letting it spread either way like a mother hen's wings, and leaving the ends open for the chickens to go in and out.

"We will fill the can with hot water every night," said mama, "and it will keep the chickens nice and warm. They will never know that it is not a real mother."

Whether or not this was true, the chickens certainly lived quite happily with their syrup-can mother, until papa declared that they were large enough to go to roost in the barn.—*Mary Gilbert, in Little Folks.*

### SAVING THE BIRDS.

THE march of civilization has robbed millions of useful, as well as sightly and tuneful birds of their old-time facilities for home making. Tree trunks are being laid low every year over hundreds of acres. The old-fashioned structures, where birds might flock under open eaves are being replaced by modern roofs that shut out bird life. Whole races, like the Chimney Swifts, are being deprived of their shelter in the big, old-style chimneys. Such conditions, combined with lax laws for spring shooting and pot-hunting, will soon drive the valuable insect eaters to extinction, it is agreed. It will be the children's work to house the evicted birds at the time when they not only rear their young, but eat most copiously of the insect crop destroyers.

"The children are now the great factor in this great economic movement," said William Dutcher, president of the National Association of Audubon Societies. "We are calling on Congress, the Legislatures of the entire country and on every adult body to help; but I believe the work of the school children of the land will accomplish more than all the other methods combined."

## For SUNDAY READING

### HIS DIVINE PATIENCE.

Why is the Master so patient yet  
In the world where wrong is wrought  
Takes he no heed of the riot of sin,  
While his will is treated as naught?  
Could he not thunder his judgments down  
Where the men his power defy?  
O the Master is great through his gentleness—  
"He shall not strive nor cry."  
Not in the whirlwind, not in the storm,  
But the still small voice of love  
Is his power to reach to the world's hard heart,  
And its rebel will have to move;  
He finds his way through the silences,  
He hears the prayer of a sigh;  
In wooing whispers the Master pleads—  
"He shall not strive nor cry."  
How does the kingdom of heaven grow?  
Never through war and noise;  
But as the snowdrops do in spring,  
And as love through households joys.  
No blatant trumpet, no rush of war,  
Proclaims the Christ King nigh;  
Though the kingdoms of earth shall all be his,  
"He shall not strive nor cry."

—Selected.

### "JESUS WEPT." John 11: 35.

RICHARD BRAUNSTEIN.

Boys and girls are sometimes inclined to look down upon others when they cry, because they do not understand the comfort of tears. But tears are not unmanly, and they cannot often be helped. In fact they are a blessing. Terrible, indeed, is it, when we are grieved beyond tears. We should therefore never mock or slight them, and always bear in mind that even Jesus wept. If he had not, he would not have been altogether like us. So we must be glad that he did weep. Although many joys came to him he had many sorrows. For did he not live in this sinful world, as man, like one of us, as his Incarnation shows, and consequently he suffered as we. There are many joys that come into our lives, but there are also many sorrows. Little children cry; young people cry; and old people cry. This is a world of tears and smiles—of rain and sunshine.

But when you read about Jesus, you never find that he wept for himself. People were cruel to him, very unfaithful; but he did not weep about it. As he was led to the dreadful Cross, women bewailed and lamented. He said to them: "Weep not for me." It is a wonderful thing.

But Jesus did cry. He must have wept many times, and suppressed many tears. When people came to him weighed down with sickness. When he saw them unkind and selfish toward each other and acting in an unchristian manner. When they tried to keep little children from running to him, and the poor blind beggar from calling. How sorry these things must have made him. But who can remember how many times we are told that he wept? Twice. First in Luke 19: 41. "And when he was come near, he beheld the city and wept over it." There was the beautiful city that was to be the pride and joy of the whole earth, to whom God had sent so many prophets; for whom he had done so much to make the people good. The city with its homes, and wonderful church, and yet so wicked that it would soon be in a mass of ruins. That is why Jesus wept, for he loved the city and would have liked to see it happy always. He was grieved that the people should be so ungrateful, after having so much done for them.

Suppose, for instance, that you had spent much time and patience on something, and then someone that did not care a bit came and spoiled it. You could not be blamed for weeping. So Jesus wept as he beheld the iniquities of the city.

This is the kind of sorrow fathers and mothers feel when, having loved and toiled for their children, they do not become good. And what do you think Christ must feel after all he has done for us, in living for us and loving us, if we do not love him? There are no tears so sad and dreadful as those of disappointed love.

The other time we are told that Jesus wept, is in John 11: 35. He was then at Bethany. Mary was crying very, very much, because her brother was dead, and the Israelites cried with her. Jesus was so sorry that they did not understand, and that they were in such grief, that he cried too.

One can scarcely realize what tears mean for us. It is like when a little bird is sick and peeps in his distress, his little friends and nest-mates gather around him and peep also, as much as to say: "We are so sorry. Let us help you." It goes to show that there is brotherly love even among our dumb kin.

A little child visited a neighbor whose baby had died, and came home and told her mother that she had been comforting her. Her mother asked her how she had done it, and she said: "I cried with her." Dear little, angelic, innocent soul, that was really a very true way of comforting a sorrowing one. To know that somebody cares is a help to us. But to live in the knowledge that Jesus cares is the greatest help of all. Where does the discontent and general disappointment of man come from? What is the origin of this dissatisfied world, for we are always complaining? Because one-half of the people do not confide and trust in Jesus. We have our clever lawyers but Jesus is above them all. He is our legal advisor, who will plead our cause to the great Judge, and if we only rely on him, we will never lose our case.

We may always count on his sympathy when we are in sorrow, because we have lost something, or because lessons are difficult, or because we have done wrong, or because we are suffering. Christ knows and cares about it. He will help us. We sometimes say when things go wrong: "Nobody cares." Oh, yes, somebody does. That one is Jesus.

"Even Jesus Wept!"

### THE JOY OF GIVING THAT WHICH COSTS.

AFTER a missionary meeting in Brighton, England, a poor widow of the parish presented herself before the pastor and gave him a sovereign. He knew the poor woman's great poverty, and accordingly refused to accept the coin, remarking at the same time that it was too much for her to give. The widow seemed disconcerted and afflicted, and with the irresistible eloquence of an overflowing heart, she begged him to accept it. "Oh, sir," added she, "I have often given pieces of copper to the Lord. Two or three times I have had the joy to give him pieces of silver; but it was the grand desire of my life to give him a piece of gold before I die. For a long time I have been putting by all that I was able, to make this sum. Take it, I pray you, for the missionary cause." The minister did not refuse further. He added to the collection this precious offering of a loving heart.—*Christian Endeavor World*.

### DAILY TESTS.

THERE is more cause for joy than for complaint in the hard and disagreeable circumstances of life. Browning said, "I count life just a stuff to try the soul's strength on." Spell the word "discipline" with a final g—"discipling." We are here to learn Time's lesson for Eternity's business. What does it signify if the circumstances about us are not of our choice, if by them we can be trained, learning the lessons of patience, fortitude, perseverance, self-denying service, acquiescence with God's will, and the hearty doing of it. Circumstances do not make character. Just where you are, take the things of life as tools, and use them for God's glory; so you will help the kingdom come, and the Master will use the things of life in cutting and polishing you so that there shall some day be seen in you a soul conformed to his likeness.—*Maltbie D. Babcock, D. D.*

### EDGED TOOLS.

I KNEW a man once whose wife became intensely interested in a revival meeting as a seeker of salvation. He was a skeptic and a scoffer, and when he found her constantly reading the Bible searching for some promise that would comfort her, he said:

"Bosh! I will give you enough of that. I will read the Bible to you every day, till you are sick of it"; and he began. Day by day when he came home he read the Bible—chapter after chapter, having his wife sit and listen. At last one day, when he had finished the third chapter of John, he said,

"My wife, won't you pray for me? I am a poor, lost sinner"; and they knelt and prayed, and God came in mercy, and both were converted.

I knew another skeptic and scoffer—a great physician—my mother's cousin, who was a frequent visitor at my father's house when I was a boy. On one occasion he complained because he could find nothing in the library he wanted to read.

"Will you read a book I will bring you?" my mother asked him.

"Yes, I'll read anything. I'll read an almanac, a patent-office report—anything"; and mother brought him the Bible.

"The Bible! The Bible," said he. "Why, I haven't read the Bible since I was a boy."

"But you promised," mother said, "and I hold you to it"; and he began. He scarcely laid it aside even to eat or sleep for four days and nights.

"The most absorbing book I ever saw," he said.

After a hundred hours passed thus, away in the night, he knocked on my mother's door, and said:

"Cousin Lucy, Cousin Lucy, won't you get up and pray for me? I am a poor, lost sinner."

And she did, and God heard that prayer, and the great doctor was saved. Edged tools cut.—*M., in the Cumberland Presbyterian*.

## Echoes from Everywhere

Former President Grover Cleveland, who has been confined to the Lakewood, N. J., Hotel for two months by an attack of rheumatic gout and acute indigestion, has sufficiently recovered to leave Lakewood for his home in Princeton.

May 27 and 28 disastrous storms, at places assuming the fierceness of a tornado, swept over large portions of the Middle West. Besides the damage done to buildings, telegraph and telephone lines, growing crops, etc., a number of lives were lost and many people injured.

Half a million dollars' worth of books, magazines and rare manuscripts were endangered and \$150,000 worth of them were lost by fire which burned the Harper Brothers' building in New York. Among the manuscripts lost were new ones of Mark Twain, Wm. Dean Howells, and others.

M. Fallieres, president of the French Republic, was the guest of King Edward, of England, the last week in May. In making this visit President Fallieres returns the visit made to his country by King Edward, and also visits the Franco-British exhibition now in progress in the latter country.

In view of the growing scarcity of timber in our country, the "Scientific American" gives a timely suggestion in noting the fact that Europe has demonstrated that a country can be prosperous and develop on a very small amount of lumber. Practically speaking, there is not a wooden shingle in the whole of Europe, while frame houses are rare. Lumber yards in some countries of Europe hardly exist.

In the latest Accident Bulletin of the Interstate Commerce Commission, dealing with the last three months of 1907, the statistics show that there is a marked decrease, both in the number of train accidents, and the number of passengers killed or injured. There is a decrease as compared with the previous quarter and with the corresponding quarter in 1906. Out of a total number of 220 persons killed, only 21 were passengers, as against 110 passengers killed in the preceding quarter and 180 killed during the corresponding quarter of the previous year.

"Putnam's and the Reader" reproduce a return postage-stamp coupon. It comes from Japan. The legend in French which appears on its face is repeated on the back in German, English, Spanish and Italian, the English version reading: "This coupon can be exchanged for a postage stamp of the value of 25 centimes, or the equivalent of that sum, in countries which have adopted the arrangement." With this in use, one can prepay postage on the answer to a letter which he sends abroad without going to the trouble of hunting a postage stamp of the country to which he is writing.

A correspondent for a Chicago newspaper has just completed a trip from that city to New York, using electric railroads for the greater part of his journey, which required eight days and cost \$23.55 in fares. The total length of the journey is estimated at 1,278 miles, of which all except about 322 miles was on trolley cars.

To induce the people of Madrid to allow themselves to be vaccinated, the mayor of the capital gives a lottery ticket free of charge to all bringing a vaccination certificate. There are four drawings a year and the prizes are very small, but Spaniards, being inveterate gamblers, poor men and women flock to the vaccination chambers while praying to the saints to protect them against the "poison" contained in the lymph.

The general education board has recently made gifts to educational institutions aggregating more than three-quarters of a million dollars. The largest single gift of the board was \$125,000, granted to William Jewell College, Liberty, Mo. The board also made grants of \$80,000 for farmers' coöperative work in the southern States, and of \$20,000 for special high-school agents in connection with State universities in the southern States.

Kansas City, May 27.—An attempt to secure a record indorsement of the standard American revised edition of the Bible as the best version before the American public and commending its widest usage among Presbyterians aroused the general assembly of the Presbyterian church in the United States of America today in one of the most spirited discussions since the assembly met, and the attempt failed by a very narrow margin.

Pittsburg, May 27.—The Semi-centennial celebration of the United Presbyterian church opened in this city this afternoon. Addresses and other features in commemoration of the jubilee anniversary will be interwoven with the business sessions of the assembly during the remainder of this week. While no time has been set for action on the subject it is certain that much attention will be devoted to closer relations or actual consolidation of the United Presbyterian and Presbyterian churches.

Almost on the eve of adjournment Congress decided to do something. The stoutest was not brave enough to return home and face his constituents with no provision made for avoiding another financial panic, should one threaten. May 27, by a vote of 166 to 140, the House passed the Aldrich-Vreeland composite currency bill, and the Senate was expected to pass the same measure shortly afterward. The life of the measure is limited to six years, but long before that time expires it is believed by competent observers that the national monetary commission created by this act will have agreed upon a comprehensive measure for the reorganization of our entire financial and currency system.

A ban has been declared against rats and mice in the Panama canal zone in efforts to prevent bubonic plague from gaining a foothold there. It has been demonstrated that the plague is communicated by means of fleas. The fleas get it from rats and mice and communicate it to human beings. With the extermination of rats and mice it is said there will be no danger from the bite of the flea so far as plague is concerned. Canal employees have been instructed to kill rats and mice.

The biggest clock in the world has been set in motion at a soap factory in Jersey City, N. J. The dial of the clock is 38 feet across. The minute hand is 20 feet long, and with its counterpoise weighs nearly a third of a ton, while the weight that moves the mechanism weighs 2,000 pounds. At night the hands are outlined with incandescent lights, red lights marking each numeral and an incandescent lamp each minute mark. The tip end of the minute hand travels twenty-four inches every minute.

Denver, May 27.—There will be no liquor sold in the convention auditorium in Denver, where the national Democratic convention meets in July. Application was made to the committee on arrangements in charge of the convention for a concession for a bar in a section of the auditorium some distance from the assembly hall. A large sum was offered for this concession, but the committee unanimously voted to refuse any concession for a bar or other means of selling liquor.

The president of Swarthmore College announces that on the recommendation of the faculty committee on athletics it has been determined to abandon intercollegiate football and basket-ball games for not less than one year. The decision, it is explained, hinges on the refusal of the board of managers several months ago to accept a bequest under the will of the late Anna T. Jeans of Philadelphia, on condition that Swarthmore give up intercollegiate athletics. The decision reached at that time by the college authorities is unalterable, but in declining the bequest recommendations were made that there be a curtailment of athletics at the institution.

We have a young and new country, but Canada is still younger and newer, and last year over a quarter of a million people migrated over the border in search of cheap land. This number would grow every year were it not for the successful work of the irrigation bureau which is providing lands for this desirable element of our population here at home. Last year the bureau completed 1,881 miles of canals, resulting in the establishment of eight new towns and furnishing homes for 14,000 people. It is now expending over \$1,000,000 a month, and has projects under way to be completed at a cost of \$70,000,000.

Washington, May 31.—The cloud of uncertainty which has been hanging over commercial and industrial affairs in the United States since last fall is, in the opinion of Seymour Bell, British commercial agent in this country, passing away. In a recent report to Parliament on this subject Mr. Bell declared: "Readjustment and recuperation are well under way, and, unless labor troubles should retard the improvement or monopolies of capital interfere to keep up prices at too high a level, it is expected that before many months have passed business will be on a safer and more normal basis. A country that produces crops valued at nearly \$7,500,000,000 is unlikely to suffer long from industrial stagnation."

Alton, Ill., May 27.—Alexander Marshall, manager of a manufacturing plant at El Sah, near Alton, has completed experiments in the use of limestone rock, mixed with equal bulk of coal, as a fuel. Marshall has successfully operated his manufacturing plant for two weeks by the use of coal and limestone, the carbonic acid gas in the coal, liberated under the heat, being combined with carbon and making an intense heat. No change in the furnace or special apparatus was needed for the process, and there is no residue of ash.

Washington, May 31.—The wood pulp and print paper investigation committee of the House, which presented a preliminary report to that body several days ago, will continue its investigations during the recess of Congress. It is the purpose of Chairman Mann to gather a great deal of statistical information from the census bureau and the Department of Commerce and Labor during the coming summer. Subcommittees also will be appointed to visit paper mills in different sections of the country and take testimony as to conditions prevailing at them, and it is possible that the full committee will hold a number of meetings.

The world is so accustomed to regard France as being in the vanguard of culture that it comes as a shock to learn that there is a higher percentage of illiteracy there than in several other countries of Europe. This is the more striking because France has had compulsory education for about a quarter of a century. At the present time the percentage of illiterates in France is 40 per 1,000 men and 60 per 1,000 women. In this respect France compares unfavorably with Germany, which has only 4 illiterates per 1,000 of the population, and with Sweden, Denmark and Holland, where the illiterates number from 8 to 45 per 1,000.

Oregon has probably initiated more advanced legislation within the past few years than any other State. They have there the initiative, the referendum and the recall, and have for some time practically named the United States senators by direct vote. Under the referendum law, the voters will decide on June 1 whether to accept or reject a measure that embodies the Henry George theory of the single tax. The measure, if adopted, would exempt all buildings and machinery and place the whole tax on land. Friends of human progress will await with great interest the result of the vote. Henry George has never been successfully answered, and very many people believe that by instituting the single tax we may lay the axe to the root of most of our economic problems.

The cultivation of olive oil which constitutes an important industry of Italy is suffering severely from the ravages of a virulent pest—the keiroun or oil worm, which in the fly stage infests the young fruit. In the northern parts of the country the oil yield has been in great demand owing to its low acidity and almost complete lack of smell. Up-to-date methods of gathering and grinding the olives together with improved preserving processes are being adopted with the result that increased demands for the product from various parts of the world have arisen, but the poor-ness of the crops has considerably depreciated the supply with the result that prices have increased. Outside of Italy the greatest bulk is purchased by Great Britain, but for the past few years exporters have been draining upon their reserves and as these are now very low the oil promises to become a luxury unless some expeditious means of combating the havoc wrought by the oil worm can be discovered.

## CREAM OF MAGAZINES

### CHILD LABOR IN THE SCHOOLS.

This country is slowly being roused to see the evils of child labor, in mill and mine, in street and store and sweatshop. It would be hard to overstate those evils.

There is the direct personal suffering involved, the loss of childhood's pleasures, the weight of premature care, the pain of exhaustion, and the danger of accident due to the natural carelessness of childhood and its quick wearying of any task. Quite apart from the direct injury from bad conditions, or from the exactions of the specific work, it is this main fact—that childhood is physiologically incapable of prolonged concentration, and that to require it is to destroy childhood.

So follows the second class of evil in child labor—the injury to the race thru the premature development of those who should be children, and who are forced to be men and women before their time.

This attacks that basic advantage of all the higher forms of animal life, and humanity's especial prerogative—the prolongation of the period of immaturity. The higher the race, the longer the period. To shorten it is to lower the race standard. The precocious development forced by child labor brings a sickly and stunted maturity, premature marriage and imperfect descendants. It is worse than race suicide; it is to torture, cripple and slowly deteriorate the race thru the persons of those we live to love and care for—those on whose advancement depends the progress of the world—our children.

With this line of argument we are tolerably familiar, and may add to it one not quite so patent—the effect on the immature mind of working for payment. Any healthy child has a large capacity for exertion, loves to do things, is eagerly desirous of helping in any process he sees going on. This race instinct for working is as vital as the play instinct, as normal, largely of the same nature. But when to the natural expression of energy is added the pressure of our wage system we pervert the process. It is hard enough for the adult to combat the degrading effects of our commercialism, however strong, however well educated, however stoutly buttressed with noble ideals and honest habits, and to thrust our children under its influence, years before they are grown, is to weaken and contaminate our moral heredity as well as the physical.

While all the healthy agitation is going on against this recognized evil of child labor, let us call attention to a less recognized form of the same evil—the child labor in our schools.

Our educational system we believe to be the best in the world. Good as it is we admit some shortcomings, and are continually altering and bettering from year to year.

But granting all this good, there remains one general evil—that of overwork. We do not demand as much mental labor as did Dr. Blimber, of atrocious memory, but the effects produced by that exacting educator are too frequently repeated among us to this day.

It is not more, but different, education, wiser methods

in education, that we need; a system that will not be content to offset an eight-hour injury by a patent scheme of ventilation and some compulsory gymnastics.

Here is a girl, thin, anemic, spectacled, engaged in ceaseless desperate struggle to "keep up with her studies." If she were forced to the same pace to keep up with the flying shuttle in the mill we should see the harm of it clearly enough—that is, if she were our own child. This one is well dressed, well loved, well doctored, but she is persistently and continuously overworked; and when in later years motherhood is demanded of her she is inadequate to that great task.

Then we cry out against education for women! It is not education that hurts them. If we were all better educated, especially our women, we should know better than to subject any child to a strain like this. The trouble with them is weakened constitutions, simply from overwork in tender years; hard, remorseless, enforced labor, exacted at a period when the energies of life should all be spent in natural growth. When we do understand how to educate, it will be a part, a proud and joyous part, of that great process. —The Independent.

### THE WIVES OF THE PSEUDO-RICH.

One elderly lady (I remember hearing this long ago) all her life had wanted to have a little cottage by the sea, where she could spend a few months in absolute rest each year. It would cost her about four thousand dollars. Her husband was worth many millions, and they had several great houses both in this country and abroad.

"But why don't you get it at once?" some one asked her. "You are very rich."

"My husband is rich," she said wistfully. At the time it puzzled me, but it does not now.

In one of our Southern cities, a lady drove down-town behind a pair of horses for which her husband had paid \$10,000 the week previous. When I told her how beautiful I thought her horses were, she burst into tears. In answer to my expression of astonishment, she exclaimed: "Don't you suppose I know everybody is talking about me? Everybody in the country knows what Jim paid for this pair, and they all say, 'Why doesn't she pay her small bills!' If only I had a little money of my own—just a little that I could count on—so that I should not have to do such inconsistent things!"

I recently said to Mrs. R—, who had been forced by her husband's failure to earn her own living: "You are such a practical woman, tell me, why did you not save? Half of your income for five years would have prevented all this."

"I couldn't," she said. "Even now, looking back on it all, I see that I could not have done differently. I never could get hold of any actual money, or I should have put some away. I never could find out what we were spending. In my house accounts, of which I had charge, I had to be accountable to George for every cent I spent.

He insisted on my running exactly the sort of house we had, and I was always hard pressed to make it come within the amount allowed me. The real sums of money that were spent were on the things over which I had no control. It was his money, all of it. He never let me forget that; and he never let me feel that I had anything whatever to say about his property."

Is it not clear that the extravagance of these women is not responsible for the failures of their husbands, since they are not even responsible for their own extravagance?

Is it not painfully clear that a woman who is not permitted to manage her own household on an intelligent basis is being definitely incapacitated for ever taking care of herself, if need be?

Two things are needed to help the situation: More conservatism and consistency on the part of our business men, with a realization that their families cannot safely live on inflated incomes. Second, a better understanding of conditions and responsibilities on the part of our daughters and wives.

And there are two ways to bring this second remedy about: through the husband's attitude and through the practical education of our little girls.

Don't misunderstand me; I am no advocate of the "emancipated" woman. I prefer the protective attitude of man to the competitive one. Man is in every way more fitted to be the wage-warner, as well as the backbone, of the family, and it is to him that woman should look. But, at the same time, any woman may be called upon to earn her own bread. Are we not, then, making a mistake when we prepare our daughters for no future, but to amuse themselves, to be taken care of, to be the nominal center of a household, but with no control of the strings that lead to the circumference?

A woman who does not know approximately what her husband is making, how heavy his obligations are, and how and where she can spend or save for the best interests of all concerned, does not stand in a normal relation to life. And when there is added the condition that makes her merely the beneficiary of his bounty—when, to obtain that bounty, she must resort to the use of arts and tricks—then, even though she does it for the benefit of her children, the dignity and the glory of wifehood have passed from her. The spread of brokeritis may seem to be confined to a relatively small class, but it is the class most seen, and heard, and written about, and it should not be forgotten that "a little leaven leaveneth the whole lump."—Everybody's Magazine.

#### STORAGE RESERVOIRS TO PREVENT FLOODS AND AID NAVIGATION.

A PLAN has been proposed to stop forever the costly spring floods at Pittsburg and other places along the rivers which drain the Appalachian Mountains. These annual devastations are so certain in their recurrence that they have come to be considered almost inevitable. All the efforts of the Government with dams, restraining walls, and other engineering works have proved inadequate to control the streams when they have been swollen with the melting winter snows. On the other hand, the Government projects have proved unavailing to maintain the same rivers at a depth great enough to permit unhampered navigation later on in the year, when the flood waters have spent themselves. This

latter trouble possibly causes a greater financial loss to the South than do the floods, but as it is not concentrated into a brief spectacular outburst, less is heard of it through the newspapers. It was, indeed, the problem of navigation that gave rise to the present scheme.

It is now proposed to go to the seat of the evil—to the headwaters of the rivers—and apply there two remedies: First, the maintenance of a forest cover which will keep the ground porous so that it will not shed all the water from its surface at once but will soak it up and release it gradually; second, to establish storage reservoirs at strategic points which will retain surplus flow when it is not useful but only does damage by being allowed to run free, and will pay it out, little by little, later on, when it is sorely needed.

The United States has spent \$30,000,000 to improve navigation on the rivers which have their upland sources in the Southern Appalachians, and work already undertaken will cost at least \$56,000,000 before it is finished. This does not include the Ohio proper, which is largely supplied with water from these sources, on which more than \$6,000,000 has been spent. Despite this outlay, navigation is so precarious on many of these rivers, especially in the upper stretches, during several months every year that steamboat lines have to suspend operations and many companies have abandoned the field because with the light-draft vessels they are forced to use they can not compete with railroads, although steamboat transportation is normally much cheaper than railroad rates. The Government has striven for a 4-foot depth or even, in some places, for a 3-foot stage and been unable to maintain it throughout the year.

Experts from the Geological Survey, with the storage reservoir scheme in mind, last year made a careful study of the rivers which flow from both sides of this watershed, located reservoir sites, computed the amount of water they would hold, the heights of the necessary dams, and the periods during which the rivers could be maintained at various depths above their low-water levels during the dry seasons. The results of this study are published under the title "The Relation of the Southern Appalachian Mountains to Inland Water Navigation," as Circular 143 of the Forest Service, and can be obtained free by writing to the Forester at Washington. The initial cost of these reservoirs would be greater than the works under the present system, but the authors of the circular say that the storage reservoirs would give the relief, both in regard to navigation and to floods, which the present projects fail to supply and they point out that the relief so gained would be permanent, whereas under the system now in operation there is a continuous expense in dredging the channels which become clogged with sand and silt washed down by the spring floods, especially from the unforested areas around some of the rivers.

In the long run the storage reservoir method would be cheaper as well as more effective, for, as one of the sponsors of the plan says, it is better business to add to the tops of the rivers and get what you want, than to keep digging out the bottoms in an attempt to get a river deep enough to float a boat in.

### THE MAN AND HIS PAY.

It is not the pay that makes the man. A five-dollar-a-week clerk cannot be made into a fifteen-dollar clerk by merely raising his wages to that amount. It is the man that makes the pay. The fifteen-dollar man who is started at five dollars will soon be up to a fifteen, and by the time he gets there, he will probably be a twenty-dollar man. As a rule, it is not difficult for one who is making a purchase in a store to tell the clerks who are working solely for what there is in it and those who are working with a regard and a respect for their work.

It is scarcely more difficult to detect in an office or in a factory the men who are keeping the pay-envelope right before their eyes to the exclusion of everything else. It is remarkable how much in the way of opportunity and how large can be the opportunity that can be completely obscured by a little manila pay-envelope.

Of course there are men who do not care, men who are satisfied to jog along without thought of rising. Between this class and the class of those who are anxious to get ahead and who try every minute, there is the class composed of those who under favorable conditions will make the necessary effort, tho under average circumstances they waste much time in forgetfulness and inertia.

The man who knows and at the same time is anxious realizes that he is constantly under the eye of some one who will appreciate effort. He knows that if he tries hard he will himself be benefited by the effort and will grow in ability as he increases his effort. He knows too that he cannot try to help his employer without being found out and rewarded in proportion as he tries.

While we may in a measure deprecate the effort that is entirely selfish, that works harder, tries harder simply for what there is in it, still the instinct of self-preservation is first and strongest, and, after all, every man does work very hard for what it will profit him in some way.

Even so, no man can help himself without helping his employer, unless he is dishonest about it, and in this day of strenuous competition employers are just as anxious to get good workmen and to keep them as the workmen are to get good jobs and to hold them.

It is the rare occasion when a valuable man and energetic worker who is looking after his employer's

interests does not get substantial appreciation of his efforts in the way of better pay.

The man who wants to succeed and who has the right idea of success is the man who will not let his pay stand between him and better service. He is the man who will make his work bring him better pay rather than his pay bring better work.—*Frank Farrington.*

### BETWEEN WHILES.

"This is what I call capital punishment," said the boy who was shut up in a closet with the preserves.

New Arithmetic—If it takes one boy one hour to do two errands, how long will it take two boys to do one errand?  
Answer—Half a day.

"I ate a piece of pie for supper last night." How did you feel when you awoke this morning?" "I haven't been to sleep yet."

"Dad, I'm going in for surgery. All the girls are taking up a fad."

"Good enough, daughter. Could you amputate a button from the back of my coat and graft it onto this vest?"

Mrs. Muggins: "Since Mrs. Newrich's husband made all his money she has the doctor continually."

Mrs. Muggins: "Yes, I hear she is suffering with nervous prosperity."

Grocer—You gave that woman one too many potatoes when you measured out that quarter-peck, my son.

Boy—What's one potato, I'd like to know.

Grocer—One potato in a quarter-peck! Four potatoes in a peck! Sixteen potatoes in a bushel! Sixteen hundred potatoes in a hundred bushels! Why, my boy, you'll ruin me if you keep on.

A man sent this answer to a bookseller who sent in his account for a book delivered some time before: "I never ordered the book. If I did you did not send it. If I got it, I paid for it. If I didn't I won't."

Pie—"Why do they refer to government office as pie?"

"Because," answered Senator Sorghum. "It's something that nearly everybody likes himself, altho he thinks it's bad for nearly everybody else."—*Washington Star.*

"Cissy" asks if there is anything that will bring youth to woman. Yes, indeed; an income of \$5,000 a year will bring one every night in the week.

## WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED.—A COOK. An active, loyal sister, a good cook, for the college. Terms right. Work begins in September. Send reference with your application. Mount Morris College, Mount Morris, Ill.

# **In Planning Your Trip to ANNUAL CONFERENCE**

## **Next Month Arrange for Joining the EXCURSION TO MIAMI RANCH**

You have been reading and hearing of the mammoth and substantial work of the FARMERS' DEVELOPMENT CO., in developing and colonizing the

## **MIAMI VALLEY, NEW MEXICO**

and now is your chance of a lifetime to see with your own eyes and know from your own observation the wonderful attractiveness of

## **MIAMI VALLEY**

as to CLIMATE, SOIL, WATER, SCENIC BEAUTY, PEOPLE, SCHOOL AND CHURCH PRIVILEGES, and all other essentials to a happy homeland.

The FARMERS' DEVELOPMENT COMPANY is composed of men whom you know.

The directors are Isaac Frantz, D. G. Wenrick, I. B. Miller, I. H. Rosenberger, M. N. Mikesell, F. D. Rosenberger, J. Wasson, and J. C. Wine. Geo. W. Colvert is General Sales Agent.

Are you seeking a safe and profitable investment? Are you seeking a home? Then you owe it to yourself to see MIAMI RANCH before deciding upon another location.

The excursion to MIAMI RANCH will be delightful, instructive, and inexpensive. It will leave Des Moines immediately after the close of Annual Meeting.

For further particulars WRITE US and when you get to DES MOINES call at MIAMI RANCH HEADQUARTERS.

**Springer, New Mexico**

# Facts Regarding Imperial Valley

Some people in trying to induce their friends to settle in the country where they themselves are located, frequently send them advertising matter that is gotten up by unscrupulous land agents that deviates from the truth. Their friends come and buy property and soon find out that the facts do not correspond with the advertisements sent them. The result is they soon become discouraged and sell out at a sacrifice, and go back where they came from, worsted financially and in some instances say worse things of the country than they should, and thus bring reproach on a good country (though not as good as the advertisement represented it to be). The undersigned has known this to happen more than once, and for this reason has decided to tell his friends about the Imperial Valley in his own words, so that he alone shall be responsible, and so that the wonderful Imperial Valley may never be made a reproach and a by-word.

Imperial Valley is situated in San Diego County, California, 183 miles east of Los Angeles on the Imperial branch of the Southern Pacific railroad. The soil is an alluvial deposit and all crops are grown by irrigation, with water from the Colorado River. The main irrigation canal is 80 feet wide on the bottom and 100 feet wide on the top, and 10 feet deep. The soil is adapted to the growth of wheat, barley, alfalfa and nearly all kinds of fruit. Alfalfa having plenty of water can be cut eight times per season, yielding as high as ten tons of nice hay per acre which sells at present from \$8.00 to \$11.00 per ton. Barley can be sown for winter pasture in alfalfa stubble after the last crop of hay is harvested. Alfalfa can be cut every three weeks if the hay is wanted for dairy cows, or every four or five weeks if wanted for horses. I have known of alfalfa yielding \$40.00 worth of seed per acre and my own yielded \$20.00 per acre with the first season's sowing. Dairying and hog raising are very profitable. Butter sells from 20 cents to 45 cents per pound; hogs, 7½ cents on foot; also beef, cattle and horses do excellently. One colt weighed 960 pounds at less than one year old. One acre of alfalfa will keep from 2 to 3 head of dairy cows or horses and from ten to fifteen head of hogs. Oranges, lemons, dates, figs, apricots, grapes and berries do well. A single grape vine has yielded 30 pounds of grapes 18 months from setting. Grapes, apricot and cantaloupe growing is very profitable as they will ripen here from three to four weeks earlier than other places, and be placed on the eastern market before they are ripe in other localities. One man at Coachella was offered \$600.00 cash for the grapes on a single acre of vines and refused the offer and sold at retail for \$1,400.00. Cantaloupes will net the grower from \$50.00 to \$300.00 per acre. I have lived in the valley as long as any one, being one of the first settlers, and my experience and observation has taught me that you can grow almost anything here you plant, including vegetables, if planted in the proper seasons and properly cared for. The selling price of land at present is from \$40.00 to \$100.00 per acre, owing to location. President Roosevelt says that when it is thoroughly developed it will be worth from \$500.00 to \$1500.00 per acre.

Reader, when you shiver around your fireside the coming winter, just think of the Imperial Valley where you can go in your shirt sleeves nearly every day in the year. And on the 10th day of this month (May, 1907), while there was a snow storm raging in many places in the eastern states, we were making hay and picking and eating fruit in the Imperial Valley.

## Ropp's New Commercial Calculator and Short Cut Arithmetic The Standard for Store, Farm, Bank or Factory,

5 1/4 x 2 3/4 in.

Is from beginning to end a greatly improved, enlarged and thoroughly revised publication.

It contains an entirely new system of unique Tables, Short-Cuts and up-to-date Methods.

It is unquestionably the most complete, useful and comprehensive Calculator ever published.

It has more than twice the matter, scope and capacity of Ropp's former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

It is the most convenient and practical Labor-saving work ever used in the business world.

It will make every one independent, sure and self-reliant in all practical calculations.

It will prevent mistakes, relieve the mind, save time and labor, and often loss and trouble.

Its Tables are adapted to all the trades and occupations in the city and country, and

### Show the Answer as Quickly as a Watch Shows the Time.

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.

It will make the study and use of Figures easy and interesting for young and old.

It will enable every progressive mind to become an expert, sure and rapid calculator.

It will prove a boon to all whose education in arithmetic has been limited or neglected.

#### 48 Cuts Illustrate the Elements of Mechanics and Mensuration

It defines about 70 points in "Commercial Law" which every man and woman should know.

It is the result of devising, and improving system after system; of spending thousands of dollars in experimenting; of making millions of miscellaneous calculations, and of doing some vigorous thinking during 38 years, by an analytic, practical and persevering mind.

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

# ANNUAL REPORT OF CONFERENCE OF 1908 HELD AT DES MOINES, IOWA

As usual we are arranging to publish a complete Report of the proceedings of the Conference in book form with manila cover.

## Bicentennial

On account of this year being the Two-Hundredth year since the Brethren church began in Germany, it will make this meeting of unusual interest and importance in the history of the church. For this reason alone, thousands will want the Report this year to commemorate that event.

## Important Business.

Much important business will be transacted at this meeting that will be far-reaching in its effect.

## Send Your Order Now

Send us your advance order now, or hand it to our local agent of your congregation, so you will get a copy as soon as the Report is published.

We expect to push the publication of this Report and will endeavor to have same ready for mailing, the week following the meeting.

Price prepaid, per copy, .....25 cents

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

# JERRY McAULEY An Apostle to the Lost

Edited by R. M. Offord

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser of human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them is to find the clew to his power. Here is one of them. "I have nothing to be proud of; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

## Kindle the Flame in Other Hearts

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

## Every Church Worker

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

# THE INGLENOOK

## CALL OF THE TWENTIETH CENTURY

So live that your afterself—the man you ought to be—may in his time be possible and actual. Far away in the twenties, the thirties of the Twentieth Century, he is waiting his turn. His body, his brain, and his soul, are in your boyish hands. He cannot help himself. What will you leave for him? Will it be a brain unspoiled by lust or dissipation, a mind trained to think and act, a nervous system true as a dial in its response to the truth about him? Will you, boy of the Twentieth Century, let him come as a man among men in his time, or will you throw away his inheritance before he has had a chance to touch it? Will you let him come, taking your place, gaining through your experiences, hallowed through your joys, building on them his own, or will you fling his hope away, decreeing, wanton-like, that the man you might have been shall never be?—David Starr Jordan.

### TOURIST SLEEPING CARS.

A striking feature of the Union Pacific passenger trains is the tourist service. The tourist sleepers are identical with the standard sleepers, with the exception that their furnishings are not on so grand a scale, but the accommodations are equally good and are sold at **HALF THE PRICE** of the standard. The seats are upholstered, and at night the berths are hung with heavy curtains. Each car is accompanied by a uniformed porter whose duties are the same as those upon the Pullman Palace Sleepers.

### DINING CARS.

Union Pacific dining cars are operated on all through trains. These cars are all new in style and models of beauty and elegance.

### DINING ROOMS AND LUNCH COUNTERS.

Dining Rooms and Lunch Counters are located at convenient points along the line, and all through trains which do not carry dining cars are scheduled to stop at these points. Well prepared meals of the best quality are properly served at popular prices. Full time is allowed for meals.

## THE ABOVE PHOTOGRAPH

shows the residence of Elder H. F. Maust formerly of Waterloo, Iowa, who was the pioneer settler of Butte Valley, so far as our colonization project is concerned. It is almost two years since he bought 800 acres of land in the valley. At that time there was not a sagebrush amiss and not a furrow plowed where you see these splendid buildings. Of course it has required a great deal of labor to do all the work that has been done in these two years, but how long would it take "back East" to own a farm of that size and have this kind of buildings on them?

His land is worth, today, double the amount he paid for it and yet it is not for sale. Write him at Macdoel and see what he says about it. If you think this is the only nice house in the valley, just watch this page next week and the next, and the next, and the next, and the next.

A news item in "The Siskiyou News" says that Roy E. Swigart, formerly of Dixon, Ill., has had an orchardist helping him set out a large orchard. Roy is a great fellow. He couldn't wait till fall when the rest are going to set out thousands of trees. It's natural for him to be ahead. Why, he only came to the Valley on the 15th of March this year and he has a large barn up and eighty acres of land cleared. In fact he's doing things.

What do you suppose the price of land will be in Butte Valley in two years more if the present rate of development keeps up? Well, that does not worry the fellow that has bought there, but the fellow that has not yet secured a home there ought to figure a little on that. There are low rates from June 1st to Sept. 15th and homeseekers should avail themselves of this splendid opportunity of getting a good home at the right price, in the right kind of a country.

# A Mother's Stirring Tribute

to a plain old home remedy. Mrs. John E. Jones of Florissant, Mo., is the author of the following letter: "Florissant, Mo., Jan. 19th. Dr. Peter Fahrney & Sons, Chicago, Ill. Dear Sirs: Our baby now eleven months old is taking your Blood Vitalizer with most delightful results. She is teething and has always been troubled with constipation so that we had to give her a physic every day. This finally failed to help, and as she became very feverish and we were afraid spasms might set in, we called our family physician, who prescribed other and stronger medicine. It only put her in agony and for hours we did what we could for her but she grew worse instead of better. The doctor came again and gave her something that just barely moved her bowels. We grew hopeful but soon found that this last medicine failed to work too. The last night of the old year, we watched her with sinking hearts as she was growing rapidly worse. When morning came I begged my husband to let me try the Blood Vitalizer and quit the doctor. The doctor thought the trouble was only teething but I felt there was something more than that, as two years ago we lost a little darling whose symptoms were similar and whose bowels the doctors failed to move.

With anxious hearts we gave her the first teaspoonful of the Blood Vitalizer. In a few minutes she was asleep, and O, how I watched and prayed. In an hour her stomach seemed to be softer. In two hours when she awoke I gave her a second teaspoonful and in an hour she had obtained the relief we sought. I continued to give her the Blood Vitalizer and, O, such passages! I found she had worms very badly and they still continue to pass.

I send this letter to you that other mothers may learn of what we consider to be a God-given remedy for the little ones. Your Blood Vitalizer has certainly by God's blessing saved our darling."

## A MOTHER IN SWITZERLAND WRITES.

Dr. Peter Fahrney & Sons Co.,  
Chicago, Ill.

Wald, Switzerland, March 9,

Gentlemen:—

I desire to take the time to tell you that your Blood Vitalizer has accomplished some wonderful things for myself and daughters. Through long-continued illness my nerves seemed to be totally ruined. I was hardly able to sleep and so run down physically that I had given up hopes of getting well. Last fall, however, I decided to try your Blood Vitalizer and obtained some at the agency here. To my surprise I commenced to pick up at once, my sleep returned and I got stronger day by day.

I also commenced to give it to my daughter (aged 10) whose blood seemed to be weak and vitiated and whose eye-lids were always raw and inflamed. She also had a disagreeable discharge from the nose. All these troubles have disappeared, for which we are deeply thankful.

Sincerely yours,

Mrs. W. E. Rebsamen.

The writer of one of the above letters of testimonial states that her motive in writing is that other mothers may learn of the merits of DR. PETER'S BLOOD VITALIZER. What a characteristic of the true mother's heart! Her feelings go out not only to her own but to other little sufferers. Among the readers of the INGLENOOK there are no doubt many mothers to whom the knowledge of a reliable home remedy, in which absolute confidence can be placed, is worth much. DR. PETER'S BLOOD VITALIZER has very properly been termed the mother's friend. It is the mother in the family that usually bears the brunt and worry of the sickness of a dear one. She is, by her position, the one who is called upon when something is wrong, and hence upon her knowledge of a proper remedy depends the weal and woe of the household.

DR. PETER'S BLOOD VITALIZER, unlike other ready-prepared medicines, is not to be obtained in drugstores. It is supplied to the people direct by local agents appointed in every community by the proprietors, Dr. Peter Fahrney & Sons Co., 112-118 So. Hoyne Ave., Chicago, Ill.

# THE INGLENOOK

Vol. X.

June 16, 1908

No. 24.

## Protecting Our Boys And Girls

ANTHONY COMSTOCK, Secretary of the Society for the  
Suppression of Vice

MARCH 2, 1908, I closed thirty-six years of public service on behalf of the children of this nation, and in defense of their moral purity.

There are three things which the ordinary reader does not realize:

First, the number of youth and children, twenty-one years of age and under in this country.

Second, the facilities for reaching them.

Third, the dangers that environ them.

According to the last official enrollment, there were 36,727,363 boys and girls, twenty-one years of age and under, in this country, out of a total population of less than seventy-four million.

This means that if a person were to stand at a given point 367 consecutive days, and allow 100,000 different boys and girls, twenty-one years of age and under, to pass him every day, at the end of the 367th day there would be 27,363 that he had not seen.

### The Facilities for Reaching Them.

When it is remembered that the mails of the United States go everywhere, and that the Express Companies and Common Carriers reach every part of the land, then a person will begin to realize how easy it is to debauch the mind of any one of these boys and girls.

In every city, town or hamlet, there is a postoffice where letters are received. And if they are properly addressed, with the requisite postage upon them, they must be forwarded to their office of destination.

In the larger cities, you will find on every street and avenue a letter-box. In every large business house, especially a large office building, there are mail chutes running from the top floor to the basement. In every mail-car there is an aperture through which letters may be dropped.

In this way evil men may send, unbeknown to parent or teacher, sealed packages containing the vilest matter, addressed to the purest child. No one knows it has been sent to the child, unless the watchful parent or

teacher intercepts and opens it before the child receives it.

### Are There Any Specific Dangers to the Young?

The third question then presents itself:

An experience of thirty-six years has qualified those who are on the firing line, as experts. And as one of the outpost pickets I report that there are foes more to be dreaded than any bird or beast of prey. There are evils more deadly in their effect than the bite of a mad dog. For instance:

If a mad dog bites a child, the child immediately cries out, and every passerby is made aware of the fact that the child has been bitten. The child runs home screaming, a doctor is summoned, remedies are applied, and everything is done to relieve the suffering, and to ward off the dire consequences of the bite.

Not so, however, with that which secretly enters the home, under the sanctity of the seal, through the postal service. The child receives the matter at the hands of a letter carrier. He or she opens it, unbeknown to parent or teacher. Inside of it may be advertisements or samples of diabolical things, which the sender has for sale. It comes before the mind of the child, and there is carried into the Chamber of Imagery, in the heart of that boy or girl, influences which are insidious and deadly in their effects. The reproductive faculties of the mind—Imagination and Fancy—constantly employ these influences as a means of entertainment. Evil thoughts are the precursors of evil deeds and evil habits. These are influences that at once corrupt the thoughts, pervert the imagination, sear the conscience, harden the heart, and damn the soul. They curse, more and more, each generation born into the world.

According to the last report of The New York Society for the Suppression of Vice, we have gathered up more than 1,800,000 leaflets and circulars. We seized, during the year 1907, over 774,000 pictures. In round numbers, we took out of the community, last year, over twelve tons of contraband matter. This

means more than twelve tons of mad dogs, or twelve tons of little black devils, put out of existence. We also made one hundred and sixty-five arrests during 1907.

Altogether, The New York Society for the Suppression of Vice, which I have the honor to represent, has made nearly 3,200 arrests and seized more than 125 tons of contraband matter. But this is not all.

The Western Society for the Suppression of Vice, of which Mr. R. W. McAfee, of Crawfordsville, Ind., is the Secretary and chief moving spirit, has, since 1884, been active in this department of work. He has accomplished a work which has put the entire community under obligations to him. And if he does nothing more than what he has already accomplished, he has won rich laurels, and is entitled to a monument to be erected to his name and fame.

There are others who have stood behind Mr. McAfee, who are practically unknown to the community, as staunch friends and supporters of this cause. They are modest and retiring men. I desire to introduce Mr. W. J. Breed, of Cincinnati, the President, and Mr. H. D. Penfield, of Chicago. There are others who have been associated with them, for years, content to be unknown, and satisfied to stand behind the movement of which Mr. McAfee has been their representative.

In New York City two men have recently been called to their eternal rest who, for years, stood as bulwarks of strength and comfort to this movement.

Mr. John Sinclair was buried from the Fifth Avenue Presbyterian Church on the 21st of January; and Mr. Morris K. Jesup passed from earth to heaven the night of the same day.

Mr. Jesup, in 1872, showed the grandeur and nobility of his character by going down to a business house, taking a poor young man by the hand, and expressing to him his personal sympathy, showing his confidence by providing the means to work with. He practically fathered this movement up to the time of the incorporation of The New York Society for the Suppression of Vice, in May, 1873.

Prior to the incorporation of this Society, largely through the efforts of Mr. Jesup, we were successful in seizing the plates for printing 167 out of 169 different books, that were then being published to the detriment of the community.

The men engaged in this hellish business made a practice of collecting the names from catalogues of schools and seminaries, and then sending, unbeknown to parent or teacher, their advertisements, setting forth, in bawdy and filthy terms, the titles and descriptions of the books, pictures, articles and things which they were then openly advertising for sale.

Many and many a man and woman has had cause, in these later years of their lives, to pray to God, as one of old, "Remember not the sins of my youth, nor

my transgressions." "Deliver me from the sins of my youth."

Both the New York Society, and the Western Society, have been supported, all these years, by voluntary contributions. The money, in each instance, is under the control of the Board of Managers of each organization.

I have been engaged in this work thirty-six years. I do not ask for personal favors or gain, although I have a blanket mortgage on my home, after thirty-six years of service. But I do ask, and earnestly seek, on behalf of the Board of Managers of these two organizations, that those who have means to contribute, will express their love for the children of the nation by contributing, as their hearts may be moved, in defense of the moral purity of the children of the nation, against the moral-cancer-planters of the day.

The writer of this article has just come in from court, from the arrest of a man, and the raiding of a place in a thickly populated portion of this city, where a man kept a news-stand on the sidewalk; and then, as young men would visit his stand, he would take them down into a basement, formerly occupied by a plumber, where he kept the most diabolical books and pictures for sale. He solemnly declared that he had none of these matters; but before we got through we seized 126 books; 135 pamphlets; and a small number of circulars. Some of these books contain from ten to fifteen pictures of the most atrocious character.

On the 12th inst. we brought into the courts a man who was importing, from abroad, not only indecent publications, but publications containing the most frightful blasphemy and sacrilege that it has ever been the writer's duty to look upon. I say duty, because except I was forced to look upon such matters, they were so revolting that one would turn away from them in horror and disgust. I never supposed it possible for any human being to sink so low as must be the man who uttered some of the blasphemous, sacrilegious, and indecent things which were seized, and their dissemination prevented.

One day, in October last, we took seven-and-a-half tons of matter to one paper mill, and had it ground up into pulp. Two employes of this Society were obliged to remain by it until five o'clock the next morning, before it was put out of existence.

In another instance we took eleven-and-a-half tons of matter to another paper mill, had it thrown into a vat of sodiash and destroyed.

Last year we seized more than 22,000 magazines and papers; and 621 negatives for making obscene photographs. In September last we seized in the City of Hartford about 75,000 pictures, and plates from which they had been printed. The following week we took 57,700 pictures which were hidden away in a dark bedroom of a tenement house in Forsyth Street, in this

city. The week after that we took 24,000 pictures from a printer in the Bronx.

Between noon of the 17th of October, and noon of the 19th, we made fifteen arrests in the City of Philadelphia, and seized about 110,000 pictures there.

Now the question is, Will the good people of this country contribute towards supplying the ammunition necessary to put out of business these hundreds and thousands of little black devils, that are hunting out our children, in secret, to destroy them?

To one unfamiliar with the facts, this may seem very strong language. But to those of us who have been, for thirty-six years, on the firing line, words are very tame when employed to describe the atrocious character of the foes which we, year by year, have faced; and which we have constantly sought to overthrow and put out of existence.

Persons have frequently said, "Well, I should think you would be afraid of your life. It is a wonder to me you haven't been killed." I met two very lovely men today who were walking together, who gave utterance to the foregoing sentiment. I replied in the words of my banner text: "No weapon formed against thee shall prosper, and every tongue that shall rise in judgment against thee thou shalt condemn. This is the heritage of the servants of the Lord, and their righteousness is of me, saith the Lord."

By faith and prayer this work has been sustained and cared for. The grand results accomplished have not been reached by man's wisdom, but by the blessing of Almighty God on feeble man's effort.

Anyone disposed to contribute to the Western Society, should send their contribution to Mr. W. J. Breed of Cincinnati, Ohio.

Anyone disposed to contribute to the New York Society, should send to Mr. Henry E. Jones, Treasurer, 140 Nassau Street, New York City.

Any desiring to remember this cause at their death, the following is a proper form of bequest:

I give and bequeath to The New York Society for the Suppression of Vice, incorporated by the Legislature of New York, May 16, 1873, the sum of \$..... to be applied for the purpose for which it was instituted.

I crave no epitaph upon my tombstone other than "The Children's Friend." The welfare of this mighty nation is dependent in a large degree upon the moral purity and lofty character of the children of today. The hand that strikes down the foes to moral purity of today, defends the highest interests of the future.

A GOOD, practical education, including a good trade, is a better outfit for a young man than a grand estate with the drawback of an empty mind.—*Horace Greeley.*

UNDERSTAND this first, and always: The world wants the best thing. It wants your best.—*Frances E. Willard.*

## LINES TO AN OLD PRINT SHOP.

RICHARD BRAUNSTEIN.

Where years ago trod belle and beau,  
In silk and satin rustling,  
Where echoes greet no hurrying feet  
Of shoppers storeward bustling,  
All hidden there from noise and blare  
Of cars and coaches rumb'ring,  
A quaint retreat in a quiet street,  
The Old Print Shop is slumb'ring.

Ah well I know the tinkle low  
Of door-bell shrill and trusty;  
And far above all scents I love  
The odor faint and musty  
That greets me there where treasures rare  
'Midst dust and dusk are hidden,  
And tempt my heart in that quaint mart  
With bargains purse-forbidden.

The shop is small, each tiny wall  
Is hid by print and etching,  
While overhead his filmy thread  
The spider's ever stretching.  
The sun all day ne'er finds its way  
A-through the narrow casement,  
But Love is there, and peace so rare  
Bides in that little basement.

And though I mourn the povert purse  
That causes all my ire,  
I patient wait till Time and Fate  
Shall grant my heart's desire;  
For some fair day my love will sway  
E'en these, and gain full measure—  
A heart so true, sweet eyes so blue,  
The Old Print Shop's best treasure!

## ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

### Chapter XV. Mrs. F. S. Osgood.

FRANCES SARGENT LOCKE, daughter of Joseph Locke, a prosperous merchant of Boston, was born in 1812. Her early life was passed in Hingham, chiefly. While a child she showed literary talent, particularly in verse, and her abilities in this line were first noticed by Mrs. Lydia Maria Child, at that time editing *Juvenile Miscellany*. By invitation she began contributing to that journal, and afterwards to others under the name of "Florence." In 1834 she married the painter, Osgood, and went with him to London, where they remained four years, he acquiring a reputation as a painter, she as a poetess. They resided chiefly in New York after their return to the United States, although Mr. Osgood was absent occasionally on professional visits to various parts of the country.

Mrs. Osgood in 1841 edited an annual, "The Flowers of Poetry and the Poetry of Flowers," and in 1847, "The Floral Offering." A collection of her poems was printed in 1846, and a complete collection of them was printed in one large octavo volume in 1850, the year of her death.

Her prose contributions would make probably two volumes if collected. They may be called prose in name only, being essentially poetical, many of them being far more so than much that is called poetry. It has been remarked that her whole life was a poem. Her productions never deteriorated, but always improved. Her later poems were marked by a tenderness of feeling, a freedom of style, and a wisdom of apprehension that was truly pleasing to every reader. If for no other reason she ought to be remembered for her beautiful poem on "Labor," which concludes:

"Work for some good, be it ever so slowly;  
Cherish some flower, be it ever so lowly;  
Labor!—all labor is noble and holy;  
Let thy great deeds be thy prayer to thy God."

Worthy of mention: John Ogden, education; Rev. Stephen Olin, travels; Peter Oliver, the Puritans; Mrs. Caroline Orne, tales and sketches; Miss C. F. Orne, stories; H. G. Otis, political, J. R. Orton, poems; Rev. H. J. Osborn, the Holy Land; Robert Owen, socialism; Ruth Ogden, stories.

*Bryan, Ohio.*

## The Galena Lead Region

Mary E. Canode

MANY of our states that have figured in the earlier history of our country have localities that were once busy centers of commercial activity, but are now of comparatively little importance. Those places won their reputations through one or more of the great industries,—commerce, manufacturing, lumbering or mining.

The fact that in time the tide of interest turned in another direction, leaving to those communities scarcely a remnant of their former activity, was due either to exhaustion of natural resources or resulted because rival localities offered more and better facilities. And it is not often that interest in the old locality is revived, but occasionally such does prove to be the case.

That bluff, rocky section of northwestern Illinois and southern Wisconsin, long known as the Galena lead region, in general, lies within a radius of twenty-five miles of the historic old city of Galena. In past years the city enjoyed the reputation of being an important waterway shipping point and the surrounding country that of being rich in lead ore deposits. But for over a quarter of a century, with the exception of the few recent years, that region which once yielded lead in such large quantities has been considered unavailable for extensive mining interests. Lead ores continued to be mined to some extent, but the ventures were generally those of small miners. Men of some means, residing in the smaller towns would lease timber land and hire miners to do the work. Frequently two or three miners would lease land and prospect on their own risks. On favorable mornings these men might be seen trudging along toward their claims to work only till noon. Picks and shovels would then be concealed under a convenient pile of leaves after which farcical performance they trudged home again to spend the afternoon in idleness. The old sack thrown over the shoulder might be either empty or weighted with the forenoon's "finds," as the miner terms his luck. Sometimes these burdens represented one forenoon's work, sometimes that of a whole week

of forenoons and frequently the week was spent without any finds. The contents of each sack usually represented from \$2 to \$4 in value and would be taken to the grocery store or too often to the drink shop to be exchanged for the necessities or the unnecessaries of life.

Through this kind of mining the country became literally honey-combed with small mines and prospecting excavations. It was no unusual sight to see the roadsides lined with old mines into which the earth had been but partially replaced. Farm lands and groves alike had once been invaded, but clearing of forest lands and cultivation gradually did away with those traces of former enterprise. In those days of surface mining the groves were unsafe as places of resort for summer outing parties for one would be in constant danger of stepping or tumbling into abandoned diggings which were often concealed by leaves or underbrush.

Excavations varied in depths. The prospector would start his work by digging a hole about five feet in diameter, meanwhile paying close attention to the nature of the earth to determine whether or not it promised mineral. And this promised mineral might prove to be only a lonely piece of ore, freak-imbedded in the clay and having no apparent connection with any vein, as though accidentally dropped there by Nature to be as accidentally found by the fortunate miner. These detached lumps varied in sizes from small crystals to masses too heavy for one man to lift.

If no finds occurred after from two to eight feet of prospecting in promising earth, the holes were abandoned. Better luck would lure the miners to greater depths. If water was struck the mine had to be abandoned. If not, and the mine was still promising, they ventured deeper and in case of a find of vein ore where side digging was necessary, the opening was secured from caving in by sticks of wood placed log-cabin style around the mouth of the mine.

Occasionally larger capitalists formed stock com-

panies and hired miners to prospect and mine on a more extensive scale. The digging was then continued to a much greater depth and the company was obliged to furnish engine and pump to rid the mines of water. A six-inch stream of sparkling water being forced out by one of these large pumps was not an uncommon sight at these deeper mines and the pump was kept running day and night to insure safety to the mine and miners.

The accidental occurrence of ore imbedded in clay is called occurring in pockets. Ores in larger quantities are found in veins, quite frequently above ground in crevices of limestone rock. Besides pocket finds, surface ores occur in three different positions and show by their formations in which of these positions they have been native and are named accordingly. These positions are east and west crevices, north and south crevices and crossings. The ore of the east and west crevice is composed of cubical crystals, varying in sizes and occurring in pairs—one larger crystal with a smaller one attached to it. North and south crevice ore does not occur in crystallized form but in broad, flat, shale-like pieces.

The peculiar form called crossing ore occurs where the two crevices meet and cross. This form is a mixture of the other two; one attempt at flatness and another at crystallization. Sometimes a granular surface will cover a flat base with here and there projecting cubical crystals, showing how Nature's conflict has spoiled its own work. These three forms of surface ores are about 95 per cent pure lead.

Another, and perhaps the most beautiful form of lead occurrence in this region, is single and double current lead sulphide. Its formation is supposed to have been influenced by electrical currents. The single current is made up of long spicular crystals, lying one against the other like flat, headless nails. The whole compact bunch forms a wedge-shaped mass, the crystals pointing toward a common center. The double current form consists of two bunches of these crystals, each bunch pointing in a direction of its own, usually lying at right angles to each other.

The accompaniments of Galena lead are sulphur, limestone, crystallized-limestone or spar and two oddly-mixed forms called dry-bone and jack. The former, as its name indicates, resembles an old weathered bone, having an ugly, dried-out appearance. When pulverized and subjected to heat it yields considerable lead. Jack consists of fine crystals of mixed metals. When broken it shows a dark glittering surface. Its composition is crystallized limestone, lead, iron and as has been recently discovered, large quantities of zinc. It is because of this discovery that a revival of something like old-time interest in the Galena region has occurred. Stock companies have been organized and work is now progressing on more extensive plans than for many years. The mining now

done is for both zinc and lead, but more particularly for the latter. This recent enterprise of deep mining has changed the method of prospecting, as jack in large quantities occurs in veins or sheets from 70 to 180 feet below the surface and prospecting must be done by drills which are sunk till they strike either sand rock or clay bed. If the drill strikes blue lime rock without showing a find the machine must be moved for another attempt. If the drill shows a find, a shaft is sunk and the vein is followed until its mineral is exhausted or further mining is impracticable.

Rewey and Platteville, Wisconsin, and Galena, Illinois, are the chief centres of interest in these new mining ventures. Ores are being found in good paying quantities. The men now engaged as miners are largely college students who wish vacation employment. It now remains for present and future intelligence and enterprise to prove what of mineral wealth is yet to be found in that region.

#### THE MEADOWLARK—A GENERAL FAVORITE.

MRS. M. E. S. CHARLES.

"All hail to the meadowlark,  
Whose notes are bright and clear,  
His merry lay  
Who sings so gay  
When the summer days draw near."

MEADOWLARKS are familiar friends of the hillside and meadow. They have a very extensive range of distribution, breeding from Florida and Texas to Nova Scotia and Southern Canada and from the Atlantic ocean to the plains. In the far west it is replaced by the western meadowlark, and in the Southwest by the Mexican meadowlark, both local varieties, and very similar to our species. While this bird is called a lark it is not a lark at all, but a true American starling.

The meadowlark is ten to eleven inches long; upper parts brown, varied with chestnut, deep brown and black, with a cream-colored streak through the center; throat and breast yellowish with a black crescent in the center of the breast; under parts yellow, shading into buffy brown, spotted or streaked with dark brown; the outer tail feathers chiefly white which is a conspicuous mark in flight.

This bird is a true harbinger of spring, arriving in the latter part of March or early in April. It announces its presence at once by its loud and clear call-note, which sounds like he-ha-he-here. They arrive in flocks of ten to twenty or more and soon separate into pairs and each pair takes possession of its old haunts. In localities where these birds are numerous, they live close together. It seems surprising that they so often select low, boggy places for their roosts instead of the pleasant upland slopes. Walking through meadows and lowlands after nightfall, one may frighten them from the grass. They are easily recognized by their rapid sputtering alarm note. The grass-finches and

lark-sparrows which are relatives of the meadowlark, also seek little hollows in the ground for bed-chambers, usually sheltered by grass tufts. These birds begin making arrangements for housekeeping in the latter part of April or early in May. The female constructs the nest alone, while her mate is singing to her his sweetest notes.

The nest is always built on the ground, usually in the shelter of a thick tuft of grass, beside a few corn-stalks, a bunch of clover, etc. Often a covered passage is built to their hidden nest. This entrance is mostly formed of withered grass, and so well conceals the nest that it can only be detected by flushing the female from it, or by the anxiety of her mate, who will frequently fly around the spot in so small a circuit as to betray the location. In many cases the nest is arched over on one side. The arched nest is made when there is nothing else present to protect it. Generally it is placed in a slight depression in the ground. It is constructed of coarse grasses and lined with finer ones. The eggs, usually four in number, have a white ground-color and are marked irregularly with reddish-brown spots and lilac shell-marks. When the young have left the nest a second brood often follows, and in the South sometimes a third one. The parents are so much attached to their young that they utter the saddest notes if some accident befalls them.

The meadowlark is almost an ideal bird. How beautifully contrasts the bright yellow with the deep black crescent on the breast in the sunshine of a bright spring morning! And how impressive are the clear, exhilarating notes! When the farmer follows his team afield in the early morning his ear catches the finest and most delightful strains. The song is characterized by a delicacy of tone remarkable in so large a bird. They are usually silent during July and August; but when September comes they resume their choruses, which last until November, increasing in vigor as the autumn advances, or until they leave for the South.

This is one of the most valuable and beneficial birds to the farmer and fruit grower. More than half of its food consists of harmful insects; its vegetable food is composed either of noxious weeds or waste grain. One point in its favor is that, although naturally an insect eater, it is able to live on vegetable food, and consequently is not forced to migrate in cold weather any further south than is necessary to find the ground free from snow. This explains why it remains for the most part in the United States during the winter, and comes north as soon as the snow disappears from its usual haunts.

Although an invaluable ally to the farmer and a favorite of all lovers of Nature, the meadowlark is hunted in many parts of the country as a game bird. Its flesh is highly esteemed by epicures, but surely to slaughter it for game is the least profitable way to utilize a valuable species.

Whoever fights, whoever falls, Justice conquers evermore.—*Emerson.*

The life of every man is a diary in which he means to write one story and writes another, and his humblest hour is when he compares the volume as it is with what he vowed to make it.—*J. M. Barrie.*

There are seasons when to be still demands immensely higher strength than to act.—*Channing.*

Emotion is power when it is caught in the cylinder and does not escape in the whistle.—*Rev. William Rader.*

Work for some good, be it ever so slowly; Cherish some flower be it ever so lowly; Labor! all labor is noble and holy; Let thy great deeds be thy prayer to thy God!—*Frances S. Osgood.*

Every individual will be the happier the more clearly he understands that his vocation consists, not in exacting service from others, but in ministering to others. in giving his life the ransom of many.  
—*Tolstoy.*

## THE SWEET PLEASURE OF PRAISING.

I READ the life of a great artist the other day who received a title of honor from the State. I do not think he cared much for the title itself, but he did care very much for the generous praise of his friends which the little piece of honor called forth. I will not quote his exact words, but he said, in effect, that he wondered why friends should think it necessary to wait for such an occasion to indulge in the noble pleasure of praising, and why they should not rather have a day in the year when they could dare to write to the friends whom they admire and love, and praise them for being what they are.

Of course, if such a custom were to become general, it would be clumsily spoiled by foolish persons, as all things are spoiled which become conventional. But the fact remains that the sweet pleasure of praising, of encouraging, of admiring and telling our admiration, is one which we English people are sparing of, to our own loss and hurt. It is just as false to refrain from saying a generous thing for fear of being thought insincere and what is horribly called "gushing," as it is to say a hard thing for the sake of being thought "straightforward." If a hard thing must be said, let us say it with pain and tenderness, but faithfully. And if a pleasant thing can be said, let us say it with joy, and with no less faithfulness.—*Selected.*

NEGLECT and irregularity, long continued, will make knowledge useless, wit ridiculous and genius contemptible.—*Johnson.*

## Around the World Without a Cent

H. M. Spickler

### Chapter VIII.

ANOTHER important and interesting discovery was made on this English farm. Occasionally I would "run in" to a bumblebee's nest. At first, they gave me great fright. I would jump back, instinctively, get out of the ditch, and run like mad. The noise they made as they rolled, like yellow-jackets, out of the nest in the grass, was quite terrifying. It sounded like they would sting at both ends at once. At first I waited some time before going back. But after a time I found that these bumblebees never left the nest at all, but just rolled about over the ground on top, like little fools, or

sat clinging to a straw and fanning the air with their wings. At last I grew so bold as to go right up to them. Still they sat and fought the air,—with their *mouth* and *wings*. They reminded me of the dog that barks so loud and bites so little, or of the coward who brags so much and brays so long, but who does it all with his *mouth* and "*wings*." I got down on my hands and knees right over them. I almost felt their stings entering into my face, as I imagined them flying at me. But they didn't fly. They didn't sting. Their game was a game of pure bluff.

And one of the best lessons I learned around the world, was this game of bluff,—how to meet it, how to tell it from the real, and why it was used. These bumblebees were cowards, so far as bumblebees were concerned. Their life depended upon their ability to sting,—animals, if not human kind. Honey is a most delicious food for almost every kind of animal

life, and most animals will make a dear fight for a little mouthful of it. And these bees had their honey and loved ones at home to defend from intruders. I do admit that while their peace attitude toward enemies was a commendable one, in non-combatant spirit, their pretense for battle and noisy bluff are not to be imitated.

Some of the bees took wing, circled about for a moment, without any of the terrifying simulation they had used while sitting on their nest, and went whirring away over the fields, just as though their absence at that particular moment was the best thing

for their community life. I took others into my hands, rolled them over, now on their back, and now on their feet, but still they did not sting me. Were I to write this for one of the magazines our President reads, he might be ready to call me a nature fakir for this bit of fact that I found among English bumblebees. But I know what I am writing about. I was there, on all fours, over those

bees. Not one nest, or two, but many I scared up, and none of them acted with the military spirit of our own Yankee bees. Their game was bluff, bluff, bluff. They lived in an atmosphere of pretense. They issued from their castles with a great noise, in great numbers, and with terrible flourish of weapons. But no sooner were they outside, face to face with the enemy, than they curled up their toes, turned over on their backs and apologized for their presence.

The honey was mine to take or leave alone, just as I chose to do. In pity for the weak little animals,

House Used by Farm Hands on Gibson Farm. Married Folks Only.  
Notice Entire Lack of Charm.

and also in thankfulness at their harmlessness, I always left their nest, so far as I was able, unmolested, for one of the crimes of our country life is the murdering off of these most valuable insects by boys who are in ignorance of their mighty value to a farmer.

The sparrows have been killed off by law. The crows have been shot at for so much a head. The groundhogs have been cleared out pretty well. It is probably right for us to rid the country of that which does harm rather than good. But the bumblebee,—who has championed its virtue? Who has raised a voice against its ruthless slaughter? The President of the United States could not do a wiser thing than to raise his voice in behalf of our noble and brave American bumblebee, a bee that knows what it is here for, has come to stay and means to do so if he has half a chance. Without this bumblebee, we have been told, by scientific men, there could be and would be no clover. It takes this bumblebee with the stinger always ready in self-defense, to produce the glorious crops of fragrant clover, without which our farms would soon become arid and the country people suffer poverty. Nothing so enriches a soil as

red clover. It is the highest fertilizing value known to soil science. But it takes the bumblebee to produce it. The little honeybee has tried to supplant the bumblebee in its work, but it has completely failed, for its honey sucker is too short to reach down the long petals of the clover flower. Now it is in the reaching down and getting this honey that the bumblebee, without knowing it, but wisely appointed as the instrument by a loving God, fertilizes the blossom, allowing the pollen to diffuse itself over the flower so as to reproduce itself by the growth of the clover seed. The more bumblebees we have, the more and better will our clover be. The fewer bumblebees, the less prolific our acreage in clover. In direct proportion of ratio as we have bumblebees, or do not have them, will be our returns in clover, and then in good land, and then in good crops, and then in good profits, and then in happy people and well-educated, well-raised children.

Another insect found in these ditches, as in the straw and hay in all England, is the "earwig," a

little cricket-like insect that is said to give the direst trouble to the workmen of the farm by crawling into the ear and boring thence into the brain. The men always exercised the greatest care when lying upon the ground or sleeping in the straw, and usually we hunted about to be sure that there were no earwigs in our immediate presence. Once in the ear, I was told, it was difficult to be removed, and only a skillful doctor could extract it. From the ear it went to finding a way directly into the head, boring and boring and boring, until the victim roared with pain and went mad, unable to endure longer the awful torture, dying at last when the insect reached the brain.

I seldom kill insects or animals just because I happen to be able to do so, but when I found these ear-

wigs, known by their long, reddish and slender bodies, looking something like a cricket, but with legs unable to jump, I always killed them on the spot.

In order to be perfectly safe from these insects the men wore constantly in their ears pieces of cotton. I determined to stuff the lobes of my own ears with cotton, and so at noon, one day, I set out for the little village and at one of

the drygoods stores I asked for some cotton. What they brought me,—the pretty girl and her mother,—I will tell you about in the next letter.

### OUR GRADUATE.

MARTHA SHEPARD LIPPINCOTT.

They talk of sweet girl graduates,  
But how about the boys?  
Without them, girls would be deprived  
Of many of their joys.  
They love to see a manly boy,  
Who's studied with a will,  
And perseveringly has climbed  
The graduating hill.  
There on the platform Jesse stands,  
Diploma, to receive.  
Our little boy, not long ago,  
We scarcely can believe  
Has grown to be this great, tall man,  
That looks so wondrous wise;  
But there is boyish mischief still  
Comes sparkling in his eyes.

Two Loads of Cabbage, Called Brocklow, for London Market, Packed so They Can be Counted Like Eggs in a Crate.

He's thru with school and ready to  
 In business settle down,  
 And after his long hours of work,  
 Perhaps, go see Miss Brown.  
 He's ready now for anything,  
 To bring him wealth or joy;  
 For he has grown to be a man,  
 The while we lost our boy.

Perhaps he'll seem a boy to us,  
 Although he is so tall,  
 And we may find we have not lost  
 Our little boy at all;  
 For men, they say, are only boys  
 Grown taller with their age;  
 We still, down in his heart, may find  
 The boy, as well as sage.

Moorestown, N. J.

### HOW THE HEALING ART DEVELOPED.

J. T. STUDEBAKER. M. D.

#### In Five Parts.—Part Four.

Our best American surgery was for nearly a whole century dependent upon Europe with Jno. Hunter as prophet. Philip Physick is perhaps the most widely-known American surgeon, a friend and pupil of Hunter, and educated in Edinburgh and London. It will be observed that no regularly educated and scientific physician was to be found in America except he received his schooling abroad up to the opening of the medical department of the University of Pennsylvania in 1765. It is almost incredible to think that the eminent school of Harvard should have a classical department in successful operation for nearly one and a half centuries before the Harvard Medical College was established, the second institution of its kind on this continent. Leonard Hoor, a distinguished physician, was the first man to complete its course. At the outset of the war for independence, there were no laws to say who should and who should not practice medicine; there were many poorly-educated physicians and charlatans, it being estimated that out of 3,500 there were only 400 who had received medical degrees.

Samuel Fuller, the first physician coming to New England, came on the *Mayflower*. It is not certain that he was a graduate. Ample provisions had been made for common schools and colleges. There were many learned citizens and scholarly clergymen. The latter were expected to have a knowledge of medicine to be able to properly discharge the duties of piety and humanity to the needy, greatly appreciated by the people. This is why the first medical work published in America was written by a well-informed clergyman of Boston, entitled, "A Brief Guide in Smallpox and Measles." This was printed in 1677, the same year that Sir Robert Hood discovered plant cells, the smallest parts of plants as seen through the microscope, to be followed later by Schwann's discovery of animal cells. The separation of theology and medicine, begun in the sixteenth century, was not yet complete. The

fact that the clergyman should write on smallpox showed that it was more or less prevalent. Up to the most remarkable medical discovery of the eighteenth century, that of prevention of the enormous mortality of smallpox through inoculation of the virus transmitted directly from a patient to one in good health, which produced a light form of the disease and thereby protection or immunity against later infection, it was considered a deadly foe. Inoculation was introduced from Turkey to England by Lady Mary Wortley Montayn in 1718 and later into the colonies of America by Cotton Mather. Vaccination was ushered in by Jenner in 1796, the virus not being taken from the human subject but from the eruption of vesicles (blisters) of calves having "cowpox," giving us a modified product which sterilized and treated with glycerine was in a large measure the same as the vaccine now used.

Vaccination seemed to be a landmark to new and great fields of discoveries making the nineteenth century the most famous of all eras. In fact medicine and surgery since 1800 have made more advancement than during the past two thousand years, the highest aim being summed up in one word, "precision." They had practically released themselves from tradition, dogmatism, speculation, metaphysics and authority which had fettered the intellectual world so long. The time came when man was not satisfied to rely upon unaided hands. Through the microscope the cell and germ (bug) theories were developed which have perhaps done more than anything else to revolutionize medical science. The diagnosis or nature of most diseases of bacterial or germ origin is with its aid made rapidly and accurately, thus making the quick adoption of measures preventing their spread possible and their treatment feasible.

It was because of thousands of soldiers dying in the Crimean War, 1847, from their wounds, in contradistinction to a much smaller number killed on the battlefield, that Lister, an Englishman, was aroused to cope with the apparent fatalism which seemed to settle down upon the profession. This exercised his ingenuity and he concluded that some destructive agent gained entrance into the wound and flourished there under certain conditions and by appropriate measures could be destroyed. He thought that the medium of contamination was the air, but later, anything that might come in contact with the wound, as clothing, instruments or hands which might carry disease if they were not properly cleaned. Pasteur confirmed this and began to look for an antidote to neutralize the intruding agent, which he found in carbolic acid, an agent scarcely known in Great Britain, said to have been used by him to deodorize the pastures near Carlisle which were thought to infect cattle. Lister modified this chemical and had won a complete victory for antiseptics, which inhibits germ growth, by 1880. This

launched us upon the most brilliant era of all surgical achievements, making it possible to explore any region of the body with safety, thus saving many thousands of lives that had been doomed to die. His methods, as far as developed, were carried into the army surgical treatment of the Franco-Prussian War of 1870. Before this some surgeons wore the same old coat for years. Surgeons now putting on a sterile gown for each new operation, look back to it as a barbarous age. It took Lister to develop proper wound treatment and the essential cleanliness. On account of this the relief of suffering cannot be estimated; to think that only thirty to forty years ago, diseases, as hospital gangrene, erysipelas, and most virulent forms of sepsis, so-called blood-poisoning, ran rampant as most dreadful epidemics, but today are under control through preventive precautions. Lister is a member of all sorts of learned bodies both at home and abroad and also honored by Queen Victoria in 1897 with the title, "baron," the first and only representative of the profession to be so distinguished in Great Britain.

### THE DRAGON FLY.

JOHN H. NOWLAN.

WHAT do you call him? Snake feeder, snake doctor, devil's darning needle, mosquito hawk? Every one of the names, save one, is a slander on the whole tribe. On the other hand the dragon fly is one of our best friends. He eats everything of the insect kind—flies, gnats, mosquitoes and butterflies. He would eat our friends, too, were it not for the fact that his habitat to a great extent is not theirs.

Watch him some summer evening. See him alight on a dead limb, or, if that is not to be found, a post, weed, or any other object that will allow him a good

range of vision. Presently a mosquito comes along singing gaily and—it's over. In less time than it takes to tell it, out went the dragon fly, captured the mosquito and returned to his post in triumph, or supped as he floated leisurely along. He ought to see well, as each of his large prominent eyes has 28,000 polished lenses.

There isn't another creature in all the animal kingdom can do what he can. He can go straight ahead at a speed greater than that of a railway train, and then without changing the point of the compass he is facing go just as rapidly backward or to either side.

Catch him? Well! Put your finger on him and—he

isn't there. However, he is strictly a warm weather fellow. A June morning is sometimes cool enough to benumb him sufficiently to enable you to capture him.

The greater portion of his life is spent in or near the water where he can find his favorite food—mosquitoes.

The eggs are deposited in the water and there the larvae live for about a year.

They are often two inches long, are quite flat, of a dingy color, and of course, have six legs. By the way, that is the way with all insects. Even the caterpillars have only six. The ten on the hinder part of their body are not true legs, only five pairs of pinchers.

In their watery home the dragon flies feast on the little wigglers and other insects until full grown. Then they come to the bank, or climb on brush and become pupae. They do not lie dormant as butterflies do, but continue to eat all insects they can capture.

In due time the pupa casts its skin and the complete dragon fly sails away on the breeze.

*Mulberry Grove, Ill.*

## CURRENT COMMENTS

The recent election in Japan resulted in leaving the relative strength of parties in the Diet very much what it has been in the past. That is to say, the Scyukai or Liberal party, by which Premier Salonji is supported, will with the aid of coadjutors among the independents remain preponderant in the popular assembly. Nevertheless, Salonji's early downfall is predicted in the best informed political circles. The Japanese idea of government is about midway between that of Great Britain and that of Germany so far as regards the right of Parliament to decide who shall be prime minister. When he thinks it necessary, the Emperor of Japan hesitates no more than the Emperor of Germany to appoint the minister who suits him, regardless of the sentiment of the representatives of the people.

### Poverty and Crime.

Isn't it true that crime springs from poverty? Not from poverty when and where all are poor, to be sure; nor in every instance from poverty of the individual offender; but from social poverty—that is, the social condition of abject and hopeless want, in the midst of plenty to the point even of luxury. Each of us naturally tries to escape this social condition. Each may indeed be generous enough to desire that all shall escape. But if one cannot escape the slough of poverty without thrusting others in, who is there that won't sacrifice his neighbor? And he who makes that selfish sacrifice, he who thrusts others into poverty in order to escape it himself, isn't it he that is labeled "criminal"?—provided, of course, that he resorts to methods that are under social condemnation, and gets found out. Of predatory crime, at any rate, there seems little room for any other explanation than poverty in social conditions where plenty abounds. Were this social condition unknown and unfeared, what motive would there be for theft of any species? And how could there be predatory crime if there were no motive for theft?

### Results of Prohibition in Georgia.

This year is the "off" year in the meeting of State legislatures, but next year, when the legislatures of most of the States will be in session, a large amount of restrictive legislation may be looked for. If prohibition is even fairly well enforced in the States which have adopted it, other States will be inclined to follow their example. It is, of course, too early to judge of results, but the first reports from Oklahoma are of a marked falling off in the business of the police courts, and from Georgia<sup>1</sup> of increased steadiness of Negro laborers. At Atlanta last January, there were but sixty-four cases of drunkenness before the court, as compared with 341 in January, 1907. In January and February, 1907, there were 3,074 arrests for all causes; in the corresponding months of the present year only 1,538. The first sentence for illegal selling was to twelve months on the chain-gang. There have been several days this year when no prisoner was before the court at Atlanta charged with drunkenness; and on one memorable day the city jail for the first time since it was built, was wholly empty. These are facts that will bother the bureau of publicity which the National Brewers' Association has just established, to prove to the people of the South that "prohibition does not prohibit."

### The Franco-British Exhibition.

The entente cordiale between Great Britain and France receives visible expression in the Franco-British Exhibition opened by the Prince of Wales last week in the Shepherd's Bush district in the West End of London. Thirty thousand visitors came out to see the sights and listen to the singing of "God Save the King" and "The Marseillaise." The 125 principal buildings and 400 minor structures are packed in an area of 140 acres, but the arrangement is such that the effect is described as pleasing. The world does not pay so much attention to world's fairs as it did two decades ago, so that, although the labor and material used in the construction of the Franco-British Exhibition will come to fifteen million dollars, most of the world has scarcely heard of it. The most attractive feature of the exhibition will probably be the great stadium where the Olympic games are to be held in July and October. The stadium will seat seventy thousand people and provide standing room for

eighty thousand more. If the state of the entente cordiale were to be judged by the state of the exhibition at opening, it would be more a prospect than a reality. True to convention, the fair was almost without exhibits on the day of opening. But the prospect is that by mid July it will be well worth seeing. Exhibitions from all the British and French colonies will make it a true "world's fair." The nourishment of the Anglo-French friendship is to be made much of. French and British gardeners have been working together on the grounds; French and British bands will play during the exhibition; three nights a week French and British pyrotechnicians will set off fireworks; every guide will speak both French and English. And not only will the distinguished French visitors be received with honor and cordiality, but special trips will be arranged for tradespeople from France who wish to see this evidence of the Franco-British friendship, and some four hundred French schoolchildren are to come to England as guests of the nation.

### A New Temple of Peace.

We are beginning to have a new sort of building in the world, buildings devoted to internationalism. The cornerstone of the first such building was laid at The Hague less than a year ago. The corner-stone of the second was laid in Washington recently. And Andrew Carnegie, who ought to receive the next Nobel peace prize, had a large share in each. He gave the money for the Palace of Peace at The Hague, and \$750,000 of the money to be used in the new building for the International Bureau of American Republics. The building will stand in Van Ness Park near the White House, the State, War, and Navy Department Building, and the Corcoran Art Gallery. It will be built of steel and concrete, in Latin-American style architecturally, since twenty of the twenty-one governments which join in the International Bureau are Latin-American. Besides the offices of the Bureau of American Republics, the building will contain a special room, the "Hall of the American Ambassadors," the only room of its kind in the United States, especially designed for international conventions, receptions to distinguished foreigners, and for diplomatic and social events of kindred nature. The dedication was a great Pan-American affair, although President Castro neglected to follow the example of his fellow-presidents in sending a message of congratulation. The occasion was signalized by an impromptu debate on the subject of peace between President Roosevelt and Mr. Carnegie. The President expressed his familiar views in regard to the relation of the great navy to peace saying, "If we build up the American fleet as we ought to build it up the other party will not really desire war. My advocacy of peace is both sincere and rational, and therefore I believe in doing all we can to secure it, both by doing no wrong ourselves and by keeping in such a state of preparedness that we shall not be exposed to being wronged by others."

Mr. Carnegie, when it came his turn, discarded his prepared speech and told the President that he differed with him. "When the President is as old as I am and has had as much experience I think he will agree with me," he said. He thought that The Hague Conference had already pointed the way to better things than huge armaments, that man slaying should cease just as man buying had ceased in the United States. He looked forward to the time when peace would be assured by a universal treaty of the world Powers. The audience applauded him liberally.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## "SOLUTION OF THE LIQUOR PROBLEM."

SOME time ago we received a letter from The Model License League, whose headquarters are at Louisville, Ky., in which was enclosed a list of questions relative to the liquor business on which the League desired to have our opinion. Accompanying the letter of explanation and the questions was a paper containing a solution of the liquor problem. It is quite an admission for the liquor interests to confess that there is any problem needing solution. They introduce the subject by the statement of facts admitted by all thinking people:

Obedience to law is essential to the continuation of our institutions and no fact in our history, as recorded day by day, is more lamentable than the failure on the part of States and Municipalities to enforce the edicts of society as expressed on our statute books.

That is well said, but evidently the facts have only lately been discovered by the liquor men. If they had had an experimental knowledge of them for any length of time the liquor question would not be so insistently demanding a solution. Further the paper says:

We shall not undertake to show what causes are responsible for this state of affairs, but shall go directly to the point we have in view, and say that the failure on the part of society to enforce its laws for the regulation of the retail liquor trade has brought that trade into disrepute, has driven from its ranks many of the self-respecting element, and is responsible for a crusade against the entire traffic, widespread, fanatical and destructive to property-rights, to revenues and to individual liberty of action.

Is it not well that they do not "undertake to show what causes are responsible for this state of affairs"? Wonderful wisdom! The same unerring wisdom is shown in the next step when society is charged with failure to "enforce its laws for the regulation of the retail liquor trade." Yes, directly, society is to blame for this. But it seems strange, does it not, that the failure of society to make the saloonkeepers mind

has brought the business of the saloonkeepers into disrepute? It is an example of the saying that if you give a calf enough rope it will hang itself. The calf has had rope and rope until—well, it is plainly headed for the precipice. The fanatical and destructive crusade against the liquor traffic is widespread, and more than that, it is still spreading. In their attempt to regulate a business that is bad all through, the people have lost patience, and now they propose to get rid of it, root and branch.

The paper continues to deplore the lawlessness of the saloonkeeper and the fact that he is protected in his lawlessness by the officers of the law, though it does not explain how this last is brought about. It concludes:

These things are bad of themselves, but they are proving destructive to our trade in a thousand ways, and self-preservation demands that we take a hand in putting a stop to them.

To accomplish this our license laws must provide an attractive reward to those saloonkeepers who observe laws, and a drastic penalty for those who violate them.

Then follows a copy of what The Model License League would consider a "model license law" which would have for its aim the solution of the liquor problem. We do not reprint this would-be law because it contains no provision for any real revolution in the liquor business. It would fail, as all efforts at regulation have failed. One can tell something of the nature of it by what is said above about providing an attractive reward for those saloonkeepers who observe the laws. Here again we have evidence of the debasing influence of the business on those who engage in it when "an attractive reward" is necessary to secure from them obedience to the law. Will loyal, upright citizens countenance a business which must thus be bolstered up? But the evil resulting from the liquor business does not stop with its debasing influence on the saloonkeeper. It goes on and on until it affects every one of us in one way or another. There can be no model license law for a business that is altogether bad.

## LESSONS IN ESPERANTO. No. 7.

## EXERCISE 15.

Sesdek minutoj faras unu horon, kaj dudek-kvar horoj faras unu tagon. Unu minuto konsistas el sesdek sekundoj. Januaro estas la unua monato de la jaro, Marto estas la tria, Julio estas la sepa, Septembro estas la naŭa, Decembro estas la dek-dua.

La dudeka (tago) de Februaro estas la kvindekunua tago de la jaro. Hodiaŭ estas la dudek-oka tago de Aprilo. Lasta sabato estis la dudek-sesa tago de Aprilo. Dek du monatoj faras unu jaron. Bonan tagon, sinjoro (Mr.).

Kian agon li havas? How old is he? Li havas dek ok jarojn. He is eighteen years.

Li estas maljunulo de sepdek jaroj. He is an old man of seventy years.

Antaŭ unu semajno, antaŭ unu monato. A week ago, a month ago.

Post du horoj, post ok tagoj. In two hours, in a week. Li mortis la lastan ĵaŭdon. Mia onkla mortis la lastan than ninety years.

Mi venos la lundon plej proksiman. I shall come next Monday.

Li mortis la lastan ĵaŭdon. Mia onkla mortis la lastan jaron.

## EXERCISE 16.

En Julio kaj Aŭgusto, la vetero estas varmega. En Januaro, ĝi estas malmalvarma. Kiun vi preferas? Ni

fajfi,—to whistle.  
 rideto,—smile.  
 hejmo,—home.  
 ĉesi,—to leave off.  
 fajro,—fire.  
 leciono,—lesson.  
 preferi,—to prefer.  
 vento,—wind.  
 apenaŭ,—hardly.  
 suno,—sun.  
 blovi,—to blow.  
 furioza,—furious.  
 pacienco,—patience  
 kvietiĝi,—to become calm.  
 somero,—summer.

havas venton kaj pluvon en Marto. Aprilo apenaŭ komencas montri al ni la unuajn ridetojn de la suno.

Se la pluvo falas, la vento blovas, fajfas kaj furiozas, mi restas hejme, kaj atendas pacience la ĉeson de la pluvo, la kvietiĝon de la vento, sidante apud la fajro kaj legante bonan libron. Jes, mi ricevis leteron de mia bopatro kaj kartojn de miaj gefratoj. Kie loĝas viaj gepatroj? Ili loĝas en Chicago, ili reiros al Colorado en la somero. La libreto estas en la dometo. Si estas apud la pordeto, sed mia frato estas en la domego. Arbo, arbeto. Pala, paliĝi. Hela, heliĝi. Juna, maljuna, maljuniĝi. Se mi estus ricevinta la libron, mi ĝin redonus. Kia lingvo ĝi estas! Kiu parolas Esperanton?

Elgin, Ill., la 28 de Aprilo, 1908.

Mia Estimata Amikoj:

Mi esperas ke vi estas lernanta ĉiun lecionon, kaj ke vi trovas la studadon plezuro.

Tre vere via.

## EXERCISE 17.

Now I am reading, you are reading, and he is reading—we all read. If I were well, I should be happy. Beg her to send me a candle. Running water is purer than water standing still. In the language Esperanto, we see the future language of the whole world. Having found an apple, I ate it. I will seek the truth? Do you hear the song of my birds? My dear friend I will try to follow your example. Replying to your esteemed letter, we thank you for your proposal and we will accept with pleasure your services. Eight is the fifth of forty.

ALLAN EISENBISE.

16 S. State St., Elgin, Ill.

## LEND A HAND.

LEND a hand to the tempted.

Lend a hand to the soul in the shadow.

Lend a hand to those who are often misjudged.

Lend a hand to the soul crushed with unspeakable loss.

Lend a hand to the poor fighting the wolf from the door.

Lend a hand to those whose lives are narrow and cramped.

Lend a hand to the boy struggling bravely to culture his mind.

Lend a hand to those whose surroundings are steadily pulling them down.

Lend a hand to the girl who works, works, works, and knows nothing of recreation and rest.

Lend a hand to the prodigal sister. Her life is as precious as that of the prodigal brother.

Lend a hand, an open hand, a warm hand, a strong hand, an uplifting hand, a hand filled with mercy and help!—*Selected.*

## FOOD PRINCIPLES

LENNA FRANCES COOPER, Principal School of Hygiene and Cooking, Battle Creek Sanitarium

### Article Nine.—Eggs.

THUS far we have devoted our studies principally to the fuel foods, starches, sugars and fats, but this month we shall take up another class of food substances known as protein. This important food principle performs a function which no other food principle can do. It is the material out of which we build our body and keep it in repair. This human machine which we call the body has been correctly compared to an engine which requires iron for the building but when once completed requires fuel with which to perform its work. It will also occasionally need some more iron with which to repair the worn-out places.

So with our bodies. The growing child needs protein from which to build its body, *i. e.*, to grow. But after maturity is reached it does not need nearly so much protein for only repairs are to be made and scientists have found that much more protein than is needed for this purpose is a detriment.

But our body differs from an ordinary machine in that it must work and perform its functions while it is being builded, *i. e.*, while it is growing, hence the food at all times must contain both protein and "fuel," but more protein proportionally in the child's food than in the adult's.

According to some recent experiments from one-tenth to one-eighth of the daily ration is thought to be about the right proportion for the protein, although some authorities place the amount still higher.

The sources of this important element we shall take up in the next few issues.

The egg is the simplest form of proteid food, although it contains fats, mineral matter and water besides. Almost all foods are combinations of two or more food principles and a food is called starchy if starch predominates and proteid if protein is abundant.

The egg in itself is quite a complex substance. Within the shell is contained everything necessary for the formation of bones, blood and tissue and also nourishment for the young chick until it issues from the shell. Protein and mineral matter are both necessary for the building of tissue, blood and bone and fat is

present chiefly as the source of nourishment because it is the most concentrated form of food and this is chiefly in the yolk which is about thirty per cent fat. The fat is in a very finely divided state and is an excellent example of a perfect emulsion.

The white of the egg is principally protein which we call albumen, and water, about seventy per cent of it being water. The white consists of millions of little cells which contain this semi-liquid albumen which when beaten are ruptured allowing this viscous albumen to escape and to envelop large quantities of air during the process of beating. This is why the beaten white of egg occupies so much larger space than it did before beating.

An egg will cook at a much lower temperature than most other articles of food. The egg white begins to coagulate at a temperature of 134 degrees F. and the egg yolk at 122 degrees F., whereas most substances require the boiling point of water, 212 degrees F. The temperature most favorable for the cooking of an egg is 160 degrees F. An egg cooked at this temperature for 12 to 15 minutes is ideally cooked, but where a thermometer is not convenient another method must be resorted to. They may be put to cook in cold water and allowed to come slowly to the boiling point for a soft-cooked egg. For a hard-cooked egg put to cook in the same way, but when the boiling point is reached place on the back of the stove where the heat will be moderate and allow to stand in the hot water 20 to 30 minutes. When cooked in this way the yolk should be mealy and the white quite soft. If the white is very hard it is because the heat has been too great.

The digestibility of an egg depends very much upon the way it is cooked. An egg should never be boiled. A hard-boiled egg white is very indigestible because it evades mastication and is almost always swallowed in much larger pieces than one can well digest. If it is to be served at all it should be put through a fine colander or sieve in which form it is comparatively easily digested because of its fine state of division. On the other hand a hard-cooked egg yolk cooked 20 to 30 minutes until it is mealy is very easily digested.

Since boiling water which has a temperature of 212 degrees F. is too high a temperature for cooking eggs, surely hot fat which reaches a temperature almost twice as high as water is much more objectionable. The heat renders the albumen too hard altogether.

#### The Best Way to Proach an Egg.

Heat the water to boiling, break the eggs into a dish one at a time. Turn the heat off from under the water if a gas stove, or move the utensil to the back of the range. Drop the eggs in one at a time. cover and let stand 3 to 5 minutes.

#### Foamy Omelet.

Beat the yolks of three eggs to a creamy consistency. Add to the yolks 3 tablespoonfuls water and 1 rounded tablespoonful of finely-grated stale bread crumbs, also  $\frac{1}{2}$  teaspoonful salt. Beat the whites until stiff and fold into the yolk mixture. This is done by putting the egg whip down through the whites and bringing the other material up through it shaking the whip lightly when it is brought up. This motion is continued until the ingredients are well blended, then the mixture is turned out into a very hot greased omelet pan. The heat is at once decreased so that the omelet may cook over a very moderate heat. When it has risen to two or three times its original size, and the bottom is nicely browned, place in a moderate oven for a moment, long enough to dry the top slightly. Then fold and turn out upon a platter. Garnish with parsley.

When properly made, this is a very beautiful and tasty omelet.

#### Cream Baked Eggs.

Place an egg in a ramekin or a custard cup, sprinkle with salt and cover with one or two tablespoonfuls cream sufficient just to cover the egg. Place in a moderate oven and bake 8 to 10 minutes, or until it becomes jelly-like.

#### Macaroni with Eggs.

- 1 cup macaroni, broken into 1-inch lengths.
- 3 hard-boiled egg yolks.
- 1  $\frac{1}{2}$  cups milk.
- 2 tablespoonfuls flour.
- $\frac{1}{4}$  teaspoonful salt.
- 1 to 2 tablespoonfuls dry bread crumbs.

Wipe the macaroni with a dry cloth, break into 1-inch lengths and put to cook in eight cups of boiling salted water. Cook rapidly until perfectly tender, drain and pour over it a dash of cold water. Drain again and place a layer of it in the bottom of a baking dish. Then make alternate layers of the egg yolk sliced and the macaroni, having macaroni for the top. The whole egg may be used if put through a sieve. Over all pour a cream sauce (1-3 cream if possible) made by heating the milk to scalding and thicken with the flour. Add salt and cook in a double boiler 15 to 20 minutes. On the top sprinkle the bread crumbs and bake till a nice brown.

### THE HOUSE OF REPOSE.

ADALINE HOHF BEERY.

(Concluded from Last Week.)

I KNOW there are some who will accuse me of preaching the doctrine of laziness, but I believe it is a sin to throw away one's strength when it might be saved to cultivate the soul with. Why do so many country women break down? They were taught to "fly around" from daylight to bedtime and that it was not correct form to be found sitting in a rocking-chair, reading, in the middle of the day. Hail the day of her emancipation, when she shall have cheerful permission to rest, when nature demands it.

Another requisite to smooth-running machinery is to have all food for the table well prepared. Every woman ought to have taken a course in cooking from her mother. It is far more practical and appetizing than the modern cooking-schools, their famous cook-books, and their foreign-tasting products. To be sure, a knowledge of food chemistry and healthful combinations is of value, as well as an understanding of the individual constitution; and I would like to write a paper on that very subject.

The kitchen, where a woman has to spend so much of her time, ought to have some decoration, too. First, never have the walls papered, for sanitary reasons, but paint them some attractive color.—pale green is very pleasing. Your merchant will give you a handsome calendar for the asking; hang it in a good light. A bright panel of flowers, children, or animals may be allowed here, with an alarm clock for audible company. You want a small mirror also, that you may watch for frowns, tumbled hair, and such like. A red geranium in the window will help to keep up your spirits.

Keep the shades high while you are at work, unless it is on the sunny side, for nothing is more cheerful than light. Do you remember when you were timidly groping in the darkness, how you were calmed by a sudden burst of light? Do not have carpet on the floor, but oil-cloth or linoleum. It ought not to be necessary to say that kitchens ought to be well ventilated, but some do smell "awful" in winter time. Have a stout spring on a well-fitting screen door. If it is worn into holes, wire cloth can be bought by the yard to repair it. All windows in the house should be screened. Flies are not conducive to repose.

If the kitchen is very small, it presupposes another room for dining. This may be tinted with rose, or other suggestion of freshness. But do not disfigure it with pictures of melons, peaches, and bananas, and dead fowl hanging by their feet. A great ship bounding over the billows is a more inspiring sight, and a boy wading in a brook in July will furnish a topic for pleasant reminiscence. A bay window, full of clean, thrifty plants, makes an admirable background. Linoleum, with designs in imitation of parquetry, is very desirable as a floor covering.

Of course the table is the chief object in the dining-room. If you can, "let the cloth be white," as Will Carleton says. Do not overload with dishes. It is vulgar. Have the table large enough so as to leave ample space between the few dishes containing the food. It suggests freedom, elegance, repose. Let the dishes be dainty, not brown and cracked. Do not turn the plates upside down. Whenever possible, have a bunch of fragrant flowers in the center of all. To this symphony of odors invite your family, and see if the influence on them and you is not elevating.

If there is a room in the house which you can dignify as "library," give it the air of intellectuality. Let the coloring be in brown and yellow effects. Have several good portraits of noted authors, educators, musicians, and philanthropists, and an etching or so. Have a large table in the middle, where papers and magazines may lie handy, and not be out of place. A roomy desk will contain all letters and important papers.

If you have not gas or electric light, let the lamp be one with a circular wick, porcelain-shaded. If possible, have a broad window-seat, where you can snuggle down and enjoy a favorite author or journal. A good spring couch is sometimes convenient, if one member of the family reads aloud and another wishes to listen. Let the library be a retreat where hungry souls may find communion with other souls preserved in the literature of all ages.

Lastly, have the approach to the house suggestive of repose. There must be no litter of paper or chips, and it is better to have a smooth stretch of velvety lawn than to have it all chopped up into little promiscuous beds of flowers or scraggly shrubs. Keep the walk clean and in good repair. A wide veranda is always inviting, and two or three porch chairs should always be saying, "welcome." Honeysuckle twining around the pillars is a fragrant addition, and the front door ought to have a glass panel. By the time your hand is on the knob, you ought to be in such a frame of mind that you can be devoutly thankful for your own haven from the wearing routine of daily wrestling.

*Huntingdon, Pa.*

#### ECONOMIZING STRENGTH AND TIME.

"NEVER go empty handed." That is what one mother used to say to the small daughters she was striving to mold into model housekeepers. If one was going up stairs she must look about and see if there was not something downstairs that belonged upstairs that she could carry up and put into its place, and so on from one part of the house to another.

The mother always said it would be a great help in one's housekeeping and save unnecessary steps if people would just remember that little rule. The daughters have proved it so, and now they say to their own children as they help them about the house, "Never go empty handed."—*Selected.*

#### MY LITTLE BOY.

Against my knee a little head is lying.

Two eyes of blue are looking into mine.  
The breath of twilight in the air is sighing, sighing,  
And twinkling stars amid the azure shine.  
With mother love the winsome face I kiss,  
And fold the hands so weary of their play.  
No sweeter joy a mother holds than this,  
Too soon, alas! the little feet will stray.

Again I press him to my hungry heart.

Ah, me! if I might shield him ever so!  
Mayhap some day he'll kiss me and depart,  
And I shall sorrow as I watch him go.  
Secure I hold him in my arms tonight,  
And motherlike I lay him down to rest;  
His curly head upon the pillow white,  
His dimpled hands soft folded on his breast.

I may not go and leave my darling there,  
So fair he looks within his cosy bed,  
Ere one last touch upon the wavy hair,  
One lingering kiss upon the lips so red.  
"God bless my darling!" low I whisper then,  
And silent as a watcher of the night  
I close the door, low breathing o'er again  
A mother's prayer to keep his steps aright.

—T. F. Rowland.

#### TRAINING LITTLE HANDS.

It is to be regretted that mothers give so little heed to the importance of their daughters knowing how to use the needle. Every girl before entering her teens should know how to sew on buttons, tapes, mend rips, rents and thin places in her own clothing, yet few of them, even when grown, have the skill to do it nicely. How often do we see little girls between the ages of eight to twelve years, with plenty of idle time on their hands, going about with garments in need of little repairs, where safety-pins and common pins take the place of buttons and threads, holding the pieces together until the mother finds time to attend to them! What is to hinder the child from learning to sew on her own fastenings, to mend small rents or sew up little rips? Allowing the child to go about with clothing out of repair is but encouraging and accustoming her to habits of slovenness which may cause her much mortified vanity and loss of self-respect in after years. The "stitch in time" often saves more than a few additional stitches.

With a very little showing, the lassie can do her own things—not always with a very great nicety of stitches at first, but satisfactory results will come with practice, and, with proper encouragement, she will learn to take a pride in keeping her garments whole. Then, too, it is no unusual thing to see the little brothers of grown sisters running about, regular little rag-muffins in looks because of rips, rents, lost buttons and torn-out buttonholes, which the sisters could easily repair if they had been given the responsibility. Indeed, many of these little boys could do much to keep themselves comfortably "harnessed," if their own fin-

gers had been given the proper training. In olden times, the wee lassies of from three to five summers were given tasks in sewing, and by the time they grew beyond the mother's brooding they were expert seamstresses. For the sake of neatness, comfort and economy, it is well to imitate our grandmothers in some things, and in nothing more than that the lassie should do more with the family wardrobe and less of the eye-straining "fancy work" that really serves no necessary purpose.—*The Commoner*.

## The Children's Corner

---

### OUR LETTER FROM AFRICA.

DEAR BOYS AND GIRLS:—

In my letter last month, I promised to tell you more about the African baby.

Have you ever seen a little child cry when a new baby came to its home and took its place on mother's lap? Yes, I think you have. Well, little African children are just the same. When a new baby arrives, the grandmother takes the youngest child into its mother's hut to see the new baby and hold it. Should the child show signs of jealousy, it is taken out and not allowed to come in again for three days, when it is again brought in by the grandmother and the baby placed in its arms. If it shows signs of pleasure, well and good, but if it is still jealous, the mother places the baby on the ground, take the little child in her lap and fondles it. Then she takes the baby alongside of the child, fondling both until the child is quite comforted. Just like the mothers at home.

How do you like sour milk? Some of you have plenty of sweet milk to drink. How would you like sour milk for your food? Many little babies here have to drink it. The mother shakes it well in a calabash. Then she grinds some corn to mix with it. The corn is ground on stones so the meal contains a good portion of grit. This does not trouble the digestion of the grown-up people, but does trouble the baby seriously until it gets used to it. Some of them get thin porridge, but the most of them get sour milk and mealie (corn meal). Poor little things! They do not like it either. It is hard to make them drink it, so the mothers try this plan: placing the baby on her lap, she pours a little of the milk into her hand, puts the edge of the palm to the baby's mouth and slowly raises up her hand until the baby's mouth is covered. Even then the baby refuses it, so the mother nips its nose and forces it to drink. As a rule there is a great deal of coughing and spluttering and the baby's face and naked body are covered with the mess. The mother calls up the dog, as she has no such thing as a napkin or handkerchief, and tells the dog to lick the baby clean. After seven days the baby may have its mother's milk. Then it is plump and happy.

Sometimes it has to have the sour milk all the time. One morning I was at the mission doctor's office and saw such a poor little sick baby. The mother had brought it a long way on her back through the burning sun. The doctor asked what food it had. The mother showed us a big bottle of dreadful smelling sour milk. The doctor said that the baby was starving to death. The father was very angry because the doctor would give the baby no medicine. The doctor urged the woman to stay and the ladies of the mission would feed it properly. She wanted to stay, but he said, "Who will cook my food?" and refused to let her stay. The baby died on the way home.

The people sleep on grass mats spread on the mud floor of the hut, and so it is not to be expected that the baby would sleep in a cradle. The baby sleeps on a mat of its own, which is tucked away under the

mother's blanket. The mothers are very fond of their babies and kiss them a great deal:

The small children are put to sleep with lullabies that the mothers make up as they sing. Sometimes they sing the praise song of the grandfather, using the name of the child instead, but generally sing about weeding the garden, bringing wood and water, cooking, smearing the huts, threshing the corn or brewing the beer. The song will be something after this fashion: "Hush, my child, thy mother has not hoed her garden: has not hoed her garden, for there are stones between the weeds and the stones hinder her: thy mother has not hoed her garden." Here is a Gazaland lullaby; it is given both in English and Tshindao, so that both the sound and the meaning may be grasped.

Woyo, woyo,  
ndo enda mugoa  
kuna Mwandiemudza,  
mukunda wa Tshibuwe  
O nameso matshena,  
ahongo a a mutshangwa,  
mutshangwa zie zano.

Woe, Woe.  
I'm going down south  
To Mwandiemudza,  
Tshibuwe's daughter,  
Who has white eyes,  
Like a weasel's,  
The cunning weasel.

wo one tsho ito ndebvu,  
dza pera kutumbuka,  
dzo ne nhumbu.

You see its whiskers,  
Are fine and large,  
They need a doctor.

The idea is that the youngster will have a strong beard like the weasel's, but it must be doctored in order that it will not be white.

Babies are carried in several ways, but the most common way is on the back of the mother or the little sister nurse. She puts the blanket around her hips, lifts the baby by one arm, swings it around her and places it on her back. Then she draws the blanket up over the baby, up to its shoulders and fastens the blanket in front. The child is rocked by the gentle motion of the body and there it rides and crows and sleeps. The mother does not feel the weight of the baby carried in this way and can work all day with the baby strapped on her back. The baby is comfortable even though its head lolls over the pouch of the blanket and is exposed to the sun. Hats of course are not used. Sometimes I have seen a woman walking on a journey, carry an umbrella to shade the baby.

Sometimes little girls come to school with a little baby strapped on their backs. When the baby cries, they must get up and walk with it. We often see the little girls at play with a baby on their backs. The babies enjoy it immensely.

Do you know babies and children who suck their fingers? African mothers do not object to that very much, but they think it is very bad to bite the finger nails. They say that the child will grow up to be lazy and cross and will become poor.

I want you to get well acquainted with the little folks of Africa, then you will know better how to pray for them.

The next letter I will tell you about African twins. You will be surprised. Pray for us that we may be able to teach many about Jesus and his love.

Yours in His service,

NELLIE REED.

*Fair View M. S., Umzumbe Rail, Natal, S. Africa.*

#### THE PEBBLE AND THE ACORN.

"I am a pebble, and yield to none!"  
Were the swelling words of a tiny stone;  
"Nor time nor seasons can alter me;  
I am abiding while ages flee.  
The pelting hail and the drizzling rain  
Have tried to soften me long in vain;  
And the tender dew has sought to melt,  
Or touch my heart, but it was not felt."

"There's none that can tell about my birth,  
For I'm as old as the big, round earth.  
The children of men arise and pass  
Out of the world, like blades of grass,  
And many a foot on me has trod,  
That's gone from sight and under the sod.  
I am a pebble, but who art thou,  
Rattling along from the restless bough?"

The Acorn was shocked at this rude salute,  
And lay for a moment abashed and mute.  
She never before had been so near  
This gravelly ball, the mundane sphere;  
And she felt, for a time, at a loss to know  
How to answer a thing so coarse and low.

But to give reproof of a nobler sort  
Than the angry look, or keen retort,  
At length she said, in a gentle tone:  
"Since it has happened that I am thrown  
From the lighter element where I grew,  
Down to another, so hard and new,  
And beside a personage so august,  
Abashed, I will cover my head in dust,

"And quickly retire from the sight of one  
Whom time nor season, nor storm nor sun,  
Nor the gentle dew, nor the grinding heel,  
Has ever subdued, or made to feel."  
And soon, in the earth she sank away  
From the comfortless spot where the pebble lay.

But it was not long ere the soil was broke  
By the peering head of an infant oak;  
And as it arose and its branches spread,  
The Pebble looked up, and, wondering, said,  
"A modest acorn, never to tell  
What was inclosed in its simple shell;  
That the pride of the forest was folded up  
In the narrow space of its little cup,  
And meekly to sink in the darksome earth,  
Which proves that nothing could hide its worth

"And oh, how many will tread on me,  
To come and admire the beautiful tree,  
Whose head is towering toward the sky,  
Above such a worthless thing as I.  
Useless and vain, a cumberer here,  
I have been idling from year to year;  
But never from this shall a vaunting word  
From the humble pebble again be heard,  
Till something, without me or within,  
Shall show the purpose for which I have been."  
The pebble its vow could not forget,  
And it lies there wrapped in silence yet.

—Anonymous

#### For SUNDAY READING

#### OUR CHARITY TO OURSELVES.

RICHARD SEIDEL.

WHATEVER may be our position in regard to other people, one thing at least is certain, we seldom are lacking in charity toward ourselves. Although we may be the most inconsiderate of mortals in our treatment of other persons' failings, we are pretty apt to assume a very different attitude when it comes to the consideration of our own. Shortcomings that seem inexcusable in others, become perfectly natural acts when we commit them, for there are comparatively few of us who cannot find an excuse with which to explain away the very things that we would never forgive in other individuals. I suppose that this is entirely reasonable, for a man is expected to defend himself and this is only

one form of self-defense to which we turn as naturally as we would turn to a gun if we felt that our lives were in danger.

If we could but bring ourselves to look at this matter in a reasonable light, however; if we could persuade ourselves to show the same consideration for the failings of other people as we do for our own "peculiarities," this would be a pretty happy world in which to live. Unfortunately, however, this is one of the impossibilities, it is a test of character for which human nature does not yet seem to be fitted. We may talk loudly about the virtue of charity, we may tell people how anxious we are to put ourselves in the other persons' places that we may judge how we might feel and act under similar circumstances, but as a matter of fact we do not do this. We only say that we do it—or that this is what we are trying to do.

It is the most common thing in the world for one person to criticise another. In fact the criticism escapes our lips so naturally that we have come to think little or nothing of it. If anybody should tell us that we were addicted to the crime of gossiping we should probably become very indignant, and yet there is scarcely one person in a thousand who does not lay himself liable to this charge a good many times in an average day.

Thus somebody mentions somebody else's name, and we immediately repeat a story that so and so has told us. Of course, we may not vouch for its truth, but the next man who repeats it will say we told it as a true story, and by the time it has circulated about town for a day or two, its magnitude will have increased beyond the point of recognition.

Sometimes such stories do no end of harm. Men's financial and social standing have been ruined by baseless rumors that may have been set afloat by some person who would scorn the idea that he was a gossip. And it is so easy for such things to happen! A word that has been misunderstood, a look that is misinterpreted, an act for which there has been no logical explanation—any little thing is sufficient to start the ball in motion, and like the snowballs that we used to delight in making when we were boys—how such things gain in size, and how their shape does change with every revolution!

Of course, when these things happen to us—when we are the victims of the misunderstanding—we cannot understand it. We cannot imagine how anybody could possibly have suspected us of such an act or thought. We cannot see why our friends and acquaintances should not have taken the trouble to put themselves in our place. Then they would have realized that the thing was beyond belief. Oh, yes, it is very easy for us to wonder why we should have been treated uncharitably, but then we never do commit any act for which there is not a perfectly reasonable excuse. If we make a mistake in our work we find no difficulty

in telling just how it happened. "Why!" we say, "anybody would have done the same thing." And it is with just such a feeling as this that we try to explain away the words and deeds that would appeal to us as inexplicable if we had not been the persons who were guilty.

Other people make mistakes, but we—never. Other people make fools of themselves, but not we! Other people commit crimes against the law, crimes against decency, offenses against their neighbors, their country, and their God, but we never do such things. If you do not believe it, just listen and hear how easily we can explain things that couldn't possibly have been explained away if anybody else had done them.

### "BLEST BE THE TIE."

Nor one in a thousand who sings the old hymn, "Blest Be the Tie That Binds," knows the history of its homely origin. It was written by the Rev. John Fawcett, who in the latter part of the eighteenth century was the pastor of a poor little church in Lockshire, England. His family and responsibilities were large, his salary was less than \$4.00 a week.

In 1772 he felt himself obliged to accept a call to a London church. His farewell sermon had been preached, six wagons loaded with furniture and books stood by the door. His congregation, men, women and children, were in an agony of tears.

Mr. Fawcett and his wife sat down on a packing case and cried with the others. Looking up, Mrs. Fawcett said:

"Oh, John, John, I cannot bear this! I know not where to go!"

"Nor I, either," said he, "nor will we go. Unload the wagons and put everything back in its old place."

His letter of acceptance to the London church was recalled, and he wrote this hymn to commemorate the episode.—*Home Herald*.

### THE TRULY ELOQUENT PREACHER.

HE is the truly "eloquent" preacher who so preaches the Word that he succeeds in inducing people to do what they know to be their duty, and in persuading men to refrain from doing what they know to be wrong. Noisy declamation is not "eloquence"; neither is he an eloquent preacher whose sermons leave the people, morally and spiritually, living on in their sins, even if his pulpit efforts do draw great crowds, and elicit much applause. God designs "through the foolishness of preaching to save them who believe," and obey the Gospel when they hear it.—*The Telescope*.

IN conduct do not make trifles of trifles. Regard the smallest action as being either right or wrong, and make a conscience of little things.—*Spurgeon*.

# Echoes from Everywhere

The American Medical Association met in convention in Chicago June 2, the meeting lasting four days. Following the general opening of the convention in the Auditorium there was a number of section meetings and papers bearing on the newest phases of medical progress were read by leaders in the profession.

The federal government won a notable victory in the United States District Court recently in Illinois when the Chicago, Burlington and Quincy Railroad Company was found guilty on three charges of violating the twenty-eight-hour law, which provides that livestock shall not be confined in cars over twenty-eight hours without being taken out for the period of five consecutive hours for the purpose of giving them rest and food and water except when the shippers request that the railroad company keep them thirty-six hours without food or water.

Two hundred thousand yen (\$200,000) is now indicated as the size of the proposed present by Japan to the Canton guilds if the boycott of Japanese goods is discontinued. Meanwhile advices from North China and Manchuria state that, owing to the activity of the Cantonese emissaries, the movement is rapidly spreading throughout the north. The emissaries are working systematically and secretly. Their literature makes no mention either of the boycott or of Japan, speaking of "the national disgrace with reference to the country responsible," which, the Chinese all understand means Japan.

The feature of the sale of books from the library of Mrs. Thrale, afterward Mrs. Piozzi, the friend of Dr. Johnson, was six quarto manuscript volumes, comprising about 1,630 pages entirely in autograph by Mrs. Thrale, commencing in the latter part of 1775 and concluding with an entry dated March 30, 1890. All manner of topics are recorded in the volumes, including many conversations and anecdotes concerning Dr. Johnson. The high price of \$10,250 was realized. For the signatures of John Milton and son to the marriage covenant of the poet's daughter Anne \$322 was bid.

The fourth annual session of the National Wholesale Grocers' Association of the United States was held recently, with 600 delegates in attendance. President William Judson of Grand Rapids, Mich., in his annual address was optimistic. He declared that despite the hard times the past year was one full of activity. Pure food laws, uniform contracts, free deals in trade, subsidy of salesmen, buying from manufacturers and uniform state laws corresponding with national pure food laws were among the important issues discussed during the convention.

With packs on their backs and only enough money to supply their immediate wants, a college professor and ten

students sailed June 5 in the steerage of the steamship Alice bound for the immigrant fields of Europe. At the head of the party was Professor Edward A. Steiner of Iowa University. The members of his class are volunteers from the colleges and universities of the middle West. The plan mapped out for the party is to study the alien as he is at home, to learn his languages, his habits, his social condition and its causes, and to trace the history of the races that are pouring into America. Upon the completion of this task the ten men will enter the mining fields of Pennsylvania as social workers and interpreters under the auspices of the Pennsylvania Young Men's Christian Association. The expenses have been met by subscriptions from those interested in the work.

An important provision so far as the railroads and traveling public of the country are concerned was embodied in the sundry civil appropriation bill and has become law without attracting attention. By law the interstate commerce commission is now authorized to investigate, test and report on the use and need of any appliances or inventions intended to promote the safety of railway operation. Inventors of such appliances are required to furnish them in complete working order and the commission is empowered to employ persons familiar with the subject to conduct the experiments and investigations. It is thought by the framers of this law that it will vastly promote the introduction of safety devices upon railroads by encouraging the inventors.

Under the terms of the new currency law, passed by Congress in the closing hours of the last session, banks in which funds of the government are deposited must hereafter pay interest for use of such funds. An exception is made in the case of those banking associations designated as national depositories in which funds are placed strictly for the use of the government. There are outstanding about \$72,000,000 of government funds on which interest must be paid by banks, and by an odd coincidence a similar amount rests in depositories not subject to the tax. It was stated at the Treasury Department that not only would the tax be charged on all deposits of government money made in the future, but that the tax would be payable on funds already deposited from the time the new law became effective. The rate of interest chargeable is to be not less than 1 per cent, and as much more as the Secretary of the Treasury may deem proper. For the present, however, the probable rate of interest will be 1 per cent per annum.

A great tuberculosis convention will be held in Washington this summer. Among other nations that will be represented at this convention, Russia is planning to send a large delegation. The White Plague is one of the scourges of Russian life.

The British House of Commons, May 6 unanimously adopted a resolution urging that steps be taken for the speedy abolition of the system of licensing opium dens in Crown colonies, particularly Hong Kong, the Straits Settlements and Ceylon. If this is done it will be effective coöperation with the Chinese government and would add strength to the American proposal of an international commission.

The days of bright green French canned peas are passing. The Board of Food and Drug inspection, which is another way of saying Secretaries Wilson, Cortelyou, and Strauss, have decided that after January 1, 1909, food greened with copper salts will not be entitled to entry into the United States under the pure food and drugs law. Until that time, however, if the label tells the truth about the copper, vegetables not containing an excessive amount of the salts will be allowed to enter.

The vital statistics for France for 1907 show that, for the first time, the deaths exceed the births, the figures being 793,000 to 774,000. The wiping out of the small margin of increase which heretofore existed will probably stir France. Whether such schemes as prizes for large families and bachelor taxation will do much good is doubtful; but the growing fight against alcoholism, with which depopulation is bound up, should help, in common with other ameliorative social legislation.

We have heard so much about the "Big Stick" of late that we have almost forgotten the policy of "speaking softly," which goes with it, and which is as strong a guarantee of peace as is the other. Now, the Lower House, which very sensibly refused to provide four new battleships for the navy, has voted a million and a half for a government exhibit at the Japanese exposition to be held in 1910. The move appears to be a wise one and the money well expended. It will serve notice on Japan that our intentions toward her are entirely friendly, and that if there is to be trouble it must be of her own seeking. And coming at a time when her own finances are in such condition that she is offering nine per cent for money, it will give her some idea of what a rich and powerful and altogether dangerous people we are.

#### Postage to Britain 2 Cents.

Washington, June 3.—Postmaster General Meyer announced today that an agreement had been reached with the British government, providing for a letter postage of 2 cents an ounce between the United States and Great Britain and Ireland, to become operative Oct. 1, 1908. He stated further that the British postmaster general, Sydney Buxton, was making a like announcement to the house of commons today.

London, June 4.—Postmaster General Buxton's announcement in the house of commons today of a penny post arrangement with the United States, gives greater gratification to the British people than many of the weightier political reforms and is especially greeted as an important stage on the road to universal penny post. It is considered certain to have considerable effect on foreign opinion, and little doubt is entertained that it will speedily be followed by the announcement that negotiations with France to the same end have been satisfactorily concluded. The newspapers here are showering congratulations on Postmaster Generals Buxton and Meyer, and on Ambassadors Reid and Bryce.

#### Three Billion-Dollar Session.

Seventeen or eighteen years ago there was raised the cry of a "billion-dollar Congress," and the possibility of such an enormous national expenditure brought all sorts of charges of extravagance upon the party in power. The recent years of unprecedented prosperity have taught the nation to think in terms of millions instead of thousands, and have developed a certain rashness in private and public expenditures. Whereas we trembled at the thought of a billion-dollar Congress then, we face calmly, in this year of diminished revenue, a billion-dollar session. It is instructive to compare the expenditures then and now under its more important heads:

| Fiscal year.           | 1909.         | 1892.         |
|------------------------|---------------|---------------|
| Sundry civil .....     | \$120,000,000 | \$ 35,460,000 |
| Legislative, etc. .... | 33,000,000    | 22,000,000    |
| Army .....             | 95,382,000    | 24,000,000    |
| Navy .....             | 122,660,000   | 31,500,000    |
| Fortifications .....   | 11,500,000    | 3,775,000     |
| Pensions .....         | 163,000,000   | 135,200,000   |

The country has grown enormously in these years. This is reflected in the expenditure for the postoffice and the agricultural departments. The former has increased (largely on account of the new rural free delivery) from \$76,000,000 to \$221,000,000 in the seventeen years, and the latter from \$3,000,000 to over \$11,000,000. The item which has increased all out of proportion to our national growth is the expenditure for our army, navy and pensions. The deficit for this fiscal year will be over \$60,000,000, and on the basis of the appropriations now made, the deficit next year must reach nearly \$150,000,000. And yet the press, blind leaders of the blind, have almost unanimously called down anathemas upon Congress for refusing to build four battleships instead of two.

June 1, with one of her four propellers disabled, the Cunard liner Mauretania has accomplished the astonishing feat of clipping two hours and forty-one minutes off her own trans-Atlantic westward record. This is only fifty-six minutes behind the best run ever made over the course, made by her sister ship the Lusitania. When the Mauretania anchored she had covered the 2,889 miles between Daunt's rock and Sandy Hook in 4 days 21 hours and 18 minutes. The Lusitania covered the distance in 4 days 20 hours and 22 minutes.

Cecil Rhodes, the diamond magnate of South Africa, dreamed of a railroad running from Cape Town to Cairo. That dream is being wrought out in reality at a rapid rate. The road south from Cairo now reaches Khartoum, while the one from the south has penetrated as far north as Broken Hill, four hundred miles beyond the Zambezi, and two thousand miles from Cape Town.

So well satisfied is Commissioner Bingham of the New York police with the work of the six police dogs imported from Belgium that he has decided to send to Ghent for six more. Although little has been heard of the six dog policemen, it is said that they have been of material aid to the police in the outlying districts. It is not that they have done anything spectacular, such, for instance, as knocking down and holding criminals until the arrival of a bluecoat, as they are said to do in Brussels and Ghent, where they are used, but they have produced a fear on the part of night prowlers in the districts where they are used.

## CREAM OF MAGAZINES

### THE ARTISTIC TEMPERAMENT.

"O Liberty! What crimes are committed in thy name!"

Just why it should have become a moral shibboleth that the artistic temperament explains, justifies and excuses ethical and, stranger still, æsthetic shortcomings, is a fit subject for wonderment—an excellent additional instance of the inconsistency of human attainment. Just why it should be that the man whose soul is supposed to be attuned to the finer harmonies of the æsthetic sense is therefore, as a corollary, lax in his moral code and frequently wanting altogether in the humbler reaches of that æsthetic feeling, offers a curious problem for the thoughtful. It has become an axiom that the artist in whatever field of artistic achievement must be considered without reference to the man, although it is equally axiomatic that the artist is the man. Nevertheless, there is no more primal requisite for true judgment of the artistic than the capability thus to divorce the man in his human failings from the artist in his divine afflatus,—the work of art from the worker thereof. The curious thing is that the "artistic temperament" expects this divorce carried still further where all reason for so doing is lacking. And the world at large has, with a shrug of shoulders, complacently come to regard the artistic temperament and a wholesome sanity as altogether incompatible; whereas, in reality, they are not.

It is not the artistic temperament, but its opposite, that makes the man who writes a good poem delight in dirty linen and indulge in freakish fashion as to his hair. It is not the artistic temperament, but its contrary, that makes the creative genius of any form of art practice the immoral and the unclean—from the neglect to pay his debts to the indecent orgies of the satyr. The sincere love of the beautiful in any of its manifestations never yet made a human being ugly. We are too prone to confound cause with effect in these things. The artistic temperament never belittles. When the possessor of the gift is contemptible we may rest assured that without it he would be more contemptible still. And the world, frequently more charitable than she receives credit for being, and almost always a bad judge of what is artistic, is too apt to cover with the mantle of her complacency temperament that gets off easily with the charge of being merely artistic. There is nothing artistic in pose, nothing artistic in the assumed delight in the yellows and reds of the moral chromatic scale, but there is much that is dishonest in it. If the innumerable posers who cumber the purlieus of the courts of Art were broken by the world upon some sincere task of righteousness, the artistic atmosphere would receive a purging infinitely to the honor of Art!

Of a truth, we dabble too fearlessly with the sacred things of life. There is nothing nobler in human nature than the genuine artistic gift, yet we have seen it become confused with a thing of shreds and patches. Feeble poetasters and inconsequent fiction-mongers prate about their "art," and we have "artists" all the way up from

the "tensorial parlors" through Grub Street to the "studio" of the more or less mongrel professional. No wonder the artistic temperament becomes a factor to reckon with! For, after all, the real artist whose humanity may crop out in idiosyncrasies and obliquities scarcely more pronounced than those of the business man or the man of science—the man of individuality, of thought, and of preoccupation anywhere—is not the moral offense, and by no means the "artistic" offense, that is the poser whose cheap affectations of sincerity seek to prostitute Truth itself.—Lippincott's Monthly Magazine.

### POPULAR GOVERNMENT IN OREGON.

A document unique in American political literature has just been issued by the Secretary of State of the Commonwealth of Oregon, and distributed to every voter in the State. It is entitled, "A Pamphlet Containing a Copy of All Measures 'Referred to the People by the Legislative Assembly,' 'Referendum Ordered by Petition of the People,' and 'Proposed by Initiative Petition,' to be submitted to the legal voters of the State of Oregon for their approval or rejection at the regular general election to be held on the first day of June, 1908, together with the arguments filed, favoring and opposing certain of said measures."

The first fact that arrests the reader's attention, upon looking over this pamphlet, is the magnitude of the demand which it makes upon the interest, thought and time of the voters to whom it is addressed. No less than ten constitutional amendments are proposed, and nine acts. These are supported or opposed by nineteen arguments. The range of subjects is wide—from proportional representation in public offices, number of judges in the Supreme Court, exemption of property from taxation, and woman suffrage, down to the building of armories, the custody and board of prisoners, and the regulation of salmon fishing in the Columbia River.

Four of these measures are referred to the people by the Legislative Assembly. Seven go to the people because the referendum has been ordered in these cases by petition of the people. The remainder are proposed by initiative petition. All are printed in full. The form in which they are to be set forth on the official ballot is given in all cases, and the instruction to vote "yes" or "no." Arguments in support or objection are in all cases admirably brief and pointed. Some of them are from individuals, speaking as citizens merely. Some are offered by business interests, and some are presented by associations, clubs and societies.

All in all, so remarkable a body of propositions proceeding from and addressed to a democratic electorate, has never before been seen in America. The pamphlet as a whole is in essentials like the printed "Warrant," setting forth to the voters of a New England town the subjects upon which they will be expected to render their decision at the annual town meeting. If the Oregon experiment works, it will be in effect the establishment of the substantial reality and almost the form of the town meeting

plan of democratic government in State affairs by and within an entire commonwealth.

It would be absurd to make any prediction as to whether the scheme will in fact succeed or not. As we have said, this warrant is a large order. It makes a big demand upon popular interest, intelligence and effort. At the same time it is well calculated to awaken the interest, to tempt the citizen to expend the necessary time, and to quicken his intelligence. We cannot imagine anything more likely to prove of high educative value than the circulation and the inevitable discussion of the propositions of such a pamphlet, followed by the actual voting.

If the plan does succeed, it will certainly be the beginning of momentous political changes in the United States. It will be the assurance that this country will ultimately be a true democracy, and not a plutocratic republic. If the people of Oregon show themselves to be equal to the task which they have imposed upon themselves, they will create the reality of government of, for and by the people. And if that reality is created in Oregon, it will at no distant day be created in a large number of the other commonwealths.—The Independent.

### THE DEADLY HOUSE-FLY.

That the house-fly is not merely disagreeable, but dangerous—that it is an unclean pest of “appalling profligacy” and “disease-spreading habits”—we are assured by W. Frost and C. T. Vorhies, in an article of timely warning in *Country Life in America* (New York, May). These writers note that the house-fly proper, as well as several other flies, lives its larval life almost exclusively in animal excrement, usually in horse-manure. Where stables are left unclean, the litter packed down under the horse's feet will swarm with thousands of larvae. The fly itself, the completed stage of this larva or “maggot,” carries disease germs in a passive way. Say the authors:

“The mosquito bites a sick person or animal, and from the blood secures the infectious agent, which may then by another bite be inoculated into a second individual. Some of the biting flies also carry infection in this way, but the house-fly, not being able to bite, does not carry the inoculated diseases. It is, however, responsible for the distribution of certain diseases whose casual agent enters the body through the food. In other words, it aids in the distribution of intestinal diseases. The flies do this by carrying the disease germs from the dejecta of the sick to the food of the well.

“The disease germs which they carry are Asiatic cholera, typhoid fever, dysentery, and tuberculosis. In this country typhoid fever is undoubtedly the most important of the fly-borne diseases, although we are very ignorant in regard to the part which they play in the distribution of dysentery and tuberculosis. The fly gets the germs from the discharge of the patients where disinfection has not been properly performed. It may also become infected by crawling over the patient or the soiled clothing which may have been left untreated. In the country districts where adequate means of sewage disposal is rare, and in towns where sewage systems are absent or imperfect, the danger is greatest. The flies get their feet and mouth parts covered with the germ-laden material and thus carry it to the food which they may visit. From laboratory experiments it seems probable that a fly once contaminated with the typhoid germ may retain this germ in a living condition for at least three weeks. Thus a contaminated fly may be the means of carrying the infections for considerable distances if it has an opportunity to travel.

“Germ-laden material may also be eaten by the fly, and in such a case it has been shown that the typhoid germ may pass through the intestinal tract of the insect and still remain alive. A ‘fly-spot’ left by such an insect is dangerous. This is not theory alone, but in Chicago, when typhoid fever was especially prevalent, Miss Hamilton caught flies in districts where the sewage system was poor, and the typhoid germ was isolated from such flies in five out of eighteen trials.

“It is known that flies devour the sputum of consumptives, and the germ of tuberculosis has been found many times in the intestinal contents of these insects. How important it is as an agent in the distribution of tuberculosis we do not know, but probably it is not as important as in the case of typhoid.

“A simple, practicable, and quite successful plan for fighting the pest is that of throwing the manure each morning into a small room screened against flies, sprinkling upon it a small amount of chloride of lime as a precautionary measure. Various modifications of this to suit the size of the stable would certainly be feasible, such as a tightly-closed can or box, for the accumulations of a small stable. Of course, this would require that the manure be carted off and disposed of every few days, instead of being allowed to accumulate for months as it often does. When spread upon the fields it will dry out so completely as to prevent the deposition of eggs or the development of the larvae, to which warmth and moisture are essential. A few cities require closed receptacles for manure. The fly problem really resolves itself into three. First and most fundamental is the one of preventing the breeding of the pests. The second is that of preventing contamination of existing flies by making access to the more important sources of infection impossible.

“Third and last, but by no means least, is the problem of preventing their access to food-supplies. This end should be sought not only by careful screening of houses to protect dining-rooms and kitchens, but by screening all food exposed for sale. The dust of the streets settling upon exposed foods is bad enough, but when we add the danger of infection by the crawling flies, we may well wonder that more illness does not result.”—Literary Digest.

### RAILROAD CAPITALIZATION CONCERNS THE WHOLE PUBLIC.

It would superficially appear that this question is of chief interest to the banker, the capitalist, and the railroad promoter; but this is quite beside the fact. Those most interested in the proper financing of railroads are the farmers, the manufacturers, the workingmen, the merchants,—the general producing and traveling public; for without the selling of stocks and bonds railroads in these days can neither be built nor be very extensively improved. The first roads were often private enterprises, in the sense that they were financed by one or two men; and there are still sporadic instances where one man, or a small syndicate, has undertaken a railroad enterprise of magnitude,—Mr. Rogers' Virginia road in the East and Mr. James' El Paso & Southwestern in the West being prominently in mind,—but 999 miles of road out of every 1,000 which have been built in the last ten years in this country have been constructed with the money of the public, the proceeds from the sale of securities. Therefore, if we are to have new railroads, more laterals, adequate equipment,

and larger terminals, we must have a market for railroad securities.

The curse of all this stock-jobbing, this overcapitalization, and consequent distrust, falls on the public,—the lumberman who wishes to extend his market but finds his effort balked by railroad incapacity, the jobber who cannot make his market in a reasonable time, the contractor whose work must stop awaiting material, the landowner whose property remains undeveloped from lack of transportation facilities, the mechanic for whose labor railroad construction creates demand, and all the millions in one way or another dependent on the extension and improvement of our railway system.

The problem of railroad capitalization becomes in this light a people's problem, one in which all have direct pecuniary interest; and if our premise is correct,—that we must find some way by which greater faith in these securities can be established as a prerequisite to a full renewal of activity in this important and vital work,—it is at once apparent that the search for such a plan advances out of the realm of Wall Street finance into that of American statesmanship.—From "Railroad Capitalization and Federal Regulation," by Franklin K. Lane, in the American Review of Reviews for June.

#### THE MONEY IN KINDNESS.

UNTIL humankind has attained considerably nearer to the goal of perfection than at present the fact that a reform has a utilitarian side will not be considered a handicap to its success. The remarks of President William De Looss Love of the Connecticut Humane Society at a recent annual meeting of that organization are, therefore, worthy of notice. He said:

"The difference in the value of animals in Connecticut under humane or inhumane treatment is enormous. It has been estimated that the productive value of a horse is extended five years by proper use, food and care. If his net earning power is only 25 cents a day, and he works six days in a week, he earns \$78 a year, and in five years \$390."

There being some 50,000 horses in Connecticut, Mr. Love estimated that humane treatment would increase their value by nearly twenty millions of dollars. Then he did a little figuring on the 125 440 cows in the state, with this result:

"These cows average six and one-fourth quarts of milk a day. If, as claimed, a cow's productive life is extended two years by proper treatment, the value of this milk at 7 cents a quart would amount to \$318.50 for each animal, and the aggregate for the cows in the state would be more than \$40,000,000."

There are, of course, more admirable arguments for kindness to animals than the profit that lies in humane treatment, but since it takes all kinds of people to make a world these figures will undoubtedly appeal to some.—*Chicago Evening Post*.

Said He—"I wonder why it is that women are so much more curious than men?"

Said She—"I really don't know. I've never had the curiosity to try to find out."

#### Impossible.

He.—"Do you think it would be foolish of me to marry a girl who was my inferior intellectually?"

She.—"More than foolish—impossible."—*Philadelphia Inquirer*.

The new Danish law permitting women above 25 years of age to vote is ingeniously contrived to disfranchise the fair sex, for how many women are going to admit that they are over 25? The horrid men who passed the law must have known that it would be practically inoperative.—*Pathfinder*.

The maid who announced to the guest waiting at the door that "she didn't hear her until she had rung the bell three times," meets her match in the elevator boy described by a writer in the *New York Evening Post*.

"If anyone calls, Percy, while I am out, tell him to wait. I shall be right back," said the woman to the apartment-house elevator boy.

There was no answer. "Did you hear me? Why don't you answer?" asked the woman with some heat.

"I never answers, ma'am, unless I doesn't hear, and then I says, 'What?'"

#### In the Sewing Room.

"You are a pushing sort," said the Scissors to the Thimble.

"Yes," replied the latter, "but I'd like your life better. It's just ripping. And you?" to the Needle.

"Well," replied the latter, "my life is just sew-sew. But then, though not a blunt individual, I generally come to the point."

"Oh, you have an eye to things," interrupted the Pin, "but I generally control matters by my head work."

"I am sorry," remarked the Spool, "that I can't be serious, for I'm in a continuous round."

But here the seamstress appeared, and soon all felt themselves in pretty much of a box.

#### A Fast Worker.

"My stenographer can write one hundred words a minute." "So can mine, but she doesn't seem to care what words she writes."—*Cleveland Leader*.

"How did you come to get married?" asked a man of a very homely friend.

"Well, you see," he replied, "after I vainly tried to win several girls that I wanted, I finally turned my attention to one that wanted me, and then it didn't take long to arrange matters."

#### A Hollow Ring.

Son.—"Pa, why does Mr. Ring say his head is as clear as a bell?"

Pa.—"Because there is nothing in it but his tongue."—*New York Tribune*.

"So you are going to New York in your automobile?"

"I didn't say that," answered Mr. Sirius Barker. "I said I was going to start."

If you want a man to think you are smart you have only to make him think you think he is smart.

## Ropp's New Commercial Calculator and Short Cut Arithmetic

The Standard for Store, Farm, Bank or Factory,

5 1/4 x 2 3/4 in.

Is from beginning to end a greatly improved, enlarged and thoroughly revised publication.

It contains an entirely new system of unique Tables, Short-Cuts and up-to-date Methods.

It is unquestionably the most complete, useful and comprehensive Calculator ever published.

It has more than twice the matter, scope and capacity of Ropp's former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

It is the most convenient and practical Labor-saving work ever used in the business world.

It will make every one independent, sure and self-reliant in all practical calculations.

It will prevent mistakes, relieve the mind, save time and labor, and often loss and trouble.

Its Tables are adapted to all the trades and occupations in the city and country, and

### Show the Answer as Quickly as a Watch Shows the Time.

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.

It will make the study and use of Figures easy and interesting for young and old.

It will enable every progressive mind to become an expert, sure and rapid calculator.

It will prove a boon to all whose education in arithmetic has been limited or neglected.

### 48 Cuts Illustrate the Elements of Mechanics and Mensuration

It defines about 70 points in "Commercial Law" which every man and woman should know.

It is the result of devising, and improving system after system; of spending thousands of dollars in experimenting; of making millions of miscellaneous calculations, and of doing some vigorous thinking during 38 years, by an analytic, practical and persevering mind.

### It is Especially Designed for

Farmers, Mechanics, Business and Professional men,

Office Edition (9 1/2 x 5 1/4 in.)

Cloth binding, gold stamp, large type, .....\$1.00

Pocket Edition (6 1/2 x 3 3/4)

Cloth, with pocket, flap and silicate slate, ..... .50

Leather, with pocket, flap and silicate slate, gilt edge, ..... 1.00

Vest Pocket Edition (5 1/4 x 2 3/4)

Cloth, round corners, red edges, ..... .35

Leather, gold stamp, burnished edges, ..... .50

BRETHREN PUBLISHING HOUSE,

Elgin, Illinois.

## PASTOR'S POCKET RECORD

Arranged by Rev. Sylvanus Stall, D.D.

This record affords space for the recording of 63 church officers; 714 members, over 6,000 pastoral calls; 42 communion services; 126 baptisms, 84 marriages, 105 funerals, 273 sermons; 63 addresses; 168 new members, besides ten other departments.

### Ministers.

You will find this an excellent little volume to carry with you at all times.

It contains nearly 200 blank pages and is bound in black leather, size 3 3/4 x 5 1/2 inches. Very convenient to carry in pocket.

Price prepaid only 50 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

Practical Exercises in

## MUSIC READING

for Self Study, Day Schools, Singing Schools, Institutes and Normals,  
by Geo. B. Holsinger.

### JUST FROM THE PRESS

This book is a valuable one in its line and will fill the demand for a first-class instruction book in music, either for individual study or for class use. The author has had over thirty years' experience in teaching and writing music. He knows just what the student in music needs most, and has it brought together very uniquely in this book. Besides numerous exercises and instructions in music reading, it contains a goodly number of first-class songs and hymns.

### Music Lovers and Teachers,

here is a book you have been looking for, and at a price that each can afford to own a copy.

It contains 32 pages and has heavy paper cover. Can furnish both round and shaped note. Be sure and mention which notation you desire. Shaped note sent if notation is not named.

Price prepaid, each .....15 cents

Price per dozen, prepaid ....\$1.50

Special prices in quantity to teachers.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

Circular which describes a splendid line of these goods. It's free for the asking.

Send us your name and address and we will furnish you with several extra circulars to be handed to your friends.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## CAP GOODS

Our business has almost doubled itself during the last year. We are sending goods by mail to thousands of permanent, satisfied customers throughout the United States. The reason is simple.

**Our Goods are Reliable. Our Variety is Large. Our Prices are Low.**

All orders filled promptly, post-paid. Satisfaction guaranteed or your money refunded. Send us a sample order and be convinced. Write us for a booklet of unsolicited testimonials and new line of samples, which will be furnished free. Send at once to

**E. E. ARNOLD, Elgin, Ill.**

## 6 PER CENT NET

### ON NORTH DAKOTA FARM LOANS

All loans are first mortgage loans.

No loan is made exceeding 50 per cent of the actual value of the property.

Title in all loans is passed on by reliable Attorney and no loan sent out unless title is perfect.

Interest is collected and remitted each year free of charge.

Write for reference as to my reliability. I will refer you to men that you know either personally or by reputation.

**MICHAEL BLOCHER, Perth, N. Dak.**

## In each number of THE INSTITUTE TIE

**Dr. R. A. Torrey**

Answers Practical and Perplexing Questions, similar to these recently published:

"Some teach that a believer is sanctified instantaneously; others declare that sanctification is a gradual process, perfected in heaven only. What does the Bible teach as to this?"

"Is it ever right to ask unconverted though moral people to teach a Sunday-school class or do other definite Christian work?"

"How would you prove the existence of God to an inquirer?"

"What is the Scriptural means of raising money for church or other Christian uses?"

"Kindly explain Acts 13: 48; 'And as many as were ordained to eternal life believed.' Are some born to be lost?"

Another department **Dr. Torrey** maintains is: **STUDIES IN THE LIFE AND TEACHINGS OF OUR LORD.**

**Dr. Jas. M. Gray** conducts regularly his Bible course, **THE LAYMAN'S COMMENTARY ON THE OLD AND NEW TESTAMENTS.** He began the **BOOK OF EXODUS** with the April issue.

### Other Regular Departments.

Editorial Notes, Contributed Articles, Bible Book Studies, Methods of Christian Work, etc., For Sermon and Scrap Book, Anecdotes, Outlines, World News, Notes and Suggestions, The Evangelistic Field, Book Notices.

Monthly, \$1.00 a Year. Specimen Copy Free.

It is expected that **THE TIE** will report the addresses of several Bible conferences during the coming summer.

**THE INSTITUTE TIE,**  
80 Institute Place, Chicago.

blue collar handsomely set off with  
large anchor buttons. Cut in latest  
yachting style, and can be in-  
stantly changed into a jackie suit,  
giving the child two suits for the  
cost of one. \$2.50

## BUNNING'S TRI-SUITS

PATENTED DECEMBER 24, 1907

A new departure in garment making that dispenses  
with drawers' waist, suspenders and other supports

The only practical garments made that can be  
worn without any underclothing in warm weather

Made all parts in one piece, self-supporting, as nature  
intended, with no buttons to hurt, no annoying hooks,  
no unsanitary, foul air-retaining strings to interfere  
with health-circulation of air and blood, no uncom-  
fortable lumps or thicknesses, no irritation, and  
they are so easy to put on and off that a small child  
can dress itself — they appeal to parents at a glance

We guarantee Bunning's Tri-Suits will  
cut the youngster's laundry bill in half,  
and that at the price of one costly gar-  
ment children can be neatly, comfortably  
clothed with Tri-Suits an entire season

When you see them you will wonder  
how they can be sold at such low cost

IF YOUR DEALER CANNOT SUPPLY YOU, WE  
WILL, POSTPAID, ON RECEIPT OF PRICE

**THE BUNNY COMPANY**  
89 LINCOLN STREET, BOSTON, MASSACHUSETTS

Mention this publication and we will send  
you a handsome souvenir for your trouble

**FOR ROUGH RIDERS, 3 to 8 years**  
Khaki Hyde-grade galatea, regulation army cut  
with 13 large, showy eagle buttons. Has belt,  
four useful flap pockets, and can be worn on all  
occasions. This suit will instill pride and patriot-  
ism in every youngster's heart, and is a genuine  
value at the price. \$2.00

**HANDY DANDY, No. 2**  
For 2, 3, 4, 5 and 6 year boys.  
A labor-saving, comfort-making  
cover-all that quickly wins a  
mother's heart. Two handy pock-  
ets, and long pants to prevent  
stockings wearing. Just the thing  
for boys to dig and play in. 75c

**FOR SOLDIER BOYS**  
3 to 8 years  
Fit for a Raja Prince. White Hyde-  
grade galatea, with blue belt and  
strappings trimmed with red  
worsted braid. Has two pockets,  
and is finished with large, brass  
buttons. \$2.00

**FOR INDIAN BOYS**  
3 to 8 years  
Better than ordinary kinds. Brown  
Hyde-grade galatea, full cut, two  
large pockets, brass buttons, and  
an abundance of brown and red  
feathered trimmings. You won't  
regret the price as they outwear  
three other suits. \$2.50

**HANDY DANDY, No. 3**  
For 2 to 6 year old boys. The only  
pajama made having two cover-  
ings over chest, lungs, kidneys,  
stomach and bowels. Extra quality  
fannelette. Prevents uncovering  
and colds, and should be in every  
child's wardrobe. \$1.00

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

# ANNUAL REPORT

OF CONFERENCE OF 1908

HELD AT

DES MOINES, IOWA

As usual we are arranging to publish a complete Report of the proceedings of the Conference in book form with manila cover.

## Bicentennial

On account of this year being the Two-Hundredth year since the Brethren church began in Germany, it will make this meeting of unusual interest and importance in the history of the church. For this reason alone, thousands will want the Report this year to commemorate that event.

## Important Business.

Much important business will be transacted at this meeting that will be far-reaching in its effect.

## Send Your Order Now

Send us your advance order now, or hand it to our local agent of your congregation, so you will get a copy as soon as the Report is published.

We expect to push the publication of this Report and will endeavor to have same ready for mailing, the week following the meeting.

Price prepaid, per copy, .....25 cents

The Inglenook one year, .....\$1.00  
"Amerika Esperantisto" one year and paper-bound copy of Esperanto Grammar, ..... 1.50  
\$2.50

If you order both, at once, only, .....\$1.25  
Cloth-bound book, without 'Nook, prepaid, \$1.00

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

# JERRY McAULEY An Apostle to the Lost

Edited by R. M. Offord

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser of human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them is to find the clue to his power. Here is one of them. "I have nothing to be proud of; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

## Kindle the Flame in Other Hearts

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

## Every Church Worker

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

# Macdoel, Butte Valley, California

---

(Clipped from Siskiyou County News.)

Mrs. Rose Harter is making arrangements with a contractor to sink an artesian well and will go down as far as 500 feet. There are indications of oil in the neighborhood but they would hardly strike it at that depth.

✿ ✿ ✿ ✿

Hershel Maust has 300 acres of grain.

✿ ✿ ✿ ✿

Pat O'Connor has proved himself to be one of the best county supervisors in the State of California. He has put the roads in his district in the best condition ever known. Pat is surely doomed to an overwhelming reelection this fall. He can't get out of it.

✿ ✿ ✿ ✿

The new depot is about completed.

✿ ✿ ✿ ✿

We learn that it has been reported in Yreka that the late storms blew over the wind mill at Sam's Neck, that the grain in Butte Creek valley was blown out by the roots, and that the leaves were stripped off the trees and the fruit buds killed. It is all false. The wind mill is standing and in perfect operation, the fruit trees are in full bloom and the blossoms are in healthy condition, and the grain O. K. with present prospects of a good crop. It is the latest spring our old timers have ever seen. But while we have had a late spring it has operated to keep back the fruit and crops and no damage resulted. Truly the prospect is bright in every way in Butte Creek valley.

✿ ✿ ✿ ✿

Charles Messick has plans completed for a large new store building.

✿ ✿ ✿ ✿

Mr. Luther is preparing land for fruit trees which will be planted next spring, chiefly in apples. He has the contract for plowing and seeding several sections of land for Eastern people.

✿ ✿ ✿ ✿

Mr. Maust has opened a store and boarding house.

✿ ✿ ✿ ✿

Butte Creek valley has one advantage over most California districts, and that is

its sub-irrigation. Butte creek, which is a large stream, sinks in the valley and spreads out like a fan under the surface. Water can be obtained most any place by digging a short distance. The water in this large underground area rises nearly to the surface by capillary attraction and affords sufficient moisture for the crops.

✿ ✿ ✿ ✿

Mr. Perry's large hardware store is running full blast.

✿ ✿ ✿ ✿

Manager Gallager of the Butte Valley Land Company was in Macdoel last week making arrangements to build a stone hotel and bank building.

✿ ✿ ✿ ✿

All the farmers about Macdoel are busy and doing well.

✿ ✿ ✿ ✿

A stick of timber 16x16 inches and 72 feet long, of yellow pine, surfaced on all four sides, was taken from Manley's mill to the dredger at Callahan last week. This is an evidence of what this county can produce in the way of timber.

✿ ✿ ✿ ✿

The largest fruit shipping company in California is authority for the statement that more than twice as many men will be needed to handle the fruit crops this season as were required last year. From all parts of the State come reports of the most favorable indications for enormous fruit crops which will go far toward solving the great problem of the unemployed.

---

## A RECORD WITHOUT A PARALLEL.

A new booklet just out. It is the latest thing on **Butte Valley, California**. It contains two dozen new photographs never shown in print before. These photos were taken at the beginning of the month of May and they are correct and true to name.

Address any of the following,

GEO. L. McDONAUGH, Omaha, Nebr.

D. C. CAMPBELL, Colfax, Ind.

ISAIAH WHEELER, Cerro Gordo, Ill.

E. M. COBB, Elgin, Illinois.

## INDIA: A PROBLEM

By W. B. Stover

This book contains 344 pages, cram full of plain facts and illustrations concerning India, by a man who has spent years in the field and knows what he is talking about.

#### NOT DULL

I have been reading your books, so feel that you are near us. That book is all right. Some of these books are so dry that there is danger of spontaneous combustion. They have to be kept in a damp place, and "away from the boilers." You have gotten up a book full of information and not dull.

Yours sincerely,  
W. H. Stephens,  
Poona, India.

Sept. 20, 1907.

Price of book prepaid,

Cloth, ..... \$ 1 15  
Morocco, ..... \$ 1 65

No. 25.

## Tendency of Present Day Education

Prof. C. C. Ellis

WHAT is the dominant educational note of the hour? To give the briefest possible one must say—the physical child. The interest of educators and educational gatherings has shifted from the intellectual to the physical side. It is time that moral culture is receiving more attention than formerly, and conditions are such that it is destined to be considered more and more; but just now it is the physical that is uppermost. There are two phases of the physical education problem that are receiving attention, the healthful phase and the vocation phase, just now the emphasis is upon the latter.

"The most important educational topic in the United States for the next twenty-five years will be the question of industrial training"—so writes Supt. Warriner of Saginaw, Michigan, in the *New England Journal of Education*. By industrial training he means training for the workshop and factory as distinguished from commercial education for the store and office and agricultural education for the farm. If we include these three in the term vocational training we touch the key-note of the educational discussion of our day in addresses, in the press and in organizations.

On March tenth President Roosevelt at the opening of the International Mothers' Congress said: "For the boys I want to see training provided that shall train them toward and not away from their life work; that will train them toward the farm or the shop, not away from it." Similarly he advocated that the girl should be trained for the duties of womanhood. On February 25-27 the department of superintendence of the National Educational Association met in Washington, and three out of the five general topics for discussion concerned the child on the physical side, two of them being vocational, while one of the four Round Table discussions was upon Agricultural Education. The three topics referred to are: "The Place of Industries in Public Education"; "Agricultural Industries and Home Economics in the Public Schools"; "The Nurture and Physical Well-being of the Child."

Even more significant is the formation of a national society for the Promotion of Industrial Education. The first annual convention of this society which was organized in November, 1906, was held in Chicago in January of this year and was addressed by educators of such prominence as President Eliot of Harvard and others equally prominent in social and industrial lines. The president of the association, Dr. Henry S. Pritchett, of the Carnegie Foundation, stated the aims of the society: 1. To examine and report upon conditions in respect to industrial training in this country, and to compare them with those prevailing abroad; 2. To recommend types of model trade schools adapted to the needs of particular communities; 3. To propose methods by which these trade schools may be articulated with the existing system of public education.

That we are far behind other nations, notably Germany, in this matter was made very clear in the discussion. Bavaria, with a population but little greater than New York, has more trade schools than the entire United States. Miss Jane Addams pointed out the danger that the manufacturer may capture the schools as the business man did for a time through commercial education and another problematic feature is the attitude of the labor unions toward industrial education. It is becoming increasingly clear, however, that in the reaction from the purely intellectual education the nation is not going to pause long at the half-way house of a manual training which is given for discipline alone but will insist upon a practical training focused upon a life vocation. It is not within our province now to argue for or against the wisdom of this; we merely record the fact as the most significant thing upon the educational horizon today.

Juniata College, Huntington, Pa.

THE permanency of the public depends on whether or not this is a righteous nation; and for the righteousness of the people we have to depend upon the Christian Church.—Dean Hodges.

## BUSINESS LIFE IN CHINA.

C. F. APPLETON.

THE business man in China does not occupy the same social position as he does in many countries where the influence of money is more keenly felt than it is in this country. In this Empire he ranks fourth in the social scale, being superseded by the scholar who feeds the brain of man, by the farmer who nourishes the body, and by the mechanic who provides shelter for soul and body.

The greatest hindrance to business life in China is the lack of confidence or faith in their fellow-men. This is especially noticeable in the native banking system. There are but very few corporations that have agencies, even in the principal business centers, and deposits are made reluctantly even in these larger concerns. In many smaller places the native banks are simply stores which carry sufficient stock of silk goods or other valuable merchandise to inspire confidence in the people. On this account the rates of interest are exorbitant and even well-to-do people often find money hard to secure in case of emergency. It is said that there is but one safe investment on the native market for surplus funds, viz., land which, accordingly, when compared to the value of labor and food products, is high-priced. The usual depository for surplus cash with the average Chinaman is in the form of lump silver, hidden away in some crevice of the house or some secluded spot in the field or yard. If all such idle, profitless talents of the white metal were put on the market, China would have no need of foreign loans to build her railroads and steamship lines. A more general confidence and spirit of patriotism is being roused among the natives and in some port cities large firms and corporations are being formed like those in America.

The native coin of China consists of "cash" and lump silver. The former is a brass coin with a square hole in the center. At present rates of exchange it is worth about one-twentieth of a cent. The "tael" (one ounce of silver, worth about seventy cents gold) is used in large transactions, and may be purchased in lumps, weighing from one to fifty ounces. Twenty-five dollars worth of "cash" would weigh over five hundred pounds and the same value in pure silver, such as is used in business transactions, would weigh about thirty-six ounces. In recent times copper cents are coming into common use and the tael is being replaced by the silver dollar sometimes called the Dragon dollar. Paper notes on foreign banks are also coming into extensive use.

A Chinese store usually consists of a one-story building, one side of which opens to the street during the daytime but is closed up at night by movable partitions, to be reopened at daybreak. A heavy counter runs across the front of the storeroom or forms an

ell with passage-way to a second room. Behind the counter the goods are placed on shelves or hung up on hooks or nails for public inspection. The number of clerks in attendance usually gives prompt attention and careful watching of the purchaser. The business of any shop may vary from a few peanuts, dates, candy, etc., worth in all about \$1, to that of some of the larger department stores in the port cities. In large cities there are shops that deal exclusively in grain, in flour, in confectionery, in leather strings, in harness for horses, in dishes, in poultry, in foreign articles, such as oil, lamps, cotton, tinware, dress goods, etc., and others that deal in silk goods, or in shoes and hats. Then there are the public inns, the public restaurants and the meat-shops which frequently do their slaughtering in the street in front of their shop. The street peddler is an important factor in all business centers and must always be taken into consideration. Almost any small article, such as peanuts, fruits in their season, meats and fish eggs, chickens, ducks, flour, native bread made from graham flour, firewood, which is sold by the pound, and even larger articles, such as chairs, benches and tables, can be bought from the mendicant peddler on the street.

The question has been asked me: Are young men in special demand in the stores as clerks? A great many young men are employed in that capacity, but the older men are not excluded from the profession, and as a matter of fact, anyone with a small capital of a few dollars, may set up a business for himself and this is frequently the case when the family has no other means of subsistence. In rare cases are women employed in public business life in China. They assist in preparing the stuffs at home or sell small articles from house to house to other women, but their work is supposed to be in the home.

Chinese stores seldom have any fixed price on their goods and the more they can squeeze out of the purchaser, the better salesmen they make. This jangling of prices wastes a great deal of time and, in large transactions, frequently means the loss of several weeks on each deal, or in the paying of an extra high price. The lack of faith and confidence in each other, the many different money systems in use and the lack of uniformity in weights and measures, are some of the hindrances to business enterprises in this Great Empire. It is hoped that the spread of Christianity will restore mutual confidence and thus reform many of the present business methods of China.

*Kai Feng Fu Honan, China.*

THE Church has no right to be silent when vice and virtue grapple for mastery. While saloons are as legal as churches, and while they are as numerous as schools, the Church has not done its full duty.—*Prof. Scanlon.*

## Around the World Without a Cent

H. M. Spickler

### Chapter IX.

No sooner had I asked for the cotton than the girl who was alone in the store opened up the cases of spool thread and asked me what color I wanted. "Not thread," I said, "but some cotton," when she handed me a couple of different colored spools of cotton thread. "I want some cotton to put into my ears to keep the earwig from getting into my head."

How she thought I was going to jam one of those wooden spools of thread into my ears I do not understand, and to have put the thread itself into the lobe would be nearly as difficult. Then she opened several more cases of spool thread. She handed me a silk spool. "Is that what you wish, Mister?" she asked, blushing because of her inability to find what I wanted.

"No, Miss, not thread, but cotton, I want,—something to put into my ears to keep out the earwig," She then went over the entire line of thread on hand, looking at this spool, then at that, glancing at me now and then to see if I wouldn't say that she had found the one I wanted. It seemed ridiculous to me that a grown-up young lady, good-looking and intelligent, should not know just what I meant when I said "cotton."

But she gave it up at last and went to the door and called her mother, whose home joined the store on the side. Her mother then began to go through the spools of thread, saying, "Cotton, all right, sir, you can have anything you want here, any color, any size, any thickness—we have them all."

Casting my eyes about over the store I saw several

bales of cotton lying on an upper shelf. "There it is," I said, "that cotton there, that white cotton in the bale, up there, rolled up, and sticking out there,—that!"

In utter bewilderment they had both stared at me and fussed over the cases containing several hundred spools, asking me to buy now the brown one, now the white and now a black spool of "cotton" as they called it.

Half an hour from the time I began to buy the cotton,—it seemed that long,—I had in my possession a penny worth of the white, unwoven fibre. From that time on I wore cotton in my ears to keep out the dreadful "earwig."

One day I passed a shop on which hung the sign "Mangling Done Here." On the other side of the street there was another. "Washing and Mangling Done Hear." I was told that "mangling" meant "ironing," and that the "mangler" was a sort of machine made for that purpose,—to mangle the clothes of patrons.

Having some clothes ready for

the wash I brought them to the house of the sign, "Washing and Mangling Done Hear." asking the woman who met me at the door of the mangling house, as I set down the bundle, to please be careful and not tear the soft fabric of one of the shirts I had bought at a St. Louis department store before setting out on my long journey. She looked mad when I said this, as if to say that she knew her business and all other gentlemen were glad enough to have her do their washing and mangling without thinking it necessary or incumbent upon them to suggest to her the

Two Heavy Draft Horses Hitched Tandem to a Small Wagon that a Pony Could Pull! That is England's Way.

least idea as to how it was to be done. She meant to say to me that she was a real English,—real “Henglish, you know!” woman, and that as such she knew her business; that what I said was perfectly unnecessary.

Four days after I went down to the “mangling” house to see if my shirts had been “mangled.”

“Yes, sir, gentleman, come in” she replied to my knock on her front door. “Come right out to the mangling room,” she said, and she led the way under two or three clothes-lines of wash hanging criss-cross over the room.

Then she got me my bundle of mangled clothes. They had been washed and “mangled.” They were clean, as clean as sunlight, but that fragile shirt bought in that St. Louis department store was never meant to get into the hands of an English washerwoman. The English people believe in putting good stuff into the things they manufacture. As a rule, they can be depended upon for reliable material. Their shirts for workingmen are made of coarse, heavy, strong and durable, long-wearing goods,—not pretty, either in design or color, as a rule, but made to wear like iron.

It was not her fault that bad luck had come to my beautiful fragile shirt of St. Louis. She worked it over the board and soaped it and hammered and pounded it, and boiled it, and hammered it again and scrubbed it and boiled it again until it had lost every button, had burst its back clean open from the tail to the collar, and was so flabby and raggy that by the time she got it out from under the jaws of the “mangler,” it was—well it made six very convenient pieces of wash rags, rags that were soft and nice for washing the face.

I begged her not to take the matter to heart,—tried to tell her how full of graft was our American commercial life, and said I ought to have known better than to have brought such a shirt along with me.

But when I caught a glimpse of the “mangler,” with its heavy planes of stone and its cruel rollers of steel, I was glad it had been the shirt made in St. Louis, and not the Yankee from Illinois that had been ground back and forth through its merciless grip.

As I passed up the little lane across the meadow in the rear, two small urchins ran out of the schoolhouse and looked back furtively as they turned the corner and ran past me. “What are you going to do?” I asked. “Skip the dollie,” they both replied, at once. “Skip the dollie!” I asked, “What does that mean?”

“We’re running away from school this afternoon,—we told the teacher we were sick. That is what we mean when we say, ‘skip the dollie.’ It means to run away from school and have a good time.”

As I was waiting at the butcher shop that night to have several nice mutton-chops tied up, a policeman, dragging two dirty, crying boys along with him, passed on the brick walk.

They were the same two boys that told me they had gone away from school to “skip the dollie” and have a good time. The nose of the bigger boy was bleeding. His face was scratched in several places and he had lost his cap.

They were locked in something that looked like a calaboose.

“‘Skip the dollie’ sounds pretty,” I mused, as I ate my second English chop, “but it doesn’t seem to end that way.”

### Chapter X.

ALTHOUGH the English speak the same mother tongue as the Americans, their names for things, and their accent, are often so confusing as to make it impossible to be easily and always understood. In buying at a notion store, as also in buying at a lunch counter, I failed to understand a single word of whole sentences, even after they had been repeated once or twice. Day is pronounced *dai*; May, *mai*; gray, *grai*; say, *sai* (sigh); the *a* in Savior is pronounced as *i* in “hive”; the *a* in bathe, as *a* in clad; lovefeast would be pronounced *lovefased* (faced); my own name was pronounced by nearly everybody who knew me on the farm *’Enery*. Otherwise, I was called the “H’american.” When they said no, it was *naw*.

When I lifted my hat to a lady and gentleman on the way to church I noticed that the gentleman did not raise his, and also that the other gentlemen with me did not raise their hats when speaking to the women they met. I am speaking for that part of England which has come under my observation thus far. Surely the gentlemen of all England are not all so rude as these near London. At Sunday school one of the little boys was a trifle disorderly. He was forthwith punished by having to stand on the floor before the whole school, just as some teachers in the day school punish their uncontrollables. On the next Sunday he was back again in his class and acted like a little man. Reverence for law and authority is taught in England. Obedience to the laws of the land are as imperative in the training of children as are the rules of common decency. Honor in business is taught the children in the schools, and it is demanded of the grown-ups themselves.

Nearly everything is weighed upon “balances” instead of spring scales in the village stores, and these are tested very carefully twice a year by a detective inspector at a charge to the owner of several shillings. The bread I bought was weighed, when I demanded it. The loaf must weigh by law, two pounds. When it falls under this, as my loaves often did, the baker cuts a slice from another loaf to make up the shortage. At times I would go home with enough extra slices thus secured to furnish one whole meal. For one living so close to his income as a penniless world tourist, this was quite an item in three months’ boarding

myself. For the careless or dishonest grocerymen at home we should strive to introduce a law making the penalty very heavy for dishonest weighing. Only last week a clerk in a prominent American store told me that grocers were known to make the weights a little short in nearly everything they sold in order to retrieve what they had lost on non-paying customers. She said that the honest folk had to pay the bills of the dishonest folk. To a limited extent, and in certain cases, that may be only too true. But that I should be compelled to pay for my neighbor's shortcomings, whenever and wherever he happens to be dishonest, is not right. If one store, more than another, by their unwise methods of extending credit, loses greatly by dishonest purchasers and trembles on the verge of bankruptcy, I should not be held for the foolishness of the proprietor, simply because I am honest and always pay my bills. Let the store go bankrupt! But let honest patrons be protected, and let cash payments be duly honored. At any rate, the man who uses unjust balances in his store, or while hawking on the street, or while buying the farmer's poultry, should go to prison. It is the meanest kind of theft, and the Bible pronounces upon it the heaviest of woes. The English people love fair play, and though they love to conquer their enemies, they will usually give them a square deal.

When the English have oatmeal for breakfast it is called "oats," but when they go to the field to cut the oats, it is then called "corn." When we walked one day among the potatoes, the foreman said, "look at those arms," and he meant "tops," of the potatoes. He called the cauliflower *brocklow*, and when a horse became balky, he said it was "gibing." A freight train passed on our right, and he said, "There goes a *goods-train*." One of the cars was painted white and he said, "That *carriage* is different from the others." The engineer he called the *driver*, the conductor, the *guard*. I noticed there were no cow-catchers on any of the engines, and that the headlight was of two small lamps on each side of the front of the engine.

All of these differences were pleasing to me, as I noted them, in every walk of life.

The wagon we used on the farm was called a "van," and the cultivator was called a "brake." The hired men were called "blokes," the farmer was the "gov'nor."

When we went to church the people stood every time they sang, and always sang every verse. And everybody sang,—until they came to the seventh verse, when sometimes my voice was tired out and I quit. It is better to sing every verse when everybody sings than to sing two verses and have only a choir sing.

And so I am learning that there is good and bad on both sides of the water. That while there might be some bad, there is also some good in everything.

The wise man among us is he who, by judicious culling of the good, mixing life in just and reasonable proportions, seeks to make the best of his advantages, ignoring his disadvantages, and gathering the honey from flower and weed, hill and valley, lays up a bountiful supply of sweets for himself and his fellowmen. Such a man believes that earth is changing, that heaven is coming, that evil is dying and good is living. Above all he despairs not for lack of perfection in circumstances and men, but filled with hope, smiling at the petty defeats of his daily life, he radiates wholesome vigor wherever he goes and the men and women he jostles on the crowded street turn about to look longer at the stranger whose glance was love and whose touch was power magnetic.

All Rights Reserved.

### THE LITTLE THINGS OF LIFE.

RICHARD BRAUNSTEIN.

THE man spoke truly who said he always enjoyed coming to New York or any other great city, because everything was so jolly and convivial. He observed that even the cars were elevated. There's a great deal in the thought. What a man can't find in a great big city to fill his soul with content, rasp down his angles, round off his sharp points and give him the polish of attrition, so that he may roll easily in that variegated compound called modern society, can't be found anywhere.

I often fancy that what pleases the stranger most is the sense of bigness that is apparent everywhere—big houses, big parks, big charities, big jobs, big crimes—and, well, the spirit of bigness in everything. Perhaps it is a vein of human nature that is common to us all. Talk vulgar fractions to a man whom you wish to put up money on some scheme, that promises millions, and he will turn his back on you, but fire off a row of fat figures deftly arranged, and eloquently demonstrate how they may vitalize a pile of tin shavings and he will listen to you as if you were a potentate, and come quickly to your way of thinking and invest his money. Only make a show of yourself and there will be lots of people to hold the mirror. It has often seemed to me, that the man who gets along nowadays must be either a slice of lemon or a lump of sugar, strong in his individuality and not content to be gulped down among the seltzer aperients of life.

But my theme is the little things of life. "Little martin-boxes of homes" are generally the most happy, while cozy little villages are nearer being atoms of shattered bliss than anything I know of. Little fortunes bring the most content, and little hopes the least disappointments.

Little words are the sweetest to hear; little charities fly furthest and stay longest on the wing; little lakes are the stillest; little hearts the fullest, and small farms are the best tilled. Little books are most read and

little songs the most loved. When nature would make anything rare and beautiful, she makes it in small bits—little pearls, little diamonds, little dewes, delicate and tiny flowers. Everybody calls that little which they love best on earth. I once heard a man speak of his "little wife," and fancied she must be a perfect bijou of a helpmeet. I saw her; she weighed nearly two hundred pounds; I was surprised, but then it was no joke; the man meant it. He could put his wife in his heart and have room for other things besides, and what was she but precious, and what was she but little?

*Multum in parvo*—much in little—is the great beauty we all love best, hope for the most and remember the longest.

But enough on this theme. The best part of a discourse is often the doxology and mine shall be the narration of an incident that is vouched for by a friend. He says that in one of his visits to a lady, he found her petting a bird. The little creature reciprocated her affection in such a remarkable manner that at his request she told him the story.

Some time ago, when the streets were covered with frost, she noticed a tiny snowbird apparently weak and hungry, sitting on a sprig of grapevine at her window. Raising the sash softly, she brushed the snow from the top of a flower-pot and sprinkled some crumbs for his breakfast there.

The bird ate, and the next day he came again. On the third day the lady sat at the window, and after waiting awhile the little creature came again, this time a little nearer. A week later he picked his food from her hand. Before the end of the winter the bird would

hop into the room and nestle in the shoulder of his benefactress.

One day, when spring was approaching, the lady tied a silken thread around one of the little fellow's legs, and soon afterward, the little fellow disappeared, taking flight northward, perhaps with a flock of other snowbirds. The lady had almost forgotten the incident, and her strange acquaintance, until the cold weather returned. One day, sitting at her window, she heard a pecking on the glass. Looking up she saw a snowbird. Remembering the little arctic pet of the winter before, she opened the window. The bird at once flew into the room and perched on the back of her chair, and on its leg, bright as when it was first tied there, was the tiny thread of silk which her hand had attached a year ago. Who says that birds and beasts have no memory?

Who taught the parrot to say, "Welcome"? asks Bacon. Who taught the raven in a drought to throw pebbles in a hollow tree when she espied water that the water might rise, so that she might come to it? Who taught the bee to sail through such a vast sea of air to find the way from a flower in the field to its hive? Who taught the ant to bite every grain of corn that she burieth in her hill lest it shall take root and grow? Even a goose flies by a chart which the Royal Geographical Society could not amend.

Let us thank God for the big things of life—things that can be called great. Let us be grateful and appreciative, for all his great gifts, remembering at the same time that they all come from the little things; that they all come from a seed, whether it be a word or a deed.

## How the Healing Art Developed

J. F. Studebaker, M. D.

### In Five Parts—Part Five.

AT about the time of the triumph of Listerism. German and French scientists discovered the bacteria of tetanus (lockjaw), plague, erysipelas, diphtheria, cholera and anthrax (wool-sorters' disease). They studied their properties—size, form and groupings, whether having motility or not, all with the microscope, on what food they grew best and what agents checked their development and destroyed them. Then it came to be known that they were productive of toxins or poisons, these being the principal destroyers of the human body. The toxins in the body were found to be counteracted by an antidote or antagonizing substance to poisons, introduced beneath the skin which was the source of the antitoxic serum treatment for diphtheria after much experimentation on animals. So scores of children owe their lives to dissection of animals while yet alive.

Antisepsis, the process of destroying poisonous germs, and anæsthesia, the loss of feeling or sensation permitting operations without pain were the two great surgical events of the nineteenth century, the former having its origin with Lister, as stated, and the latter with an American dentist, Morton, who in 1876 proved ether to be a safe anæsthetic. The following year chloroform was introduced by Sir Dr. Jas. Simpson. With such advances surgery has become one of the most respected sciences of modern times instead of the most debased practice of the dark ages.

We are now in the age of systematic preparation, inductive reasoning, exact observations, laboratory demonstrations instead of didactic lectures alone as formerly, and specialization. To be well qualified in one specialty man must have a thorough knowledge of all related sciences. "Medicine is applied science." It is dependent upon chemistry, biology, bacteriology,

anatomy, botany, and others. The great enterprises, as railroads, electric systems, financial corporations and manufacturing industries are not under men who acquired a small amount of knowledge and skill through experience, but are conducted by those having a first-class training in engineering and the technical sciences. The relation of the physician to the community has been profoundly modified by the general progress of learning and the extension of the sciences and arts to many fields of activity. Professional training has become so diversified that the physician finds himself only one of many to do a particular work. In ancient times medicine was involved in superstition rather than reason. As time has gone on the conduct of all human affairs has come under the influence of scientific tendencies, leading to clearer and simpler methods and organization of effort. The public and the physician are coming nearer together, more or less subservient to the same laws.

Although the sciences have been contributory to each other, no one has done so much as that of medicine and surgery in the prolongation of life and the enhancement of the welfare and happiness of mankind. The average life fifty years ago was thirty-eight in Europe and America; at the present, forty-five to fifty. It is true one should have a knowledge of the other sciences that he may take advantage of their discoveries and inventions to apply them to the prevention and treatment of disease and also for the attainment of truth and the advancement of civilization. Not only has medicine added greatly to the happiness, health and life of mankind, but to national prosperity through the support of the general health of the laboring classes so that industries may go on uninterruptedly with pauperism and charity diminished.

Nothing has done more in the prevention of diseases than the discovery of germs producing them. Tuberculosis was certainly the great "white plague" up to the time of the finding of the tubercle bacillus or germ, by Koch, a disease which has destroyed more lives than all the wars of history. After this recognition of its bacterial origin in 1882, the dawning of the day was come when it might be hoped to be stamped out, the consideration of which is the purpose of the International Medical Congress in Washington next September. It is by such discovery of specific microorganisms that we know how to stamp out such scourges as the plague, yellow fever, and malaria.

Progress is our watchword. We are looking for the final and best word in every phase of medical science. It is the ideal of the profession to instruct people how to avoid illness. When, however, sickness overtakes them, the most valuable means of the healing art are sought. Simple hygienic rules are observed and the purest of drugs used, chemically pure, from the vegetable, animal and mineral kingdom. Think of seeing such old-time popular medicines in our own

drug store with their respective labels—"Elixir of Mummy," "Excellent Spirit of Human Skulls," "The Quintessence of Snakes, Adders and Vipers," "The World in a Glass." The most reckless would now shrink from such crudeness.

We need only to reflect upon the wrapping of ancient medicine in mysticism, secrecy, ignorance, and authority, to appreciate in some measure the fruitful age in which we now live. One does not need to go abroad for schooling. Every determined young man, no matter how poor, can become proficient in any science. His laboratory experimentation under good teachers making him keen in intellect and sound in judgment. Every State has its colleges and universities. The largest cities have their medical centers of colleges and adjacent hospitals. Each State has its laws and regulations as prescribed by the State Board of Health to govern the practice of medicine, not permitting any one to practice without preliminary education equal to a four years' high-school course and without the completion of a four years' medical and surgical course recognized by the State Board of Health and in most States, the passing of a three days' written examination, thereby eliminating charlatans and nostrums as the mushroom quack from imposition upon the people.

With medicine and surgery as an art and science having struggled through the centuries for their existence and against annihilation and at present advancing to their zenith, surely we can say that as long as men have reason, the profession with its invincible courage will incessantly push forward and say with Napoleon, "There are no Alps."

#### PROVERBS FROM JAPAN.

PATIENCE is the rope of advancement in all lines of life.

The ignorant are never defeated in any argument.

It is more easy to evade the trouble which Heaven sends us than that which we bring upon ourselves.

If the water be too pure, fish cannot live in it; if people be too exacting, fellow beings cannot stand beside them.

Where there are no birds, the bat will be king.

Be not lenient to your own faults; keep your pardon for others.

When the sense of shame is lost, advancement ceases.

Negligence looks at the battle-field, then makes its arrows.

Seeking information is a moment's shame; but not to learn is surely a lasting shame.

A woman without jealousy is like a ball without elasticity.

Unless blind and deaf, one cannot be impartial.

In trying to straighten her horns, the cow was killed.

## Facts and Figures from Faraway Falklands

POSSIBLY there is no place on earth where the "terra incognita" idea applies more forcibly than at the Falkland Islands; that is, where a civilized government is in control. British publications, notably the *Encyclopedia Britannica*, give very false impressions of the Islands and all pertaining thereto. A residence of over nine years should entitle the writer to the position of an authority on Falkland Island matters.

The Falklands are situated in the South Atlantic Ocean, between fifty-one and fifty-three degrees south latitude, and between fifty-seven and sixty-two degrees west longitude, and about three hundred miles from Cape Virgins, at the entrance to the Straits of Magellan, and four hundred miles northeast of Cape Horn.

Internationally, the question of priority of discovery has an important bearing; but here authorities differ. In the past, possession of the Islands has been disputed by Spain and Great Britain, and the right of possession is still in dispute, Argentine claiming to inherit Spanish claims, and also the right of possession to all territory contiguous to her coasts.

The Spanish claim is that the Islands were discovered by the great navigator, Vasca De Gama, but the British claim that the Islands were first discovered by the English Captain Davis in 1592, and claim also that in 1594 Captain Hawkins of the British navy took formal possession of the Islands and partially surveyed them.

After more than two centuries in which time France, Spain, United States and England were concerned in the ownership of the islands, the latter took final possession in 1832. And it may truthfully be said that the British have transformed what was a treeless, bleak, wind-swept, rocky, boggy territory into a prosperous colony, where a poorhouse or public charity of any kind has never been needed; a place where there is a larger amount of money per capita than is found, possibly, in any other place on earth; a place where the distressed mariner suffering from his battle with the storm-tossed seas around Cape Horn,

where the Atlantic and Pacific meet in eternal war, and where the storm winds sweep ceaselessly down from the Terra Del Mountains, may come and find relief. Hundreds of vessels have gone down to death on those troubled waters, and hundreds more have turned their prows toward the Falkland Islands for relief and shelter. The Falkland Islands are veritable ocean graveyards. Every point, reef, or shoal around the Islands has a story of shipwreck and death.

To illustrate. Of nine ships doing a coasting trade around these Islands when the writer came, and several which were put on since, not one remains. All have been wrecked. During this time three large American ships have been wrecked in these waters, and the shores are lined everywhere with wreckage

of ships which out yonder on the gale-swept seas have gone down to death, only to be marked on the long "Loyds" lists "Sailed from port, but not heard from." It is a sad, sad fact that the list of ships which sail from port and are never heard from runs every year into the hundreds. This con-

Falkland Peat Bog, Showing the Peat in Process of Drying.

sulate is kept here for the relief of American ships in distress.

The Islands number about two hundred, but there are only about thirty available for commercial purposes. The largest of the groups are the East and West Falklands. The East Falkland Island contains three thousand square miles of territory, and the West Island has an area of two thousand three hundred miles. All the other islands aggregated contain one thousand two hundred square miles; or, in other words, the total area of the Islands is about that of the State of Massachusetts.

Several chains of low mountains thread the Islands; the highest being a little less than three thousand feet high. One interesting peculiarity of the mountains is that the higher one ascends the wetter and boggiest the surface and it is impossible to travel with a horse when an ascent of five hundred feet has been made. These mountains are the home of the wild cattle, and

it is the fact given above which prevents their extermination.

The soil of the islands is a soft peat, of which there are three varieties. The peat furnishes fuel for the people, and is cut in the summer months, from the beginning of December until the latter part of February. It cannot be cut at any other season as it would not dry. The summer is the dry season, and some years in the capital, Port Stanley, water for drinking and culinary purposes becomes very scarce; but in the camp there are fresh water springs everywhere, many of them containing supplies of trout.

Writing of the grass, the Falklands, the smaller islands, are covered with tussock grass, which grows to the height of four to five feet, and has a tessellated seed head. This grass is most excellent in quality, succulent and tender. When the practical English last settled in the Islands, they tried to kill the wild

work of the dogs, the writer will relate an instance, one of many he has seen, which he saw at Teal Inlet Ranch. Riding out with the superintendent, who had one of his own dogs with him, he pointed to a lot of sheep about one mile away, and sent the dog to work them. The dog ran but kept looking backward occasionally while running, to see what the master wanted him to do. When the dog arrived at the sheep the master, by hand and arm motion, had the sheep corraled into a bunch, and then driven north, then south and finally by the same process called the dog away from the sheep and back. I have seen the same thing done with whistle calls.

Both superintendents and the shepherds have their own dogs, and you cannot offend more quickly than to pay attention to the dogs or attempt to work them. They assign as a reason the fact that it spoils the dogs.

The people are nearly all either Scotch or their

A Penguin Rookery is very Familiar to all the Falkland Islanders.

cattle off and replace them with sheep, but the sheep destroyed the tussock grass by eating not only the grass, but the rootage, which grows in a bog above the ground; that is, the larger part of it.

Sheep raising and ship repairing are the main industries of the Islands. There are approximately eight hundred thousand sheep on the Islands, owned by thirty ranchmen. A ranch of one hundred thousand acres will give employment to about thirty or forty men. This force is divided into shepherds and navies. The latter are men for all around work. Each shepherd is in charge of a block but if the block be large, say ten thousand acres, two shepherds will work it. Each shepherd is provided with several horses and dogs. The work of the dogs is most interesting. The dogs are controlled in their movements by the voice, and when far away, out of reach of the voice, by whistle and movements and motions of the hand and arm. As a concrete illustration of the wonderful

descendents. There are no natives here, and never have been.

Education in the Falklands is not up to the high standard of the home schools, and yet a good deal is accomplished on the line of educating the young Falklander. It is an opportune time to write on this subject as Stanley, the capital, has recently built a new school building which would do credit to more pretentious places. The Government school, the main school of Stanley, consists of two departments—the “infant school” and the “grammar school,” each with two teachers. Reading, writing, arithmetic, grammar, and geography constitute the whole course of study, but the wealthier people complete the education of their children, especially the boys, in England. It is a matter of fact that some of the boys from here have surged to the front in the English schools and taken class honors.

The most interesting thing in connection with Falk-

land Island educational affairs is the camp schools. Six teachers travel the camp, teaching the children and the children of the shepherd's family. Though living miles and miles away from other people, they are assured of at least six weeks' schooling in the course of the year. At least one-half of the population of the islands cluster around the stations, and the schools at the stations have the children of several families in attendance. The teachers are brought here by the colonial government and the Falkland Island company from England. The Falkland Island Company, the largest land owners in the colony, furnish three teachers, who teach exclusively on Falkland Island Company territory. The compensation is in American money, from \$25 to \$30 a month, but the teachers receive their board in addition. The system is like that of pioneer days in Iowa, the board-around mode. Sometimes, yes often, it is the case that the teacher will have only the children of one family to teach, but he is compelled to give them six weeks' instruction, and in addition give them a course of study to pursue until his next coming. But let it be noted that the average Falklander goes in for the Rooseveltian idea of the large family. What will the reader think of families of from ten to twenty-five; but this is a fact. Where there is a station with several families, competition is created by the giving of prizes to the most proficient. The teachers, who are always men of refinement and culture, feel like saying anything else than their prayers, sometimes, over the accommodations in the line of board in the cottages of the shepherds. They have told the writer stories of experiences which are humorous in the extreme to the listener, but emphatically emphasized on the part of the relator.

A very interesting matter in connection with Falkland Island camp life is the mode of calling for assistance. As a prelude the reader should have before his mind the following facts: First, there are six thousand square miles of territory in the Falklands. Second, on all this territory there are only two thousand people. From this the reader can see that many of the people are far from neighbors and relief in urgent trouble. How do they obtain relief when it is needed? By signal fires on the high hills and mountains.

Two fires signify trouble, three fires call for quick relief. Another interesting matter in the Falklands is that although there are more than sixty varieties of birds, they are nearly all practically silent. A few give forth pleasant musical sounds. Even then the notes are so low that you must be quite near to hear them; but when you do hear them you are repaid, as the low-sounding notes are soft and flute-like and very pleasant.

One very interesting bird is the dotrell. It is a small bird about the size of the English sparrow,

which has become so plentiful at home. It is most excellent eating, and abounds everywhere in camp. Snipe are everywhere, and are very excellent in quality; but the high price of ammunition with which to shoot them is one thing which protects both.

The reason for mentioning the bird matter is found in the fact that there are hundreds of thousands of wild geese, and the government and the sheep owners have combined to attempt their destruction. The government pays two pence, four cents, each for goose beaks. Last year many thousands were slaughtered, and this year the government has authorized the killing of nearly one hundred thousand. The reason assigned for this is that one goose will eat as much grass as two sheep, but it seems an awful slaughter.

There are two regular churches, the Episcopal and the Catholic. The first is by far the more important. The Episcopal church has a cathedral which has cost approximately, in United States money, \$65,000. This is the cathedral town, being the only spot in South America where the British have a territory for such purpose. There is a church-building for the dissenting portion of the people, of whom there are many, but they have not had a minister for many years.—*The Religious Telescope*.

#### CLASSES FOR THE DEFECTIVE.

THERE are now in nearly fifty of the public schools of greater New York classes for mentally defective pupils. To mitigate the harshness of the term to ears of sensitive parents, the name ungraded classes is applied to those special divisions.

The name is descriptive of the nature of the class and the work attempted. Almost no general teaching is possible; every child must be dealt with individually. Classes number from fifteen to twenty pupils, with ages varying from 7 to 17 perhaps, in one room. Each child has its individual need, and must be studied with special attention to the awakening, or the development, or the suppression of faculties, abilities, or tendencies.

Although no two children in any one room seem to the casual observer to resemble each other in appearance or behavior, to the careful student defectives classify themselves according to certain definite types.

The experiment has been carried on during the last seven years in various schools of the city according to the ideas and methods of the several principals and teachers. Such good results have followed in these particular schools that a more extensive and uniform system is now organized under direct supervision of the board of education. The first half year of such organized work is just completed.

In the last year the license to teach ungraded classes was established. Special examinations are required, as peculiar qualities of intelligence, knowledge, skill

and sympathy are necessary for effective instruction of the mentally weak.

Particular attention is given also to the matter of examination of the children for ungraded classes. Nationality, inherited tendencies, environment, peculiarities of temperament, physical condition, and inherent causes for backwardness or mental deficiency are studied before placing a child in an ungraded class.—*Chicago Tribune*.

## CURRENT COMMENTS

### A Somnambulist.

An extraordinary acuteness of vision in the sleep-walking state has attracted the notice of Dr. James W. Russell to a girl of twenty-one observed last August at the Birmingham (Eng.) hospital. The patient, a teacher, typewriter and music student, was reserved and more or less hysterical, and in three years she had had four seasons of sleep-walking, with almost nightly rising in sleep for several weeks at each period. She usually left her bed between one and two in the morning. She was not easily aroused, appearing wide awake but recognizing nobody, and in this condition she attempted various tasks, playing the piano, tuning her violin, reading, studying harmony, crocheting and writing letters. It was found that this work was always done in almost absolute darkness. A letter was written to a relative, but on being asked to copy the address in the same light, when awake, she was unable to see, and wrote a confused jumble of lines one over another. She crocheted well and wrote a very accurate musical essay. The eyes seemed normal. Another curious feature of her case was that, contrary to usual experience, she could recall events of her sleep, seeming to have a very clear recollection of them.

### Taft's Work in Panama.

The United States is conducting a kindergarten in self-government for the benefit of a number of backward pupils, as Cuba, the Philippines, and Panama. It transpires that the chief purpose of Secretary Taft's visit to the Isthmus was to give special instruction on this subject of self-government to the Panamans, in order to prevent a possible revolution there in connection with the choice of a new President to succeed Amador. Our Government has profited by the experience in Cuba, when the feeling that the election had not been fair led to the revolutionary outbreak preceding the present intervention. The Panama election is to occur July 12. The Constitutional party, headed by Senor Arias, Minister of Foreign Affairs, according to reports received in Washington, had denied the privilege of registration to members of another faction of the Constitutional party headed by Senor Obaldia, former Minister to the United States and one of the candidates for the presidency. Such a critical period had been reached that a revolution seemed almost inevitable. Under the treaty with the United States, it is our duty to preserve order in Panama if there is danger to our interests there. When Secretary Taft pointed out

the condition of affairs, the Panama government agreed to appoint a commission of electoral inquiry to investigate the complaints of all parties, this inquiry to be open to the United States through its agents. Panama officially declares that it desires and assures an open, fair and free election and that the result shall not be open to reasonable doubt, and agrees that if the United States comes to the conclusion that material errors or defects are now or hereafter made in the electoral proceedings or that the right of suffrage has been or may be lost to citizens through the failure of the electoral jury to discharge its duties or otherwise, then Panama will cause the same to be remedied in some lawful manner in the due course of the season before election. The Panama Cabinet extended the time for registration so that under the fair conditions insured by the presence of the American agents, all might register who had the right to. The agents already have gone to their posts in the interior.

### Telephones and the Public Service Commission.

One of the measures in the program recommended to the Legislature by Governor Hughes is the placing of telegraph companies under the jurisdiction of the Public Service Commissions. The New York Board of Trade and Transportation sent a very strong letter to the Governor in regard to the need of putting the telephone companies under such jurisdiction. The business of supplying telephone service is a natural monopoly. It is for the interest of the public that it should be a monopoly. But, as figures show, it is not for the interest of the public that it should be an unregulated monopoly. The present profits of the telephone company in New York City are not known.

The only public investigation of the finances of the company, made in 1887, showed that in the preceding six years, during which charges had been raised from \$60 to \$90 and then to \$150 the net profits of the company had averaged approximately seventy-nine per cent per year. In other words, on a cash investment of \$600,000, the company in six years had realized \$2,844,454.53. In 1892 the telephone companies advanced the rate for unlimited service from \$150 to \$240 per year in New York and from \$75 to \$150 per year in Brooklyn. Since then agitation has forced the New York Telephone Company to put its charge on a basis of the number of messages, so that now, for example, 1,500 messages a year cost \$87, 800, \$57, and so on. But if, with 7,000 subscribers in 1887, the company was making nearly eighty per cent a year, with the 200,000 subscribers it has now, with charges averaging probably as high as they did then, there is every indication that the profits are enormous.

To be sure, figures alleged to be the result of a private investigation made two or three years ago, seemed to show that the profits were reasonable, but the investigation went only so far as the company was willing. The company is not willing to undergo a public investigation, and when such is the case, an unfavorable deduction is inevitable. But whether profits are extortionate or not, the American people are determined that private, unregulated monopoly shall cease, that charges shall either be fixed by competition, or if there is no competition by Government regulation. If our legislators at Albany, nominated under the present system, will not put telephone companies under the Public Service Commission, so much the more need of direct nominations.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## THE GROWTH OF PEACE.

ALL lovers of peace will find encouragement and hope in the fact that the aggressive advocates of peace are seeing to it that the subject does not pass from the minds of the people in the years that must elapse before the assembling of the third Hague Conference in 1915. Already last November, through the influence of Dr. Samuel P. Brooks, president of Baylor University, the State of Texas held a peace Congress. Last month at Philadelphia the second State Peace Congress was held. And later in the month, for the fourteenth year, Mr. Albert K. Smiley, at Lake Mohonk, brought together as his personal guests, eminent men and women having for the theme of their conference the promotion of the cause of arbitration and peace. "Similar congresses will undoubtedly from now on, in increasing numbers, be held in every State in the Union, so that each year we shall either have a National Peace Conference, as we did in New York last spring and is proposed in Chicago next year, or else several State conferences."

It is remarkable how the peace idea has grown in the last few years. Previous to that, few people held to it as a principle except those belonging to certain religious denominations which included it in the tenets of their faith. Outside of these people were either coldly indifferent or took their stand with the combative element. Slowly, but surely, the principles of right are coming to prevail in the world and we can look forward to the time when "the kingdoms of this world" shall "become the kingdoms of our Lord and of his Christ."—the Prince of Peace.

The platform of the Philadelphia Conference "was refreshingly progressive, and, while it fully recognized the great work done at The Hague and the leadership of the American delegation there, it took a positive stand for the things yet to be done, demanding that our Senate ratify the Hague Convention, establishing the International Prize Court, the only convention not

yet ratified; that the International Court of Arbitral Justice be established as soon as three or more nations can be got to agree upon the method of selecting judges; and, most important of all, that the United States take the initiative in the matter of the limitation of armaments."

It would be difficult to see, continues *The Independent*, from which we have in part quoted, "how these three most important 'next steps' could be improved upon unless the platform had also requested our Congress to follow the example of Denmark, which has just appropriated, in addition to her war budget, a peace budget of \$2,000 for the propagation of peace."

## IN THE POLITICAL WORLD.

It is difficult for a speaker or writer to get a hearing these days if he goes outside the political world for his theme. We are so constituted that we cannot well give our attention to more than one thing at a time, and now everything is politics. Considering our form of government, it is necessary that politics should hold this prominent position at regular intervals. For those of us who are not professional politicians it is a good time to inform ourselves on the real live issues and acquaint ourselves also, in some degree, with the methods by which affairs political are managed.

We have heard much about the corruption in politics, and from the evidence by which the charge is backed we must believe that there is much corruption. We should be surprised if this were not true, in view of the corruption in other businesses, since the political field affords unparalleled opportunities for doing crooked work. But corrupt or not, we need to know about it, for it is only in knowing that we are in a position to help bring about changes, if changes are needed. As the sovereign people we cannot emphasize our sovereignty unless we are acquainted with the things that have to do with the means by which this sovereignty is to be expressed. This does not mean that we ourselves shall wade into the muck. Simply keeping our eyes and ears open at the present time will put us in possession of much of the knowledge we should have to place us abreast of the times.

Without giving the subject a great deal of study, we note that some changes have been going on in recent years in the matter of partyism. To be sure, we have our parties still, but the voter is an American citizen now before he is a party man and this is especially true of the later generation. There was a time when party principles were everything, and the man who was chosen to represent them was given very little consideration, as a man. Now we have come to know that no party has a monopoly of the good and safe principles, and we have learned, too, by some sad experiences, that our dearest principles have been basely neglected

because we failed to entrust them to representative men.

It seems to us that the change spells progress,—improvement. May it be so.

### LESSONS IN ESPERANTO.—No. 8.

#### VERBS, PASSIVE VOICE.

WE have three participles in the passive form of the verb.

Ata, final, denotes the present participle, (passive).

Amata, loved (now). Skribata, written (now).

Ita, final, denotes the past participle (passive).

Amita, been loved. Skribita, been written.

Ota, final, denotes the future participle (passive).

Amota, about to be loved.

These participles may be used as nouns, adjectives, and adverbs and are subject to the same rules.

The passive voice represents the action as being received.

Mi estAS amATA.—I am loved.

Mi estAS amITA,—I have been loved.

Mi estAS amOTA,—I am about to be loved.

Mi estIS amATA,—I was loved.

Mi estIS amITA,—I had been loved.

Mi estIS amOTA,—I was about to be loved.

Mi estOS amATA,—I shall be loved.

Mi estOS amITA,—I shall have been loved.

Mi estOS amOTA,—I shall be about to be loved.

Li estas amata de ĉiuj,—He is (being) loved by all.

Ŝi estis amata de sia fratinoj,—She was loved by her daughters.

La batata knabo estas mia frato. The (now being) beaten boy is my brother. Batate, la knabo ne ploras. Being beaten, the boy does not cry.

#### VOCABULARY.

|                    |                           |
|--------------------|---------------------------|
| Nomi,—to name.     | Fotografi,—to photograph. |
| Beni,—to bless.    | Bapti,—to baptize.        |
| Inviti,—to invite. | Konstrui,—to build.       |
| Ŝafo,—a sheep.     | Juĝi,—to judge.           |
| Komerĉi,—to trade. | Ŝteli,—to steal.          |
| Bovo,—an ox.       | Bruli, to burn.           |
| Droni,—to drown.   |                           |

“Ist,” suffix denotes one’s occupation. Dento, a tooth, dentisto, a dentist. Instrui, to teach. instruisto.

“Ar,” denotes a collection of things named. Arbo, a tree, arbaro, a forest. Vorto, a word, vortaro, a dictionary.

“Ig,” suffix, to make, to cause to be. Pura, clean. Purigi to cleanse. Morti, dead. Mortigi, to kill.

“Id,” suffix, denotes “the young of,” Ŝafo, a sheep. Ŝafido, a lamb. Kato, a cat, Katido, a kitten.

#### EXERCISE 18.

Mi estas amata. Li estas vidita. Li estas dronita.

Ili estas nomotaj. Vi estis fotografitaj. Ili estis benitaj. Li estos baptota. Li estis invitota La seĝo estas aĉetita de mi. Kiam via domo estis konstruata, mia domo estis jam longe konstruita. Honesta homo agas honeste. Kiam mi venos, diru al mi la veron. La varon. La dentoj de leono estas akraj. La dentisto kaj la kantisto estas en la arbaro. La leono mortigis la ŝafidon. Mi havas kvar kokidojn. Se vi estus saĝa vi havus multe da amikoj. Juĝi, juĝisto. Hundo, hundido. Komerĉi, komercisto. Birdo, birdido. Ŝteli, ŝtelisto. Kanti, kantisto. Bovo, bovido, bovino. Bruli, bruligi. Droni, dronigi. Edzo, edzino. Lavi, lavisto. lavistino, edziĝi, edzigi.

#### EXERCISE 19.

In July and August, the weather is hot. In January it is cold. Which do you prefer? We have wind and rain in March. April scarcely begins to show to us the first smiles of the sun. If the rain falls the wind blows, whistles and rages, we remain at home, and await patiently the ceasing of the rain, the quieting of the wind, we sit near the fire and we read a good book. Yes, I received a letter from my father-in-law, and cards from my brothers and sisters. Where live your parents? They live in Chicago, they return to Colorado in the summer. The little book is in the cottage. She is near the wicket, but my brother is in the mansion. Tree, bush or shrub. Pale, to become pale. Bright, to become bright. Young, old, to age. If I had received the book I would return it.

What a language it is! Who speaks Esperanto? I hope that you are learning each lesson, and that you find the study a pleasure. Very truly yours.

#### SOME OF OUR ESPERANTISTS.

HERE are the names and addresses of some of the people who are following the lessons in Esperanto. We are publishing them so that they may become acquainted with each other by post card exchange or otherwise and thus make a practical use of the new language. Any other students of the language desiring to become acquainted with their fellow-students should send their names and addresses to this office so that they may appear on this page.

Miss Bertha Phillips, Palmyra, Pa.  
Miss Elizabeth Zortman, Palmyra, Pa.  
Roy P. Hylton, Macksville, Kans., R. R. 2.  
Fannie Hylton, Macksville, Kans., R. R. 2, Box 69.

Mae Derrick, Rice, Okla.  
Nannie Derrick, Rice, Okla.  
Emmanuel E. Lontz, Congerville, Ill.

“If we can get the children deeply interested in school gardens we shall have gone far towards eliminating malicious mischief and vandalism. This is the best sort of preaching.”

## FOOD PRINCIPLES

LENNA FRANCES COOPER, Principal School of Hygiene and Cooking, Battle Creek Sanitarium

### Article X. Milk.

Milk is one of our proteid foods. This is shown by reference to the following:

#### Composition of Milk.

Water, 86 per cent  
 Fat, 4 per cent  
 Nitrogenous Matter (protein) 4 per cent.  
 Sugar or Milk 5 per cent.  
 Mineral Matter, 1 per cent.

Although it contains only 4 per cent protein when compared with the solid matter which is only 14 per cent, it ranks quite high as a proteid food.

There are two kinds of protein in milk, viz: casein and albumen, the casein being the principal one. The protein is the principal part of the curd which forms in sour milk.

The fat is in a finely-divided state known as an emulsion. For this reason cream is considered an easily digested fat.

The sugar of milk, known scientifically as lactose, is not a very sweet sugar. It is often used in medicine for coating pills, etc.

Beside these natural ingredients there are numerous little organisms known as bacteria or germs. They are very small indeed. So small they cannot be seen without the aid of a microscope, but they are capable of producing very decided effects.

They accomplish their work simply by growing. In order to grow, three conditions are necessary: moisture, warmth and food. Since milk contains 86 per cent water there is plenty of moisture and at the temperature at which it is drawn about 98 degrees F. is also ideal. The part of the milk which supplies food for these organisms is the sugar. The change effected by these organisms is brought about by their action on the sugar. When they feed upon the sugar they break it down much as we "break down" or digest our food. They change the sugar or lactose to an acid known as lactic acid, which in turn causes the casein to coagulate and when heated slightly forms the curd which is the basis of cottage cheese.

There are two kinds of these bacteria, *i. e.*, those

which produce disease and those which do not produce disease, but bring about the souring of milk. Fortunately those which do not produce disease are the most numerous, but conditions favorable for the growth of one kind are favorable for the growth of the other, and if only a few of the disease-producing bacteria are present, they may be sufficient to carry the disease. It is a well-known fact that milk is a very good vehicle for the carrying of certain diseases. Many epidemics of scarlet fever, typhoid fever, diphtheria and other communicable diseases have been directly traceable to milk infected with bacteria producing these diseases. And there is no doubt but that tuberculosis is also transmitted in the same way.

These bacteria are not transmitted from the body of the cow (unless it be tuberculosis) to the milk, but find their way into it from the external surroundings. When we realize that almost every particle of dust is accompanied by bacteria, and see the amount of dirt and dust in an ordinary barn, there is little wonder that milk contains so many bacteria. The hay thrown down from the mow during, or just previous to the milking, is laden with dust and bacteria. The body of the cow is usually dirty and dusty and many times filthy and oftentimes the milkman is arrayed in clothing unfit for one engaged in handling food for human beings.

If properly cared for, milk need not contain so many of these bacteria.

In some of our larger cities, such as New York, Philadelphia, Chicago, etc., there are firms which conduct model dairies. At these dairies the milk is carefully cared for from first to last. The body of the cow is carefully groomed, the milkman performs a careful toilet and dons clean clothing and the milking is done in a separate room which is kept scrupulously clean and free from dust.

Then the milk is cooled as quickly as possible, as cold is unfavorable to the growth of these microorganisms, so that those which do get into the milk will not be able to multiply very rapidly.

The milk is then put into bottles that have been

sterilized by boiling or steam pressure, and sealed so that no dirt or germs can get into it.

Milk thus cared for is much more wholesome than ordinary milk, as is proven by statistics. In some of our large cities where statistics have been kept, it has been found that of children fed on ordinary milk, forty per cent die, while of those fed on clean milk, only six per cent die. Clean milk thus cared for can be obtained in the cities under the name of certified milk and is of course much more expensive, usually selling for from 12 cents to 16 cents per quart.

If clean milk is not obtainable, then it is best to pasteurize the other milk. This may be done as follows:

To pasteurize milk: Place the milk in clean bottles which have been boiled or baked several minutes, filling to within one inch of the top. Sterilize some cotton by placing it in a moderate oven and baking till of a golden yellow color. Cork the bottle with this cotton. Place in the bottom of a deep kettle some cotton or something to keep the bottles from coming in contact with the intense heat at the bottom of the vessel. Place over the fire and heat quickly. Keep the water at a temperature of from 165° to 175° F. for fifteen minutes (a dairy thermometer may be purchased at any drug store for a few cents). The milk must then be cooled as quickly as possible. This heat is sufficient to kill most disease-producing germs. Keep corked until ready to be used.

Remember that all measurements are made level.

#### Cocoanut Custard.

1 pint milk                      2 tablespoonfuls sugar  
2 eggs                              6 tablespoonfuls shredded cocoanut

Steep the cocoanut in the milk. When heated, strain out the cocoanut, beat the eggs slightly, add the sugar, then the heated milk and strain into custard cups or the dishes you expect to serve it in. Place these in a pan half filled with hot water. Set in the oven and bake until set, or place in a steamer and steam until set.

To test a "set" custard, break the skin slightly and place a silver knife through the opening into the custard. If it comes out clean or watery, the custard is done.

#### Floating Island.

2½ cups hot milk                      4 tablespoonfuls sugar  
                                                    4 tablespoonfuls pulverized sugar  
4 egg yolks                      4 egg whites                      Vanilla extract

#### Jelly.

Beat the egg yolks slightly, add the sugar, and gradually the hot milk, stirring while pouring the milk on. Strain and cook in a double boiler, stirring until it begins to thicken. As soon as the custard will mask the back of a silver spoon so that it cannot be seen clearly through it, the custard is done and should be removed from the fire at once and cooled as quickly as possible. The danger of spoiling these custards lies in the over cooking. They continue to cook after

being removed from the fire, due to the fact that eggs cook much below the boiling point of water.

Add a few drops of vanilla and when thoroughly cooled and ready to serve prepare a meringue made by beating the egg whites until stiff and then folding in the pulverized sugar. Place this on the top of the custard and over this put bits of some bright-colored jelly. For a very delicate Floating Island, whipped cream may be used instead of the meringue.

#### AUNT DOROTHY'S MISTAKE, OR 1 Cor. 10: 24 PUT IN PRACTICE.

MARTHA B. LAHMAN.

WHEN Aunt Dorothy Trumpe was single, she did not see much of the "ragged edge" of life. She was brought up properly, so far as morality, culture and education were concerned, but she had not been "put through" as some girls have. Her leisure time had been spent for herself.

She had early given her heart to God, but she had not yet comprehended all of her privileges. So when she became mistress of a home of her own, and her household and family duties seemed to multiply continuously, she felt there was not much she could do outside of her family circle.

It was her ambition, too, to keep her children clean and tidy at any cost. So, as it seemed, she was often taxed to the utmost, to keep things orderly, and, as she expressed it, to keep herself and children presentable, it being her custom, intuitively, to do her known and accepted duty well.

She did not get to services regularly, for she was fearful if she took her stirring baby, it would prevent others from hearing the Word of God.

It happened that she got to prayer meeting one evening, and the leader asked her unexpectedly to open the service with prayer.

It was not her make-up to shirk, but she had not offered prayer in public before, and her private prayers had been mainly for herself and family, so for a moment she was at sea. Soon she mustered courage, and asked the Lord's help, and immediately she forgot herself and her interests and her surroundings and poured forth such a prayer as only the Spirit could have dictated.

The burden of her prayer seemed to be for more usefulness, and she prayed that the Lord might help them all to seek and to seize opportunities for helping others. Yes, she prayed for an increase of faith, for the salvation of souls, and for a clearer understanding of God's Word, and she also prayed that their spiritual poise might be such that men would know they had been with Jesus.

That her prayer gave an impetus to the meeting, was evident, judging from the many impromptu speeches that followed. There were talks from some who had

never spoken a word for Jesus before in public, and as the topic under discussion was Greater Christian Activity, it was a service long to be remembered by those present.

Aunt Dorothy remarked to a friend on the way home that she would no longer remain so passive. She said as she was aggressive in her home, she meant to be for the church. It was her determination not to do her own will, but to carry out the will of her heavenly Father.

As she laid her to rest that night, she told her companion that she had hoped to get the children's frocks done by Easter, and that she meant to get her spring work done so she could take a trip in June, "but if the Lord lets me live," she said, "I am going to do more for others. I have always felt that there was nothing I could do, but somehow I feel impelled to do something for Jesus right at home."

She arose in the morning with a keener sense of duty, and breakfast was no sooner over than a rap was heard at the kitchen door. She opened it to find a tramp there who asked for a cup of coffee. "I am sorry, she said, but I have just emptied the coffee out." But observing his crestfallen look, she called to him, saying, "If you do not mind waiting, I will make you a cup." And while he was drinking his coffee, thoughts of the previous evening came to her mind, and she asked him about the welfare of his soul; and finding he had no Bible, she gave him one.

Before dinner another rap was heard at the back door. This time it was an agent, a woman apparently in poor circumstances, and discouraged. So she spent twenty minutes with this woman encouraging her and aiding her materially.

When evening again came, she thought of two lives she had tried to brighten, and wondered if the next day would bring any opportunities.

Sure enough the next day she was reminded of the birthday of an aged neighbor, so she baked a birthday cake and presented it.

The following day one of her neighbors was moving away, and she prepared him a lunch and gave him some tracts to read on his long journey.

And so the days slipped by with many opportunities that before were unseen or unheeded, and Aunt Dorothy says she was mistaken when she thought there was nothing she could do, and I dare say her faith has been increased, for works are simply faith put in action; and she continues to follow the advice of the great Missionary who gave us such a good definition of faith and who said: "Let no man seek his own, but every man another's wealth."

#### THE SELFISHNESS OF SACRIFICE.

Do not neglect the outings, even though they may be of but a few hours' or a day's duration. The house-

mother particularly needs these temporary releases from the nerve-racking tensions that come of the daily routine. A journey, or a visit is not always restful, or satisfying, and from either of these one sometimes returns more worn than when the trip was undertaken. House-mothers, who are proverbially good to others, should learn to be good to themselves. Often the sacrifices upon which we pride ourselves are but forms of selfishness, for in making them we are but consulting our own inclinations and pleasures, rather than the pleasures of others. It is our delight to deny ourselves that others may have the good times; but very often the family would have twice the pleasure, if we would allow them to enjoy a little of the doing without, and thus have the pleasure of feeling that they have added to our pleasure. Many a son and daughter would gladly share their good times with mother, relieving her of the drudgery of serving, and would thereby increase the happiness of every member of the company. Children are not selfish by nature, but are readily taught selfishness through the unwise example of the parents. Boys and girls are not to blame, if they accept the services that are forced upon them from their babyhood, and many a girl gets an erroneous idea of mother's tastes through never having her attention called to their existence. "Mother does not care for nice clothes," or "Mother never cares to go anywhere," are expressions often heard from young lips; and mothers are themselves to blame for these ideas. Instead of the mother being the servant, she should be the ruling spirit, to which all her family, as willing servitors, are ready to bend the knee. Now, girls and boys, see to it that mother gets out into the sunshine, and see that she shares in your good times. All she needs is to be made to see that her happiness is your happiness. In your outings, make a comrade of mother. And get the idea that "mother does not like nice things," out of your heads. See that she has them.—*The Commoner*.

#### A PLEA FOR THE FUTURE BOY AND GIRL.

R. F. BRUBAKER.

THERE has been a gradual development in all educational lines, except in Industrial, Agricultural and Domestic Science departments. Our church schools have paid little attention to this line of work in the past. Now to make it worth while it seems to me it is time we as parents are becoming awakened and see some of the real needs of our children. In every undertaking that is worth our while, we should take a deep look at the problems that are before us. The future boy and girl is a problem that should interest every father and mother. Every parent desires that his children understand more thoroughly the practical things which go to make a successful life.

The conditions of the age demand better trained men. The tendency now is for our boys and girls to

rush to the city. By furnishing means to build and operate these departments of Agriculture and Domestic Science, we can in a large measure, change the course of many boys and girls from the crowded city to the open country, where temptations are fewer and where strong Christian men and women are needed to lead in the church and state. Often when they go to the city they are lost to the church. They could have been saved if we only would have given them ideals that would have kept them where they belong, where they would have proved a blessing to themselves, their parents, their community, to the church, and to God. A child lost means much to all the above. It is truly worth while to try to save them by placing them in a healthy environment where they will partake of the ideals before them.

Now what the writer wants with this article is to stir up the guardians of children in such a way that it will come home to them with such force and power that they will be willing to give of their means for an institution that will direct the present boy and girl in a way that they can help the future boy and girl. It is time to act, because a reaction is taking place in agricultural lines. Our future is wrapped up in our children. Let every man, whether he has children or not, look after the best interest of all boys and girls. We are our brothers' and sisters' keepers.

In conclusion, let every parent get deeply interested in the present boy and girl in a material way so that they may contribute more to the good of mankind.

*McPherson, Kans.*

#### THE COMING MAN.

I know the dearest little boy,  
 With clinging curls of brown,  
 The upturned lips for me to kiss  
 Keep many a heartache down.  
 Two little hands oft smeared with dirt,  
 Two eyes of brightest blue,  
 Two tiny dimples in his cheeks,—  
 Perhaps you know him, too!

I know the dearest little boy,  
 Who questions strange will ask;  
 To answer them as best I may  
 Is still a happy task.  
 His sailor cap was bought to match  
 His suit of navy blue;  
 Those stubby shoes were once quite black,—  
 Perhaps you know him, too!

I know the dearest little boy,  
 Who plays so hard all day,  
 When twilight comes he leaves his toys  
 For Dreamland's happy way.  
 Climbs into arms that hold him close  
 Against a heart that's true,  
 He is my all in all to-day,—  
 Perhaps you know him, too!

God bless this dearest little boy,  
 Who grows from day to day;  
 And may he have the strength to bear

The hardships on life's way.  
 May he have wisdom and the will  
 To always dare and do:  
 I know he never means to fail,—  
 Perhaps you know him, too!

—Bernard A. Pitman.

#### THE WATER-DROP.

JENNIE TAYLOR.

A TINY drop of water, clear and shining, was holding fast to a leaf-tip. What fun it was to be a beautiful water-drop with a home where it could see the great far-off sky and the pretty white clouds floating high in the blue.

But at last it grew weary of being a water-drop with nothing to do but sparkle and glint in the bright yellow sunshine. It no longer watched the sky and the clouds, content with its place on the leaf, but looked about to see what the big, busy world around it was doing.

"I must hasten to bloom," the plant upon which it rested was saying.

"I must help to ripen the berries," the sunbeam was saying.

"I must finish getting my load of sweets," hummed a bee on its way to a clump of heartsease.

The water-drop listened intently.

It heard the breeze whisper as it lightly lifted the leaves close by, "I must cool the heated brows of the laborers in yonder field."

Then the water-drop wondered what it could do to help such a great busy world in its wondrous work. Suddenly a strange thing happened.

In its eagerness, the water-drop lost its balance and fell from the leaf-tip. It slipped down the hillside and splashed plump into the brook that seemed to be running away.

The brook was so tiny that it could hardly carry the leaf boats sailing upon it.

"Now, I can help the brook, perhaps," said the gay little water-drop. "I am not large enough to do much; but I will try to do what I can."

As the brook flowed on, other drops came and each with its tiny strength helped the brook as it crept along, now slowly in the shadows, now dancing in the sunlight. This was not hard work. The water-drop still found time to play and sometimes it would reach a quiet pool where it could again watch the blue sky and the pretty clouds. But it was happier in its work helping the brook than it was when idly dreaming.

Sometimes it moved swiftly. It seemed to be running a race with those far-off floating clouds. Then, too, the brook was nearing the river and was tumbling over the rocks and hurrying on to join that great stream.

When the brook joined the river the water-drop found a busy world indeed. There it had harder work to do, for big puffing steamboats were plying along carrying such heavy cargoes that the water-drop went forth to help.

And so all the water-drops of the river were needed and with their united efforts the great boats on the river were as easily carried as were the leaf crafts of the brook.

At last the river glided out into the sea where there was such a multitude of other drops that our friend of the leaf-tip became frightened.

"Now, I am lost," it cried. "Nevertheless I must find my way and finish my work. Surely there is something here for me to do."

After a short struggle with the waves, the water-drop found a ship on its way to a foreign port. "I will help take the ship across the sea," and with the aid of the willing water-drops the good ship sailed safely into the harbor.

Just then a sunbeam shone out over the harbor. It drew the faithful water-drop toward it, saying: "Come with me," and the water-drop in company with other water-drops felt itself slowly lifted up, up into the light, higher than the tallest trees that grew by the brook and higher than the greatest ship that was ever built. They were going up into the far-off sky and—

"We are one of the beautiful clouds," said they as they drifted across the blue.

One day the skies frowned darkly and the cloud was rent asunder. Then a strange thing happened again. The water-drops were falling, but before they had fallen very far the sunbeam shone out against them and then they were more happy and beautiful than they had ever been before. Among them was the shining one of the leaf-tip. It was helping to make the rainbow that flashed across the sky.

*Tipton, Iowa.*

## For SUNDAY READING

### MY SUNBEAM.

MARY C. STONER.

I chanced to meet the other day  
A little sunbeam on my way.  
Its radiant light brought joy and love  
As though it came from worlds above.

It shone with glee as I passed by  
And quickly stole one little sigh,  
And yet, it seemed the same bright ray  
Before it took my sigh away.

I watched that beam as on it went,  
So fleet as on an errand sent;  
It sought a throng where worship sweet,  
Arose in love to Jesus' feet.

I wondered what its tiny light  
Could do to cheer that place so bright.  
But as the pastor sweetly prayed  
For those who from the Master strayed,

That gentle beam with radiance shone  
And led a wand'rer to God's throne,  
That little beam in silent love,  
So like a blessing from above,

Has found its way into my heart  
And does not with the day depart.  
Those radiant beams of happy cheer  
Are smiles of love from eyes so dear.

And should I tell you of the life  
That beams with richest blessings rife,  
You'd know from whence that beauteous ray  
Had come to bless my little day.

You'd know a maid so sweet and fair  
Who won my heart and stole my care  
You'd know of one that earth holds dear  
That heav'n lows with love to cheer,

You'd know of one so pure and sweet  
Because of praise at Jesus' feet.

North Manchester, Ind.

### THE SUPERNATURAL ELEMENT IN PRAYER.

Is not the key to all real power in intercession the unalterable persuasion that prayer carries with it supernatural force? The moment we abandon the supernatural element in the Bible we may well burn it; and so, if we abandon the supernatural element in the Christian life, we may as well give it up altogether. The trend of our day is to deny to the Word of God its proper divine element, and so make it virtually a human book; to deny to conversion its divine element, and make it simply a human reformation; and to resolve the efficacy of prayer into mere self-culture.

The Word of God teaches a supernatural element in all holy living, and especially praying; a divine conviction, wrought by the Spirit, flooding the soul, and power imparted to the suppliant by the Holy Spirit moving in him. (Rom. 8: 26, 27.)

Prayer, therefore, has supernatural energy. It is the working of Divine Power, from beginning to end, and as long as we depend even upon the best exercise of merely natural faculties we never know prevailing power; but as soon as, abandoning our own struggles, efforts, endeavors and resolutions, we open our hearts to the incoming, indwelling, inworking, and outworking of the Divine Spirit, the problems of prayer reach their practical solution.

There is no "can not" in the vocabulary of a Spirit-filled suppliant. Victims of long-established evil habits say, "I want to live a better life, but I can't." The believer says as to prayer, "I can not, but God can." What one can not do, or get done, apart from God, becomes not only possible, but easy and natural, when filled with God; and if, after vainly trying to break loose from habits of years by the feeble weapon of

their own resolutions, men would only come to the conclusion, "I can not do this thing alone, but I can do it with God," the power of evil would be broken.

Just so with Christian disciples. As to overcoming besetting sins, particularly sins of disposition—impatience, envy, jealousy, uncharitableness—that are such a disgrace to themselves, a reproach to Christ, and a stumbling-block to others—how many would overcome but can not, because they have never yet got hold of God with regard to this matter. Hundreds enter into newness of life the instant that they understand and realize that what is impossible without him, becomes possible, easy, and natural with him.

So of supernatural faith in prayer. While we deny or doubt the power of God to answer, we never know full deliverance. In the Psalms we are told that the pilgrim people of God "limited the Holy One of Israel." All limited conceptions of his power and love limit God. So long as we think he can not, or will not, do this thing for us, he never will. And, as we limit him, by our *conception* of what he can and will do, so we limit him by our *reception* of what he does, so that, even when he works, we fail to see it.

Our Lord says, "The light of the body is the eye"—not because the eye actually gives light to the body, but because it is the faculty that makes light available. Faith is the verifying faculty by which truth is received into the soul; and, without that verifying faculty, all the truth in the world will not deliver from error, just as without the eye all the light in the universe will not illumine.

We must open our hearts largely, fully, absolutely, to the indwelling and inworking of the Divine Spirit in prayer; and so our great problems will be solved, great difficulties overcome, and great answers follow. Satan flees before a man made almighty by the omnipotence of God.—*Missionary News*.

#### LOVING PEOPLE WHOM WE DON'T LIKE.

THIS world is full of various kinds of folks. It would be a very monotonous world if it were not. It is the variety which gives it interest. But many of these different sorts of people do not feel kindly toward other sorts.

"We are not congenial," they say. "I simply cannot endure that girl," one girl says to another. "Her taste in dress is outrageous and her giggling and general silliness intolerable." The other girl says: "I don't like that precise person, who never acts naturally or forgets primness." And there are deeper dislikes than these.

No, many of these dislikes we can not help, but they have nothing to do with loving. Loving and liking are different things. Jesus did not say, "A new commandment I give unto you, that ye like one another," but "that ye love one another." Love rises above

like, and can exist in spite of dislike. Charlotte Brontë makes this discrimination:

"Like me no longer then; love me instead."

We like what pleases us. We love what we would please. Liking is selfish. Love is unselfish. Liking depends on its object; loving upon its subject. If the person we like changes, we may dislike him, but no change in the person loved can alter love.

Even at the best, liking is a feeble thing, capricious, unreliable; but loving is deep and eternal. It is good enough to speak of liking things, but whether we like persons or not is a matter of small consequence. The question is, "Do we love them?"—*Selected*.

#### GOD BEHOLDS.

LET us all learn to thank God for difficulties; they are part of our discipline. Canaan lies on the other side of the Red Sea and the Jordan River—we need not cross either of them till we come to them. God can divide the big sea as easily as he can dry up the little river. When we come to the sea, the voice of Providence is, "Go forward!" and the waters part asunder. When we reach the flowing Jordan, and our feet touch the stream, behold, it has vanished, and we go through dry-shod! The story of Christian faith and its frequent deliverances is often like a postscript to the eleventh chapter to the Hebrews. When we voyagers get safely into the desired haven up yonder we may take great delight in looking over our log books, and in discovering how wonderfully our Pilot brought us through dark nights and dangerous channels. Pastors often discover very dense fogs lying over their churches; let them never forget that there is One to whom the darkness shineth as the day.—*Dr. T. L. Cuyler*.

THE *Interior* says: "I was up to the Moody Church, the other morning, when they fed six hundred unemployed men," said a gentleman, "and it was a sight to make a man stop and think. So far as I could see, the men were a long way from being bums. But there was one thing which seemed to me very significant. There was a request from the platform for the Christian men in the audience to hold up their hands. There were not more than a dozen out of the six hundred that claimed to be Christians. It seems to me that this proves in a very practical way that godliness is profitable for the life that now is. If it doesn't actually prove that very few Christian men come to want, it does prove that the churches are faithful in taking care of their own members."

MORALITY without religion is only a kind of dead reckoning—an endeavor to find a place on a cloudy sea by measuring the distance we have to run, but without any observation of the heavenly bodies.—*Longfellow*.

## Echoes from Everywhere

Guthrie, Okla., June 12.—State Auditor M. E. Trapp today announced the assessed valuation of the property of the Western Union and Postal Telegraph companies as fixed by the state board of equalization. The estimate submitted by the Western Union company, slightly in excess of \$300,000, was increased to \$1,907,770, while the valuation of the Postal company was fixed at \$48,240, practically double the company's figures.

The Swedish Riksdag has passed an additional allowance of nearly \$2,000, for the publication of the report of the last anti-alcohol congress at Stockholm. This makes a total allowance by the state for the congress of about \$6,000. The Swedish Society for student total abstainers now has a membership of 11,652, an increase from last year of more than 15 per cent.

Before the adjournment of the Ohio legislature was passed two more temperance laws to strengthen the local option districts. One provides that where persons receive shipments of liquor C. O. D. within the prohibited sections the sale shall be held to have taken place at the point of delivery, and the parties receiving said shipments shall be amenable to the law. The other law bars forever from the saloon business a man who shall have been found guilty a second time of violating the liquor law.

Free Employment Agent Gerow, of Topeka, Kans., has already begun advertising for men and teams to assist in the coming grain harvest. He calls for 21,000 men and 1,195 teams.

The senate and house of the Oklahoma legislature passed a bill which prohibits the intermarriage of the negro and white races. It makes any person violating this provision guilty of a felony and subject to fine of not more than \$500 and of from one to five years in the penitentiary. Any minister or other person solemnizing such a marriage is equally guilty of a felony. Any person having been three times convicted of a felony is barred from entering the married relation.

An interesting case of technically obeying the law and at the same time dodging it has come up in Dubuque, Ia. An ordinance was passed requiring saloon-keepers to have nothing in their places of business that will shut off customers from the view of those who pass by on the streets. All obstructions were removed in accordance with the law, but some of the saloon men evaded the intent of the measure by putting up in the front part of their drinking-places strong electric lights behind which were big reflectors which blinded the eyes of persons passing by on the streets. The matter is to be tested in the courts.

Prof. Walter William Skeat, teacher of Anglo-Saxon at Cambridge university and author of a number of works of a philological nature, has spoken out in favor of Prof. Brandt of the Berlin university who recently declared that Americans speak better English than Englishmen do. A number of critics declared that Prof. Brandt was wrong, but Prof. Skeat says he is correct; that the excellent pronunciation of many Americans is due to the fact that training in English is given more attention in America than in England. "In England," he says, "the great schools treat Latin and Greek as of first importance and pay little attention to English and elocution. Moreover, the study of phonetics is taken seriously in America, while it is almost unknown in England, except to a few students. The consequence is that the ordinary Englishman is entirely ignorant of his own language. I see no objection to the employment of Americans to teach English, because they give attention to the subject and understand what they are talking about."

In some parts of Europe corncobs are used for building purposes. The cobs are collected and taken to a factory where heavy compresses crush and mold them into blocks of various sizes just as bricks are variously molded. These blocks are then bound with wire so as to make them hold together. They are then soaked in tar to make them watertight, and are ready for use after this treatment. Of course they are much lighter than bricks, are always dry, and make good houses. This is but one of the very many ways in which Europe shows a greater economy than America does. There is little over there which goes to waste. Even the refuse and garbage of Paris is made to serve a purpose by being burned and converted into power.

One of the results of the peace conference of the Central American states, held in Washington last year, was the establishment of a Central American court of justice which has just been inaugurated at Cartago, Costa Rica. The court established as a permanent tribunal, the five countries represented—Salvador, Costa Rica, Guatemala, Honduras, and Nicaragua—binding themselves to submit to it all controversies or questions which may arise among them, "of whatsoever nature and no matter what their origin may be," in regard to which the respective departments of foreign affairs are unable to reach an understanding. The court consists of one regular and two sub-justices from each country represented, who sit for terms of five years.

President Jose Santos Zelaya, of Nicaragua, became chief ruler of the country in 1893. He is a military despot and reflects himself every sixth year. He is something of a genius and has had a pet plan for some years of uniting the five Central American republics into one government.

He hopes to live to see this idea carried out, and expresses the opinion that it would do wonders for Central America.

#### Educational Convention.

More interest than ever before is being taken in the approaching yearly convention of the N. E. A., or National Education Association, which is to be held at Cleveland, O., from June 29 to July 3. Cleveland, now a city of over half a million population and the seventh in size in the Union, is centrally located and easily reached and as a railroad rate of a fare and a half has been arranged for, notwithstanding the reductions forced on the railroads by recent hostile legislation, it is expected that the attendance will break all records.

In order to take advantage of the reduced rates a person must, however, become at least an associate member of the organization, but this can be done by sending a fee of \$2 to Secretary Wm. G. Rose, Chamber of Commerce, Cleveland, who will, if desired, assign the applicant to quarters at reduced rates—these rates varying from 75 cents a day for room only or \$2 a day for full board up. Full active membership, to new members, costs \$4. Membership entitles a person to participate in all the proceedings, to enjoy special rates for side excursions, etc. For instance, a round-trip ticket to Buffalo and Niagara Falls by water will cost only \$3. Cleveland is now unique, as over 200 miles of trolley roads there have been thrown open to the 3-cent fare, after Mayor Johnson's long fight.

The sessions of the convention will be held in the Cleveland Hippodrome, a great modern auditorium costing \$2,000,000 and seating 5,500 people. There will be a national spelling contest for pupils of the seventh and eighth grades, and also a "play festival" to interest the younger visitors. There are unlimited opportunities for diversion, and the Forest City is to give a hospitable welcome to the educators in every way.

Visitors should buy only a one-way ticket at their local station, and should secure from the agent a certificate showing the fare paid, etc. This certificate is then to be presented at registration headquarters on arrival at Cleveland, and this will entitle the holder to a half-fare rate for the return journey. Some of the railroads may not make the special rates and visitors should ascertain from the station agent in advance whether he has the proper certificates.

#### Oklahoma Legislates Boldly.

In the bright lexicon of youth Oklahoma has yet to discover the word fear. Problems which her sister states have thought themselves gray-headed over and yet have not solved, she goes ahead in an off-handed manner and settles. There has always been a vast amount of dissatisfaction about the way in which wages are adjusted under the competitive system. Occasionally manufacturers claim that they are forced to pay too much; usually laborers believe that they receive too little. If the bill which has passed her legislature is signed by the governor, Oklahoma will settle all these disputes. The measure gives the state labor commissioner power to order either advances or reductions of wages as may seem to him just in the light of trade conditions. It is not likely that such a measure would be pronounced constitutional by the courts; it puts into the hands of one man rather more power than is good for a republic.

A less radical measure which will be widely approved is the direct primary bill passed recently providing for

the primary election of all candidates. The most novel feature of the bill is the requirement that all matter printed in the newspapers complimentary to a candidate, either during the primary or the campaign for election, must be labeled in at least a ten-point type, "Political advertising." If the requirement should be made a general one, it is likely that we would see the phrase "political advertising" scattered pretty freely through the news columns of our daily papers for some time to come.

It gives Americans a shock to find that until last week one of the German States had no constitutional government. Yet such was the case until May 19 when Grand Duke Frederick of the Grand Duchy of Mecklenburg-Schwerin gave up his feudal privileges and granted a constitution similar to that enjoyed by some of the other German States. The new régime will by no means be a democracy, for the suffrage is to be according to property classifications, and the members of the legislature are to be elected by a system of indirect voting. The two Mecklenburgs, Mecklenburg-Schwerin and Mecklenburg-Strelitz, will each have a general Landtag, as well as legislature of their own to act on local questions.

A few days ago Oklahoma had a chance to test its guaranty banking law and found that it made good. The International Bank of Colgate failed and the state banking commissioner took charge of its affairs immediately. Within one hour after he got control he had authority to pay depositors in full although the bank was \$23,000 short. The institution had \$9,000 cash on hand and \$7,000 deposited in other banks and when this was exhausted the commissioner drew checks upon the state guaranty fund. Under the guaranty banking law in Oklahoma a tax of 1 per cent is levied upon the average annual deposits of all state banks, and the money thus raised is used in payment of all depositors of an insolvent state bank after the funds of the bank have been exhausted.

The envoys of Mulai Hafid, the would-be usurping Sultan of Morocco, have not met the cordial reception they could desire from the European governments. To be sure, in Germany a government agent promised to report their errand to the proper authority, but in Paris they knocked in vain at the doors of the President and the Foreign Minister. Mulai Hafid's tsar seems to be approaching the horizon on the down grade in Morocco itself. If it disappears entirely Abd-el-Asis will have the French to thank.

The forty-sixth star of the Union was a costly one compared with its predecessors. The election, constitutional convention and incidentals of getting Oklahoma started cost \$315,000. It cost only \$31,000 for the same expenses for North Dakota, \$15,000 for South Dakota, \$26,000 for Washington, \$27,000 for Montana, and \$47,000 for Utah. The price of States boomed with all other prices.

A terrible famine is raging in Uganda. More than 40,000 deaths have occurred in the Nsoga Province alone. The government is feeding 50,000 of the natives. Crops are a complete failure, and there is prospect of much suffering during the next few months.

We imported a hundred million dollars of gold last fall. Now we are sending back a good deal of the gold to Europe. Within the last few weeks \$33,500,000 in gold bars and coin has left New York for the other side.

## CREAM OF MAGAZINES

### FUN IN HARD WORK.

The greatest fun in the world is work done heartily and well, but there is no fun in the game of hard work if the essential rules are not followed. All the necessary elements must be present: first of all is HEART. No one ever really enjoyed hard work which employed only muscles and nerves and brain. The heart must be in it. Every effort must carry with it a passionate interest and desire. Every moment must contain the indulgence of a wish, must be a stepping-stone of an ambition. Necessarily the work must be **worth doing**. This rule does not shut out any legitimate task. There is a way to connect the most commonplace labor that needs to be done with the great movements of the world's progress and uplift.

When the new parliament buildings of the Dominion of Canada were being reared, a visitor stopped to speak to a number of workmen who were cutting stone. The visitor asked one man what he was doing, and he replied that he was earning two dollars and a half a day. He asked a second man what he was doing, and pointing to a chart spread before him the man said he was trying to make the stone on which he was working correspond to the chart. A third man was asked what he was doing. And it must be remembered that all three men were, to all outward appearance, at precisely the same work. But the third man let his mallet rest for a moment, and straightening himself up, pointed proudly to the great building, the graceful lines of which were beginning to be clearly formed in the massive pile before and above them. Looking up proudly at the great structure and evidently thinking what it meant and the glory of the completed edifice, he said eagerly: "I am helping to make that." This man had a vision, he was doing something that was worth while. The task of earning money is not worth while; the task of blindly following a pattern is not worth while; but to have a part in making something which is big and glorious—whether it be a cathedral or a character—that is worth while.—The Circle.

### OUR YEARLY LOSS FROM INSECT PESTS.

It will probably startle the average American citizen to learn that every year insect pests damage our live stock and the agricultural products of our soil to an amount exceeding the entire expenditures of the national Government, including the pension roll and the maintenance of the army and navy. In no other country in the world do insects impose so heavy a tax on the products of the farm as in the United States. A scientific agricultural writer (C. L. Marlatt, assistant entomologist in the national Bureau of Entomology) estimated a few years ago that a total of more than \$700,000,000 annual loss due to insect pests in the United States is below rather than above the actual damage.

Despite the careful and thorough work done to eradicate these pests great damage is still inflicted by them.

Before the cotton worm was studied and the method of controlling it by the use of arsenic sprays had become common knowledge this plague had levied a tax of \$30,000,000 in bad years on the cotton crop. This estimate and those that follow are based on the official figures of the Department of Agriculture for the calendar year 1904,—the latest statistics available. Much saving has been effected since then by the methods of the Bureau of Entomology and the State Entomologists, but the aggregate loss is still enormous. A knowledge of the habits and the methods of controlling or avoiding the Hessian fly, including improved cultural methods, has resulted in the saving of wheat values to the farmer aggregating from \$100,000,000 to \$200,000,000 annually. The apple crop of the country is worth from \$6,000,000 to \$8,000,000 more since the as yet incomplete control of the codling moth has been generally understood. The root worm was almost baffled by the principle of rotation of corn with oats, thus saving the corn crop to the extent of many millions annually. The annual losses occasioned to forests and forest products by insect pests have been estimated at not less than \$100,000,000, of which \$70,000,000 is damage sustained by the growing timber. The tobacco crop suffers from insects to the extent of more than \$5,000,000. The white scale would have completely destroyed the orange and lemon orchards of California but for the introduction of one of its natural enemies from Australia, while the control of the Mexican boll weevil has already saved the farmers of Texas an enormous sum, and has really made the continuance of cotton-growing possible.

Besides these direct losses enormous damage is done by insects to cattle and in the transmission of disease to man. The loss in the value of horse, sheep, and cattle products directly chargeable to insects (the ox warble, the buffalo gnat, and the various biting flies and ticks) would aggregate, Government statisticians figure, not less than \$175,000,000 annually. To this must be added the cost of protection from insect damage to stores' products and from the noxious mosquito, fly, and other disease-bearing insects. Undoubtedly mosquitoes as carriers of malaria and yellow fever, and flies as transmitters of typhoid, occasion the loss of another \$50,000,000 or \$60,000,000 in the form of lessened economic productivity. —From "How Science Fights the Insect Enemies of Our Crops," by Louis E. Van Norman, in the American Review of Reviews for June.

### A "HOUSE OF GOVERNORS."

That the recent Conference of Governors at the White House may give us a new instrument of government is an idea that seems to have fired the imaginations of our editorial writers almost as much as did the definite and immediate purposes for which the Conference was summoned. As one casual meeting of the nations at The Hague has grown into a septennial Congress of the World, so, suggests the New York Independent, may this gathering of

Governors perpetuate itself, with "more results than even Mr. Roosevelt and his advisers could have imagined." The Times not only sees "nothing unconstitutional, subversive, or dangerous" in the idea of an annual meeting of the Governors of all the States, but points out, among the "many merits" of the idea, that such a body "seems to be a needed supplement to the Federal and State system."

While the suggestion owes its impetus to the Washington Conference—al tho it was not formally broached there—the scheme of a "A House of Governors" was outlined more than a year ago in a pamphlet written and published by Mr. William George Jordan, who was at one time editor of The Saturday Evening Post. Mr. Jordan sent this pamphlet to all the Governors, thirty of whom wrote to him indorsing the idea. It is claimed by the advocates of the proposed new instrument that it will conserve States' rights, promote uniform State legislation on vital questions, and do away with that "twilight zone" between the nation and the State in which exploiting interests have sought to take refuge from both. The Federal Government, in conformity with the spirit of the age, tends to become "a great governing trust, crowding out and threatening openly still further to crowd out, the States, the small jobbers in legislation," says Mr. Jordan. The menace of this tendency, he adds, is that "the nation soon will be no longer a solid, impregnable pyramid, standing on the broad, firm, safe base of the united action of a united people, but a pyramid dangerously balanced on its apex—the uncertain wisdom of a few." He admits, however, that whatever Federal usurpation of States' rights may have come about is due to the fact that "the States have largely abrogated their rights by disuse—the States themselves have been to blame."

The few that did show a readiness to grapple with the larger questions which affected the whole Republic were handicapped, he says, by "the lack of coöperation from their sister States."

This failure of the individual States to shoulder their share of the nation's legislative responsibility was emphasized by Secretary Root in his speech before the Pennsylvania Society in this city, which attracted so much attention a year and a half ago. Said the Secretary at that time: "The people will have the control they need, either from the States or from the national Government; and if the States fail to furnish it in due measure, sooner or later constructions of the Constitution will be found to vest the power where it will be exercised—in the National Government." According to Mr. Jordan, however, the better solution of the difficulty is to be found in the "House of Governors." Thus (to quote from the pamphlet already mentioned):

"It is proposed that the Governors of the forty-five [now forty-six] States meet annually for a session of two to three weeks to discuss, consult, and confer on vital questions affecting the welfare of the States, the unifying of State laws, and the closer unity of the States as a nation. The House of Governors would have no lawmaking power, nor should it ever aspire to such power. Its force would be in initiative, in inspiration, and in influence. The Governors would seek to unite on a general basis of action on great questions to be submitted to the legislatures of the respective States in the Governors' messages. It would seem that an august, dignified body of forty-five Governors, representing their States, with the lawmaking power of forty-five legislatures behind them, should in time become an inherent part in the American idea of self-government and a powerful factor for good in the nation.—Literary Digest.

## THE EVOLUTION OF TRAVEL.

MAN's first locomotion was by walking. How long this mode continued as the only means of travel we do not know, but Adam was forced to invent schemes for easing and quickening his speed.

The second method of traveling evidently was that of riding an animal. The donkey, and the camel are Oriental relics of ancient travel. In long distances this was a labor-saver and a comfort besides, but pictures of early times reveal the third stage of travel, which was by chariot or a vehicle of some sort.

This last development marks the beginning of the inventive genius in man as applied to travel and with all the evolution which has followed, man still uses the rotation of the wheel as the highest mark of inventive skill. A wagon looks common enough today, or a wheel seems next to nothing as an invention, yet this world owes much of its present development to the wheel rotating on an axis. Likely there were no patent-right offices, and affidavits, and patentee's fees when the first wheel was made. Even the inventor's name is not known, but his genius has blessed the world as much as any other one invention that can be named, so far as the economies of life are concerned.

Land, water and air travel devolves upon the use of the wheel almost exclusively. Land transportation is all done by wheels, except where a little sledding can be done. The mighty ocean steamers are propelled by the rotary motion of water wheels in one form or another, and the dirigible airships are lifted by the buzzing motion of wheels with flanges attached. Gas balloons only float with the currents, hence can never become a factor in travel.

From the chariot, the wagon and other carriages, we come to the use of rails being used to accelerate the speed of wheels. Railroads with a double track have been the only known system so far. Before the steam road, horse cars were driven on rail tracks.

Just now it looks like a reaction is setting in. Instead of a double parallel set of wheels for cars we have the monorail with just one wheel under the center of the car. So well balanced is the car, and so close to the rail is the center of gravity that the weaving from side to side is overcome by two brace arms which project from the top of the car against two small overhead rails.

The onward motion of the well-balanced load tends to keep the train in an upright position, as is illustrated in the hoop, which rolls for the boy, and the one-track bicycle which works so nicely for single passengers.

The traction or driving wheels of the car are arranged in tandem, and the cars are prevented from toppling over by an overhead guide. There are four double-flanged driving wheels to each car, and each wheel is driven by two electric motors.

The monorailroad is eminently fitted for high-speed travel, because the cars, being supported at the top as well as at the bottom, are kept very steady. We have reached the limit of speed on steam railroads. The violent rocking and swaying of the locomotive and the heavy pounding of its parts, work havoc with the track. On the other hand, in a monorailroad of the type we have just described, the cars will have no tendency to sway, because a slight variation in the level of the rails will not result in a lateral motion, but merely in a vertical fall and rise.

### THE BOY WE ALL LIKE.

THE boy who never makes fun of old age, no matter how decrepit or unfortunate or evil it may be. God's hand rests lovingly on the aged head.

The boy who never cheats or is unfair in his play. Cheating is contemptible anywhere and at any age. His play should strengthen, not weaken his character.

The boy who never calls anybody bad names, no matter what anybody else calls him. He cannot throw mud and keep his own hands clean.

The boy who is never cruel. He has no right to hurt even a fly needlessly. Cruelty is the trait of a bully; kindness is the mark of a gentleman.

The boy who never lies. Even white lies leave black spots on the characters.

The boy who never makes fun of a companion because of a misfortune he could not help.

The boy who never hesitates to say no when asked to do a wrong thing.

The boy who never quarrels. When your tongue gets unruly, lock it in.

The boy who never forgets that God made him to be a joyous, loving, lovable, helpful being.—*Exchange.*

### GOSSIP TOWN.

Have you ever heard of Gossip Town,

On the shores of Falsehood Bay,

Where old Dame Rumor with rustling gown,

Is going the livelong day?

It isn't far to Gossip Town,

For people who want to go—

The idleness train will take you down,

In just an hour or so.

The thoughtless road is a popular route,

And most folks start that way;

But it's steep down grade, if you don't watch out,

You'll land in Falsehood Bay.

You glide through the valley of Vicious Town,

And into the tunnel of hate,

Then crossing the Add to Bridge, you walk

Right into the city gate.

The principal street is called "They Say," and

"I've heard" is the public well,

And the breezes that blow from Falsehood Bay,

Are laden with—"Don't You Tell."

In the midst of the town is Tell-tale Park;

You're never quite safe while there,

For its owner is Madam Suspicious Remark—  
Who lives on the street "Don't Care."

Just back of the Park is Slander's Row,

'Twas there that Good Name died,

Pierced by a shaft from jealousy's bow,

In the hands of Envious Pride.

From Gossip Town, peace long since fled,

But trouble and grief and woe,

And sorrow and care you'll find instead,

If ever you chance to go.

—Author Unknown.

### Between Whiles.

His Charity.—Closefist—"No, sir; I respond only to the appeals of the deserving poor."

Openhand—"Who are the deserving poor?"

Closefist—"Those who never ask for assistance."—Tit-Bits.

In our anxiety to accomplish big things we overlook a lot of little things that aggregate greatness.

"Boo hoo!"

"What are you crying about, little boy?"

"Boo hoo! I'm cryin' cos watermelons an' cucumbers and all them things come when there ain't no school, an' it don't do no good to be sick."

Had Her Own.—"Can you be trusted with a secret?" he asked.

The woman drew herself up proudly.

"You have known me for ten years, haven't you?" she replied.

"Yes."

"Do you know how old I am?"—Washington Herald.

Doctor Billbig returned this week from a month's vacation and found that a young medical graduate, whom he had left in charge of his office, had gone to work and cured up four-fifths of his old reliable patients, thus nearly ruining a lifelong practice among the fashionable set. It doesn't do to trust much to the inexperienced.

His Future Occupation.—"What business is papa in, mamma?"

"Why, he is a tea sampler; he samples the different kinds of teas."

"Mamma."

"Yes, my boy."

"Do you know what I want to be when I grow up?"

"No. What, my boy?"

"A pie sampler!"—Yonkers Statesman.

---

## WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

---

WANTED—A Brother who is a blacksmith, to buy all or half interest in a fine, large shop in Ramona, Kans. Brethren have church here and work is plenty. Good terms can be had if needed. F. M. Shirk, Lost Springs, Kans.

**TWO CROPS  
CORN  
SIX CROPS  
ALFALFA  
GROWN  
EVERY  
YEAR**

Fronting west on the Gulf of California for 350 miles with an average width of 80 miles inland, lies the State of Sinaloa on the West Coast of Mexico. It is the second State in Mexico south of Arizona. It is bounded on the North by Sonora, on the East by Chihuahua and Durango, and on the West by the Gulf of California.

## **SURFACE OR TOPOGRAPHY.**

Sinaloa is divided by nature into three natural belts running North and South through the entire length of the State.

## **THE COASTAL PLAIN.**

From the sea margin on the Gulf of California back to the foothills lies this wonderful level coastal plain. At the Southern end of the State it is barely 10 miles wide, but broadens constantly to the North until in the District of Fuerte, the most northerly District in the State—it is 50 to 60 miles wide. The area of this coastal plain is about four million acres (6,250 square miles), and nowhere on the North American Continent can today be found in a continuous body such rich, fertile and productive lands. **Its soil is deep, averaging 42 feet deep, and inexhaustibly rich:** (See analysis). It produces luxuriant crops of practically all of the products of the temperate, semi-temperate, and tropical zones. (See Products). It is crossed by 10 flowing rivers, many of them large streams. It has three principal seaports, Topolobampo, Mazatlan and Altata, in addition to several minor coasting ports, including Santa Maria, Manglon, Playon, etc. It is through the entire length of this coastal plain that the Southern Pacific is now building its main line from Guaymas to Guadalajara and Mexico City. These incomparable advantages of level lands, deep rich soil, good climate, ample rainfall, rivers in abundance, seaports, and railway facilities assure a future to this Coast plain which can hardly be overestimated.

## **THE FOOTHILL BELT.**

Lying immediately back of the Coastal Plain is the beautiful Foothill Belt of Sinaloa, averaging from 20 to 30 miles in width. This is, and always will be, the great

one-crop district of the State. Its topography naturally does not lend itself to irrigation, except in small favored valley spots, so that it must depend on rainfall for its crop production. Nevertheless this section has many distinct advantages. The surface is usually abundantly covered with fine hardwoods of such varieties as ebony, cedar, mahogany, lignum vitæ, etc., and always a plentiful supply of building, fence, and fuel woods. Little creeks, "arroyos" abound, as well as springs, and natural reservoir sites for storage of water can generally be found. This is unquestionably the best grazing district, being well supplied with natural grasses, and the browsing also being good. Here and there are small valleys containing level rich lands on which are raised excellent crops of corn, beans, pumpkins, etc. This, also, is a natural fruit belt growing practically all fruits, with an exceptionally fine flavor. Here grow side by side sugar cane and grains, pears and bananas, grapes and pineapples.

The climate here is unexcelled, the nights cool and delightful, the drinking water from mountain sources, clear and sparkling, and the conditions for living unusually good. In this belt also are located some of the best mines, silver, gold and copper, in the State.

## **THE MOUNTAIN BELT.**

The foothills gradually climb up into the mountains on the East or rear side of the State, these mountains reaching elevations of 5,500 feet. The entire Eastern side of Sinaloa is practically all mountainous. At these elevations are found large forests of pine and oak which, though at this time inaccessible by rail, form large timber reserves of great potential value which will come into the market in future years. Some fine grazing is also found in these mountain lands, and where soil appears crops grow like magic. Water falls are abundant, ready to furnish tens of thousands of horsepower for industries of Sinaloa. These mountains constitute a mineral belt of fabulous richness, there being already discovered and operating many mines, worth millions.

## **DISTRICTS (OR COUNTIES.)**

Sinaloa is sub-divided into 10 districts, in the following order from North to South.

| Districts        | Principal City | River            |
|------------------|----------------|------------------|
| I. Fuerte        | Fuerte         | Fuerte           |
| II. Sinaloa      | Sinaloa        | Sinaloa          |
| III. Badiriguato | Badiriguato    | Humaya           |
| IV. Mocorito     | Mocorito       | Mocorito         |
| V. Culiacan      | Culiacan       | Culiacan         |
| VI. Cosala       | Cosala         | San Lorenzo      |
| VII. San Ignacio | San Ignacio    | Piaxtla          |
| VIII. Mazatlan   | Mazatlan       | Mazatlan         |
| IX. Concordia    | Concordia      | Quelite          |
| X. Rosario       | Rosario        | Rio de las Canas |

The population of Sinaloa at the last regular census was 300,000.

## **RIVERS AND WATERCOURSES.**

Sinaloa is undeniably the best watered State in the Republic of Mexico. A glance at any map of Mexico confirms this statement. It is crossed during its length of 350 miles by ten rivers, flowing from East to West, emptying into the Gulf of California. These rivers have their sources in the high mountains of the interior in Chihuahua and Durango and are fed and renewed by the heavy rainfall and deep snows of these interior mountain ranges.

## **RAINFALL.**

The summer rains in Sinaloa usually begin in June and continue to October. From data obtained from the Government Station at Mazatlan, and from private data,

# THE INGLENOOK

the rainfall may be averaged at 30 inches per year. Usually showers occur also in the months of January and February, although not invariably. The following table of rainfall in the City of Culiacan (the State Capital) for the year ending Feb. 28, 1906, was recorded during a year of unusual and constant rains, there being a precipitation of 50.9 inches.

## WEATHER RECORD.

Of temperature, Rainfall, etc., in City of Culiacan, Sinaloa, Mexico, as per records for the year ending February 28th 1906.

|                                | Mar. | Apr. | May  | June | July | Aug. |
|--------------------------------|------|------|------|------|------|------|
| Highest temp. in mo. (Fahr)    | 91   | 88   | 97   | 99   | 92   | 96   |
| Lowest Temperature .....       | 48   | 61   | 70   | 82   | 77   | 77   |
| Average, all day .....         | 72.1 | 75.9 | 84.6 | 90.3 | 87.1 | 85   |
| Total rainfall for mo., inches | 1.6  | 0.5  | 0    | 4.2  | 9.2  | 7.4  |
| No. clear days in month        | 17   | 24   | 29   | 20   | 10   | 19   |
| No. of cloudy days in month    | 3    | 3    | 1    | 3    | 5    | 2    |
| No. of Variable days in month  | 11   | 3    | 1    | 7    | 16   | 10   |

|                                | Sept. | Oct. | Nov. | Dec. | Jan. | Feb. |
|--------------------------------|-------|------|------|------|------|------|
| Highest temp. in mo. (Fahr)    | 95    | 90   | 85   | 76   | 85   | 90   |
| Lowest Temperature .....       | 75    | 62   | 62   | 37   | 37   | 48   |
| Average, all day .....         | 83    | 81.1 | 72.6 | 64.2 | 62.8 | 66.6 |
| Total rainfall for mo., inches | 13    | 0.5  | 7.5  | 5    | 1.0  | 1    |
| No. of clear days in month     | 17    | 24   | 14   | 28   | 26   | 26   |
| No. of cloudy days in month    | 9     | 2    | 10   | 3    | 5    | 2    |
| No. of Variable days in mo.    | 4     | 5    | 6    | 0    | 0    | 0    |

Average highest daily temperature over 12 months, 90.7 degrees.

Average lowest temperature, same period 61.3 degrees.

Average temperature, all day, same period 77.1 degrees.

Average number of clear days in month 21.2.

Average number of cloudy days in month 4.

Average number of variable days in month 6.3.

The highest temperature reached in any hour during the year was 99 degrees Fahr.

The lowest temperature in any hour during the year was 37 degrees.

The rainfall during the entire year was, 50.9 inches.

## CLIMATE AND SEASONS.

From October to June in Sinaloa weather conditions cannot be better anywhere. The days are bright and sunny, but not too hot, while the evenings are delightful and the nights cool enough to enjoy sleep. In June the rains begin and while the temperature does not rise to high figures, rarely going high in the 90s, nevertheless the humidity adds to the heat as registered by thermometer. Under the preceding heading of Rainfall will be found a temperature record which speaks for itself. The average temperature for the year ending Feb. 28th, 1906, was 77.1 degrees Fahr. Highest recorded point 99 degrees. lowest, 37 degrees. Those who have given the climate a fair test—through Summer and Winter—agree that it averages up well with Southern California, while its Winter climate is unquestionably superior. **It seems a favorable place for cases of catarrh and asthma,** those going there finding almost immediate relief from such troubles.

## SOIL OF SINALOA LANDS OF COAST PLAIN. ANALYSIS.

| Hygroscopic moisture at 16°C ..... | 3.22 | per cent |

The soil of the foothill belt is about the same, except coarser in grain, and with more iron in it. The soil in the valleys of the rivers naturally has more silt and alluvial deposit and is an easier worked soil, but no richer in food values for plants than the soil further away from the rivers.

No soil for agricultural, horticultural or gardening purposes need or can be richer or more productive than this. It contains, in large quantities, all the essential elements for plant growth.

## PRODUCTS.

It is not alone the great variety of products raised in Sinaloa that astonishes the newcomer, but the extra fine quality of many of them that attract the grower and investor.

Sugar cane here finds ideal conditions of soil and climate, approaching perfection. When you understand that in Louisiana the per cent of saccharine or sweet in the sugar cane averages about 7 per cent; in Cuba 9 to 10 per cent; in Hawaii, the Paradise of sugar planters, 10¼ to 12½ per cent, rarely higher, then you will realize what it means when we tell you that in Sinaloa sugar cane has tested as high as 17½ per cent.

Alfalfa finds its natural home here, flourishing and producing 6 to 8 crops per year of from 1¼ to 1½ tons per acre, and finding ready market at \$15.00 gold per ton.

Garbanzas, a yellow chick pea, highly prized as a food in Mexico and Spain, are produced here at a profit of \$75.00 per acre, the market being always good, and a strong demand.

Corn yields well and always brings good prices. It is the staple food of Mexico, as wheat is in the United States, being eaten in the form of tortillas, as daily food by fourteen million people. This year, 1907, corn has averaged in Sinaloa, over \$1.00 gold per bushel and has been as high as \$1.25 per bushel. **As two crops are raised per year (January and June planting) it can be seen that corn pays.**

## BEANS.

Beans (frijoles) are also a staple in Mexico, and always command good prices. They are as frequently planted with corn as above and are a good side crop. They invariably produce well and bring good prices.

## GRAINS.

There are good grain sections in Sinaloa, but the natives do not understand its cultivation very well and it is not raised on the scale it should be. Wheat, barley, rye, and other grains are grown in small quantities, but can be raised at a large profit by those understanding how and properly equipped to handle them.

## FRUITS.

Sinaloa can raise everything in the way of fruits. Its lemons and limes are fine. Its oranges, though native seedlings, are early, sweet and delicious. Its strawberries beat those of California. Its bananas are exceptionally well flavored. Its tropical fruits such as papaya, zapotes, etc., are perfect of their kind. Its grapes the best. With all this, there has been no effort in the past to grow fruit on any commercial scale, due probably to the lack of transportation facilities. The new railroads will give an impetus to the fruit industry, and one who plants fruit there now will reap a rich reward at maturity.

## LIVE STOCK—POULTRY, ETC.

Cattle are here, as elsewhere, big money makers, but this is not a grazing country in the sense in which we here in the United States know it. On the coastal plain, grass is scant and scarce, whereas browsing on bush and twig is plentiful. It is not uncommon to see large herds of cattle in good condition on tracts of land where practically no grass will be seen. They keep in good condition from browsing alone. As the country improves and pastures are made, cattle will be better fed and pro-

# THE INGLENOOK

duce more, but with the possible exception of some parts of the foothills, Sinaloa will never be a cattle country as we know it in the United States. In some foothill districts there is excellent grass and pasture, but not enough to be called general throughout the State.

Hogs do well and get enormously fat. Both lard and pork are very high. Ham and bacon sell at fancy prices. Goats and sheep are first-class money makers in Sinaloa. Poultry thrives here as nowhere else. Chickens, turkeys, ducks and geese, all do very well and produce good results. Plenty of food for them.

## HORSES AND MULES.

Here is the best spot on earth for any man that knows his business to raise horses and mules. He will have one of the best markets on this continent for the next 25 years to sell good heavy work horses and mules. They are, and will be for years, in great demand at fancy prices. Any one bringing in a good jack and brood mares cannot fail to do well. Care should be taken however to bring them in during the Fall or Winter in order to acclimate them before the next Summer. Heavy farm work stock is in great demand throughout the whole State, and will sell for big prices.

## MARKETS AND PRICES.

A good market exists for every product now raised in Sinaloa. All crops and produce sell always at good prices and often for high prices. The opening up of the State by railway communication from several directions means the throwing open of all of northern and interior Mexico as a market for Sinaloa products, in addition to opening the markets of the United States for its fruits, fine winter vegetables, etc. **The question of over-production need not be considered**, at least within this generation. Northern and interior Mexico is comparatively dry and non-productive of agricultural products, being largely devoted to cattle-raising and mining, and these States will pay well for the products of Sinaloa's well watered plains and valleys. Prices for food products have always been high in Mexico, and will be so for many years to come. In addition, **Sinaloa has its own large mineral belt to supply with food** as well as a long line of Coast, north and south, along the Pacific Ocean, which draws, and will continue to draw its supplies, from this fertile, productive State of Sinaloa. **Corn at \$1.25 per bushel**, beans at 7c per lb., alfalfa at \$15 per ton (all U. S. currency) are prices and a fair sample of prevailing market prices.

## LABOR AND WAGES.

For the present, labor is reasonably plentiful, although the building of the Southern Pacific Railroad through the State has drawn about 10,000 of the best laborers to railroad work. However, the completion of the railroad within the next two years will at once relieve the labor situation by replacing these men throughout the State as agricultural laborers where needed. The laborer is the peon or Indian workman of Mexico. Average wages paid are from 62½ cents to 75 cents per day, Mexican currency, (31¼ cents to 37½ cents, U. S. money). On these wages the laborer boards himself and works from early morning until late at night. While not up to the standard of farm hands in the United States, Mexican laborers accomplish considerable in the long hours and steady pace they maintain. They are excellent woodmen and excel with an axe or machete. They are exceptionally good at cleaning land, rough planting and agricultural labor, and are also fine cowboys or "vaqueros."

## HARDWOODS, TIMBERS, ETC.

Many hardwoods and precious woods, including mahogany, ebony, cedar, lignum vitae, amapa, mauto, etc., abound throughout the State. Almost anywhere, timbers for fencing, corrals, house posts, etc., can be had in abundance. Pine and oak are found only in the mountains. The foothills are all well wooded.

## RAILROAD TRANSPORTATION.

In Sinaloa today is presented to view the most remarkable railroad situation on the North American continent. The great Southern Pacific Railroad system is building its extension from Guaymas, Sonora, South through the State of Sinaloa as fast as men, money and materials

can build it. There are, at this writing, employed in the building of this one line alone, 6,400 workmen and 2,600 mules and scrapers, 2½ miles of railway being finished ready for use each day. The bridge that crosses the river Fuerte has been completed and the line will be pushed rapidly South through the State as fast as possible. This line is heading for Mazatlan which it is expected to reach before the end of 1908 and will then push on toward the city of Guadalajara, from which point, construction has commenced North to meet this railroad. The estimated expense of construction of this one line is \$40,000,000 in gold, it being aided by a subsidy from the Mexican Government.

## NATURAL RESOURCES.

Sinaloa is a bountiful storehouse of natural riches simply awaiting the hand of man to develop and display them. Its rich, level and irrigable lands of the Coastal plain; its beautiful valleys in the foothills; its pine and oak clad mountains, all call for utilization. Limitless quantities of water in the streams, prodigal wealth of gold, silver, copper and iron in the bosom of its hills and mountains are waiting for the farmer, fruit raiser, irrigator and miner to bring forth their wonderful potentialities of wealth. A second California, plus plenty of water and big rivers throughout the State. What better can you, Pioneer or Young Man, ask? Especially with a railroad situation confronting you, which is not paralleled on the North American continent.

## SAFETY OF LIFE AND PROPERTY.

Mexico is today one of the best governed and most peaceful countries in the world. Law and order reign supreme and justice is meted out with impartial hand. Today over eight hundred million dollars of United States capital are invested in Mexico, and tens of thousands of American citizens are making not only good livings, but fortunes in Mexico. It offers better opportunities now to enterprising Americans than any part of the United States.

## OPPORTUNITIES.

What can I do in Sinaloa? you ask. All that can be done in any new country. Help develop it. Go into stock raising, bring down some good breeding stock and raise mules and horses. There will be fortunes in it for twenty years to come. Go into cattle raising; nothing better. Every head of cattle doubles your money every two years. Plant fruit—grapes, oranges, lemons, olives, all big money makers in Mexico. Plant fibre, the millionaire maker of Mexico, that grows to perfection only in Yucatan and Sinaloa. Open stores, go into manufacturing, buying and selling of products, canning fruit and vegetables, ice-making, packing, all avenues are open to you, prices high and markets good. Grow alfalfa, fatten hogs, lard is high, scarce and much in demand. **There is room for all and a market for all you can produce.**

## TITLES TO LANDS.

There are probably more first-class perfected titles to land in Sinaloa than in any other State in the Mexican Republic. A series of surveying concessions have been operating in Sinaloa over a considerable term of years and thus titles have been brought into the courts and before the tribunals of Mexico until all points have been contested and consequently have been definitely settled. Excellent records can be referred to and usually good titles obtained. Competent attorneys are to be found whose advice is safe and reliable. "Clipped from a Los Angeles Publication."

Mr. Isaiah Wheeler of Cerrogrado, Illinois, with his camera starts in a few days for a trip down through the State of Sinaloa, Mexico, with me. We will travel over the new line of the Southern Pacific Railroad to secure pictures for a Booklet similar to the one recently published, "A Record Without Parallel," on Northern California. Send for a copy, it will be MAILED FREE and will give you an idea how the new SINALOA BOOKLET will look. If you want this Sinaloa booklet FREE send your request in at once.

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

MINNEAPOLIS, MINN.

# **PURE COLD WATER**

is one of the many attractive features of

# **Miami Valley**

Mr. W. E. Metz just completed his well. He found a strong vein at only ten feet. The water is perfectly soft and pure and as cold as ice.

In addition to the incalculable advantage of good wells the water which flows in the irrigation canals is drawn straight from the pure, sparkling Rayado Stream and is perfect for all domestic uses.

Coupled with the abundance and purity of water supply are the advantages of soil, climate, scenery, good neighbors, school and church privileges, perpetual prohibition.

You can't afford not to visit MIAMI RANCH if you are seeking a home.

PRICES now 50 per cent lower than established market price of such lands but will soon be advanced. TERMS—One-fifth down and one-fifth annually—only 5 per cent interest on deferred payments.

Buy your ticket to Springer, New Mexico. Special reduced rates on the first and third Tuesdays of July.

Write for booklet "Wesward Ho" which will tell you more.

# THE INGLENOOK

## The Perpetuity of the Union

When my eyes shall be turned to behold, for the last time, the sun in heaven, may I not see him shining on the broken and dishonored fragments of a once glorious Union; on States dissevered, discordant, belligerent; on a land rent with civil feuds, or drenched, it may be, in fraternal blood! Let their last feeble and lingering glance, rather, behold the gorgeous ensign of the Republic, now known and honored throughout the earth, still full high advanced, its arms and trophies streaming in their original luster, not a stripe erased or polluted, not a single star obscured, bearing for its motto no such miserable interrogatory as What is all this worth? nor those other words of delusion and folly, Liberty first, and Union afterward, but everywhere, spread all over in characters of living light, blazing on all its ample folds, as they float over the sea and over the land, and in every wind under the whole heavens, that other sentiment, dear to every true American heart, Liberty and Union, now and forever, one and inseparable!—Daniel Webster.

# President Roosevelt Says:

**"WORDS ARE GOOD ONLY WHEN BACKED UP BY DEEDS."**

The volume of praise spoken by thousands of cured ones who have testified to the healing virtues of that grand old household remedy,

## DR. PETER'S BLOOD VITALIZER

Is backed up by a record of actual cures extending back over 100 years. Contains no dangerous drugs or mineral poisons, but is made from pure medicinal herbs, leaves and barks which act directly upon the blood. This powerful vitalizing tonic was first used with wonderful success by old Dr. Peter Fahrney in 1780, and the formula has been handed down through four generations to the present proprietors, the grandsons of the originator.

#### A HAPPY WIFE.

Newark, N. J., July 6th.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs: We have now had your Blood Vitalizer in our home for over ten years and I must say it has done a great deal of good. My wife was obliged to keep her bed continually. She has been a sufferer for many years with some form of stomach trouble. Since we have had your medicine in the house she is happy and recommends it to all sufferers. She says your remedy is better than anything she has ever come across.

Yours truly,

J. C. Ruschenberger.

#### SAYS IT IS A BLESSING.

Beresford, S. D., Oct. 19.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Please fill the enclosed order for Blood Vitalizer as soon as possible as we are all out at the house.

I was completely knocked out with stomach trouble and could hardly eat anything, but am now as well as ever. The credit of my cure is due to blood Vitalizer. It has been a blessing to me.

Yours truly,

L. P. Frieberg.

#### CURING THE LITTLE ONES.

Huffman, Minn., April 16.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Allow me to thank you for what the bottles of Blood Vitalizer which we have used have done for us. It has simply been wonderful. We had a little boy who was very weak and sickly, but since taking the Blood Vitalizer he has become so big and strong that it is a pleasure to look at him.

Yours truly,

P. R. Peterson.

#### A GRATEFUL WOMAN

Waco, Tex., Feb. 18th.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Had it not been for your Blood Vitalizer, I know I would have been confined to my bed. I was afflicted with rheumatism and extreme nervousness, which at my age, 65 years, made life almost unendurable.

My wonderful improvement I owe, next to God, to your Blood Vitalizer. My neighbors who have used it are also full of its praise.

Yours truly,

Louisa Mohr.

## Mary Reed and Her Work Among the Lepers

JOHN JACKSON, F. R. G. S., Author of "Mary Reed, Missionary to the Lepers," "The Leper Land," Etc.

"Whose burden still . . .

Was 'Shelterless, shelterless, shelterless.'"

—Lowell.

IN the long course of human history there has appeared no more tragic and pathetic figure than that of the leper. Inspired both by traditional association and by natural horror, men have shrunk from him as a creature cut off from all the interests of healthy humanity. His cup is full to the brim with bitterness, and includes in it every ingredient of sorrow. Disease both loathsome and lifelong; expulsion alike from home and city; forfeiture of social and legal rights; all these, together with the consciousness that he is an outcast and that life holds for him no hope, combine to make the lot of the leper the very embodiment of misery and despair. Indeed, the very word has become the synonym for all that is foul and repulsive.

In all ages and in all lands it has been the same. How complete a picture, though in a few words, the Pentateuch gives us of the leper. With garments rent, with bared head and covered lip, and with his warning cry of "Unclean! unclean!" the defiled man dwelt alone—"without the camp." In New Testament times, the ten men who sought help from the Divine Healer were found outside the village, and uttered their cry from afar off.

The testimony of secular literature confirms that of the Sacred Record concerning these most pitiable of all the sons of affliction. History tells of several royal lepers, including Henry IV of England, Robert Bruce of Scotland, and Louis XIV of France. It is not surprising that a fate so charged with every element of tragedy has been the theme alike of poem and of romance. Chaucer writes of one whose "ugly leper's face" had been before as "white as lely floure." Tennyson makes touching reference to the ritual of the medieval church when he causes the leper's bride to say,

"'Libera me, Domine!' you sang the psalm; and when  
The priest pronounced you dead, and flung the  
mould upon your feet,

A beauty came upon your face not that of living men,  
But seen upon the silent brow when life has ceased  
to beat."

Lowell's Sir Launfal and the holy Francis of Assisi agree, first, in turning from the leper in loathing, and then in beholding in the diseased outcast "an image of Him who died on the tree." Who that has read "Ben Hur" can forget the ghastly discovery of the imprisoned lepers? The graphic pen of R. L. Stevenson has not only enabled us to see the English leper of the Middle Ages stealing through the forest in the grey dawn, with his hooded gown and his wooden clappers, but has moved our pity for the lepers of Molokai as well as our admiration for Damien's self-sacrifice on their behalf. Finally, the Indian leper of today has not escaped the keen vision of Kipling, and even his powerful pen has depicted no more terrible object than the ghastly creature who leaps out upon the drunken Englishman as he desecrates the Hindu shrine.

The total number of these disease-stricken outcasts existing in the world today, no man knows. They are to be found in almost all countries save those of western Europe. In the United States their number is estimated by thousands, and they are numerous in the Philippines. All eastern countries are afflicted by this foul disease, but India is probably the most leprous land in the world. Of its sufferers we have more exact and reliable information than of any of the eastern countries. The last census of India returned ninety-five thousand lepers, and the very census officials themselves admitted that this was far below the actual total. Indeed, it is a responsible estimate to place the lepers of India at two hundred and fifty thousand.

Stricken with a loathsome and incurable malady

which disfigures its victims ere it destroys them; regarded as accursed by their own deities; considered to be unclean outcasts by their own kindred; these afflicted people represent the lowest depth of human

of twenty-two societies of whom thirteen are American. It will thus be seen that the work is both international and interdenominational, and therefore should command the sympathy of benevolent people of all countries and all churches.

Miss Mary Reed's Home at Chandag.

misery. In many thousands of cases their condition literally coincides with the quotation from Lowell at the head of this article.

What, it may well be asked, can a Christian mission do for people in such a case as this? So far from the answer to the question being a hopeless one, I am glad to reply that it can do for them *everything save heal their disease*, and even in this respect immense alleviation is afforded them through the agency of the Mission to Lepers in India and the East. This society, which exists solely for the bodily relief and spiritual instruction of lepers, together with the rescue and education of their untainted children, was founded in 1874 through the instrumentality of Mr. Wellesley C. Bailey, who was at that time a missionary of the Church of Scotland in India, and is today the honored superintendent of the society of which he was the originator. From the commencement of its work the Mission to Lepers has labored on sensible, practical and economical lines. Its policy has all along been to enlist the services of missionaries of all societies and denominations in the cause of the leper. Hence it is that today the Christ-like work of the Mission is being prosecuted in eighty stations, covering India (with Burmah and Ceylon), China, Japan, Sumatra, Korea, Siam and the Philippines. In the supervision of its work the Mission enjoys the invaluable coöperation of the missionaries

to be healthy men and women. There is, indeed, very strong proof that this is the case. For example, at the Society's largest asylum, at Purulia in Bengal, where fully seven hundred lepers and children are being provided for, there are at least six young married

Leper Women and the Huts They Occupied at Chandkuri, before the Asylum was built.

couples on the staff of the institution, who are themselves rescued children of lepers. These are all healthy men and women, and have in many instances, healthy children of their own.

Among the many American missionaries who have done and are doing, noble work amongst these outcast

people, the name of Mary Reed stands out prominently, not only on account of her devoted labors, but owing to the fact that she is unique among American workers in having herself suffered from the same disease as those among whom she is now ministering. The story of her devotion is one of the most striking

voice, faltering only at her mother's name and coming sorrow, told the secret of her affliction.

"As my throbbing heart caught its first glimpse of her meaning, I covered my face to shut out the swiftly rising vision of her future, even to the bitter end, and almost in agony I cried out, 'O not that!—do not tell me *that* has come to you!' And when, in calmer moments, I said that every Christian ought to unite in prayer for her recovery, her only response was, 'I have not yet received any assurance of healing; perhaps I can serve my Father better thus'."

With the vision of the homeless lepers of Chandag as her guide, and the inward Voice as her constant inspiration, Miss Reed made her way to the far-distant outposts on the confines of Thibet and Nepaul, where she was appointed to the superintendence of what was at that time a small out-station of the Mission to Lepers in India and the East. A few poor houses, sheltering a much-neglected community of twenty-five or thirty of these homeless sufferers, was the scene of Miss

Reed's first labors among the lepers. This, however, has now given place to a well-built institution, with comfortable houses for men and women, separated

Miss Mary Reed's New Chapel, Chandag, India. (Presented by the Students of the Grove City College, U. S. A.)

instances of heroism that even the foreign mission field can produce. A leading London journal described her as a "female Father Damien," and declared that her life story was as thrilling as his. Miss Reed went to India originally as a missionary of the Women's Foreign Missionary Society of the Methodist Episcopal church. After five years of labor in the zenanas of Cawnpore and Gonda, her health was so broken that she returned to America for rest and medical treatment. From New York, Miss Reed proceeded to London, England, where the two most eminent specialists were consulted, both of them confirming the decision of the American physicians. A friend from the States meeting her in London at this time, and being ignorant of her malady writes: "I wondered instinctively at the ivory pallor of that sweet face, and at the cruel spot that disfigured it, so different from anything I had ever seen. I wondered, too, as the days went by, why the forefinger, always covered with a white cot, refused to yield to healing remedies." It was to this same friend that a little later Miss Reed confided her dread secret. The one who was then made her confidant describes the incident thus: "On memory's walls there will hang while time lasts for me the picture of that scene. A wax taper burned dimly on the table beside her open Bible, that Book of all books from whose pages she received daily consolation; and while, without, Paris was turning night to day with music and light and wine, within, Mary Reed's gentle

Five Lepers Women, Chandag.

by a sufficient distance, together with a neat little church which forms a conspicuous feature of the landscape.

It was my privilege to visit Miss Reed in her lonely but lovely location, and to spend some time with her and her flock, an experience charged with pathetic interest, and which will be a life-long memory. I have said that Chandag is situated on the borders of Thibet and Nepaul, and is thus on the very verge of British India. The journey of nine marches from the head of the railway was a traveling experience of unrivaled interest. The first day's journey into the Himalayas involved an ascent of the Gagar Pass, upwards of eight thousand feet above sea level. It was my fortune, or misfortune, to encounter, as we drew near to the summit, a blinding snowstorm. When a tremendous wind sent the snow swirling into the valley far below us, the effect was very impressive. Our road was a mere bridle path, without fence or protection. Often we looked down into depths which were impenetrable, and up to heights which were invisible. We seemed to be walking on the edge of the world—below us the bottomless abyss, above us, the unscalable heights. As I advanced into the mountains, however, finer weather, and more enjoyable travel awaited me. For the greater part of one day my road lay along the ridge of one of the lower ranges.

Probably nowhere in the world is there such a group of snow-clad peaks as in this immediate district of the Himalayas. It is computed that here within an area of twenty-five miles as many as seventy separate peaks, ranging from twenty thousand to twenty-five thousand feet in height, are visible. While a spectacle so sublime as this rewards a climb to the heights, the beauty of the valleys was not less remarkable. The upper slopes of the mountains were covered with magnificent forest trees, while their lower sections produce palms, ferns and flowering plants of infinite variety. Along the valleys the rivers rushed through picturesque gorges, and altogether the scenery was of the most impressive character. At length, however, I found myself ascending the last valley before reaching Chandag.

About a mile below the Asylum I was pleasantly surprised at being met by Miss Reed, to visit whom I had traveled so far. She had come down the hill in her dandy in order to bid me "welcome to Chandag Heights." I felt it to be a great privilege to meet, for the first time, one in whose life and work I had so special an interest, and to whom, and of whom, I had written so much. To see her, face to face, and to hold daily intercourse with one who is following in her Master's footsteps in no usual degree, was a privilege I had long desired, and now it was to be mine. So, if the guest was warmly welcomed, he, on his part, was still more glad to meet his hostess. We were soon chatting in the cosy sitting-room of Miss Reed's two-
